But the new method is entirely free from compulsion. Patients are invited to come forward for free treatment and are placed in hospitals only if they wish and for only so long as they remain infectious, which is not likely to be more than a couple of years.

NOW THEY COME FOR AID

That the method works is shown by a report on a postcard I recently received from Bali, where a friend is working. He says that, in an area with 14 registered cases, 17 more came forward voluntarily on the first day he set up for business.

In Khon Kaen, Thailand, Dr. R. Miquel of WHO reports that he has no trouble getting patients to the appointed meeting places for their injectons. From that single province he already has more than 4,000 cases. On one occasion, when he could not reach the meeting place because the river was flooded, 75 of these patients swam the river to get their treatment.

In one report Dr. Miquel also tells how early action gets early results. One infectious case was the father of two little girls. He was very fond of them and often held them in his arms. The older one developed the telltale marks where her little chest met her father's when she put her arms around his neck. The younger one developed the marks on the inside of her legs, where she straddled her father's hip as he carried her. Within 6 months, both were cured.

The little family that we met on the Cambodian border will be free from yaws within a month. Their chances of keeping free from the other four enemies I have talked about are excellent if the Government continues to back the programs and if ICA, WHO, and UNICEF continue to help.

Amending Section 1552, Title 10, United States Code, and Section 301 of the Servicemen's Readjustment Act of 1944

SPEECH
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. BERRY. Mr. Speaker, I wish to commend the Armed Services Committee upon having favorably reported H. R. 8772, the provisions of which are similar to a bill introduced by me, H. R. 5455. The purpose is to correct a situation that has caused and will continue to cause, grievous injustice.

The bill authorizes existing boards whose duty it is to review discharges and dismissals to take into consideration in considering these reviews the postservice rehabilitation and exemplary conduct of applicants for review, and then if warranted, to issue a general discharge, limited. It authorizes, but does not require, the boards to issue such discharge in those cases where the board feels that the facts leading to the discharge have been offset by later good conduct and rehabilitation on the part of the ex-serviceman for the period of not less than 3 years following his separation.

The bill will benefit many thousands already discharged who have already lead exemplary lives over a period of more than 3 years from their discharge.

We all appreciate the fact that there must be in the armed services an effective discharge law in order to maintain discipline in the armed services, but we also know that there are many thousands of young men and women who got into difficulty, frequently in a thoughtless manner, and who are now condemned for a lifetime because of their act. What they did may have been undesirable and their conduct may have been bad, but many of them do not deserve a life sentence because of such conduct.

If a man is convicted of a felony in Federal court and serves his time and then comes out and is rehabilitated, he can file an application for pardon and restoration of his citizenship. In the armed services this is not possible. The only authority the services now have is a review of the discharge where errors or injustice are alleged. There is no provision for postservice rehabilitation. The bill simply gives the boards the right to review and pardon, if you please, a veteran who has been rehabilitated, a veteran who has exemplary postservice. It does not give any veterans' rights that the veteran does not now have.

It should be remembered that hundreds of thousands of less than honorable discharges have been issued not by court-martial, but by some military officer or group of military officers without any judicial proceedings of any kind to sustain them.

One instance that has come to my attention is a young man who left high school and entered the Navy when he was 16 by falsifying his age. His true age was known to the officer in command, because as they crossed the international date line on his 17th birthday the crew gave him a real birthday celebration. He served well and was cited a couple of times, but because he was only a boy and inclined to be a boy when off duty, neglected on 4 to 5 occasions to return after leave and was several days late. As punishment he was given an undesirable discharge about 3 months before he was eligible for release.

After getting out of the service, he has assumed the position of a man and has done a very commendable job of providing for his family and in taking part in community activities and so forth. I assisted in an effort to have his discharge changed. Under existing law it cannot be done. His advancement in life is blighted because as a boy he acted as a boy when his officers felt he should act as a grown man.

I am convinced that the normal punishment that might have been adjudged had the act or incident been committed in civil life, should guide the review boards, as well as the age of the individual, and the conditions that prevailed at the time, and that the board should be able to take into account, postservice life as an indication of service maladjustment, or service irresponsibility. Under this bill postservice conduct indicating that the individual has rehabilitated himself, that his character is good, and that his conduct, activities, and his habits since discharge have been exemplary for a period of not less than 3 years following such discharge, may be taken into consideration.

The bill provides relief in many occasions where the veteran has clearly rehabilitated himself and has earned a "pardon," so to speak, from the stigma of "dishonorable," "bad conduct," or "undesirable," removed from his status.

He is not placed in the same status as a man with an honorable discharge, but the stigma may be removed by proof of his future good conduct. He is in this legislation given an opportunity where the facts warrant, to show to society a new type of discharge which reflects not only service, but postservice conduct.

Atomic Power Here

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. THYE. Mr. President, on August 1, there was published in the Minneapolis Star, an editorial entitled "Atomic Power Here." The editorial is a very timely one, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star of August 1, 1957]

ATOMIC POWER HERE

The congressional atomic energy committee has approved a bill which would require the Atomic Energy Commission to build 5 powerplants for municipalities and rural electric co-ops, including the 1 at Elk River, Minn. President Eisenhower and Lewis Strauss, AEC Chairman, have argued that constructing powerplants should be left to private industry, with the AEC assisting.

Construction of the five plants may be justified for their experimental value, but it is hardly accurate for backers of the bill to say, as they did say, that the Government must act because private industry has had a chance to do so and failed.

A small—5,000-kilowatt—plant sponsored by private industry already has gone into operation in California. A 60,000-kilowatt plant, being built by Duquesne Light Co. and Westinghouse Electric in cooperation with AEC, is scheduled to start operating this fall.

Applications to the AEC for similar large plants have been made by a group of Florida utilities and by a group of upper Midwest utilities. The latter group is called Central Utilities Atomic Power Associates and includes 11 companies with headquarters in Minnesota, Wisconsin, and Iowa. Northern States Power Co. would own and operate the plant, the cost of which is estimated at $25 million. AEC would contribute $7 million in research.

Such a plant would cost twice as much, based on kilowatt capacity, as a plant using conventional fuel. But the utilities are prepared to pay quite a substantial premium for two main reasons: (1) They want to familiarize themselves with this new method

of generating electricity, and (2) they are anxious about future supplies of coal and oil.

There is little question about the advisability of some Government regulations of atomic energy and technical assistance, but a lot of Americans will question the wisdom of a general policy of plant construction by the AEC.

Suppression of Free Speech at Texas Technological College

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. YARBOROUGH. Mr. President, a few weeks ago, 3 professors at Texas Tech were suddenly and without warning fired because they had incurred the displeasure of a political board. I have previously placed my opinion on this action in the RECORD of this body.

Now we have additional light on the action of the board in an able column in the Kountze News for Thursday, August 1, 1957, under the title The Printer Fires Both Barrels. The editor of this outspoken and influential Hardin County, Tex., newspaper is Mr. Archer Fullingim, an able journalist, a graduate with a master's degree from one of the great universities of America, and a dedicated American.

Mr. Fullingim has been a courageous voice for integrity and honor in politics and in government in Texas. He writes the well-known column The Printer Fires Both Barrels, and Texans know that when Archer Fullingim fires both barrels he hits a bull's-eye.

Mr. President, I request unanimous consent that the column The Printer Fires Both Barrels, as printed in the Kountze News for Thursday, August 1, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRINTER FIRES BOTH BARRELS

The stultifying heritage left by the corrupt Shivers administration is still gumming up the works in Texas. The last place it popped out and boiled over was at Lubbock, Tex., where two Texas Tech professors were fired by Shivers and Daniel appointees for expressing opinions that did not agree with views held by the appointees. The Texas Tech board of regents, at the demand of an oddball, J. Evatts Haley, fired the two profs for expressing political opinions that differed from the crackpot theories of Haley. Worse than the firing, however, was that the dirty work was done in a secret session.

You remember Haley. He ran for governor on a crackpot platform in 1956. The two professors did not support him in that race. Being the type of radical conservative that he is, Haley is the kind who wants to purge people who do not agree with him, and especially those who did not vote for him. Haley himself was once fired from the faculty of the University of Texas where he was known as a ridiculous screwball who was giving the university a "black eye." Yet A. Shivers, knowing that Haley was a Texas-style Joe McCarthy, the sort of character you hear foaming at the mouth late at night on the Mexican border radio stations, appointed Haley to the Texas Tech board of regents. So we can thank A. Shivers for the mess Texas Tech is getting in. We can thank A. Shivers for leading the synthetic patriot Haley, to believe he's somebody come. When all the time he was only a would-be troublemaker and agitator of the conservative stripe.

We haven't heard much out of A. Shivers in recent months, not even from those people who used to fancy that he might be a candidate for President on a sort of retired conservative ticket. But as long as his appointees, like Haley, can shoot off their mouth in a secret session, we have A. Shivers with us. Not in the flesh, perhaps, but in the spirit. The Daniel appointees on the board aided and abetted Haley in the firing. But is there any difference between a Shivers appointee and a Daniel appointee? If so, please delineate on the elaborate distinction.

Mr. Hale must have been a man after A. Shivers' own heart, because Shivers did not cotton to anybody unless he believed, oh so utterly, in his so-called conservatism. Meaning that he had to be a cross between one of his insurance commissioners and Bascom Giles. So let's take a catfish's-eye view of E. Shivers' Haley, the self-made eccentric that Shivers put in a position to wreck a great school with an enrollment of 8,000. Haley now poses as a cowboy, drugstore, that is, although he wears specs and is aging and graying. He wears the boots and the big hats of the odious professional Texan. While a young man, when youth generally takes up cowpunching, our boy Haley was riding the range in college classrooms and pounding a bucking typewriter instead of riding a bucking horse—he authored several books, the titles of which I almost but not quite remember. But one was about the XIT ranch which was sold to a syndicate to pay for the capitol building at Austin. Maybe there was where Haley got the rage to go cowboy after he reached middle age.

People who know Haley best say that he's the type of drugstore cowboy who likes to turn up in big cities wearing boots and big hat and be pointed out as an old bronc buster from Texas. He gets a kick out of it, they say—and Haley must go in for the kicks.

Haley, being a screwball conservative, Shivers went for him in a big way and soon Haley was Shivers' gift to Texas Tech. But Tech deserved him. That city's two newspapers never failed to go to bat for Shivers and his fellow Ike-likers. They took Shivers' side even up to the day when the prison doors clanged shut with Bascom Giles on the inside. Now those 2 papers are screaming bloody murder because Haley has made Tech look like 2 cents, but all we say is that the Shivers chickens, afflicted with fleas, lice, and the limber neck, are coming home to roost on the Texas Tech campus. The Lubbock papers have only themselves to blame. And that also goes for the Louisiana Enterprise and Journal which got in such a flap over the firing of the profs that they have been carrying editorials on the horrible thing that has happened at Tech and they have been giving Haley hell in rather pointed language. But they don't pin the blame where it belongs: on Shivers' back. It is not Haley who's lower than a snake in a wagon rut.

Now since we've already ruined our day by remembering that there ever was a governor by the name of A. Shivers who, in 8 years, achieved the ultimate in corrupt administration, we might as well recall another repulsive highlight of the Shivers administration. That was the pilgrimage of Attorney General Brownell to the Shivers estate, Magnolia Hills, near Woodville, where Herbie and Allan, congratulated each other on their love for Ike and incidentally probably hatched up the present civil-rights bill that Brownell, Ike, Nixon, and Knowland are trying so hard to sew on the South's Yankee-bruised hide. Brownell and Shivers spent hours in seclusion enjoying each other's company at Magnolia Hills.

Transfer of Nuclear Weapons

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. WILEY. Mr. President, Mr. Thomas E. Murray, a former member of the Atomic Energy Commission, now consultant to the Joint Committee on Atomic Energy, has written a very thought-provoking article on the transfer of nuclear weapons. In this age of nuclear weapons, when the world may be falling apart if we do not keep our heads instead of going off on tangent ideas, one may read the article with profit, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRANSFER OF NUCLEAR WEAPONS

The proposal that the United States should transfer nuclear weapons to certain friendly nations raises a policy question of grave importance.

Absolutely basic to the soundness of any decisions in this area of military and political policy is the distinction between two substantially different categories of weapons, what I shall call large and small weapons.

The line of distinction cannot be drawn with all exactness. Nor can it be adequate to all circumstances. However, consideration of the implications of transferring nuclear weapons furnishes the basis for a meaningful distinction. Insofar as such transfers are concerned, a 15-kiloton weapon should rank as large. In the lamentable incident of Hiroshima a bomb of this yield completely destroyed about 5 square miles of territory and caused upward of 150,000 casualties. As it was used in that instance it was a weapon of mass destruction. Weapons in the megaton range would more properly be called weapons of mass annihilation. Their possession and use relates to the broad strategy of deterrence and retaliation and to the concept of allout nuclear war. In contrast, weapons of 1 or 2 kiloton capacity certainly fall into the category of small weapons. Their military usefulness is related to the concept of limited war.

No rational approach to the problem of the transfer of nuclear weapons to foreign governments is possible unless consideration is given to the uses to which such transferred weapons could be employed.

In my opinion, it would not be unreasonable to consider the transfer of small weapons to the countries of the NATO alliance or to other friendly governments. The transfer of such weapons would be consistent with a military and political policy of equipping our allies effectively to resist small-scale aggression and to wage limited war.

However, the transfer of large weapons is altogether a different question. At least two fundamental objections must be raised against such a policy.

First, it is not at all clear that any valid military purpose would be served by it. At

the present moment our allies are fully aware of the kind of nuclear protection we are prepared to give them in the event of large-scale aggression. The NATO planners are aware of the nature of the nuclear arsenal that is at their disposal at a moment's notice. These weapons are not a guaranty against attack; but they are an assurance that retaliation of the kind necessary—whether massive or limited—will be launced by the United States forces in the event of an attack. As matters stand, therefore, the NATO countries are sure of nuclear protection. And at the same time the United States is sure of its own control especially over the use of weapons of mass destruction or annihilation.

This is the way matters should stand. It is not, I say, clear that any valid military purpose would be served by altering the situation through the transfer of large weapons to our allies. Their own nuclear protection would not be further enhanced. But our own control over the appalling possibility of all-out nuclear war would be dangerously diminished. This latter fact leads me to my second objection.

I do not hold with those who believe that any use of nuclear weapons, even small ones, will set our feet on the famous escalator that inevitably leads down into the abyss of total nuclear war. However, it is generally supposed—not without reason—that the use of megaton weapons, or those of hundreds of kiloton yield, even in limited quantities, would be the first step onto this fatal escalator. It does not matter who initiates the use of these large weapons, whether friend or foe. In either case the United States would inevitably become involved. It follows therefore, that the transfer of large nuclear weapons to a foreign government would put that government in the position of being able to force the United States into a war of survival, in which, as I have often insisted, there would be no survival. We should by no means consent to this development; much less should be actively assist in bringing it about.

It is true that no transfer of weapons would be made except under prior agreements with our allies as to the circumstances in which these weapons would be used. However, the stability of such agreements, under the stress of actual hostilities, is open to serious question. If a nation were to be faced with the imminent possibility of major aggression, it would hardly hesitate to use whatever weapons it had at its disposal. Under the threat of disaster any nation could readily rationalize the use of its nuclear stockpile, in part or in whole, no matter what its agreements with the United States may have been. It seems to me, therefore, that the transfer of large weapons even to our trusted allies could easily lead to a loss of American control over their use, and in possible consequence, to a loss of control over our own destinies.

There is a further point. It is obvious that none of the countries of the NATO alliance is able to sustain the heavy costs of extensive nuclear-test programs; much less could any of these countries bear the financial burden of a large production program. The United Kingdom recently carried on tests in the Pacific. But many Christmas Island tests would be required before the United Kingdom could come into possession of weapons designs comparable to our own. Even then, once designs were frozen, the cost of a large-scale production program would be prohibitive for the United Kingdom.

In these circumstances, it seems evident to me that the present disarmament negotiations perhaps are being used as a sort of instrument by which our allies win from the United States an agreement to transfer nuclear weapons to them. As a condition of getting England, France, and (possibly) other countries to forego the testing and production of nuclear weapons, the United States is being called upon to make these weapons available. Our allies say, in effect, that either they themselves must go ahead in the field of nuclear weapons or else the United States must make it worth their while to stay out of the field. They want the prestige that attaches to the capacity to wage nuclear war; this is presently the mark of a great nation. Therefore, they present the alternatives: either they will themselves pursue this capacity, or else the United States must endow them with it.

But this is much too inadequate a description of the alternatives. The security of our allies is a matter of deepest concern to us, but so too is our own security. Both aspects of the matter are involved in the transfer of nuclear weapons. We shall not strike the true balance between our own interests and the interests of our allies unless our policy decisions with regard to the transfer of nuclear weapons have, as their premise, the basic distinction to which I have pointed—the distinction between the category of small weapons and the separate category of large weapons. Our own interests make it mandatory that the United States retain control of weapons of mass destruction and annihilation the interest of our allies should be met by the small weapons needed effectively to resist small-scale aggression and to wage limited war. The policy of the United States concerning transfer of nuclear weapons must take account of both.

Congress and the Purse

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks I wish to include the following editorial which appeared in the San Mateo Times, San Mateo, Calif., on Tuesday, July 23, 1957:

CONGRESS AND THE PURSE

Backlog of unexpended funds appropriated by past Congresses and beyond the scope of the present budget has been estimated at $70 billion, close to the Eisenhower budget proposal for fiscal 1958.

It is this situation that former President Hoover had in mind at San Francisco when he told the American Society of Newspaper Editors recently that Congress "has lost control of the purse."

If there is concern over the effect of Government spending under a $72-billion budget, then the theoretical possibility of Federal departments in any one fiscal year pouring out an additional $70 billion in Federal funds should compound the apprehension.

Mr. Hoover declares that Government spending is a major factor in "the inflation movement now going on," and that it probably has reduced the purchasing power of the dollar by 4 or 5 cents in recent months.

That includes not only the dollars the Government spends but every dollar a taxpayer earns and the dollars of which he must give more and more in Federal taxes if the monetary unit continues to lose ground.

A move has been made at Washington, through the urging of the Hoover Commission, to help restore to Congress control of the Federal purse. It is a measure, approved by the Senate unanimously and now before the House, that would provide annual accrued expenditure budgeting. This would limit appropriations to a single year, even for long-range projects, and require annual review of all spending.

It is reasonable to expect the review from year to year would result in Federal savings. A saving of only 1 percent on $70 billion would be $700 million annually. That's almost $5 per capita.

Death of Kenneth Roberts, Noted American Author

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. BUSH. Mr. President, I rise on behalf of my distinguished colleague the Senator from Maine [Mr. PAYNE]. I ask unanimous consent that a statement prepared by the Senator from Maine [Mr. PAYNE] on the death of Kenneth Roberts, noted American author, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PAYNE, ON THE DEATH OF KENNETH ROBERTS, NOTED AMERICAN AUTHOR

Last week saw the passing of one of America's best-known historical novelists. Kenneth Roberts, a native son of Maine, labored diligently and tirelessly to acquaint his fellow Americans with the background and motives behind the historical patterns of the Revolutionary War period. His complete and methodical research resulted in some of our finest novels of that era. Through his studies he became convinced that Benedict Arnold was actually moved by high principle and—at the time—developed some degree of popularity. The excellent quality of his historical novels won for Kenneth Roberts a special Pulitzer citation this year. This richly deserved award acclaimed Roberts "for his historical novels which have long contributed to the creation of greater interest in our early American history."

Kenneth Roberts was a product of Maine and this fact was revealed not only in his writing but in other facets of his life. Rather than a journalist's career in Washington he preferred life at Rocky Pastures, the stone house which he built at Kennebunkport. His neighbors may remember him best for his infinite faith in the dowsing rod as a means of finding water and for his efforts to promote the use of such rods. He was known for his bluntness, too, and for his impatience with modern automobiles, liberal legislators, and other highly placed jackasses.

But the memory of Kenneth Roberts will live forever in such outstanding historical novels as Rabble at Arms, Northwest Passage, and Lydia Bailey. The historical accuracy of these stories has already set a level which few other authors have attained. And through Kenneth Roberts many Americans now have a better understanding of their Nation's history.

I attach to my statement editorials from five Maine newspapers concerning the life and works of Kenneth Roberts:

"[From the Bangor (Maine) Daily News of July 24, 1957]

"KENNETH ROBERTS

"In the death this week of Kenneth Roberts, Maine has lost perhaps its greatest historical novelist.

"Certainly the State has lost one of its most distinguished and dedicated friends.

"Despite his great success as a writer and the almost countless honors that came his way, including a special Pulitzer award, Roberts never forgot his native State of Maine, or spared any effort to help encourage its progress.

"After launching his career as a writer, Roberts left an editorial job on a national magazine in New York and returned to the scene of his birth at Kennebunkport. It remained his home until he died at 71.

"It was former President Theodore Roosevelt who encouraged Roberts to write his first historical novel about New England. As he did research on that project it was Roberts' observation that only then did he get a sort of broad picture of what has gone on in Maine and New England in the old days.

"Roberts wrote of historical Maine and New England not only with understanding but with integrity and accuracy that won him national fame. Few authors did more research to prove historical details.

"Once telling about his novel, Northwest Passage, he revealed that it required 3 years of the hardest kind of research for the reader to understand in 2 days.

"Roberts was more than a historian. There was nothing dry or stodgy about his books. They were human, realistic. They dealt with the people involved in those historic times; the relation of a single event to a war; to the Nation; and to the people themselves.

"To read a Roberts' novel was an adventure that lingered long after the book was put aside. History came to life from the very force of his descriptive pen.

"Perhaps Roberts summed up his work best when he commented on one of his popular books, Rabble in Arms. For a month he labored day and night to finish the last portions of the book. Often he fell asleep over the manuscript. Commenting on it, he said:

"'You have a feeling you've done something when you've done a historical novel.'

"Rightfully, Maine is famous for its rocks and men."

"[From the Portland (Maine) Press Herald of July 23, 1957]

"ROBERTS ROSE TO FAME ON INTEGRITY AND HARD WORK

"Historical novelist Kenneth Roberts owed his brilliantly successful career to a talent best described as literary integrity, a term reaching far beyond simple honesty to connote intelligence, hard work, self-confidence, and a deep sense of mission.

"While other authors settled for a guess or a comfortably ambiguous sentence covering up faulty research, Kennebunkport's Roberts dug and scratched until his tireless fingers grasped all, and nothing but, the truth. Thus tuned to ring with authority his fiction became more factual than many straight histories, prodding less patient scholars to rethink their conclusions and stimulating Americans to a more thoughtful interest in the military and political achievements of their forebears.

"He could write with the best. He competed successfully for top positions on the best seller lists. His unique quality, bred of a unique wholeness in his approach to writing a book, was his capacity to attract those who wanted to learn as well as be entertained, and who appreciated a believable teacher as much as a skilled writer.

"Although Kenneth Roberts is no longer with us, he has bequeathed us a priceless heritage. Even as he learned at the feet of the late Booth Tarkington, his life will be a lesson to future generations in how literary integrity, encompassing breadth of dedication no less than depth of research, makes the difference between mediocrity and greatness."

"[From the Lewiston (Maine) Sun of July 23, 1957]

"KENNETH L. ROBERTS

"Kenneth Roberts, who died at his Kennebunkport home on Sunday at the age of 71, did more than attract national attention to his native State, its history, its people, and its good food.

"He was, for many years, a foremost American historian and by presenting the early history of this country in the guise of interesting fiction, did much to increase popular knowledge of the Revolutionary War and the War of 1812.

"Mr. Roberts' contributions were finally recognized this spring by the Pulitzer prize committee, which presented the author a special award for his historical novels. That assuaged the disappointment Roberts felt 20 years ago, when his best-selling Northwest Passage inexplicably failed to win the Pulitzer prize for fiction.

"Kenneth Roberts was born in Kennebunk, worked as a reporter on the now defunct Boston Post, fought in World War I, corresponded over much of the world for the Saturday Evening Post, and began his series of historical novels with Arundel 27 years ago. Famous for his hot temper and outspokenness, he had no use for billboards, sloppy historical writing, bankers, and engineers and other learned persons who doubted that water could be found underground with a forked stick.

"In fact, water-dowsing became more than a hobby in Mr. Roberts' later years. A new book on the subject will be published this fall, and all over New England there are people enjoying water supplies discovered by the author's townsman, the famous Henry Gross. As a Maine product Kenneth Roberts was one of the finest and it will be a long time before we see his like again."

"[From the Lewiston (Maine) Evening Journal of July 22, 1957]

"KENNETH ROBERTS

"Maine provided the locale and many of the characters for a number of the historical novels written by the late Kenneth Roberts, who died yesterday at his Kennebunkport home. His death removes one of the outstanding historical novelists of the last quarter century.

"Roberts specialized in the period of American history stretching from the French and Indian Wars through the early years of the United States, as it struggled for its independence in the Revolution and fought to retain it in the early 1800's. He was noted for the painstaking accuracy of his accounts of life as it was lived in the formative days of this Nation. He prided himself on complete, careful research.

"Although his novels did not attain best sellerdom until the appearance of Northwest Passage in 1937, several of his earlier novels possessed as much merit, with Rabble in Arms a particularly vital story abounding in characters from the then District of Maine.

"Roberts in recent years had become exceptionally interested in water dowsing, and was writing on a book relating to this subject at the time of his death. He was a vehement supporter of those things in which he believed, and could become extremely sharp when his sense of right was disturbed.

"This was illustrated in his 'no holds barred' assault upon English historian Toynbee in an article entitled 'You Can't Say That About Maine.' He literally ripped Toynbee to shreds, and with good reason, too, in view of the Englishman's casual sarcasm relative to Maine residents and his failure to name Vermont among the New England States.

"Kenneth Roberts has left a treasure trove of entertaining books for future generations. His work was of a quality to assure that it will be read in years to come. He literally brought the past to life in glowing colors."

"[From the Waterville (Maine) Morning Sentinel of July 23, 1957]

"REWARDING CAREER

"If you sought to raise the ire of author Kenneth Roberts, you needed only to question the seriousness of his interest in the much joked about Yankee art of water dowsing.

"Roberts actually was deeply concerned with the problem of water shortages and when he and Henry Gross, a one-time York County game warden and a water dowser, got together to promote the finding of water with a forked stick it was no tongue-in-cheek venture.

"But despite his midcareer interest in water and in off-beat agriculture, Kenneth Roberts will be best remembered for his historical novels.

"His writing filled a great void in the early history of this country—especially New England—and by popularizing this history through his novels he brought to countless numbers of people a greater knowledge and understanding of human building blocks of the United States of America.

"Because of his attention to infinite detail, his works are not only good reading but are excellent source material.

"His research for his novels about Benedict Arnold, for example, led him to the conviction that Arnold's treason actually had high motives.

"Roberts' death Sunday in Kennebunkport brought to an end a rich life and a rewarding career to one of Maine's first citizens.

"Fortunately, he was spared time enough to complete another book on which he had just completed the proofreading. It is concerned with the subject that was close to his heart in later years. Its title is 'Water Unlimited'."

Europe Skeptical About the United Nations

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an article which appeared in the Sunday New York Times, in which its Paris correspondent, Thomas J. Hamilton, points out that Europe has many misgivings about the United Nations as it is presently constituted. Hamilton states that there is acute concern over the prospects of the United Nations as a result of the growing influence of the Asian-African bloc. The article follows:

EUROPE VIEWS THE UNITED NATIONS WITH MANY MISGIVINGS

(By Thomas J. Hamilton)

Britain, France, Belgium, the Netherlands and Luxembourg are developing a split personality about the United Nations. They recognize the importance of the 1957 session of the General Assembly, which will open 6 weeks from now, and the 5 foreign ministers will all be on hand to speak in the opening debate.

But this does not mean that their governments are looking forward to the session.

In all five countries a correspondent finds acute concern over the prospect that the organization, as a result of the growing influence of the Asian-African bloc, will become an out-and-out anticolonial forum. There is a corresponding lack of enthusiasm about the capacity of the United Nations to solve other international issues.

The organization's failure to do anything about Soviet intervention in Hungary is cited over and over as proof that the Assembly cannot live up to the great responsibilities that it assumed in the Suez crisis.

This does not mean that anybody wants to ignore the United Nations. The organization is very much on the minds of these west Europeans, if only as a result of the protracted sessions of the United Nations Disarmament subcommittee in London.

However, it is now realized that even if a complete meeting of the minds between the Soviet Union and the western nuclear powers could be brought about, months and years would be needed to work out the details of the inspection programs.

UNSHARED OPTIMISM

The West European Governments, moreover, do not share Harold E. Stassen's continuing and unassailable optimism about such an understanding. They are very much afraid that the Soviet Union—or perhaps India—will introduce a resolution at the coming Assembly session urging the immediate suspension of nuclear bomb tests.

On this side of the Atlantic, at least, there are acute fears that the Assembly debates, which would certainly give expression to the worldwide concern about the continuance of the tests, would result in a major propaganda defeat for the West.

Other propaganda defeats may be in store for the colonial powers. The British have been successful until now in avoiding a full-dress Assembly debate on the Cyprus question, one reason being that, thus far, the entire Asian-African bloc has not committed itself to the Greek Cypriotes.

PERSIAN GULF PROTESTS

However, the situation may change if no progress toward a settlement is made by the time the Assembly takes up the issue again. The recent British intervention in the squabble between the sheikdoms along the Persian Gulf also may bring protests.

The Dutch, for their part, do not like the prospects of Assembly speeches or resolutions endorsing Indonesia's claim to Western New Guinea. They still blame the United Nations—and the United States—for the pressure exerted on them to grant Indonesia independence.

However, it is generally believed that Algeria will rank alongside disarmament as a major issue in the Assembly, and the French are much more disturbed than the Dutch or the British about the approaching debates.

They intend to issue their new proposals on Algeria by October, and the timing has, in fact, been determined by the necessity of doing something before the Assembly begins the debate.

As now drafted, however, the proposal for three separate administrative districts, with France retaining control over military and foreign affairs, will certainly not satisfy the Asian-African and Soviet blocs.

Moreover, while the British have more or less written off the Suez affair, French resentment over the role of the United Nations is still very much alive.

In Belgium and Luxembourg a more friendly attitude toward the United Nations is apparent, although those countries were sympathetic with the British and French on Suez. However, the organization has more or less ignored the Belgian colonies, and neither Government has any special grounds for complaint.

NO MEMBERSHIP

West Germany, which is not a member of the United Nations and in fact has not applied for membership, is a special case. In Bonn it is explained that an application not only would produce a Soviet veto, but also would formalize the partition of Germany.

On the Suez issue West Germany was basically sympathetic with the British and French, and particularly with the Israelis, and correspondingly critical of the United Nations.

Last December, when the United States asked for its views on economic sanctions against Israel, West Germany replied that it would be very reluctant to comply with a sanctions resolution. It added that in any event it would continue to pay reparations to Israel for the crimes committed by the Nazis against Jews.

West Germany, of course, is vitally interested in the outcome of the United Nations disarmament negotiations.

Chancellor Konrad Adenauer's basic concern is to prevent developments under which the Social Democrats could charge that the Western powers had agreed to a disarmament program without doing anything about the unification of Germany.

Partly as a result of the Suez issue, and partly because a more positive program is provided by the numerous organizations that are working for closer economic and political association, all these Western European nations are placing less reliance on the United Nations.

COMMON POLICY

The Permanent Council of the North Atlantic Treaty Organization, to which the various Western disarmament proposals are being submitted, is now meeting its first test as a means of developing a common Western policy. If this works, the practice may be extended.

Moreover, France, West Germany and the Benelux countries are looking to the Organization for European Economic Cooperation, the High Authority of the European Coal and Steel Community and the nascent authorities for the European Atomic Energy Community and the European Economic Community in the belief that these offer the best possibility for a more efficient and more prosperous West Europe.

Britain, while still hesitating about the amount of British participation, is certainly not doing so because of devotion to the United Nations. All these countries want closer cooperation in the United Nations with the United States. But they are beginning to think of the United Nations mainly in terms of unpleasant though unavoidable developments.

International Farm Youth Exchange Serves Cause of World Agriculture

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 6, 1957

Mr. WILEY. Mr. President, I was interested to read two extremely stimulating articles in the July 30 and July 31 issues of the Milwaukee Journal concerning the gathering on the campus of the University of Wisconsin of delegates from seven nations participating in the international farm youth exchange program.

It must be remembered that most of the population of the world, including the overwhelming proportion of the population of the underdeveloped areas of the world, lives on the soil, not in the cities.

For these countries to improve their standard of living, they must be increasingly successful in extracting from the soil more food and fiber for the ever-increasing population of the globe.

The State of Wisconsin is proud of the contributions which it has made to the international farm youth exchange program.

I send to the desk the text of the two articles I have mentioned.

I hope that the youth-exchange program will continue to be carried on and will expand in its services to world youngsters and world agriculture.

I ask unanimous consent that both articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

VISITING RURAL ASIANS DISCOVER AMAZING UNITED STATES

The University of Wisconsin campus Monday took on the atmosphere of a United Nations for youth.

In many ways, the desire of the new generation for peace, security and liberty was represented by the first arrivals of 67 delegates from 7 nations to an international farm youth exchange (IFYE) program. Those assembling here Monday were from Burma, India, Iran, Iraq, Jordan, Nepal, and Pakistan.

There were young farmers with turbans and beards. And there were graceful, brown-eyed beauties from India with flowing robes and distinctive beauty spots on their foreheads. Seated with them in the Memorial Union cafeteria feasting on American ice cream were velvety-skinned girls with long braided hair from mountainous Nepal. There were men with beautiful native Burmese clothing, rather than pants, and handcraft fans so needed on a blast furnace of a July day.

HAVE RURAL BACKGROUND

These youthful diplomats all had rural backgrounds. They are farmers, some of them big operators in their native lands, or trained for some phase of agriculture. The young men—most of them over 20—will farm or teach agriculture or be government representatives trying to incorporate into their own systems the things that make American agriculture so great. The girls have been trained in home economics or social work. Most of them are college graduates and have mastered several languages.

When these youthful grassroots ambassadors return home, one group will work at the village level. The other will make a circuit to share their new knowledge of American agriculture with their own people.

It is an exchange proposition. American youths—several from Wisconsin—are now in this group's native lands, living and working on farms and attending schools. They, too, learn the new in the old world.

LEARN TO BE LEADERS

These 67 young people, mainly from the Asiatic nations, are here to absorb ideas of leadership and how best to spread knowledge of the accomplishments and the glories of these United States.

Farmers have showed these youths how to run a combine or a forage cutter. Farm

wives have shown the girls the American diet, the use of appliances and the social living of a healthy rural community.

This exchange program is run with private contributions, not a cent from the Government. Leader of this national organization sponsoring the exchange is Warren Schmidt, Washington, D. C., formerly of Dane County.

"All of these youngsters go home with the idea of living with their neighbors and friends and in peace," says Schmidt. "You never hear talk of war or strife among them. They are seeking the very same things our rural people are, a decent life, higher standards, and lasting peace with freedom.

These three things have impressed nearly all these exchange youths.

The way the average American farmer—only 13 percent of the population—has used machinery and electrical power to produce enough to feed the Nation so well and still help others in time of need.

The American diet—ham and eggs, meat every day, eggs, milk and ice cream.

The way Hollywood movies misrepresent American life. Actually some of the Asiatics really believed when they came that they would see gun-toting cowboys and would be in real danger of being scalped if they ventured out of cities.

"How silly, compared to realities," said charming Miss Amarjyot Ghatge, of the village of Bombay, state of India. "The only cowboys I saw were in rodeos at Butte, Mont., and the only American Indians on a trip to the reservation where we saw the native sun dance." She has been on a Montana ranch and before returning home will live for a time with a Pennsylvania farm family.

REPORT ON WHEAT FARMS

Also from India comes Narenda Bokey, 23, of Armravtj, who spent weeks on a Kansas wheat farm. Graduated from a mission college, this keen young man operated a 250-acre farm of his own at home, but with oxen. He saw the Kansas wheat farmers use enormous one-way plows, big seeders, and fleets of combines and balers. He is determined to buy a tractor when he returns home.

"Our soil is even better than I saw in Kansas. We get 15 to 20 bushels an acre," he says. "I want a tractor. Gasoline costs us 65 cents a gallon, but diesel fuel 30 cents, and we can afford that."

Miss Tripta Sood, from Hyderabad, India, has brown eyes that sparkle like jewels. Her sari—yards of silky material—is a garment of sheer beauty. She was graduated from Osmania University, trained in arts and will pursue social work in India on her return. She lived for several weeks with Iowa farm families, seeing the rich land of tall corn and fat steers.

ASTOUNDED BY HARD WORK

"I was astounded how hard your farmers work even with all that machinery," she says. "Even our very rich do not have appliances in their palaces as your farmers do in their homes—dishwashing machines, refrigerators and freezers. Such things are a necessity here. In India, they are luxuries now. We cannot use so much machinery because of the need of furnishing employment to so many millions. Over here, the American farm family washes dishes and mows the lawn, thinking nothing of doing both. In my country they are separate occupations."

This young lady will return to her home a stanch champion of American democracy she saw in the Iowa 4-H Clubs and Future Farmers of America chapters.

Abder Rahman Abu-Ghaben, 21, comes from historic Jericho in Jordan. He is a high-school agriculture and chemistry teacher who lived on a Kansas farm and will go to a Wisconsin dairy farm from here. He runs a 2,000-acre farm, growing fruit, bananas, and grapefruit.

LEARNED FROM CLUBS

"I learned so much," he says. "Over here, if you need help you get it from your neighbors, the FFA, or 4-H Club youths or the extension service. When I go home, I am going to show slides in the high schools on how free America achieves so much.

"I do think our schools are too hard. We try to cram the equivalent of your 4 years of high school in 1 year, leaving no time for fun. I like your system much better, time to study and time for fun."

Miss Tula Shah, 21, from Sanga Nuwakat, Nepal, lived at a Hood River orchard in Oregon. Trained in political science, her outstanding impressions were dietary.

"Oh, such pies, cookies, ice cream, and cake in your daily standard of living," she exclaimed, almost drooling. "Think of it. Everybody driving a car and eating apple pie and ice cream if they want. I learned to cook so many things to show my people."

EXPLAINS NAME

Also from Nepal is Dibaker Kaphale, 22. He carefully explained that the Kaphale represents his caste—the highest—and Dibaker his full name. He has been on a Massachusetts farm to learn about using a milking machine, growing apples, and feeding chickens.

"I learned so much," he said, "I'm going to start a night school to help my people live better when I get home."

Anis Ur Rahman Khulna, 33, is a farmer from Pakistan interested in growing wheat.

"In New York, I looked around for city gangsters and out in Kansas for the cowboys and Indians," he grinned. "How different I found things—generous and friendly people so willing to help and wanting the very things we want in my country where 42 million people are packed into 54,500 square miles. When I return I hope to convince our farmers to pool to buy some of your machinery for more production with less work."

NOTES GOOD EDUCATION

From West Pakistan's Mahmmad Nawaz, 25, who has been in North Dakota:

"Your farmers work so hard even with their machines," he said. "I would like to be as well educated and live as good as your farmers do."

On August 6 there will be 90 other exchange students here from 34 countries for another session.

YOUNG ASIANS LEARN GREEN THUMB SECRETS

(By Lewis C. French)

"The green thumb of American agriculture has a lot of sweat along with it," George M. (Soybean) Briggs declared Tuesday before an assembly of international farm youth "unofficial diplomats" at the University of Wisconsin. These dedicated foreign youths have been living on American farms and now are here to evaluate American agricultural methods and rural living. They want to see if there is anything they can use in their homeland to improve diets and living standards.

Here in America, farm abundance is a costly problem; unused food is stacked and stored. These youths are from nations such as India, Pakistan, Iran, and where teeming millions want more to eat and wear.

"How does America produce so much to live so well?" was the question the most of these young men and women asked.

BRIGGS SPREADS CHEER

These youths, who will return to their homelands in a few months, listened to and then cheered the "old maestro" of the Wisconsin college of agriculture and extension service, Professor Briggs. They had never heard anyone quite like him. For that matter, neither had Wisconsin farmers before Briggs went into semiretirement to ease off on his travels and lectures that always left farmers with a chuckle. These young people were trying to find out how best they could do some of the things this Nation has done to get such tremendous farm production.

Always a practical man, Briggs did not talk in the terms of science or jump right into the use of the costly machines almost impossible to finance in so many lands.

USED OLD TECHNIQUE

Instead he went back to the days of the farm institutes, illustrated lectures to farmers, and simple demonstrations of basic improvements.

"Show your farmers something, don't just lecture to them," he said. "And another thing, don't put your demonstrations on the farm with the biggest barns or best house. Because, if you do, the farmers of that community will back off, saying, 'Sure, that farmer can afford those things, his wife had money.'"

Briggs harked back to the days when the railroads sent farm-exhibition trains through the State. Their experts told of the value of cattle and sheep and better swine and crops. Soon there were herds and flocks and in time industrial activity along the rail line, dairy plants for milk and packing plants for meats. The exchange group nodded approval. They could do this in most of their countries.

TELLS OF MEETINGS

Then, Briggs told of the old farm institutes at town halls and district schools, where farm-research experts explained the new things—better seeds and new forage crops like alfalfa. The farmers prospered, then bought machinery and put in running water.

Briggs told of how, when the hay failed one drought year, a crop from the Orient that many of the exchange group knew about—the soya bean—resulted.

As an emergency forage crop, Briggs showed the farmers of Wisconsin and the Corn Belt how to grow soybeans. American farmers improved this crop known for centuries in Asia and now grow 22.6 million acres of it. Supplying edible oils, material for industry and meal to feed livestock, this crop is now almost as important as corn.

Not once did Briggs talk about the high-priced machinery, but he showed them simple rollers, a development from the lumber camps and pioneer farms with which to get seed underground, and the V-shaped drag for improving cloddy fields and weedy pastures. These tools they could make and afford.

IDEAS WERE USEFUL

When Briggs finished, the exchange students looked at one another and then cheered their speaker. They could understand him and his examples and make practical use of them when they return to homelands.

"Be sure to have your farmers take part in the improvement," urged Briggs. "Carry the research and new things to them in a form they will accept • • • and don't drive big autos or wear tailored clothes."

After the general assembly, the exchange divided up into discussion sessions.

One group was shown handicraft work by James A. Schwalbach. As a matter of fact, many of these young people were masters at handicraft. Look at the gorgeous bead work of the purse of those brown-eyed girls from Nepal.

Others heard of soil conservation from I. O. Hembre of the State soil conservation committee. The graceful, brown-eyed women heard of nutrition from Miss Josephine Pollock of the university staff and of gardening for varied diets from John Schoenemann and George Klingbell of the corps staff.

YELLOW CORN HELPED

They were told how the epidemic of pellagra was stopped just by replacing white corn with yellow corn because of its vitamins and carotene, and how even livestock thrived better on the golden corn.

The men of agricultural science shared their skills with these eager, friendly envoys from around the free world. There were no parades, nor propaganda—just practical help and inspiration.

There will be an even bigger exchange session here August 7 when 158 more "young diplomats," those from South America and Europe, arrive to blend in with the 67 already here from the Orient.

"I am astounded at the spirit of this nation to help yourself," said S. Ghulam Abbas Shah from west Pakistan. "I return home impressed with the dignity of labor." Eager Pakistani reported tremendous irrigation projects in their land and bubbled with confidence over a new era in farming in which they hope to share.

Democrats Are Responsible

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. BYRNE of Illinois. Mr. Speaker, when the jury-trial amendment was up for a vote on the floor of the House I endeavored to get the floor to speak against this amendment. I could not get time to speak. The RECORD shows that I voted against the amendment and I was glad that the House defeated it by 199 nays to 167 yeas. Unfortunately our sister across the hall, the Senate, did not see fit to follow suit.

My attention has just been called to a splendid editorial appearing in the Illinois State Journal on Saturday, August 3. I would like permission to insert the editorial in the RECORD.

The editorial follows:

FOR CIVIL RIGHTS DEMISE—DEMOCRATS ARE RESPONSIBLE

For the first time since the civil-rights debate began the people have been given a clear view of who is really for civil rights and who is against it. The vote on the jury trial amendment revealed this vital information.

Thirty-nine Democrats as opposed to only 12 Republicans voted for the amendment, which if kept intact will destroy the effectiveness of the bill. Thirty-three Republicans allied with nine northern Democrats voted against the amendment.

Heretofore, the public has gotten the idea that just about all the Democrats north of the Mason-Dixon line favored civil rights. This latest showdown may thus seem strange and puzzling.

But it is not puzzling at all when one remembers that the Democrat-dominated Congress is run by two gentlemen south of the Mason-Dixon line—Senator LYNDON JOHNSON and Representative SAM RAYBURN, both of Texas.

There is still a split in the Democrat ranks, but in this instance the split shifted so that only a small percentage of northerners were left in one bloc. JOHNSON'S whip brought all but the most ardent of the civil-rights backers into line.

Apparently, the northern Democrats who have been giving lip service to civil rights now hope that a watered down bill can be put through. And maybe it can.

It will be a civil-rights bill in name only, however. The public won't be fooled.

What approval of the jury trial amendment means is that voting rights of southern Negroe citizens will be inhibited as they have in the past. Southern white officials can be charged with contempt in Federal courts for blocking a Negro citizen's attempt to vote, but the judge's action could be overruled by a jury of southern white citizens. A provision has been approved in the civil-rights bill that calls for more Negro citizens on juries, but this, while commendable in itself, would only cause more confusion. Hung juries would become common.

As some of the proponents of an effective civil-rights bill have pointed out, the jury trial amendment deprives the courts of their authority to preserve their own integrity. Justice could be reduced to shambles under the bill. As President Eisenhower noted in his news conference, United States courts can use the injunction in 36 different actions to see that justice is done. To deprive the courts of this authority in civil rights will be an invitation to legal anarchy.

Three Hundred and Fiftieth Anniversary of Shipbuilding in America

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Tuesday, August 6, 1957

Mr. BUSH. Mr. President, on behalf of the Senator from Maine [Mr. PAYNE], I ask unanimous consent that a statement prepared by him on the 350th anniversary of shipbuilding in America be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PAYNE ON THE 350TH ANNIVERSARY OF SHIPBUILDING IN AMERICA

This year marks the 350th anniversary of the building of the first ship in America, the *Virginia of Sagadahock*, built by the Popham Colony in Maine. During the month of August the Bath Area Chamber of Commerce is sponsoring a series of special events to commemorate the founding of one of our Nation's historic and greatest industries: shipbuilding. It is indeed fitting that the Bath area should be taking the lead in this matter since not only was the *Virginia of Sagadahock* built there in 1607, but the area is today still renowned as one of the great shipbuilding centers in America.

The *Virginia of Sagadahock* was built at Stage Island near the mouth of the Kennebec River in Maine by the surviving members of the Popham Colony, the first English settlement in New England. She was a pinnace of 30 tons, approximately 30 feet in length, 13 feet beam, and 8 feet deep. Built to carry the survivors of the Popham Colony back to Plymouth, England, after the death of Capt. George Popham and the hardships of the severe winter, it subsequently made a number of voyages between America and England.

The celebrations this year commemorate far more than the construction of this small ship. They are a tribute to an industry that has done much to further the progress and peace of this country. From this small beginning, American shipbuilding has grown to be a bulwark of defense. With the speedy construction of ships we have been able to carry men, arms, and supplies to all parts of the world in times of emergency. In addition to its notable accomplishments in times of emergency, American shipbuilding played a vital part in the American economy in time of peace. Our merchant marine can be credited with helping to make this country a great industrial nation. It has been American ships that have made it possible for American products to reach overseas markets. The American merchant marine has truly been a major force behind America's ascendancy to world prominence. American ships have sailed the seven seas to bring prosperity and security to the people of America.

The anniversary of the building of the *Virginia of Sagadahock* is more than a tribute to the building of the first ship built in in America; it is more than homage to a brave group of early settlers. This anniversary in a greater sense is a tribute to an industry, an industry which has played a momentous role in American history; this is a tribute to shipbuilding and seafaring as a whole.

The State of Maine is particularly proud of her shipbuilders and seamen. Ships built at Bath, Portland, and many other places along our coast have served the Nation well.

The Bath-Popham area now celebrating the building of the *Virginia of Sagadahock* has long been a center of shipbuilding. The destroyers built at the Bath Iron Works are world renowned. On August 10 the U. S. S. *Hull* will be launched at Bath; and on August 15 the Post Office Department will issue a special commemorative stamp at Bath. Since August 1607 when the *Virginia of Sagadahock* was launched the Bath area has given our Nation stalwart ships to carry commerce in peacetime and armed might in war. America can indeed be proud of its great shipbuilding industry.

The Textile Industry's Troubles

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the July-August 1957 issue of the American Investor which is published by the American Stock Exchange.

The article follows:

THE TEXTILE INDUSTRY'S TROUBLES

Since World War II the Nation has enjoyed almost continuous prosperity. True, there have been business vicissitudes and few industries have completely escaped shakeouts. But no industry has been so consistently labeled a "soft spot" in the economy as the textile industry. Literally hundreds of textile mills have been liquidated in the past few years. There have been many bright spots which seemed to promise much. Financial writers have titled articles "Textiles Coming Out of the Slump?" so often the phrase has become part of the trade's jargon. But the industry still does little more than stagger along.

The Nation's second largest industry is certainly going to survive—last year's volume was $18 billion against $5 billion in the mid-

thirties. And from diapers to shrouds textiles play a never-ending part in the lives of all of us. But mere survival is hardly enough. Why the industry is in such a predicament puzzles any man who pays the bills for his fashion-conscious wife's clothes and his ever-growing children. It makes little more sense to an economist. People have money and are spending it. Average per capita consumption 1950–56 was 36.1 pounds, about as high as it has ever been. There are more people today; so more people, more money, more clothes should equal a booming industry instead of a chronically sick one. The reasons for this apparent contradiction are numerous as cotton blossoms and sometimes as hard to differentiate. To mention but a few, there are trends toward suburban living, competition, technical progress, Government tariff and subsidy policies, high costs, the price-cost squeeze, central heating, air conditioning, weather, research, fabric and fashion depreciation.

Competition is the outstanding factor. Synthetics have long been blamed for the industry's troubles and there is no question they play a sizable part. In the 1920's cotton and wool were the chief fiber raw materials and had very distinct and separate end uses. Rayon and acetate were the first man-made fibers, nylon the first completely test-tube chemical fiber. The latter put an end to women's silk hosiery and after the war began to compete with rayon, cotton and, to a minor extent, wool. In 1951 came a whole raft of new test-tube fibers, dacron, orlon, acrilan, dynel, glass fibers, plastic textiles; and still more are coming. The lighter weight synthetics are inherently lower priced which means that the average price of clothing has tended to decrease rather than increase. Thus more clothes—and today's average citizen has more specialized clothes than ever before (tuxedos, sun clothes, ski togs, and golf outfits) do not proportionately boost the industry's dollar volume. But the synthetics do not have things entirely their way and suffer with the rest of the industry. Newcomers and the natural fibers fight at every turn—dacron and cotton blends took over the men's nylon shirt business. And new textile synthetics will continue to be introduced.

Clothing is not considered the important expenditure it used to be—last year only 6.1 percent of the consumer's disposable income was spent on clothing (9.2 percent in 1947) and this had to be split among more fabrics. Part of this 34 percent dip reflects lower prices, part the trend toward what the industry calls sloppy dressing and the rest of the world casual living. Perhaps more important in recent years has been the buying trend to more durable goods—payments on mortgages, cars, and TV sets have left less for clothing.

Within itself the industry has always been characterized by cut-throat competition; profits are historically small. This has been considerably aggravated by advances in textile machinery. Formerly machinery was made to weave wool or cotton—today's machinery weaves most all fabrics. As a result whatever is currently popular is woven and too often dumped on the market. Quipped one textile man, "The industry seems to have a tendency to commit suicide. A textile designer will create a new fabric, beautiful and well engineered to suit its purpose. It gets a big promotion, a trade name, a description, and a promise of performance. The public buys it and likes it. That's the signal for other manufacturers to get aboard the gravy train. They start cheapening the fabric. It may look like the original, but it has fewer picks, poor dyes, poor finish, and in no time at all the bottom drops out of the market."

The chemical companies were the first to encroach on the natural fibers' market but far from the last. Plastics have made great inroads in the shower curtain business; paper is regarded as a competitor in about half the cotton market. (Paper cleansing tissues have virtually captured the woman's handkerchief business. Quonset huts have taken the place of tents and tarpaulins, tile floor coverings are used instead of rugs and carpets, air-conditioning does away with the need for awnings, the electric blanket means fewer wool blankets are needed. Technical progress has had its say too. Mechanization has reduced the need for heavy workshirts, trousers, shoes, and gloves. Government intervention is particularly outstanding in the cotton industry. The industry competes against United States surplus cotton exported at lower than domestic prices which then comes back into this country in finished textiles and sells in volume at prices far below what United States manufacturers can quote. So many a cotton manufacturer wants the United States Government out of the raw-cotton market.

The industry has not slept through its problems, and today many textilemen feel the answer may soon be found. A big effort has been made to convince people they will be happier if dressed up. A research study by Du Pont predicts that in the next year or two clothing manufacturers and textile companies will have a chance to compete for a bigger share of the consumer dollar. The reason: less of the consumer dollar will be committed in advance for payments on mortgages and autos, and consumers will have more money left over to buy clothing and other items. To get the leftover sums, the natural fibers will have to do more than they have to date. For every dollar spent on promoting wool, it is estimated that $4 to $5 is spent on promoting manmade staple fibers.

Some textilemen have thought the answer might be found in psychology. But, sadly mourned one industryman, "Where's the psychology? People want luxury in everything—why not textiles, too? Men buy the most expensive TV set made and then sit and watch it in a frayed shirt. Teen-age girls wear blue jeans morning, noon, and night and then for a very special occasion turn around and demand five petticoats. Where's the psychology?"

Senator Walter George

SPEECH
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mrs. BLITCH. Mr. Speaker, it was with a very heavy heart that I learned Sunday morning of the death of Senator Walter George. It is with overwhelming sadness, that I today join my colleagues to participate in these tributes to his memory.

Senator George has been on the political scene of Georgia ever since I can remember. As a young girl in school, with an intense interest in political science, I looked on him as an ideal.

Senator George was a man of many virtues. Rarely in public life, do we see a figure of such great eminence and accomplishment retain so much humility and modesty. He was devoted to his wife, "Miss Lucy." He loved his fellowmen, and he gave the fullness of his life in service to his country.

He will be missed in the world of government and remembered as a wise and able man; a man of integrity; a man of principle; a man who put duty above all else. I am sure that future generations will look back through time and recognize him as one of America's noblest statesmen.

Throughout his long and fruitful years as a public servant, he gave of his best to the people of Georgia and the Nation. His greatest monument will be the record that he leaves behind of service, loyalty, and devotion to duty as he felt it within his heart.

He was a southern gentleman in the finest tradition. I am proud that he was a Georgian. I am proud that he was my friend.

The Seventh of a Series of Editorials by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. MICHEL. Mr. Speaker, what is it like to go to church on Sunday in Moscow? That is the subject of F. F. McNaughton's seventh of a series of editorial letters appearing in the Pekin Daily Times, Pekin, Ill.

The letter reads as follows:

[From the Pekin (Ill.) Daily Times of July 29, 1957]

THE EDITOR'S LETTER

(By McNaughton)

"I don't believe in God."

So announced our girl guide when I asked her to take us to church in Moscow yesterday.

Besides, she didn't know where there was one.

But, she is making an effort to do everything we ask of her; so she set out to try to find one.

She did well.

She found three churches.

We attended all three.

First was Roman Catholic.

It had good attendance, including many in the diplomatic service.

From the chauffeurs there, we learned where there was a Baptist Church; and there I saw the biggest jam I ever saw in any church or any building in my life. Looked to me like aisles and stairways were full; choir loft and belfry stair. Vestibules were packed, and people had ears at any crack at which they might hear the service. They pushed me inside somehow and I stayed until the sermon (in Russian) started. Music was good. There were quite a few men in the audience.

I noticed one function performed by women stationed at various points. A woman has a bottle of smelling salts and a wad of cotton. When somebody in the jam faints, the alert woman quickly pours some camphor on a piece of cotton and swiftly it is passed to the people who have waived a signal beside the fainting person.

Next we had a thrill.

I told the guide that if she could find me the Orthodox (which is Russia's) Church that had the best music in Moscow, she might hear something to rival the Bolshoy singers at their grand opera.

She found it.

They let us in an iron gate then a little door near the altar. One choir was above us; the other across from us. They had a magnificent priest with a powerful voice to chant the service. The service lasts 3 hours. We stayed 1½ hours. Up to that time, every word had been sung. The beauty and the power of those voices, and the way they can be modulated is something one never forgets. No matter how much they turn the volume on, you hear every one of the parts at full fortissimo—and the volume came and lulled like the waves of the sea—and was echoed from the opposite balcony. All without organ.

They had a far bigger crowd than the Baptists because they have no seats. All stand, except those who have their foreheads against the floor in prayer. I counted an area and estimated that 1 in 6 were men; 83 percent were women. Average age about 60. Nobody seemed to be in any fear about attending church.

A Mere Matter of $25 Million

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HAYS of Ohio. Mr. Speaker, in view of the President's message yesterday telling how successful the Eisenhower doctrine had been in the Near East in spending $174 million, I thought the following editorial from the Wall Street Journal entitled "A Mere Matter of $25 Million" would be interesting. If the entire amount has been spent like this, and for the most part it has, you can see that it has done a great deal of good for the United States.

The editorial follows:

A MERE MATTER OF $25 MILLION

Saudi Arabia is a pretty warm place, but nobody there is quite as hot as some Congressmen in Washington are right now about the little matter of $25 million in foreign aid to King Saud.

It seems that when the King was here early this year negotiations were begun to grant Saudi Arabia that much money from the 1957 foreign-aid funds, and talks were started about where the money could best be spent for the country's economy. Naturally, there were some strings to the spending. The United States thought most of the funds ought to go to development of Damman, a port near the United States airbase at Dhahran. The Saudis were willing to spend some there, but wanted the balance spent for other purposes.

Ambassador Wadsworth made a number of trips to the King's desert palace to try to induce the King to take the money. But the King was reported preoccupied with other matters and the June 30 deadline passed.

None of that makes the Congressmen mad. What has them hot as a Bedouin is the fact that the State Department is back asking Congress to grant the amount of money again in the hopes that King Saud can be induced to accept it.

The International Cooperation Administration was wise to put some strings on the grant, considering the account of one item of foreign aid to Saudi Arabia dug up by the Hoover Commission. In 1953, ICA's predecessor, the Foreign Operations Administration, asked Saudi Arabia what the United States could do to help and the King suggested a vast bathhouse for pilgrims on their way to Mecca.

The bathhouse was to cost around $300,000 and to include steam sterilizers for the pilgrims' robes and prayer rugs. A site was chosen, work was begun and then FOA technicians discovered that there wasn't enough water there to run the steam sterilizers. The project was abandoned.

It may be that some similar strange idea of Saudi Arabia's economic needs led to the lack of agreement which ended in the failure of King Saud to pick up that $25 million check.

But we can understand the King's disinterest in the aid, considering the fact that he takes in some $250 million a year in oil revenues. What we find difficult is the insistence of the State Department that Congress also should insist on giving away that $25 million by making it again available to Saudi Arabia.

And considering all the circumstances, the best thing Congress can do with that unwanted $25 million is to make it, and more, available to the taxpayers by refusing to appropriate money for foreign aid that foreigners don't want.

Scientific Careers Offer Unlimited Opportunities

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HUDDLESTON. Mr. Speaker, it is alarming that students in high school and college today are not more interested in the sciences, especially in this atomic age.

Most certainly in the years to come there will be more and more need for scientists and engineers—physicists, in particular. Even today, the South cannot supply the college-trained scientific personnel its factories demand. Never has there been greater opportunity or challenge for the student of the sciences.

The Birmingham (Ala.) Post-Herald, one of the Souths' outstanding daily newspapers, justly views this situation with deep concern. Under leave heretofore granted, I am pleased to insert the following editorial from the Post-Herald's issue of August 1, 1957, entitled "Tomorrow Unlimited":

TOMORROW UNLIMITED

Lack of interest among high school and college students in science and mathematics courses continues to be one of the country's most disturbing educational problems.

Dr. Frank J. Soday, vice president and director of research of the Chemstrand Corp., of Decatur, speaking before the conference of Alabama Secondary School Principals pointed out that only 1 out of 11 high-school students studies chemistry and only 1 in 20 studies physics despite the fact that we are living in an atomic age.

He urged not only the school principals to become active in helping to overcome the manpower shortage in scientific fields but underscored the need for communitywide cooperation in the effort.

"The South especially has a vital stake in the manpower shortage," Dr. Soday said. "With 25 percent of the industry of the country in the South, its schools supply only 17 percent of the country's scientific and engineering graduates."

What a challenge that is to the young men and young women in our high schools today. What opportunity there is in this field whose boundaries are yet not even vaguely discernible.

Math and science are certainly not crip courses but for the serious student who will master them they open the way to a rewarding future indeed.

Name Calling

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an article by David Lawrence, which appeared in the New York Herald Tribune on Friday, August 2:

PRESIDENT CALLED TARGET OF SMEARING BY INNUENDO

(By David Lawrence)

WASHINGTON, August 2.—It must be the heat or else the political humidity. For one day someone in Congress says President Eisenhower doesn't have brains, and another day some other Member says the President is a lousy liar. Not long ago another Member said he didn't see much difference between Ike and Dave Beck.

All this comes under the head of free speech, but whether it's good manners and courtesy and upholds the dignity of Congress is something else again.

It is true, of course, that the sniping is being done by the Democrats and that modern politics evidently knows no limits to the smear—it's all supposed to be within the rules of party warfare.

But fortunately the public doesn't regard party zeal as permitting anyone to transcend the rules of gentlemanly conduct, especially in governmental affairs—and it may be doubted whether the people back home are proud of those representatives who engage in name calling. It was the late President Franklin D. Roosevelt who once said that, as soon as name calling starts, it is evident that the name caller is devoid of persuasive arguments and has begun to lose the debate.

KIND OF INNUENDO

There is a curious kind of innuendo in all the smears. The attempt lately has been to build in the public mind the impression that the President lacks integrity as well as fidelity to his office. At the press conference this week some one brought up a published story about Mr. Eisenhower having made a million dollars. He laughed this off and said that he would be glad to sell all his estate for that figure any time and would reap a big profit. Actually, except for his salary, what money he has today is the result of the proceeds from the book he wrote about his war experiences which was published before he became President.

Then there was the innuendo at the press conference—repeating a Senator's question in a Foreign Relations Committee hearing—that Mr. Eisenhower appoints Ambassadors primarily because they have contributed to political campaign funds. This, of course, the President indignantly denied.

The fact is that all Presidents get recommendations for appointments, and, as a rule, the one thing nobody ventures to mention to a President is that a political campaign contribution should be rewarded. Undoubtedly among those active in politics

there is considerable knowledge about who makes the campaign contributions, and it may influence some of those who send in letters of enthusiastic recommendation to a President. But it would be unrealistic to assume that the Democrats have suddenly become virtuous in this respect and do not intend to let anyone hereafter get an ambassadorial or Cabinet appointment who has made a sizable contribution to their party fund.

OTHER NOMINEES

The list of nominees who have gone to Foreign Service posts under Democratic administrations after making notable contributions, to presidential campaign funds is very long indeed—to mention only Joe Davies, Joe Kennedy, and Perle Mesta. It would be a grave mistake to imply, however, that none of them proved able, for most of them have, and so also have the Republican appointees. Business experience is an asset in diplomacy today.

As for Maxwell H. Gluck, the new Ambassador to Ceylon—who, when questioned by the Senate Foreign Relations Committee, couldn't remember offhand how to pronounce the name of the Prime Minister of Ceylon (S. W. R. D. Bandaranaike) or the full name of the Prime Minister of India (Jawaharlal Nehru)—it is doubtful whether any test in pronunciation has ever before been required before approving the nomination of our Ambassadors of Ministers to posts abroad.

NEW REFORM

It could be, of course, that the Democrats are instituting a new reform and that after this they intend to be very meticulous about such things. One would naturally expect the test now to be applied to the chairmanship of the Foreign Relations Committee of the Senate, if not indeed to membership itself on that august group. It might be the new rule that no Senator may qualify who cannot offhand recite and correctly pronounce the names of all the members of the Politburo in Moscow. Also, it might be urged that nobody can be chairman who can't reel off quickly the names of the Secretaries of the Treasury of each government to which America has made financial grants in the foreign-aid program in the last 10 years.

There are lots of things that could be added to such a quiz. It might be broadened to include some of the reporters who ask the President questions at the press conference. One wonders how many could spell Nehru's first name or give quickly the name of the Prime Minister of Ceylon. Surprising as it may seem, there are things that even the members of the press don't know—but then they are used to invectives to describe their shortcomings.

Modern Conveniences Add Variety to Our Daily Life

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. HUDDLESTON. Mr. Speaker, this is an era of modern conveniences which make possible the most luxurious living ever known. New conveniences of life appear on the American scene almost daily. There is no doubt but that these modern gadgets and contrivances make our daily life increasingly varied and far more interesting.

Contrary to popular thinking, the advent of one innovation does not necessarily replace the out-moded model. All seem to have a place in our crowded life, as an editorial in the July 28, 1957, issue of the Birmingham (Ala.) News, entitled "United States Living Is More and More Varied for All," aptly illustrates. Under leave heretofore granted, I am pleased to insert this sprightly editorial:

UNITED STATES LIVING IS MORE AND MORE VARIED FOR ALL

We were struck by figures given out recently on the number of radio sets in this country. Many, many families have several—practically one to the room.

Not only that, sales in phonographs have continued upward and upward and the phonograph record business, as everybody knows, is booming. Indeed, radio and records virtually go hand in hand now. This is the age of the disk jockey, and as he spins his platters, he builds up an appetite, especially among young teen-agers, for the records. The thing is kind of reciprocal, and what helps one helps the other.

All this in the face of TV. Television continues to hold large audiences, obviously, but poeple are more likely to turn their sets off now if programs are mediocre. Further, TV has come—for much of the country during the warmer months—to have competition with the American desire to do things outdoors, and though TV has come through with handy portables, many persons go outdoors leaving the TV set inside. Still, the business of video continues also to boom.

What strikes us in all this is the immense, growing, variety open to the American family looking for entertainment. It was only a few years ago that people were saying TV would kill movies. While it has certainly changed the pattern of movie making, has added many outdoor theaters to some definite indoor theater losses, television hasn't killed movies at all.

And can you remember the dire things said about radio when TV was finally perfected? Radio was dead, they said. But it wasn't.

And earlier, radio was said to have meant the end of the phonograph. Today the speciousness of this is obvious.

Everything keeps growing, and we seem to hold on to most of the things that are created for our pleasure or use.

Indeed, about the only thing we can think of offhand that really lost out was the Murphy bed.

(That was a bed that folded straight up into a wall closet, Junior, and be glad you don't have to sleep on one.)

Atomic Energy and Health

EXTENSION OF REMARKS

OF

HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. COFFIN. Mr. Speaker, I should like to insert in the RECORD today a thought-provoking article by the noted essayist, E. B. White, from the July 27 issue of the New Yorker magazine. In this article, Mr. White touches on one of the most critical and sobering questions confronting us in our search for national security and peace. The article follows:

I see by the paper this morning that a steel drum containing radioactive sodium waste is floating at sea, about 185 miles from here. It is described as "a menace to navigation," and I guess it is a menace, all right—at least, I would not want to hit it while out sailing. The news story says the Atomic Energy Commission has authorized the dumping of radioactive sodium waste in the ocean. I sometimes wonder about these cool assumptions of authority in areas of sea and sky. The sea does not belong to the Atomic Energy Commission, it belongs to me. I am not ready to authorize dumping radioactive waste into it, and I suspect that a lot of other people to whom the sea belongs are not ready to authorize it, either. The only reason the Commission authorizes it is that the Commission is desperate; it doesn't really know how to get rid of atomic waste, and neither does anybody else.

A neighbor of mine in Maine, Dr. Clarence Little, who experiments with mice, told members of the Bangor Rotary Club the other day that because of fallout their children's children will be abnormal; they will have water on the brain, club feet, defective kidneys, defective eyes. I recall that when the AEC was waiting, last May, for suitable weather for touching off the experimental blasts in Nevada, it left the decision about the date to an electric brain. Whether this brain had water on it I don't know. Another mechanical brain that I read about recently suddenly refused to think at all. Men stood by and fed it questions, but it seemed staggered by them and failed to come up with an answer, which did not surprise me. I am unable to understand how any man in a responsible position in any country of the world, when told that there is a wide difference of opinion as to the effects of radiation on people yet unborn, can choose the optimistic view and discard the pessimistic view, on the mere chance that the optimists are correct in their prophecies. Suppose they are wrong. Suppose the pessimists, or alarmists, are correct. What then will we have done in our arrogance?

These test explosions are for security, but it would appear from some of the evidence at hand that we are now in the business of buying security for ourselves with the lives and bodies of unborn children, and if that should prove to be the case, then I think this is the ugliest bargain I ever heard of—uglier and more bestial than any other bargain ever made on earth, and I am ashamed to be a part of this race of shrewd traders and selfish security hunters. That our intentions are good is a poor excuse. We seem able to whip ourselves into a frenzy of solicitude for the life of a boy trapped in a well, at the same time gambling away the lives of thousands and perhaps millions of boys yet to be born, most of whom will never fall into a well, except the well we are digging for them in our ignorance, a well so deep and terrible that it staggers even a mechanical imagination.

Having split the atom, we assume that we must keep splitting it, contamination or no contamination, as though, having broken a horse, we assume we must ride. Atoms for war have the pretext of security, atoms for peace the pretext of heat and power for future ages. The security is fast fading in a general uneasiness about the consequences. As for the heat and the power, what are we proposing to heat, and whom are we planning to endow with power? If some of the predictions come true, then we are in fact engaged in providing foot warmers for the clubfooted and power for those with water on the brain and defective vision. I do not know, and neither does anyone else, what sort of murder I am being made party to by these authorizations. I just hope that my generation is not destined to become

known as the clever generation, full of ingenuity displayed in small matters. I hope that in the giddiness of our triumph we have not already placed the atomic submarine ahead of the sea itself, the plane ahead of the sky.

Under the Atomic Energy Act of 1954, the Atomic Energy Commission is responsible for disposing or supervising the disposal of all dangerous atomic waste materials. If Mr. White's article is true, i. e., that a steel drum of radioactive waste has been allowed to escape proper sea burial, then an investigation should be made of the AEC's failure to discharge its custodial and disposal responsibilities.

Embassy Overseas Construction Program for 550 Buildings Will Cost More Than $200 Million

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. EVINS. Mr. Speaker, while the administration is generous with approval of requests for Federal building construction overseas, Members of Congress, as we all recognize, are experiencing difficulty in securing progress on post office and other Federal buildings in the districts of the Members throughout our own country. I believe the membership will find of interest a report from the Department of State concerning the number and extent of Federal buildings under construction or planned for embassy housing and allied housing requirements overseas.

This report indicates that 18 projects are now under construction, costing $21,605,086. Three additional projects for which bids have been called for total $2,375,000, and the Department is considering 18 additional projects which are now in the planning stage at an estimated cost of $15,985,000. The total cost of these 39 projects is $39,965,086—approximately $40 million at this time.

In addition, the Department has announced plans for a 10-year construction program for our consular and diplomatic service and related civilian operations totaling $200 million, which would be required over a 10-year period.

In this connection, Mr. Speaker, I ask unanimous consent that the letter from Mr. William P. Hughes, Director, Office of Foreign Buildings, Department of State, together with detailed report of the embassy construction program may be reproduced in the Appendix of the RECORD.

The letter and report follow:

DEPARTMENT OF STATE,
Washington, July 25, 1957.

The Honorable JOE L. EVINS,
House of Representatives.

DEAR MR. EVINS: I have received your letter of July 15, 1957, requesting certain information relating to the embassy construction program. Your letter was also acknowledged by telephone on July 16, 1957.

At the present time the Department of State, through its Office of Foreign Buildings, has the following projects under construction:

Post	Project	Amount
Accra	Office building, staff housing (8 units).	$454,170
Oslo	Office building	1,177,388
London	do	[1] 1,700,000
The Hague	do	1,063,089
Munich	do	1,332,237
Tangier	Office building and consulate general residence.	556,023
Baghdad	Office building, embassy residence staff housing (15 units).	19,34,436
Basra	Office building, staff housing (3 units).	219,016
Lagos	Office building, staff housing (4 units).	406,000
Leopoldville	Office building, staff housing (2 units).	330,192
Tegucigalpa	Office building, embassy residence.	521,138
Asunción	do	670,000
Hong Kong	Office building	856,400
New Delhi	Office building, staff housing (48 units).	2,059,122
Karachi	Office building	1,267,000
Djakarta	do	981,305
Vienna	Staff housing (46 units)	1,175,066
Manila	Staff housing (30 units)	401,529

[1] Total estimated cost of London project is $4,500,000.

The Department has called for bids on the following projects:

Post	Project	Estimated amount
Belgrade	Staff housing (45 units), warehouse, garage.	$900,000
Nagoya	Office building, staff housing (8 units).	375,000
Seoul	Embassy residence, staff housing (36 units).	1,100,000

In addition, the Department is actively planning the following projects:

Post	Project	Estimated amount
Manila	Office building annex, staff housing (60 units).	$2,700,000
Mexico City	Office building	3,000,000
Athens	do	1,000,000
Bangkok	do	750,000
Beirut	do	500,000
Teheran	Office building annex, embassy residence, deputy chief of mission residence.	$900,000
Algiers	Office building	300,000
Santiago	Embassy residence	250,000
Port-au-Prince	Office building	335,000
Quito	do	500,000
Lima	do	1,000,000
Ciudad Trujillo	Office building annex	250,000
Taipei	Office building	650,000
Saigon	do	1,200,000
Singapore	do	500,000
Rabat	Office building and embassy residence.	750,000
Dublin	Office building	400,000
Helsinki	Office building annex	1,000,000

Two years ago the Department presented to the Congress a 10-year program for physical facilities abroad to house the consular and diplomatic service and related civilian operations. A careful estimate made at the time indicated that about $200 million would be required over the 10-year period to satisfy these requirements. For fiscal year 1957 the Congress appropriated $19 million, of which $14 million was to represent the utilization of foreign currencies and $5 million was actual dollar appropriation. For 1958 the Congress has appropriated $18,500,000 for this program, of which $15 million is to be in foreign currency utilization and $3,500,000 in dollar appropriation. In addition to construction activities this appropriation also finances the cost of operating expenses, maintenance, and repair costs, furniture and equipment costs in all buildings utilized abroad by the Department of State that are Government owned or under leasehold for periods in excess of 10 years. Enclosed is a mimeographed statement of the entire 10-year program as it was submitted to the Congress 2 years ago, which may be of help to you.

I appreciate this opportunity to provide you with information. If we can be of further assistance to you, please do not hesitate to call upon us.

Sincerely yours,

WILLIAM P. HUGHES,
Director, Office of Foreign Buildings
(For the Secretary of State).

DEPARTMENT OF STATE OFFICE OF FOREIGN BUILDINGS

Foreign building requirements, 1957–65 inclusive, prepared Nov. 1, 1955

	Grand total	Estimated cost	
		1957–60	1961–65
Construction and acquisition:			
American Republics area	$22,475,000	$10,785,000	$11,690,000
European area	33,516,400	18,906,800	14,709,600
Far Eastern area	16,683,300	12,068,300	4,615,000
Near Eastern area	27,465,500	17,254,500	10,211,000
Total	100,240,200	59,014,600	41,225,600
Nonconstruction:			
Operation of buildings	23,711,574	8,652,147	15,059,427
Realty repairs and maintenance	22,805,574	8,236,147	14,569,427
Replacement of equipment	4,228,000	1,386,000	2,842,000
Buildings and grounds improvement	4,228,000	1,135,000	3,093,000
Initial furniture and fixtures	14,908,010	8,309,700	6,598,310
Repair and replacement of furniture and fixtures	8,325,253	3,062,614	5,262,639
Unscheduled projects	4,500,000	2,000,000	2,500,000
Lease payments	3,045,641	1,535,141	1,510,500
Conduct of program	10,800,000	4,750,000	6,050,000
Total	96,552,052	39,066,749	57,485,303
Grand total	196,792,252	98,081,349	98,710,903

Staff housing is programed to provide Government-owned residences for all Ambassadors and staffs and a residence for senior agriculture attachés is programed at all embassies.

No allowance has been made for dollar proceeds of property sales. The annual budget will take into consideration the proceeds of sales actually consummated.

The program reflects an increasing requirement for property repairs and maintenance. Past estimates for repair and maintenance have been inadequate to properly maintain the capital investment already made in the properties and to assure full and effective utilization of the facilities. In addition, the basic repair and maintenance requirement increases as additional properties are acquired.

The estimates for the cost of individual projects reflected in this program are based on the best knowledge available at this time on local cost and other factors which will affect construction at the post shown. Accordingly, the cost of individual projects cannot be considered in any respect firm budget estimates for the projects listed. Further, the program is based on the needs of the Government overseas without regard to current or anticipated availability of local currency credits.

The Late Senator Walter F. George

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. SIKES. Mr. Speaker, young men, and women have always looked to their elders for inspirations of character, belief and success. A shining example of one of the finest inspirations was the late Senator Walter F. George of Georgia.

My admiration for the late Senator began in my college days when every impression that is a good impression makes a lasting imprint. I formed a great admiration for the distinguished gentleman from Georgia. Years later after coming to Washington as a Representative of the people of northwest Florida, that admiration for Senator George continued to grow, not only for his great ability as a legislator, but for his personal friendliness, helpfulness, and constant cooperation as well. Walter F. George knew and recognized the need for good sound government and by his actions he was a living symbol for good government. Until the last, he was willing to forget his personal well-being and to place his service to his country above all else.

He was not a man eager for wide acclaim and for recognition for the great work he did, but his record of statesmanship and personal dignity will be remembered and admired by many generations to come.

I hold the deepest sympathy for Mrs. George and the other loved ones of the late Senator; however, I am confident this great sorrow is softened through the knowledge that the people of the United States share in this grief. While his death is a great loss to us all, his lifetime work is a gain that will last throughout the days of this Nation.

Mr. Speaker, many wonderful things can be said of the late Senator, but as I look back through the years and recall

my own experiences I feel that one of his greatest contributions has been the inspiration of his life and work to the youth of America for good government, fair play, and humble service for all men and women.

W. Gordon Robertson

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the August 2, 1957, issue of the Produce News, an extremely popular publication of the fruit and vegetable industry.

This article relates to Mr. W. Gordon Robertson, who was recently elected president of the Bangor & Aroostook Railroad Co.

I have known Mr. Robertson personally. He has made a superb contribution to the advancement and development of the potato industry in the State of Maine, and I feel confident that in his new position Mr. Robertson will perform in a manner that will redound to the benefit of the Bangor & Aroostook Railroad Co.

The article follows:

WHO'S WHO IN THE PRODUCE INDUSTRY: W. GORDON ROBERTSON

Though he is now president of one of the Nation's important railroads, W. Gordon Robertson richly deserves to be included in this series of Who's Who in the Produce Industry.

It was only last month that Mr. Robertson was elected president of the Bangor & Aroostook Railroad Co., having relinquished his post as head of Beaver Brook Farms, Inc., the large potato company in Caribou, Maine. His jump from potato growing to the presidency of a railroad looks like a big jump indeed, but the truth is that Gordon has for many years been intensely interested in transportation matters and, on the other hand, the Bangor & Aroostook Railroad has been intensely interested in potato matters.

Mr. Robertson had been on the board of directors of the BAR since April 1953, and he has been a member of the executive committee since April of this year.

FINE BAR POLICY

There are few railroads that take more interest in the welfare of the shippers they serve than the Bangor & Aroostook. The BAR has been the last to make rate increases, and it is one of the very few railroads that gears its schedule to the needs of its customers with such utter disregard to its own convenience.

Mr. Robertson's predecessor, Curtis M. Hutchins, who is now chairman of the board, was a consistent champion of the theory "the public be pleased," and there is every reason to believe that Mr. Robertson will continue these policies.

No rigor mortis policy is likely under the Robertson regime. At this moment the BAR is considering meeting truck competition with a reduction of rates to meet this rivalry.

BIG TRUCK THREAT

It so happens that on September 1 trucks using Maine highways will be allowed to increase their axle load by some 8,000–10,000 pounds, which will bring their total load up to 36,000–38,000 pounds. No one needs be told how this increase in weight will capture potato tonnage for the truckers. Gordon, however, is not one to take this lying down, and he and Tom Clark, vice president in charge of traffic, are devoting every effort to studying the situation and meeting the competition.

This is the first time on record that a potato shipper has become president of a railroad—certainly no one has ever taken the post in one jump as has Gordon Robertson. It is a tribute both to himself and to the perspicacity of the railroad's board of directors that they have seen fit to take a man from the ranks of potato shippers and place him at the head of their railroad. Of course, potatoes are a large part of BAR traffic—but by no means all of it.

BORN IN SCOTLAND

Gordon Robertson has a splendid business background. He was born in Edinburgh, Scotland, on May 13, 1911, and was educated in the public schools there. He came to Canada in 1929 and worked on farms in Ontario and New Brunswick. He was employed by Guy G. Porter Co., Perth, N. B., and 3 years later joined International Fertilizers, Ltd., at St. Johns.

Nine years later he moved to Caribou, Maine, but instead of becoming a potatoman he became a soldier. He was in the Canadian Army from 1941 to 1945 and, after being wounded in Normandy, he was discharged with the rank of infantry captain.

In 1946 he returned to industry, forming Albatross Fertilizers, Inc., being its general manager for 11 years. From fertilizers he went into the potato business itself, forming Beaver Brook Farms, Inc., and heading that company for the last 10 years.

One of his most recent accomplishments has been the promotion of the export potato business with Spain and South America, which work was conducted under the auspices of the Maine Potato Council.

Tall and handsome, Gordon is a good family man. In 1930 he married Christine Baird Young, a Scottish lass, and they have three children, Winifred, William G., and Robert G.

The Maine potato industry can look for the continuance of understanding and cooperation from the Bangor & Aroostock Railroad under the new president and former potatoman, W. Gordon Robertson.

Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. AVERY. Mr. Speaker, the following is a letter which I received from Mr. Thad M. Sandstrom, General Manager of WIBW-TV and WIBW radio, Topeko, Kans. Mr. Sandstrom makes reference to suggested improvements in the Federal Communications Commission. Also Mr. Sandstrom points out that in his opinion the Commission has made great progress under the direction of Commission Chairman George C. McConnaughey. Mr. Sandstrom's outstanding work and experience in the field of radio and television certainly qualifies him to make constructive observations concerning areas of improvement in Federal Communications Commission activities. I think Mr. Sandstrom's letter deserves serious attention.

Topeka, August 1, 1957.

The Honorable WILLIAM H. AVERY,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. AVERY: Thank you for your letter of July 25 concerning the hearings pertaining to the Federal Communications Commission.

While many of us in the radio and television industry have been critical of the Commission in the past, and probably will continue to be in the future, it is my feeling that the Commission, basically, has done a good job.

The major area of improvement from the standpoint of the radio-TV industry, would in my opinion be threefold:

1. Lessening of the paperwork load. This has improved a considerable amount in the last 10 years, but I still believe that the Commission is calling for information from time to time that is really none of its business.

2. Extension of the licensing period of 5 years. The National Association of Radio and Television Broadcasters has been urging and making a concerted effort to secure 5-year licenses. It seems to me that the radio and television industry has matured and many times over has proven its ability to serve in the public interest. The 5-year license would indeed be a great benefit.

3. Remote control for directional stations. Tests have been conducted during the past few years which prove that AM stations can operate their transmitters by remote control, even in the case of stations using directional antenna systems. Some of the smaller stations which have directional systems, such as KARE in Atchison, certainly have been burdened by the Commission's slowness in acting on this regulation. In this day and age, radio stations must take advantage of every technical advancement, and remote control operation of broadcast transmitters with directional antennas is a must.

Perhaps you have some questions about my comments, I'd be happy to hear from you. I would like to make it clear that I feel that the Commission attitude toward the radio-TV industry is much better than it was a few years ago, and great progress has been made in the administration of Commissioner McConnaughey.

Cordially yours,

THAD M. SANDSTROM,
General Manager.

Defect in Illinois Election Ballot Needs Amending

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. BYRNE of Illinois. Mr. Speaker, for a long time I have given serious thought to the position of candidates for Congress on the ballot in Illinois. After I was elected in 1956 many of my friends expressed the hope that I would enjoy Springfield. I hastened to explain that I was going to Washington and not Springfield, the seat of our legislature. I am convinced that many voters in Illinois are often confused as for whom they

are voting and for what position. I certainly believe that remedial changes should be made to remove any confusion about voting for a candidate for Congress in Washington or voting for a candidate for Illinois' State Legislature.

To that end I have met with the Republican Members of Congress from Illinois and we adopted a resolution which we have sent to the members of the State Electoral Board of Illinois which is composed of the Governor, William G. Stratton; the secretary of state, Charles Carpentier; the State treasurer, Elmer Hoffman; the attorney general, Latham Castle; and the auditor of public accounts, Elbert Smith.

I would like permission to have these remarks along with the resolution sent to the electoral board inserted in the RECORD.

I am gratified to read the splendid editorial appearing in the Illinois State Journal of August 3 in which the paper urges that consideration is given our request. The position of congressional candidates on the ballot is not logical. I contend, and am supported by other members of the Illinois Republican delegation in this, that congressional candidates names should be placed after the candidate for United States Senator.

The resolution and editorial follow:

We, the Illinois Republican Members of the 85th Congress, first session, assembled at a meeting in the office of the Honorable NOAH M. MASON, 15th District, Illinois, room 1108, New House Office Building, Washington, D. C., on Tuesday, July 24, 1957, agreed:

Whereas in the presidential election of November 1956, President Eisenhower, Vice President NIXON, the congressional campaign committee and the senatorial campaign committee proclaimed and emphasized the necessity and advisability of electing a Republican Congress, we did not succeed; and

Whereas the voters of the State of Illinois were told that "Ike needed a Republican Congress and a Republican Congress was a must in 1956," we elected a President and Vice President, but failed to elect a Republican Congress by a substantial majority; and

Whereas the very nature of the office of Congressman, described as Representative in Congress on every ballot and voting machine in Illinois is that of a Federal office and synonymous with duties in the Nation's Capitol; and

Whereas all political advertising is directed toward the election of candidates and the appeal is to the voters of the cities, towns, and rural communities; and

Whereas voters would naturally expect and look for a candidate for Congress on a ballot or voting machine after the candidate for United States Senator; and

Whereas in the State of Illinois in a presidential election this is not the fact, but on the contrary the office of Representative in Congress appeared in the position of 14A or 14B on every voting machine and in the same order on every paper ballot; and

Whereas such a position on the ballot is confusing, misleading, and is a definite handicap to a congressional candidate; and

Whereas in other States no such order of candidates as exists in Illinois is authorized or permitted and in some States they have a Federal ballot, carrying the names of the presidential ticket and the candidates for Senator and Congressman; and

Whereas in Illinois the State electoral board, the Governor, the secretary of state, the attorney general, the State treasurer, and the auditor of public accounts have the power, without legislative change, to certify the order in which the names should appear on the ballot; and

Whereas if the office of Representative in Congress were placed on each ballot after United States Senator, it would not handicap the State ticket nor injure the county ticket and would help to relieve the confusion and similarity of Federal and State offices, such as Representative in Congress and members of the general assembly: Now, therefore, be it

Resolved, That copies of this resolution should be sent to each member of the State electoral board of Illinois.

EMMET F. BYRNE, CHARLES W. VURSELL, RUSSELL W. KEENEY, TIMOTHY P. SHEEHAN, LEO E. ALLEN, NOAH H. MASON, WILLIAM L. SPRINGER, HAROLD R. COLLIER, ROBERT H. MICHEL, WILLIAM E. MCVEY, LESLIE C. ARENDS, SID SIMPSON, ROBERT CHIPERFIELD, MARGUERITE S. CHURCH

DEFECT IN ILLINOIS ELECTION BALLOT NEEDS AMENDING

Illinois' 14 Republican Congressmen have pinpointed a glaring defect in the makeup of this State's election ballot. In a letter of protestation to Governor Stratton and other members of the State electoral board, the Congressmen point out that names of congressional candidates were 14th in a long list of names last fall. Names of United States senatorial candidates, by comparison, were third from the top.

Congressman EMMETT F. BYRNE, of Illinois, who is leading the effort to get the ballot changed, says he is convinced that one of the reasons the Republican congressional candidates lost so many votes in the 1956 election is due to the misleading placement of candidates' names on the State and Federal ballots in Illinois.

That may or may not have contributed to the defeat of Republican candidates. But there is no question about the congressional names being misplaced. Last fall's ballot put the congressional candidates' name between the clerk of the appellate court and State representatives. All of the State candidates, including three trustees of the University of Illinois, were above the Congressmen's names.

The logical order on the ballot for a congressional candidate's name is with the other Federal candidates when other Federal candidates' terms come up. When other Federal candidates are not on the ballot, congressional candidates ought to have a separate listing on the ballot, or at least at the top of the ballot. The State board should give due consideration to the request of the 14 Republican Congressmen.

Judge Robert Van Pelt

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. WEAVER. Mr. Speaker, it is with pleasure and with pride that I call your attention to Judge Robert Van Pelt, who was sworn in as judge of the Lincoln Federal district court last Thursday morning. Judge Van Pelt succeeds Judge Delehant, who administered the oath of office, and the late Judge Thomas C. Munger. These two outstanding men have made a distinguished record in this office, and Judge Van Pelt is eminently qualified to carry on their high tradition of public service.

Judge Van Pelt brings to his new office a fine record of integrity, fairness, and rare perspicacity; he is a man who uses as his personal philosophy for conduct a rule from the Old Testament "to do justly, to love mercy, and to walk humbly with my God."

Quoted below is an editorial and a news item from the Lincoln Journal of August 1 and the Lincoln Star of August 2, 1957, respectively:

[From the Lincoln (Nebr.) Star of August 2, 1957]

VAN PELT SWORN IN

Some 200 witnessed the swearing-in of Robert Van Pelt as judge of the Lincoln Federal district court Thursday morning. But Nebraskans everywhere marked the occasion with satisfaction and approval. Judge Van Pelt has the full confidence of his State. It feels that the high level with which justice has been dispensed in the Federal district courts of Nebraska will know no diminution. There is nothing more reassuring to a free people than to know that their courts are in learned, competent and just hands for they are, indeed, a great refuge.

The Lincoln bench has been a fine example of the best in justice over a long and continuing span of years. Judge Van Pelt, himself an outstanding figure at the bar and in the community, succeeds distinguished predecessors and has the examples of the late Judge Thomas C. Munger and the currently retiring Judge John W. Delehant as a lamp to his feet.

Judge Delehant, himself the occupant of the bench the past 15 years, was present at the Thursday ceremonies. Nebraska bids a regretful farewell to him as the presiding figure of the Lincoln court but rejoices that he contemplates further service on occasion. It is not averse under these circumstances to sharing him with other Federal districts.

[From the Lincoln (Nebr.) Star of August 2, 1957]

TWO HUNDRED SEE ROBERT VAN PELT TAKE FEDERAL JUDGE OATH

United States District Judge Robert Van Pelt took the oath of office Wednesday morning as nearly 200 persons witnessed the ceremonies in the Federal courtroom in Lincoln.

Federal Judge John W. Delehant administered the oath and affidavits to his successor, after which Sam Van Pelt helped his father into the judicial robes. Sam, a University of Nebraska graduate, plans to enter the NU College of Law after his service in the Armed Forces is completed.

Judge Van Pelt next was seated on the bench with Judges Richard E. Robinson of Omaha, Chief Judge for the United States District of Nebraska, and J. W. Woodrough and Harvey Johnsen, judges of the United States Circuit Court of Appeals.

Judge Delehant said, "I appreciate being able to administer the oath of office to my successor" and added that his welcoming of Judge Van Pelt had a "warm and personal" greeting.

Representatives of State, Federal, and local legal and judiciary groups made congratulatory remarks to Judge Van Pelt.

CONFIDENCE, PRIDE

Barton Kuhns, president of the Nebraska State Bar Association, expressed the State organization's "confidence and pride" in the appointment of Judge Van Pelt.

District Judge John L. Polk said the new appointee's "ability and purposes as a trial lawyer has been of the highest character" and have been "so recognized by his appointment to the Federal bench."

Circuit Judge Harvey Johnsen of Omaha said the Lincoln post has a "unique position in the Federal system."

HIGHEST STANDARDS

He paid tribute to the highest standards of the past 50 years set by the late Judge Thomas C. Munger and Van Pelt's immediate predecessor, Judge Delehant.

"Judge Delehant has gained the reputation of being one of the outstanding judges in the United States," Judge Johnsen said.

Circuit Judge J. W. Woodrough said he had "the hope of great things for Judge Van Pelt."

Judge Richard Robinson, who shares the United States District Court bench for Nebraska with Judge Van Pelt, said his fellow jurist is "eminently qualified" and extended "heartfelt congratulations."

BAR REPRESENTATIVES

Congratulatory remarks also were made by Frederick Patz for the Lincoln Bar Association, Ed Garvey for the Omaha Bar Association, and George Turner for the American Bar Association, and by United States Attorney William C. Spire of Omaha.

Guy Chambers, representing Senator ROMAN HRUSKA, and Maurice S. Hevelone, representing Senator CARL CURTIS, read congratulatory messages from the two Nebraska Senators in Washington, D. C.

Dean E. O. Belsheim of the University of Nebraska College of Law, extended the congratulations of the faculty.

Acknowledging the congratulatory remarks, Judge Van Pelt said he would serve to the best of his ability, being not unmindful of the distinction brought to the Lincoln post by Judges Munger and Delehant.

PERSONAL PHILOSOPHY

Judge Van Pelt noted his personal philosophy for conduct, taken from a rule in the Old Testament, is "to do justly, to love mercy, and to walk humbly with my God."

Judge Van Pelt thanked Judge and Mrs. Delehant for their personal kindnesses.

Judge Delehant, who retired from the Lincoln post, will continue to serve in the Federal judiciary system on special assignment. He will reside in Omaha.

[From the Lincoln (Nebr.) Journal of August 1, 1957]

SUCCESS TO LINCOLN'S FEDERAL JUDGES

Federal District Judge Robert Van Pelt ascended to the Federal bench in the Nebraska judicial district succeeding Judge John W. Delehant who retired after 15 years of constructive, dedicated service.

Both men are men of unquestioned ability, integrity, and capability of service. To both the publish wishes full measure of success.

On this important, happy, and ceremonial occasion of swearing in a new Federal judge, it seems naturally regrettable from the standpoint of the public's understanding of the judiciary that pictures of the occasion could not be permitted as might be prescribed by the presiding judge.

Photographs of such occasion, it would seem, could add rather than detract from the impressiveness, dignity, importance, and understanding of the occasion. Except for the lawyers, probably hardly 2 persons in 1,000 have even visited in person or seen the United States Federal court in Lincoln—1 of the 2 permanent Federal courts in the State.

Whatever the honest difference of opinion from time to time between the bar and the press on question of photographing criminal trials (a difference which the bar and press are continually discussing with mutual respect even when in disagreement), it would seem unfortunate that ceremonial functions such as the swearing in of Federal judges, district attorneys or marshals or naturalization of aliens have not been reproduced for the public at large by photography.

[From the Lincoln (Nebr.) Journal of August 1, 1957]

VAN PELT DONS ROBES AS NEW FEDERAL JUDGE

(By Leo Scherer)

Robet Van Pelt, a Lincolnite lawyer and native-born Nebraskan, was sworn in as United States district judge Thursday morning during ceremonies in the Federal courtroom.

Federal Judge John W. Delehant of Lincoln administered the oath of office to his successor before a crowded courtroom of more than 200 persons.

Judge Delehant said, "I appreciate being able to administer the oath of office to my successor. It's a rare and honored occasion."

"However, this does not mean I shall discontinue the performances of judicial work."

The judge added that welcoming his successor, Judge Van Pelt, was a warm and personal greeting.

Van Pelt, 59, succeeds Judge Delehant who retired at the end of April, but who is continuing his work on a voluntary call basis.

The new Federal judge seemed choked with emotion when he finished his speech to the crowd.

LETTER IS READ

A letter signed by President Dwight Eisenhower and Attorney General Herbert Brownell which relayed personal congratulations and approval of the appointment was read during the ceremonies.

After the oath of office, Sam Van Pelt, the judge's son, assisted his father with the black robe.

Judge Van Pelt then took his place on the Federal courtroom bench with Federal Judge Richard E. Robinson, of Omaha, United States Circuit Judges J. W. Woodrough and Harvy Johnson, both of Omaha and Judge Delehant, of Lincoln.

Judge Van Pelt told the audience, "I feel very humble to follow to the bench such great Federal judges as Judge Delehant and the late Judge Thomas C. Munger.

HIGHEST TRADITIONS

"Their busy lifetime of service developed the highest traditions in the Nebraska judiciary."

"I just hope that some of the radiant glow that graced these great judges will shine through me."

Expressing congratulations to the new Federal judge were Fred Patz, president of the Lincoln Bar Association; Judge John L. Polk, for the Nebraska District Judges Association; William Spire, United States attorney for Nebraska; Barton Kuhns, of Omaha, president of the Nebraska State Bar Association; Dean E. O. Belsheim, of the University of Nebraska College of Law; George Turner, clerk of the Nebraska Supreme Court, representing the American Bar Association; Ed Garvey, president of the Omaha Bar Association; Guy Chambers, of Lincoln, representing Senator Roman Hruska, and Maurice Hevelone, of Beatrice, representing Senator CARL CURTIS.

TRIBUTE TO PREDECESSOR

Speakers paid tribute to Van Pelt's predecessor, Judge Delehant, calling him "one of the ablest judges in the United States and a man of extraordinary ability and fairness."

Patz told Judge Van Pelt that his appointment was "an honor to himself and the Lincoln Bar Association."

Judge Polk said Van Pelt's new assignment was "a contribution to the administration of justice in Nebraska and also a personal award for him."

Judge Robinson presided over the hour and a half ceremonies while both Judges Woodrough and Johnson participated.

Foreign Aid as It Affects Employment in the United States

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, during the past several years that the Congress has considered the program of foreign aid, arguments have been made in support of it that most of the money is spent in this country and hence it is justifiable on that ground, if on no other. What are the facts?

Study No. 9 prepared for the Senate Special Committee To Study the Foreign Aid Program and this particular phase of it includes a table estimating employment as it affects the various States. I insert it at this point:

Estimated employment related to foreign aid, by States, 1955

Alabama	2,872
Arizona	517
Arkansas	324
California	34,882
Colorado	235
Connecticut	9,971
Delaware	--
Florida	813
Georgia	1,919
Idaho	188
Illinois	30,694
Indiana	15,265
Iowa	2,051
Kansas	4,599
Kentucky	1,664
Louisiana	1,045
Maine	388
Maryland	4,244
Massachusetts	10,726
Michigan	30,302
Minnesota	2,320
Mississippi	3,045
Missouri	1,764
Montana	376
Nebraska	35
Nevada	-------
New Hampshire	248
New Jersey	17,307
New Mexico	-------
New York	38,249
North Carolina	3,959
North Dakota	-------
Ohio	39,767
Oklahoma	1,674
Oregon	972
Pennsylvania	34,010
Rhode Island	2,235
South Carolina	324
South Dakota	-------
Tennessee	1,919
Texas	12,062
Utah	329
Vermont	-------
Virginia	3,065
Washington	4,123
West Virginia	3,737
Wisconsin	9,111
Wyoming	-------
Total	333,350

In my own State of Wisconsin the estimated number of people employed as a result of foreign aid is about 9,000. The grand total, however, is 333,350. In other words, Mr. Speaker, out of a total labor force of more than 65 million people, the percent employed as a result of the for-

eign aid program is 0.513 percent, just about one-half of 1 percent. Can it be said, therefore, that this program has any great effect upon employment? Certainly it should not be concluded that in the absence of foreign aid the number of persons above would become unemployed. Tax reductions which permit greater spending by American consumers and an easing of credit restrictions would tend to sustain employment.

That State Department Poll

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. HIESTAND. Mr. Speaker, the Montrose, Calif., Ledger, one of the most sound and reliable newspapers in the district I represent, printed an editorial on August 1, which I consider worthy of reproduction in the RECORD.

Since it has to do with some of the outstanding work of our good and able colleague, the Honorable GLEN LIPSCOMB, it is herewith reproduced:

When Abraham Lincoln spoke of "fooling all of the people some of the time," he gave the Nation a solemn warning as well as a clever quote. If the present Republican President would like to take a tip from Honest Abe, he could give a little attention to what appears to be a fairly successful attempt to fool all the people all of the time, an attempt that has been inherited by the GOP from its New Deal, Fair Deal, Big Deal predecessors.

According to reports from Washington, it appears that the State Department has handed $552,927 to the National Opinion Research Center at University of Chicago over the past 14 years. In short, the trick is to have the research unit come up with the desired findings, which are then leaked to the public. This is a neat method of controlling public opinion, and through it, it was found last fall that 90 percent of the American people favor foreign aid.

The natural reaction of a reader, upon seeing that 90 percent of his fellows are in favor of something, is to get into line. At least that is what the State Department hopes.

It is interesting to note that the congressional investigating committee probing such goings-on, had to put State Department and International Cooperation Administration officials under oath in order to get a straight answer.

The revelations came when Congressman GLEN LIPSCOMB, of Los Angeles, tried to find what happens to the secret $1 million-a-year emergency fund voted the Secretary of State. It is interesting also to note that as a result of LIPSCOMB's persistence, the State Department cancelled the poll contract, and the Budget Bureau ruled that the expenditure, undetected for 14 years, an illegal use of the Secretary's unaudited funds. LIPSCOMB says the polls were used to hoodwink the Congress and the public, and one suddenly recalls that those who have been interviewed by a public-opinion poll are few and far between. Do you know any?

Perhaps this is a clue to the bewildering burden of public opinion carried by such men as the late Senator Joseph McCarthy and the senior Senator from California, WILLIAM KNOWLAND. In the past, when they have spoken out against communism or Red China, or the flagrant and ruinous squandering of American tax money overseas, they have been blasted by just such closed-circuit waves of public opinion as the one LIPSCOMB has discovered wherein 90 percent of the people are supposed to take the position the State Department would like them to take.

Ever since the day of the Literary Digest poll, which published a great prediction some years ago, polls have been hard put to convince the public.

But recently there was an indisputable poll, in which thousands voluntarily gave money to the Joe McCarthy fund. It was a complete switch, in which the people, instead of being billed for a phoney public relations effort actually paid—in a way—to express their ideas in support of the late Senator. They pledged $94,703 at the last count) to the McCarthy fund, with 19,233 individuals making the contributions. Where is the public opinion poll that can truthfully say it questioned nearly 20,000 citizens on the McCarthy issue or any other?

This is a real grassroots poll, and it proves that the Nation appreciated the efforts of the persecuted Senator from Wisconsin to stamp out the sinister, godless menace of communism, and it proves that the State Department's calculated brainwash job to destroy Joe McCarthy has little effect upon Americans.

The Future for the Family Farm

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. JOHNSON. Mr. Speaker, a frightening glance into the barren future being planned for the family farmer in America is provided by an Associated Press report of a speech by Dr. Don Paarlberg, nominated for Assistant Secretary of Agriculture, printed in the Detroit Free Press of July 28.

Already fighting for existence in fierce competition with the vast machinery and capital of the corporation farm, the little family farmer is now being told by Agriculture Department officials that the answer to his problems is higher production and a lower per unit cost. It is difficult to follow that argument in the face of the Nation's bulging warehouses and figures which show that farm costs have been in a steady upward climb. The next step is obvious in the free market the Department recommends. It will be the elimination of the family farmer by a process of attrition.

The article follows:

WILL NEW IDEA RULE FARM?

WASHINGTON.—For nearly a quarter of a century Government farm policies have been set up to emphasize prizes.

The Eisenhower administration is trying to put the emphasis on a new goal: Volume. The general idea is to market the largest possible volume of farm products—produced so economically that a low price pays off.

Dr. Don Paarlberg, Assistant Secretary of Agriculture, in charge of marketing, an economist, is pushing the mass-production, low-price, efficiency program.

Paarlberg argues that the advent of mechanized agriculture foists volume supplies on the Nation whether it wants them or not.

Consequently, policies must be fashioned to take that situation into account.

Experience has shown—say administration farm leaders—that if production is cut one place in agriculture, shifts are made to bring about overproduction elsewhere.

Paarlberg says: "We are discovering that despite efforts to check output, farm products are likely to continue abundant."

With abundant production bound to come off the farms regardless of what is done, the Nation faces the problem of what to do about the surplus supplies.

The Government has been following the policy of buying up the extra production under price-support programs and storing it at great cost to taxpayers. Much of it is given away eventually.

The administration contends that agriculture should adopt progressive steps to market the abundant production at home and abroad. One of the best ways of doing this, it says, is to reduce prices to a point where the production will move into use rather than into Government storage.

What's to be gained, critics of the new philosophy ask, by selling large quantities if the price is below production costs?

"In time," he says, "farm legislation may recognize a fact which students of agriculture have long known—that the economic model for agriculture really is a 3-dimensional figure, the 3 being price, volume, and cost per unit.

"Price times volume minus cost per unit equals net income. It is net income, not price, which is available for spending."

Paarlberg is certain that farmers can make much greater cuts in costs of production.

Mounting Contributions to Pension Programs Demand That Stable Economy Be Maintained

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HUDDLESTON. Mr. Speaker, Americans are laying aside more money for the future than ever before. Contributions to pension and retirement plans, both public and private ones, have jumped 60 percent within the last 5 years. In 1956 a total of about $13⅓ billion was placed in various retirement programs, both by employers and employees. This amounted to the equivalent of about 4 cents out of every dollar of personal income during the year.

With so much money in these pension plans, it is obvious that the future welfare and security of millions of our citizens is dependent upon the continued stability of our economy. This fact is pointed out in an editorial entitled "Pension Plans' Contributions at New High," which appeared in the Birmingham, Ala., News of July 29, 1957. Under leave heretofore granted, I am happy to include this very pertinent editorial.

The editorial follows:

PENSION PLANS' CONTRIBUTIONS AT NEW HIGH

In keeping with the growth of private and public pension and retirement programs in recent years, contributions into the funds to provide benefits have been rising steadily. Combined payments by employers and employees, the Institute of Life Insurance re-

ported recently, added up to an estimated $13,300,000,000 in 1956. The comparable figure at the end of 1951 was just about $8 billion, indicating a growth of over 60 percent in the 5-year period.

The sum of contributions to various plans was the equivalent of about 4 cents of every dollar of total personal income before taxes last year. Payments figured out to approximately $200 for every person employed in the civilian working population.

Employers, including Government as an employer, paid some $8 billion of these contributions or 60 percent of the total, the institute estimated. Under private plans alone, as constrasted with publicly sponsored plans such as the Federal Old Age and Survivors Insurance program, employers made combined contributions of $3,200,000,000 in 1956 and employees $500 million.

Total assets of public and private pension plans approached the $75 billion mark at the end of last year. Assets of private plans alone, covering some 14 million workers, added up to an estimated $28,500,000,000.

The size and scope of these plans, the institute observed, point up one of the big stakes in the current fight against inflation. A retirement benefit, whether under a public or private plan, is essentially a promise of future buying power to the recipient when he leaves the working population. Continued stability of the dollar, therefore, obviously is vital if pension and retirement benefits are to live up to future expectations.

Rural Electrification in North Dakota

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. KRUEGER. Mr. Speaker, one of the activities of Government which most closely affects the farm people of North Dakota, and thus all of the people of my State, is the work of the Rural Electrification Administration.

Since this year represents an anniversary for REA in North Dakota, I have prepared a summary of what REA and the newer rural telephone program have meant to us.

The summary follows:

Twenty years ago light came to the farms of North Dakota by way of REA.

It was on the 24th of November 1937, that electricity flowed over the wires of the new lines built by the Baker Electric Cooperative at Cando, N. Dak., in the first operation financed by the Rural Electrification Administration in the State.

Today, the scene has changed greatly.

Twenty years ago, only a little more than two percent of the farms in North Dakota had electric lights. Today, not many more farm families than that are without electricity not only for lights but for a multitude of other uses as well.

The past 2 decades have brought a change in our State because of REA, and they have also brought some changes in the attitude Americans have about REA. When the program began, it met with considerable opposition. Over the years, the success of what REA was doing brought widespread acceptance. But today, the opposition is growing again.

To understand why, we should look first at what has happened to REA since it was given approval by Congress in 1935.

THE GROWTH OF THE REA PROGRAM

As of July 1, 1957, about $2½ billion was owed the Government in outstanding loans to cooperatives. This does not include the millions already repaid.

Included in the loans were almost $111 million ($110,793,649), which have gone to North Dakota cooperatives, much of which is now being repaid.

REA loans also cover the telephone program. Total loans outstanding on July 1, 1957, for rural telephone associations were in the amount of over $200 million. Of this a large percentage was in North Dakota loans.

To date, loans for telephone groups have totaled more than $394 million since the start of the program, and of this, $24 million, or about 6 percent has gone into providing expanded telephone service in North Dakota.

More than $3½ billion ($3,536,712,273) has been loaned under the rural electrification program. Another quarter of a billion dollars was requested in the proposed budget for 1958, with another three-quarters of a billion spent in the fiscal years 1956 and 1957. I mention these figures to emphasize the stepped-up program which has been put into effect since the beginning of the Eisenhower administration. Not only has the volume of the program been stepped up, but so has the processing of applications, which takes only half as long as previously.

SOME REPAYMENTS ARE OVERDUE

REA was established in the depression to make credit available to bring electricity to the farms. The objective was to do this with long-term loans which eventually would pretty much pay for the entire program.

For the most part, these loans are being repaid on schedule. Only 8 out of almost 1,000 REA cooperatives are more than 30 days overdue in payment. The telephone loan associations are having a little more difficulty, with a few of the 450 borrowers more than 30 days overdue.

These overdue payments represent an unhealthy situation, but they are not the real source of trouble, as far as opposition to REA activities is concerned.

THIRTY-FIVE MILLION DOLLAR LOSS IN INTEREST

The opposition comes from the fact that the REA is costing the Government a hidden $35 million a year.

When REA was established, the interest rate was set at a figure reflecting the interest the Government itself was paying on money it borrowed to lend to cooperatives. When that rate went up or down over a period of time, so did the REA rate, until 1944. That year, the REA loan rate was set permanently at 2 percent.

What has happened now is that with the rise in the interest rate the Government must pay for its money, the taxpayer is subsidizing REA to the amount of $35 million, and perhaps as much as $85 million if loans continue to be made at their present record high level.

With a tremendous demand for economy facing the 85th Congress, it was natural that a bill would be introduced to change the REA loan rate.

There was immediate opposition to the measure from the National Rural Electric Cooperative Association, which opened up two lines of thought.

On one side were those who favored increasing the interest rate to keep REA on a basis of paying for itself. On the other side, were those who believe REA has now achieved its objective and should be abolished.

Ninety-six percent of the farms in America have central station power now. In North Dakota, where we have some sparsely settled areas, and in Wyoming and a few other States, the percentage is not as high. About 86 or 87 percent of North Dakota's farms are electrified.

This fact is being stressed by REA opponents who say that we can afford to get along without the REA now. They argue that most of the money now goes for services other than power distribution, and that cooperatives can start financing their own construction and expansion of plant facilities.

Moreover, much is being made of the cases of some REA co-ops who have gone into the appliance business. While this is legal as long as loan funds are not used, it has aroused antagonism in many quarters because the co-ops are selling on terms a dealer cannot match, and are doing so with funds which could be used to repay obligations to the Government.

Fighting this viewpoint is the National Co-op Association in Washington headed by Clyde Ellis. From his modern eight-story office building in downtown Washington, he directs one of the major propaganda barrages aimed at Congress.

Mr. Ellis, a former Congressman, a few months ago was given a verbal spanking before a House committee when he was described as arrogant, biased, and improperly representing his case. His operations are financed by a levy which is paid by every user of REA electricity, whether he represents every user's viewpoint or not. It's just part of the bill.

A lot of Congressmen are agreed that they prefer to listen to the viewpoints of co-op officials and subscribers in their own States.

FIGHT FOR REA PROGRAM

Years ago I remember when the gasoline lamp replaced the kerosene one. We had a friend come to visit, and since I was busy for a minute I suggested he go in and light the lamp and make himself at home. He came running out of the house a minutes later, his clothes all ripped up, and said he had lit the lamp but it had gone out. "Well, light it again," I told him. "I can't," he replied. "It went out through the roof."

Today when working for the REA program, we have to be careful, too. I have always supported REA, and I do so now, but I know you will agree when I say that I want to be sure our program, like the lamp, doesn't go out the roof.

Horseshoe Bend National Military Park Is Scene of Famous War of 1812 Battle

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HUDDLESTON. Mr. Speaker, one of the two most important battles in the War of 1812 was fought at Horseshoe Bend on the Tallapoosa River near present-day Dadeville, Ala., on March 27, 1814. This was the battle in which Gen. Andrew Jackson and his men, including Sam Houston, completely subdued the arrogant Red Stick Indians of the Creek Tribe. At Horseshoe Bend, the Indians were entrenched in an area surrounded on three sides by the river and on the fourth by strong earthen breastworks.

General Jackson, who later was to become the Nation's seventh President,

fought against the Red Sticks' land fortifications while a portion of his men circled the Indians, swam the river and attacked from the rear. The engagement, second in the war's importance only to the Battle of New Orleans, left 900 of the 1,000 Red Sticks dead and projected General Jackson into national prominence.

The site of this famous battle is about to become a national military park, the only one in Alabama.

By all means, Horseshoe Bend should be preserved for its historical significance. Under leave heretofore granted, I am pleased to insert an editorial entitled "Worthy Enterprise," which appeared in the Birmingham, Ala., Post-Herald, one of my district's fine daily newspapers, on July 26, 1957.

The editorial follows:

WORTHY ENTERPRISE

Historic spots are not too common in Alabama. During Revolutionary War days, Alabama was still Indian territory. During the Civil War, most of the fighting was to the north and east of us.

We do have a true historic shrine, however, in the site of the Battle of Horseshoe Bend and now something is being done to preserve and perpetuate it.

Legislative committees have approved a bill which would appropriate $150,000 to buy land near the site of the battle in which Gen. Andrew Jackson fought Creek Indians and roundly defeated them.

If this land is provided, along with more acreage which is being given by Alabama Power Co., the Federal Government's Park Service will develop the spot.

This should be a real tourist magnet. And it will provide something to which the State can point with pride.

Let's spare no effort to make this shrine a reality.

Anniversary of Swiss Independence

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. YATES. Mr. Speaker, Switzerland, a nation infinitely smaller than the United States but which through its own little Marshall plan has given hundreds of millions of dollars to aid wartorn European nations, celebrated independence day on August 1. It was on that day in 1291 that the men of the valleys of Uri, Schwyz, and Nidwalden formed an everlasting league for defense against all who should attack them. This league was the foundation of the Swiss conference of 22 cantons which finally was completed in 1815. Out of this union of German-, French-, and Italian-speaking mountain and valley people sprang a model democracy whose national and international conduct offers a shining example to the world.

The relationship between our countries has been a most harmonious and cordial one, particularly in the field of trade relations. The Swiss have one of the highest standards of living in the world and, in order to maintain it, they import many of their raw materials, food products, and finished goods from the United States. In turn, the United States recognizes the proficiency and fine quality of Swiss workmanship. Swiss watches and clocks, precision instruments, quality textiles, and of course the famous Swiss cheese have been landmarks of quality in the United States for years.

It is to be eminently desired that the United States and Switzerland continue to maintain friendly relations. We must not jeopardize such relations by harsh and unreasonable trade restrictions. We must remember that understanding and cooperation in dealings between nations, as between people, are the best assurance that our two great democracies will remain firm and fast friends.

I want to congratulate the proud people of friendly and democratic Switzerland upon this anniversary and to wish them many, many happy returns of the day.

Compulsory Inspection of Motortrucks on a Nationwide Basis Is Imperative in the Interest of Safety on Our Highways

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. VAN ZANDT. Mr. Speaker, the need for nationwide compulsory inspection of motortrucks has mounted during the past several months because of the lack of such a requirement in some of the States. The problem has attracted widespread attention because of several recent accidents that revealed that inadequate maintenance of trucking equipment was the chief cause of disastrous wrecks on the highways of the Nation.

Although the State of Pennsylvania has an excellent truck safety record when compared with the national average of truck accidents, nevertheless, some bad crashes have occurred because the Keystone State's compulsory inspection law does not extend to out-of-State trucks, many of which have figured in truck accidents on Pennsylvania highways.

During the present session of Congress, I introduced H. R. 7048, a bill designed to authorize employment by the Interstate Commerce Commission of 100 inspectors of safety appliances. Despite an increase in the number of ICC inspectors, it is impossible for that agency to cope with the out-of-State trucks that roll over the Nation's highways with defects that invite disaster on every mile of the road.

There have been similar accidents in the State of Pennsylvania involving out-of-State trucks with as harrowing details as revealed by the following account in the Washington (D. C.) Post of August 1, 1957, of an accident at Uniontown, Pa., this week. It is coincidental that on July 31 the Altoona (Pa.) Mirror carried the following editorial emphasizing the need for adoption nationwide of the Pennsylvania plan of requiring frequent compulsory inspection of motortrucks.

The articles follow:

[From the Washington Post of August 1, 1957]

SCAMPERING TROOPER CLEARS WAY DOWN MOUNTAIN FOR "WILD" TRUCK

UNIONTOWN, Pa., July 31.—With a State policeman's siren clearing his path, a 28-year-old truckdriver stuck to the wheel of his big vehicle tonight in a wild ride down a mountain highway and averted a possible tragedy.

Grim and white-faced after his 2-mile scrape with death on Summit Mountain, Glenn Switzer, of Fairmont, Nebr., had to be treated for shock.

"I wasn't scared until it was all over," he said weakly.

Switzer said the brakes of his tractor-trailer, which was heavily loaded with sugar, failed as he started down the hill. The vehicle's clutch burned out and smoke trailed from the wheels as Trooper Reu Silbaugh—who just happened to be cruising by—saw the truck gaining speed.

Silbaugh swung his patrol car in front of the truck and pushed it to maximum speed as he kept his siren wailing. Motorists pulled their cars to the side of the road to give the truck a chance to roar around the sharp curves.

Switzer twice drove perilously off the highway, just grazing the hillside, to slow down his vehicle. But, he said the speedometer hit the 70-mile-an-hour mark at least.

By the time Switzer roared toward the bottom of the hill and into the small community of Hopwood his policeman friend had shunted motorists and pedestrians to the side of the road. Then, going up a small grade, Switzer deliberately drove his truck into a steep bank. Only minor damage was done the truck.

As pedestrians gathered around to congratulate him, Switzer—the father of five children—climbed slowly from the cab. Deliberately, he placed a wooden block under a rear wheel so the truck wouldn't roll backwards. Then, with a faint smile, he collapsed. But he rallied quickly after treatment at a nearby hospital.

[From the Altoona (Pa.) Mirror of July 31, 1957]

NEED INSPECTIONS

What could be called the "Pennsylvania plan" is being urged in other States of the Union as regards the safety of trucks on the highway. The Keystone State, while not accident free, can boast of an excellent record all because of compulsory inspections of trucks owned and operated by State residents.

An intensive, never-ending fight is waged by the truckers' organization for added safety and Pennsylvania accidents are lower than other States due to this examination of trucks, conducted monthly.

It is agreed that truckdrivers, as professionals, are the best drivers on the highway and trucks average more miles than do pleasure cars, although the latter type outnumber trucks 5 to 1. Trucks operate 5,000 to 20,000 miles each month, and that's heavy hauling.

"The truck can be in perfect shape when it starts out for the month and be a hazard by the end of the month. We can check the maintenance record of trucks registered in Pennsylvania, but there's no way we can do it with out-of-the-State trucks," states the highways department.

In recent investigations of truck accidents in the State improper maintenance of vehicles was involved in 90 percent of them.

Pennsylvania requires a semiannual inspection of all State registered trucks and

then has the maintenance records available monthly so the State keeps a tight rein on all trucks, excepting, of course, the trucks that come into the State, many of which are defective and uninspected.

Recent accidents at Altoona, Harrisburg, Pittsburgh, on the turnpike, and others on route 22 are cited in the campaign to make trucks safer.

According to C. D. Shipley, director of the State bureau of highway safety and former safety director for the Pennsylvania Motor Truck Association: "Compulsory inspection on a nationwide scale is going to make the individual who never does anything with his truck, and we have that type of individual, conscious of the fact that it would be cheaper to maintain his truck as he went along than to just let it run until it falls to pieces. Some of them have finally fallen to pieces on mountains with disastrous results."

Bill Will Aid Alaska's Economic Development

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. BARTLETT. Mr. Speaker, on August 5, the House passed H. R. 8054, which is a bill to provide for the issuance of oil and gas leases in lands beneath inland navigable waters in the Territory of Alaska.

In my opinion, enactment into law of this bill will do much to stimulate interest in and promote the production of oil and gas in the Territory.

Mr. Speaker, the situation in Alaska is novel and, in fact, altogether unique. More than 99 percent of the total land area of 586,000 square miles is in Federal ownership. Federal reserves amount to about 95 million acres out of a total of 365 million; the remainder is in public domain. Oil and gas leases have been and are issued under the Mineral Leasing Act of 1920. Alaska is a land of lakes and rivers in such numbers that they have not all been discovered, much less named. Alaska's coastline in the aggregate exceeds in length the coastlines of the States on the Pacific Ocean, the Gulf of Mexico and the Atlantic Ocean.

Under existing law, the Secretary of the Interior is not permitted to issue any leases for lands under inland navigable waters. H. R. 8054 will permit such leases to be made under the same general rules and regulations for the protection of the public interest which operate generally in Alaska with reference to the Mineral Leasing Act of 1920. Appropriate disposition of proceeds is to be made to the territorial government after provision is made for payment to the Federal Government to cover administrative costs.

A person or a company operating in a western public domain State does not have the handicaps which confront those who seek to operate in Alaska. There leases may be acquired on the public domain from the Federal Government; and negotiations may be carried on with the State government for lands lying under navigable waters. But the territorial government of Alaska has no authority whatsoever over these lands and until H. R. 8054 becomes law no authority resides in the Federal Government either.

There is rather an urgent need to correct the situation now existing and the Alaska Territorial Legislature in its 1957 session adopted house joint memorial No. 18 which said in part:

The development of the oil and gas resources of the Territory of Alaska is of vital importance to the development and economy of the Territory and to the national defense of the United States and its Territories and possessions.

And the memorial petitioned Congress to make these lands "available to the Department of the Interior for administration in behalf of the Territory of Alaska."

The bill approved by the House August 5 was introduced responsive to an executive communication. That communication was accompanied by a draft of proposed legislation. One section of that draft gave a preference right to lease lands beneath the navigable waters described in those leases up to a limit of 640 acres of land beneath any single body of navigable waters. That provision is incorporated in H. R. 8054. I think it is quite important to note here that this was an administration proposal and did not originate with the territorial legislature or with any person or persons interested actually or prospectively in oil leases. The Committee on Interior and Insular Affairs approved the preference section after thorough discussion and consideration. Personally, I believe it is altogether appropriate to have it in the bill. It might be mentioned here that the first actual discovery of oil in what appears to be commercial quantities outside of Naval Petroleum Reserve No. 4 was made in Alaska within the last month. Up to that time money has been poured into the country for leases and for prospecting for oil without surety that there would be any return, great or small. Indeed, that is true even to this day in respect to practically all the land under lease. It takes daring and imagination and willingness to gamble to search for oil anywhere, especially in a pioneer country such as Alaska. I believe there is every good reason why the person holding a lease should have a preferential right to 640 acres of land under inland navigable water. Otherwise, what will happen will be that speculators and others like-minded will seek to obtain tracts of such land surrounded by existing leases on the public domain. I am authorized by Director Woozley of the Bureau of Land Management to state that in the discussions held in connection with this all the officials of the Bureau believed that preferential rights should be established. Some of these officials thought there should be no limitation whatsoever as to acreage; still others thought it should be greatly in excess of 640 acres. However, that figure was settled upon to make sure that no assertion could be successfully made that undue rights were being accorded to those holding existing leases.

Mr. Speaker, I sincerely hope that H. R. 8054 becomes law at an early date. It will be, I am convinced, meaningful in aiding the economy of Alaska under proper conservation practices.

Come Home, John

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Come Home, John" which appeared in the Daily Press of St. Marys, Pa., dated August 3, 1957:

COME HOME, JOHN

In a superhuman effort to keep the London disarmament conference from dropping into the Thames River to be forgotten forever, Secretary of State John Foster-Dulles made a hurried aerial trip to the British capital this week to hold Harold Stassen up before he went down for the third time.

Mr. Dulles has suggested an aerial inspection plan that would open all of United States, Canada, Alaska, the Soviet Union, and Western Europe to overhead and ground inspection, and he might as well saved his breath.

Last week we received a copy of the United Nations report on the crushed rebellion in Hungary. And contained therein was a copy of an agreement made by the Russian Government and the People's Republic in Hungary providing for the withdrawal of Soviet troops from Hungary and the payment by Russia of all damage done in Hungary.

This was drawn up and signed by representatives of the Soviet Union at the very hour Russian forces under Marshal Zhukov, the "Butcher of Budapest," were massing men and tanks on Hungarian borders for one of the greatest butchering expeditions of modern times.

Why this country tries to have any dealing with the Soviet Union passes human understanding. Since the days of the United Nations Charter was drawn up giving Russia 3 members in the U. N. rather than the 1 allocated other nations, and deadly veto power, not one solid agreement has been reached with Moscow that has been kept or honored.

She fostered war against American troops in Korea, supplying the Chinese Reds with weapons, supplies, and officer material. She backed the Egyptian fuss in the Middle East area, supplying Nasser with weapons of war at the same time the Soviets were preaching "softness and light" at the Geneva conference.

The London conference is now moving into its 5th month with Stassen continually issuing bulletins of "significant progress," with representatives of Great Britain and France, attending the same meeting referring always to the blockading maneuvers of Soviet's Zorin.

Mr. Stassen, a mere babe-in-the-woods in the field of diplomacy, grasps at any straw that holds even the tiniest morsel of hope and blows it out of all proportion, while European realists refuse to fall for any Moscow "soft soap" treatment.

Mr. Dulles, hard-headed as a cement block in many respects, should have known by this time that doing business with Moscow is like

reaching for the moon, every bit as unattainable.

But John Foster, who continues to look at the world with rose-colored glasses, figures a few words here and there will rid the world of the fear of nuclear warfare.

The folks back home, far more realistic, want Uncle Sam to keep his forces beefed up to the last man, so no surprise attack will find the old man in the whiskers snoozing in his apartment.

Victory for the South

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Buffalo Evening News on August 3, 1957:

VICTORY FOR THE SOUTH

Whatever happens from here on, the South has won the civil-rights battle—and has done it with the votes of the northern and western Democrats.

It was a formidable new coalition that Majority Leader LYNDON JOHNSON, of Texas, put together early Friday for the crucial rollcall on the jury trial amendment.

It included not only the 24 southern Democrats, as you would expect, but 15 of the 24 Democratic votes from the rest of the country. Together with 12 Republicans—mainly from the western and border States—these 39 Democrats administered a stinging defeat to President Eisenhower, who had declared only last Wednesday that he had gone as far as he could go in the direction of a compromise and moderation on civil rights.

In a parliamentary sense, the "emasculating compromise" comes as a smashing triumph for both the southern bloc, led by Senator RUSSELL of Georgia, and that dedicated party compromiser, Majority Leader JOHNSON.

But at what a cost to the Democratic position in the North was the grand display of party unity accomplished? How long will the Democrats be haunted by this rollcall—everywhere outside the South; every time a southern jury nullifies a Federal court's effort to protect the right of southern Negroes to vote?

In future campaigns, this vote undoubtedly will be recalled as the most significant civil-rights showdown in many a year. For campaign purposes, it will be drastically simplified as a vote for or against effective Federal protection of the right to vote.

It will be remembered that the votes for it came from 33 Republicans and only 9 Democrats; that the votes against it came from 39 Democrats and only 12 Republicans.

In the House, just 6 weeks ago, virtually every Democrat outside the solid South—and more than three-fourths of the Republicans—voted against the jury-trial amendment. But in the Senate, where every vote counted, 15 Democrats from States whose Congressmen were almost unanimously opposed to the jury trial voted for it.

One, for example, was Senator KENNEDY, of Massachusetts, a presidential hopeful. But Massachusetts cast a solid block of 7 Democratic votes the other way in the House. Likewise, Rhode Island's two Democratic Congressmen voted one way, its two Democratic Senators the other.

In the House, the jury-trial amendment didn't get a single Democratic vote from the 11 Western States. But in the Senate, it got a decisive 10 out of 13 Democratic votes—with only MORSE and NEUBERGER, of Oregon, and CARROLL, of Colorado, showing a touch of that old-time liberal zeal for effective civil rights. All the other western liberals—MAGNUSON and JACKSON, of Washington; MANSFIELD and MURRAY, of Montana; CHURCH, of Idaho; ANDERSON and CHAVEZ, of New Mexico, etc.—went along with LYNDON JOHNSON and the southerners in voting to weaken the right-to-vote bill.

The Democrats, to be sure, were confronted with a cruel dilemma. For years they have faced in two opposite and irreconcilable directions—procivil rights in the North, anticivil rights in the South. The northerners had to choose between breaking with the southerners and compromising with them for the sake of party unity. The choice they made—here in the Senate—was exactly the same one they made a year ago at their national convention.

Then, as now, the unifiers and compromisers carried the day; the Democratic convention produced a civil-rights plank that was so nearly self-cancelling it reduced itself to absolute zero.

Now the Democrats in the Senate have implemented that plank, by voting 39 to 9 for a compromise that reduces the civil-rights bill so close to zero that even some of the southerners may be willing to vote for it.

This is not to say that the bill is worthless. Even as it stands, it is certainly enough better than nothing so it should pass. If it can be strengthened at all, when the time comes to reconcile the crucial Senate and House differences, we would suggest once again that a recent proposal by Representative RADWAN, Republican, of Buffalo, offers the brightest hope. He would give the South its jury-trial guaranty, but only for 3 years, after which this clause would expire automatically unless the experience with it was such as to convince both Houses of Congress that it should be continued.

Perpetual Campaigning

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. WHITENER. Mr. Speaker, on August 2, 1957, an editorial entitled "Perpetual Campaigning" appeared in the Gastonia Gazette, Gastonia, N. C.

The thinking of the writer of this editorial was very interesting to me. I believe that our colleagues will be likewise interested in seeing this splendid editorial.

The editorial follows:

PERPETUAL CAMPAIGNING

Just how valuable is a public servant to the constituents he represents?

The holder of any political office can obviously be more valuable if given a reasonable length of time to serve.

This is particularly true of any position as important as that of a Member of the United States House of Representatives.

A Congressman serves his district only 2 years. Senators serve for 6 years, which is a term long enough to make them increasingly valuable to their States.

When it comes to base pay, there is no difference. Each makes $22,500 a year. But the Senator has the satisfaction of feeling that it is worthwhile to embark on long-range planning. This cannot be the case with the Representative, with only a 2-year tenure of office.

Representatives are elected in November. They take office in January and serve 2 calendar years. But there's a "joker" in their status. Just about 1 year after they have been in Congress, they must begin preparing to run for another term.

We don't feel that the Representative gets a fair deal, because no man can be at his best when he realizes that after about a year's service he must run again—that is, of course, if he chooses to seek the office for a second term.

At least 4 years in office should be allotted to Representatives. We believe if they served 4 years instead of 2, there would be an incentive to put much more into their work than is the case under a 2-year term.

One thing is certain—the 2-year term for Representatives doesn't give them a fair break.

We have always felt they should have 4-year terms.

But political tradition is hard to break, and there is small hope that the perpetually running Representatives will ever get a breathing spell.

M. Sgt. Vernon G. Waguespack Named Outstanding Airman of Continental Command

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. WILLIS. Mr. Speaker, it is with great pride and pleasure that I call attention to the selection of a member of the United States Air Force from the Third Congressional District of Louisiana as the year's "outstanding airman" of the Continental Air Command. He is M. Sgt. Vernon G. Waguespack, of Napoleonville, member of a well-known Assumption Parish—county—family, who has spent almost 17 years in the service.

Sergeant Waguespack was chosen for this award from among hundreds of airmen of the Continental Command who were nominated by their respective unit commanders and considered by a board. Lt. Gen. William E. Hall is commander of the Continental Air Command.

Together with those named for a similar award from each of the other 18 Air Force commands, Sergeant Waguespack was honored by Secretary of the Air Force James H. Douglas and Gen. Thomas D. White, Chief of Staff, during official recognition in Washington at which the 19 leading airmen were cited for outstanding achievements. The citations are sponsored annually by the Air Force Association, this year's ceremonies being a feature of the Air Force 50-year anniversary celebration.

Sergeant Waguespack has an illustrious career dating back to January 1941.

During World War II he served in both the European and Pacific theaters of operation. From 1942 to 1944 he was with the 44th Bombardment Group of Ploesti Oil Field attack fame, and in 1945 he served with the 9th Bombardment Group, flying B–29's out of Tinian Island.

Since 1950 Sergeant Waguespack has been active in the Air Reserve program, first as an ROTC instructor and is currently on training duty with the 2621st Air Reserve Center at Richmond, Va. From 1950 to 1954 he was instructor for the Air Force ROTC at Southwestern Louisiana Institute, Lafayette. He has been highly commended by civic leaders in the Richmond area for his work in the Air Force community relations field as well as the Reserve program and is in demand as a speaker. He has contributed greatly to a better understanding of the Air Force and the peaceful use of its air power. Much of the credit for the excellent status of the Reserve training program in the Richmond area is given to the successful program conducted by Sergeant Waguespack. On his own initiative he worked with local organizations in the Petersburg-Hopewell section and stimulated sufficient interest in Reserve activities to form a full new squadron.

While Sergeant Waguespack has not disclosed any information he may have as to his future in the Air Force, it is reported that he will likely receive a very important overseas assignment soon.

Sergeant Waguespack is the son of Gaston J. Waguespack, Sr., prominent sugar-cane planter and vice president of the police jury, governing body of Assumption Parish, and the late Mrs. Waguespack, and is 1 of a family of 7 sons and a daughter. He is married to the former Elaine Naquin, daughter of Mr. and Mrs. Edward Naquin, who also comes from a prominent Assumption Parish family. They have a son, Garald, aged 7.

Dr. Capps and Missouri

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. CHRISTOPHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

DR. CAPPS AND MISSOURI

(By Dr. George S. Reuter, Jr.)

The Ninth Annual Workshop of the Missouri Association of School Administrators met in Columbia, Mo., June 16, 17, and 18, 1957. The theme was Expanding Horizons for Education, but the real theme was Dr. Capps and Missouri. Dr. Capps is now 70 years of age, and he was thus honored for his long and outstanding service to education in Missouri and throughout the world. The writer was one of many who attended in the status of his former major professor.

The program featured such speakers as Dean L. G. Townsend of the School of Education of the University of Missouri; Missouri State Commissioner of Education Hubert Wheeler (Educational Progress in Missouri); Ward Barnes, superintendent of schools, Normandy, Mo. (Educational Legislation in Missouri); President Elmer Ellis, of the University of Missouri (Higher Education in Its Relation to Secondary Schools); President Clifton R. Bell, of MASA; Dr. Howard Terry, superintendent of schools, Bonne Terre, Mo.; Drs. W. W. Carpenter, Ralph K. Watkins, and C. A. Phillips, of the University of Missouri; President Philip J. Hickey, of AASA; Joplin's superintendent of schools, Roi S. Woods; Lt. Gov. Edward V. Long, of Missouri; President M. Earle Collins, of Missouri Valley College (Making Education Live); S. M. Rissler; Armin H. Bueker; Robert H. Clark; Ben A. Rogers; Eddie B. Pope; Raymond E. Houston; H. D. Williams; Elmer F. Klein; Maynard Pettigrew; Noah Gray; Robert Gilchrest; Wendell Evans; Hugo Beck; Louis J. Donati; S. H. Marcellus; B. W. Robinson; H. A. Sadler; Clyde McConnell; George Heltzel; Clarence Farnham; Rudolph Eskridge; Joy Whitener; O. Wayne Phillips; C. E. Oliver; Laurence Phelps; Marvin Shamberger; Lynn Twitty; Byron Masterson; Bernard G. Campbell; George Englehart; Morgan Selvidge; Glenn M. Drew; and Everett Keith.

Big events are often hid, however, Dr. Robert Fee Hyatt, Jr., a prominent physician and civic leader, drowned on April 11, 1957, when a car in which he was riding plunged off a highway embankment into the backwaters of the swollen Ouachita River. The accident was caused by a hog in the road. The big event came when Mrs. Juanita Biscoe, of Orlando, Fla., wrote the poem, A Dedication:

"A great physician went away
To make another call
'Twas just a week before this Easter Day
As hundreds will recall.

An angel cometh from above
Walking o'er the earth with silent tread
While calling to our great physician
And saith, 'Now, we must go ahead.'

The earthly things dropped from view
As they swiftly crossed the restless sea
To behold an immortal power,
Prepared for you and me.

Work of our great physician
Ended with the last call
As he stepped o'er the threshhold
Entering into a great glass hall.

Thou art indeed, a great physician
Saieth He upon the throne
But grander, nobler things are due
A mansion all your own.

There is no death; just sunset and evening star
His earthly duties ended, never to be resumed
Now, he's living in his Father's mansion
Just busy in a celestial room.

Our hearts are all so desolate
With each blush of the early dawn
Revealing tear-stained cheeks
A sorrow destined to be borne.

But blessings flowing from above
Will heal our saddened hearts
As the light glows from the evening star
Reflecting beauty and strength to a new start."

Dr. A. G. Capps, professor of education, University of Missouri since 1921, with his wife and nine children, was the big event at the Ninth Annual Workshop rather than the other great speakers. Capps was to this event what Hyatt was to the poem, or, in another vein, what the Cockrell family is to Missouri.

It has been a poem and now it is Dr. Capps and Missouri, or as Phil Hickey indicated, Dr. Capps and America. As a former student of Dr. Capps, the writer would say "Dr. Capps and the World."

A United States View of the United Nations

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address by the Honorable James J. Wadsworth, Deputy United States Representative to the United Nations before the American Bar Association at the United Nations in New York, which address appeared in the Department of State Bulletin on August 5, 1957.

The address follows:

A UNITED STATES VIEW OF THE UNITED NATIONS

(By James J. Wadsworth, deputy United States Representative to the United Nations)

My contribution to this distinguished meeting today is to bring to you, briefly, the United States view of the United Nations—which is my view personally and officially. How important is the United Nations to the United States?

If this impressive structure with its great expanse of glass, remarkable system of simultaneous translations, its superb communications all over the world did not further the best interests of its member nations, it would not long survive. This may seem like an unidealistic approach to many who see the vision of man's brotherhood, his responsibility for suffering humanity today, and his hopes for a better tomorrow. But fortunately there is no fundamental, irreconcilable conflict between the ideal and the practical. As a country, the most important thing we want but cannot achieve entirely by ourselves is peace. The peace we want is not that of a graveyard—or of a jail—but peace with freedom and with justice. Fortunately, this is the kind of peace which all of the world's people desire—and most of the world's governments.

The United Nations helps to achieve this kind of peace because it is a vital, growing concern which reflects the realities of international life.

It is not a perfect organization, because it is made up of nations and nations are made up of people and people are made up of many imperfections. As you members of the bar know all too well, people are by nature quarrelsome. Science hasn't yet revealed why this should be so, but it is an indisputable fact that homo sapiens for all his reasoning powers often makes a botch of his own personal relations—and not infrequently has made a botch of international relations.

Today we can no longer afford the luxury of allowing nations to "fight it out." We are impelled to find machinery for resolving our continuing conflicts if this planet is to remain habitable. The United Nations offers no cure for man's quarrelsome nature, but it does afford a place where men—and nations—can quarrel with words rather than with unleased cosmic forces.

Twelve years ago, when the United Nations Charter was written, many people thought of international law as the major element in international relationships. International law is an extremely important bulwark against international anarchy, and I would not want to belittlee its importance in any way. The United Nations International Law Commission has done and is doing good work. A very important conference on the law of the seas is being organized right now.

which is one tangible result of the deliberations of the Law Commission. The International Court of Justice is a vitally important institution. Even so, I think all would agree that the United Nations has not developed along the path of peace by the application of general principles of law but rather along the quite different path of peace by practical political solutions to specific problems.

The reason why this turn was taken is clear. The world today is divided into two totally different ideologies. Between the free world and the Communist world there is no common agreement as to even what is right and what is wrong. There is no common moral code, which must be the foundation of all law.

Even words have totally different meanings when used by a Communist and when used by a believer in individual liberty. Take for example the word "democracy"; the Communists, by prefixing the word "peoples," use "democracy" to describe a dictatorship as ruthless and total as any ever known in the history of man. Or take the word "liberation"; the Communists use that word to describe the extension of Moscow's control over neighboring countries. Or the word "aggression"—when Soviet troops go into a country to repress a revolt, this is a brotherly, helpful act, never an act of aggression. By Communist definition only capitalists can be aggressors. The irony becomes excruciatingly apparent when the Soviet Union becomes the champion of covenants guaranteeing human rights.

In addition to this semantic confusion, the legal approach to peace is handicapped by the lack of machinery for enforcing agreed-upon codes of behavior. The United Nations is not a superstate. It has none of the attributes of sovereignty. It cannot pass a law, levy a tax, or conscript a soldier. And, frankly, I am sure the United States would not be a member if the United Nations could do these things.

How then, you may ask, does the United Nations go about its herculean task of promoting peace, situation by situation, case by case? How can it possibly succeed?

The answer lies in its tremendous influence—its influence on governments and ultimately on world opinion. The framers of our own Declaration of Independence recognized the importance of world opinion when they spoke of "a decent respect to the opinions of mankind." Today, although the United Nations has no power to compel, it has an enormous power to persuade.

ASSETS OF THE U. N.

There are four assets which are unique to the United Nations and which make it the influential organization that it is.

First there is the charter, which embodies a code of behavior all member nations have agreed to observe. The charter is not always lived up to by member nations, but it has an incalculable value as a standard by which nations are morally judged. They feel obliged to shape their actions to conform to its principles even when they are under great temptation to do otherwise. Any nation pays a high price in terms of international standing and influence if it cannot justify its actions in the light of the charter. The Soviet Union is indeed paying such a price right now for its utter disregard of charter principles in Hungary.

A second asset is the uniquely valuable servant of international peace, the Secretary General of the United Nations. Mr. Hammarskjold has earned great prestige for himself and for the office he occupies. He has performed services for the community of nations which no single national representative could have done. One illustration is his successful negotiation for the return of the 15 American fliers from Communist China.

Another unique asset of the United Nations is this huge assembly hall and the other meeting rooms, where representatives of 81 nations meet, annually, and in smaller groups throughout the year, on neutral ground. The United Nations is in truth a world meeting place or in the words of the charter "a center for harmonizing the actions of nations." It is a year-round meeting place of the nations, whose representatives get to know each other's policies and points of view and who report constantly to their governments.

Fourth and finally the United Nations makes a uniquely valuable contribution in the realm of public debate and public opinion. Heads of states and foreign ministers come here every year because they know that there is no other place in the world where their views can be made known as completely and dramatically. Throughout the year high government representatives are presenting their cases, marshaling their arguments, and finally reconciling their differences before the court of world opinion.

With these resources the United Nations has accomplished things which no one nation could possibly have done for itself—including the big and powerful United States.

At the same time we must recognize that the United Nations is not all powerful; there are some things it cannot do. I am often reminded of the old adage that people have the strengths of their weaknesses and the weaknesses of their strengths; so it is with the United Nations. This past year has given us examples of both these weaknesses and these strengths.

The Soviet slaughter in Hungary, in complete defiance of the United Nations, was agonizing proof of how little the United Nations can do, peacefully, to restrain a country which has very great power and no morals. This is because the United Nations conforms to the realities of power in the world today—realities which the United Nations does not create but only reflects. These realities of power are built into the United Nations organization itself.

The Soviet Union as well as the United States has a privileged position at the United Nations as one of the world's big powers, and with this privileged position goes the right to the veto. The Soviets have abused the veto. But to deprive them of the veto or of their United Nations membership, even if these steps were possible, would raise the question of the United States' right to use the veto. On this right Americans have always stood firm—and I am sure will always stand firm.

Most certainly there are limits to what the United Nations can do. Yet we should not underrate the positive results that can be achieved within these limits.

HUNGARY

In the case of Hungary, although the United Nations has not yet succeeded in freeing the Hungarian people from their bondage, the United Nations did mobilize the conscience of the world on their behalf. It did send emergency supplies to help the people in their struggle. The United Nations has organized emergency assistance for the 190,000 refugees who fled from Communist terror. United Nations resolutions, by huge majorities, demanded free elections for Hungary, the withdrawal of Soviet forces, and condemned the Soviet Union in the most forceful possible language. And the United Nations set up a fact-finding committee of five small nations to present the full facts of the situation in Hungary for all the world to know.[1]

By these actions the United Nations has held high the torch of liberty, ignited by Hungarian bravery. Never has a revolution been so widely known; never has an oppressor been so completely condemned. The fires of moral condemnation that were lighted here at the United Nations are plaguing the Soviet rulers today and will continue to plague them for years to come.

It is certainly possible that the worldwide indignation toward Soviet behavior in Hungary is a factor in the current upheavals in the Kremlin's high command. When a system stands condemned before the world, its rulers, in panic, start condemning each other.

We cannot, of course, know with certainty what goes on behind the Kremlin walls, but we do know that Soviet ruthlessness in Hungary and the United Nations reaction to it has had a profound impact on the Communist movement in all countries outside the Soviet orbit. There have been widespread resignations from Communist Party membership. The circulation of Communist newspapers and periodicals has fallen sharply. In local elections Communist Party candidates have lost strength.

In the so-called neutral countries—countries where most of the people are uncommitted ideologicaly because they are so preoccupied with the daily problem of getting enought to eat—the appeal of communism has greatly faded. The alluring phrases and promises no longer ring true. As the representatives of Burma told the General Assembly last fall: "There, speaking of Hungary, but for the grace of God go we."

I am willing to venture the prediction that what the United Nations has done and will yet do in the case of Hungary will be the beginning of the end as far as communism's appeal to the minds of men is concerned. If this proves to be the case, the United Nations contribution to the cause of freedom in Hungary will have been significant and substantial, despite the limits on the direct action it could take.

MIDDLE EAST CRISIS

What now of the other crisis which the United Nations handled this past year, the threat of a world conflagration in the Middle East? Here we have a record of strong, swift action which, without doubt in my mind, headed off a third world war. If the United Nations had done only this one thing in its short life, it would have more than justified its existence.

By General Assembly resolutions—passed within a few days after the first shot was fired—massive military attacks on Egypt by three nations were brought to an end. The United Nations then created an emergency police force made up of troops from 10 small nations. This force moved in quickly, enabling the attackers to withdraw and peaceful conditions to be restored.

This is something the United States could not have done with its own troops without grave danger that the Soviet forces would also step in—which was one of the things we were working to prevent. And, in fact, since the United Nations Emergency Force has been in the area, there has been less tension and less friction than at any time in the last 10 years. Much yet remains to be done, but the United Nations has preserved peace in the Middle East and has given us a new chance to try again for real and lasting solutions to the problems of this troubled area.

In tackling the Middle East crisis of last October, which painfully divided us temporarily from three of our close and valued friends, the United Nations successfully made use of all of its unique assets: the charter, the Secretary General, the world meetingplace, and its capacity for mobilizing world opinion. Fortunately in this crisis the nations primarily involved were responsible nations, mindful of their charter pledges and of the importance of maintaining moral standards in the world. Among such countries the United Nations system works well, and with the cooperation of such countries it will continue to grow as a bulwark of a just peace.

---

[1] For an excerpt from the report of this committee, see Bulletin of July 8, 1957, p. 63.

I have spoken today only about the United Nations as a political instrument for settling international disputes. If time permitted I would like to discuss with you the other vitally important work of the United Nations—work which improves living conditions the world over. This would take us into the exciting and strikingly successful battles against age-old diseases, which are being waged by the World Health Organization. It would take us into the Food and Agriculture Organization, which works to banish hunger from the earth. It would take us into the activities of the Children's Fund, the technical assistance program, the refugee organizations, and the other agencies which are working to buttress peace by helping people.

A complete picture of the United Nations in this phase of its work would also include the new Atomic Energy Agency, which has been a major concern of mine for the past year and a half. This is the Agency which will carry out President Eisenhower's idea of sharing the atom for constructive peaceful purposes, so that atomic energy becomes a blessing to mankind rather than a malediction. Our Senate has recently approved United States participation in this new Agency, and we are hopeful that enough other nations will ratify the statute for the Agency in the near future so that it can come into being before the year is out.[2]

Time permits only a mention of this practical work that the United Nations is doing, which ranges from such complex matters as the atom to such down-to-earth matters as postal services and the weather. But I do want to say that the United States regards these United Nations activities as important contributions to peace. For it is not enough to contain conflicts; it is necessary also to build constructive forces within the containers which will reduce the pressures and diminish the likelihood of future conflicts.

In all of these activities, both the political and the economic and social, it is no secret that the United States wields a tremendous influence. It is—and should be—our constant concern that we use this influence constructively.

We cannot—and do not—maintain our leadership merely because we are a great power, or merely because we are richly endowed with natural and technical resources. The United States cannot—and does not—buy friends in this international forum. We command respect when our policies are right, when they are morally just as well as politically and economically sound. It is for this reason that the United States Government examines with such care each issue that comes before the United Nations, not only in the light of traditional friendships and alliances, not only in the light of ideological competition, but above all in the light of what is right and just and proper.

And finally, let me say this: our leadership at the United Nations is only as good as our national policies. These policies cannot be clearly defined—and made effective—without an informed, alert citizenry who take the trouble, as you have today, to inform themselves about the problems of the world in which we live and the workings of this unique institution, the United Nations.

The problems we face in our quest for peace with freedom and justice are as complex and variable as human nature itself. We have learned that the willingness of the world to take common action varies from year to year and from issue to issue. Yet this is our challenge—to strike toward peace, creating community out of discord and order out of community.

[2] For transmittal of the statute of the International Atomic Energy Agency to the Senate, see ibid., Apr. 15, 1957, p. 615; for text of statute, see ibid., Nov. 19, 1956, p. 820. The Senate gave its advice and consent to ratification on June 18.

"Pop" Kirsch of Brooklyn

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 15, 1957

Mr. ANFUSO. Mr. Speaker, a modern Horatio Alger story is without a doubt the success story of one of my constituents, Hyman Kirsch, known throughout Brooklyn as "Pop" Kirsch. He is now past 80 years of age and the founder of one of the largest soda-bottling companies in the country. He not only still maintains a very active interest in his business, but is also active in philanthropic work and civic institutions.

Under leave to extend my remarks in the RECORD, I wish to insert an article on "Pop" Kirsch published in the issue of June 23, 1957, of the New York Journal-American, one of our great New York metropolitan newspapers.

The article reads as follows:

"POP" KIRSCH, 80, STILL ACTIVE IN SODA FIRM—NO-CAL HIS BEST SELLER

(By Emanuel Doernberg)

Hyman Kirsch, now past 80, is the kind of man who doesn't wait until opportunity knocks. He goes out to find it.

When he arrived in America from his native land, Russia, in 1904, Kirsch was unable to land a job in the bottled-soda industry, which was his trade. So he set up a shop himself in a small Brooklyn store, made sirups by hand, turned out as much as 25 cases of soda a day and made deliveries himself.

That tiny store has grown into what is today Kirsch Beverages, Inc., and No-Cal Corp., which together make up about the largest independent organization in the land.

"Pop" Kirsch, as he's called around the bustling, noisy Brooklyn factory and office that is the heart of the Kirsch enterprise, is still active in management. He is treasurer of Kirsch Beverages and chairman of No-Cal.

FIRST OF ITS KIND

The latter company has, in a way, dwarfed the Kirsch name. The first of the nonfattening beverages, it came into being through Pop Kirsch's never ending desire to help others.

It came about this way. At the Jewish Chronic Diseases Hospital in Brooklyn, which to Kirsch is as important as the company he founded, doctors asked the sodamaker for a beverage that could be consumed by diabetic patients. The Kirsch firm went into action and its success is clear today in the mounting demand for the product, familiar now as No-Cal.

While Kirsch's son, Morris, is now president of both the Kirsch and No-Cal firms, the enterprising, hard-working founder is still very much on the job. He took time off from office duties the other day to show a visitor the long lines of clinking bottles, clanging machines, and automatic devices which have long since done away with his arduous handmade labors.

GRANDSONS HELP

Where once 25 cases a day resulted from his tireless efforts, many men and machines now speed out some 400 bottles of soda a minute and as many as 15,000 cases a day. Among those helping to produce the stacks of ginger ale, cherry, and other varieties of soft drinks, are Pop Kirsch's grandsons, Lee and David, who are also officers.

The elder Kirsch hints a new product in the soda field will be forthcoming, but is not yet ready to divulge what it is. He has no desire to get into any field but the one in which he has been so successful.

"I have always liked to stick to one business, and I still feel that way," he says.

CHARITABLE MAN

Kirsch, recently named Business Father of the Year by the Kiwanis Club of Williamsburg, is extremely active in philanthropic affairs. In addition to being vice president of the Jewish Chronic Diseases Hospital, he is also a director or trustee of many community institutions, including the Pride of Judea Orphans Home.

He wears his 80-plus years well. Kirsch reads 5 or 6 newspapers a day, enjoys flying trips and, we're told, helps pick the pretty models seen in Kirsch and No-Cal beverage ads.

Sales gains for all his products this year, particularly No-Cal, now 5 years old, is his optimistic prediction. He admits the competition is getting tougher all the time.

The company is exansion minded, Kirsch says, and the outlook is good. He points out that more people are drinking soda these days than ever, and that children are introduced to soda at an earlier age.

"Pop" Kirsch, with a son, daughter, 5 grandchildren, and 6 great-grandchildren, is very fond of children. But, he says sadly, "Kids today aren't as strong as when I was a boy."

Charles E. Eble—Local Boy Makes Good

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. KEOGH. Mr. Speaker, the following editorial appeared in the Ridgewood, N. Y., Times of August 1. The Ridgewood Times, published by my good friend, Joseph Schmidt, is one of the finest weekly papers in our community. The subject of the editorial is further proof that our country is still the land of opportunity. Knowing Mr. Eble, I know that he is fully deserving of all the honor and recognition that have come to him during his long career, and I join with his many friends in wishing him continued good health and good fortune.

The editorial is as follows:

CONGRATULATIONS

From office boy to president of the Nation's largest operating utility—this is the Horatio Alger-type experience of Charles Emil Eble, whose boyhood was spent here in Ridgewood.

Last week announcement was made of Mr. Eble's election to the presidency of the Consolidated Edison Co., of New York.

Boyhood friends of Mr. Eble, many of whom are still residing here or active in local business, industry, or the professions, recall that he attended public school 88, Catalpa Avenue

and Fresh Pond Road, and Bushwick High School.

Beginning in 1916 as an office boy, he transferred to the accounting department a year later. By 1935 he had risen to assistant controller of Consolidated Gas, now Consolidated Edison, and by 1937 to senior assistant controller of Consolidated Edison. His next promotions were to controller in 1946 and vice-president in charge of accounting, auditing, and tax operations in 1953.

Mr. Eble's success is further proof of the opportunities afforded all in this great land of ours. His career belies the notion held by some that to get ahead in life one must be born with a silver spoon in his mouth. Hard work, application to the tasks in hand, and a willingness to give service for wages received still brings their rewards. Indeed, one of the reasons for Mr. Eble's steady progress has been his policy of learning as much as he could about each department to which he was assigned and preparing himself for the job ahead. A genius at figures from his youth, with a keen, analytical mind, he devours legal briefs with the same relish that others read novels. Yet, remembering that all work and no play makes Jack a dull boy, he takes time out for recreation and relaxation. Whereas he played baseball and football as a lad, he now joins friends on the golf course.

Although Mr. Eble is no longer a Ridgewoodite (he now resides in Jamaica Estates), we like to feel that those traits of honesty, ambition, integrity, and service that have been characteristic of him were nurtured during his boyhood days in Ridgewood.

The entire community joins in extending heartiest congratulations.

A New Democracy in West Germany

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Sun-Telegraph of Monday, August 5, 1957:

A NEW DEMOCRACY IN WEST GERMANY
(By Victor Riesel)

Berlin is no fool's paradise. Operatives of 31 espionage and counterespionage units slither in and out of this city's shattered streets.

Both sides know what's happening almost every minute in the other's sector.

From the corroborated files of units in the western sector stalks a grim specter—detailed reports of intensified anti-Semitism in the Soviet areas since the recent purge.

Over there, Soviet occupation officials always have been anti-Semitic as has Nikita Khrushchev. There is an incident—never before reported—which reveals the kind of state the Russians are building in their zones.

RIOTS IN POLAND

Some time ago there were anti-Semitic riots in Poland. Some 3,000 Polish Jews fled to Berlin. Over 2,000 were made welcome in the democratic western sector and flown out to the German Federal Republic. More than 1,000 tried to stay with friends and relatives in the Russian sector of the city.

The Soviet command summoned the leader of the Jewish community in the Red sector. There is a record of this conversation. The Red official told the Jewish leader to tell the 1,000 refugees from Poland to get out of East Berlin. They had to flee again.

Contrasted with the renewed anti-Semitism in all Soviet territories is Germany's new democracy. I heard it from Chancellor Adenauer. I heard it from Germany's new generals.

ANOTHER MARX

But I also heard of it from Karl Marx—not the bearded fellow who started all the trouble, but my good friend, Karl Marx of Dusseldorf, leader of the Jewish community in that industrial capital of the Ruhr, and editor of the "Allgemeine Wochenzeitung der Juden in Deutschland."

This is the general weekly of the Jews in Germany.

Mr. Marx and I talked privately in his home. The Jews are beginning to return to Germany, he told me, substantiating what I had been told in Bonn by Werner, Middelmann, head of the Ministry for Expellees, Refugees, and War Victims.

"INNER GUIDANCE"

There is more than the freedom of the Jews and the aid given them by the Republic which attests to deep striving to create a democratic state. From Gen. Ulrich de Maiziere, head of the new army's G–3, the Joint Command, I learned that no man need yield his conscientious objections and be forcibly drafted into the army, now 100,000 strong.

There is Count Wolf Baudissin, who has charge of "inner guidance"—indoctrination—of the Bundeswehr, the army. A cultured man, given to molding modern pottery as a hobby, the Count explained efforts to make certain that the future German soldier would be a good fighting man, but a man fighting for positive democracy.

I asked how they could assure the world of this. The count told me of the Army School for Democracy in Koblenz. There, every few months, 100 officers are trained in democracy. Every battalion commander must go through it.

The caste system is banished. Workingmen's sons can be officers, and officers can bark commands only on the military and not the social level.

Retirement of Elton J. Layton

SPEECH
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mrs. GRANAHAN. Mr. Speaker, I want to extend my very best wishes to the clerk of the House Committee on Interstate and Foreign Commerce, Mr. Elton J. Layton, as he begins the retirement which he has earned through so many hard years of work on behalf of the Congress and the people of the United States.

Congressman Granahan, during the years he served on the Committee on Interstate and Foreign Commerce, considered Mr. Layton his close personal friend. Long before I met Mr. Layton, I learned to think of him as the efficient and conscientious person who always made sure Congressman Granahan was kept fully informed of all developments affecting his committee assignment.

Since coming to the House of Representatives, I have found Mr. Layton always helpful on any matter before the Committee on Interstate and Foreign Commerce. I am grateful to him for the assistance he has provided me in learning of issues before that committee which directly affect the people of Philadelphia. Mr. Layton is noted on Capitol Hill for the efficient manner in which he conducted the staff work of the committee and kept things on an even keel no matter how difficult the situation seemed to be.

I am sure he will enjoy his retirement, for he is a man of broad interests and a capacity for friendship. My best wishes go with him and his charming wife as they enter this new life of retirement and enjoyment of their own interests and hobbies.

Hail to the United States Coast Guard

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. FARBSTEIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News on the 167th anniversary of the founding of the United States Coast Guard:

HAIL TO THE UNITED STATES COAST GUARD
(By Harry H. Schlacht)

"So here's the Coast Guard battle song.
We fight on land and sea
Through howling gale and shot and shell
To win our victory.

"Semper Paratus is our guide,
Our pledge, our motto, too.
We're always ready, to do or die.
Aye! Coast Guard, we fight for you.

"Aye, we've been always ready
To do, fight, or die,
Write glory to the shield we wear
In letters to the sky.

"To sink the foe or save the maimed
Our mission and our pride,
We'll carry on 'til kingdom come
Ideals for which we've died.

"From north and south and east and west
The Coast Guard is in the fight
Busting subs and landing troops
The Axis feels our might.

"For we're the first invaders
On every fighting field.
From Arctic zone to tropic shore
You'll find our silver shield.

"So here's the Coast Guard marching song,
Through surf and storm and howling gale,
High shall our purpose be.

"Semper Paratus is our guide,
Our fame, our glory, too.
To fight, to save or fight and die.
Aye! Coast Guard, we are for you."

On Sunday, August 4, America will salute the United States Coast Guard. We shall commemorate the 167th anniversary of its founding by Alexander Hamilton, our first Secretary of Treasury. The United States Coast Guard serves in times of peace under the Treasury Department, and in time of war as part of the United States Navy.

We congratulate the wearers of the silver shield. We celebrate their gallant record in the service of our country. We are eternally

grateful, for America is a monument to their eternal spirit.

The Coast Guard was born at the birth of our Nation. It was nursed in the arms of lovers of liberty. It was destined to play a brilliant role in our history.

The Coast Guard's endurance has been tested by suffering and hardship. Its patriotic self-sacrifice has reached its noblest manifestation.

Its historic road has been marked with great and gallant milestones in the cause of our Nation. Its patriotism is the most beautiful picture that hangs in the gallery of our memories.

The Coast Guard has been endowed with a glorious tradition. It is an epic of adventure and drama of the sea. It has a unique record of selflessness. It has served with distinction, in peace and war, all humanity.

The Coast Guard has played a valiant role in the wars of our country. It has been the emergency arm of the Navy. It has participated in all the landings—in the Pacific from Guadalcanal to Okinawa, in Africa, Sicily, Italy, and Normandy.

Heroes and heroines of humanity, guardians of the sea, you have never failed to inspire us. You have served America nobly.

What are the stirring words of the Coast Guard marching song? It is "Semper Paratus"—"Always Ready." It is their official anthem. It is known around the world.

It was composed by Capt. Francis S. Van Boskerck, USCG. It captures all the glory, honor and tradition of the service. It speaks of the ideals and heritage for which every guardian lives and fights, to make men free.

United States Coast Guard—America marches forward with thee under the inspiration of your marching melody, on this your glorious anniversary, guided by freedom's holy light for a nobler humanity.

Monuments of stone and bronze will be erected to perpetuate your valorous deeds to humanity. But after the last of these shall have crumbled into dust and eroded to nothingness, your contributions to mankind will remain imperishable as long as men love liberty.

Hollander To Get Award of Civil Liberties Union

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. FRIEDEL. Mr. Speaker, since the issue of civil rights is in the forefront of the news at the present time and is a topic of nationwide interest and Senate debate, I have been requested to call attention to an award recently presented to a very distinguished Baltimorean, Mr. Sidney Hollander, for his contributions to the defense of civil liberties.

The presentation of this award was made by a very well known Maryland business executive, Mr. Jack L. Levin, who is active in civic and philanthropic organizations.

In presenting the award to Mr. Hollander, the chairman of the awards committee, Mr. Jack Levin, called attention to the fact that Mr. Hollander is the busiest man in Baltimore, but he is never too busy to be a friend in need. Nothing is too big or to small for him to tackle. He can glide easily from the important role as president of a national organization like the National Social Welfare Assembly to a local meeting of the housing committee of the urban league—without any change of pace or drive.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following article which appeared in the Baltimore Sun on May 13, 1957:

HOLLANDER TO GET AWARD OF CIVIL LIBERTIES UNION

The Maryland executive board of the American Civil Liberties Union has selected Sidney Hollander, of Baltimore, to receive its 1957 Civil Liberties Award.

The award will be presented at the organization's annual report meeting at 8:30 p. m. tomorrow at Friends Meeting House, 3107 North Charles Street.

Mr. Hollander, 75, is being honored for his contributions to the defense of civil liberties, recent leadership in the successful effort to pass a Baltimore fair-employment ordinance, and for his current efforts to eliminate racial discrimination advancing equal rights and opportunity for all.

Mr. Hollander has been president of the National Social Welfare Assembly, vice president of the Council on Social Work Education since 1954, and is a member of the executive committee of the United Service Organizations.

He served as the first president of the Baltimore chapter of the Americans for Democratic Action, as president of the Jewish Children's Society, the Baltimore Jewish Congress, Baltimore Jewish Council, and the Baltimore Urban League.

He is founder of the Sidney Hollander Award for advancing equal rights and opportunities for Negroes in Maryland. The first award went to the Sun papers for fostering better racial understanding. Similar awards have been resulted to the Baltimore Department of Education, Baltimore Medical Society, Loyola College, and to Governor McKeldin.

Jack Levin, awards chairman, will make the presentation to Mr. Hollander. D. H. Bentley Glass, president of the Maryland ACLU branch, will preside.

Senator Kennedy and France

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of August 3, 1957:

SENATOR KENNEDY AND FRANCE

When Senator JOHN F. KENNEDY, Massachusetts Democrat, unexpectedly called upon the United States to stop supporting the French War in Algeria the announcement stunned State Department officials and—it was assumed—caused a wave of hostile reaction in France.

However, it is now revealed that Senator KENNEDY's proposal received surprising support in France itself. Secretary of State Dulles took a dig at young Senator KENNEDY's proposals by saying that he would do better to busy himself with Communist colonialism, rather than criticize our ally.

The United States, in supporting French colonialism in Algeria, is doing more to inflame the Arab world and turn them toward communism than by any other one act.

Senator KENNEDY, who is not afraid to speak out on the subject, can see that also. Furthermore, he can see—contrary to Dulles' assertion that we do not want to concern ourselves with a very complicated French problem—that we are already very much involved.

France is a member of NATO and we are supplying the French with aid, in the form of money, loans, and arms. Moreover, we are trying to win the friendship of the Arab world and establish a new Middle East doctrine in that area.

Yet, the Cairo radio, and all Arabs, continually harp on the theme that we are supplying the French with arms and backing their colonialistic war in Algeria. The French contend that Algeria is a part of France, but this is a pretty weak contention, and the war in Algeria, the French colonialist war, is probably going to turn out the same way the French colonial war in Indochina and in Morocco turned out—in French defeat.

Why the French are not wise enough to see the light in time, and pull out with dignity and generosity, maintaining the friendship and respect of the Arabs, we are at a loss to understand. The British have acted much more wisely in this regard.

School Aid

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. McGOVERN. Mr. Speaker, thoughtful citizens throughout the Nation, regardless of their political party leanings, were intensely disappointed with the defeat of the Federal-aid-to school-construction bill in the House and deeply distressed with the lack of White House support and leadership on this issue. Typical of widespread reaction I have noted is the following excellent editorial from the Pioneer-Review, published at Philip, S. Dak., which I offer for the consideration of the Members of Congress:

[From the Philip (S. Dak.) Pioneer-Review of August 1, 1957]

SCHOOL AID

Some time ago we commented in this column about President Eisenhower's proposed budget cuts and spoke favorably regarding a decrease in Government spending and Government control.

In spite of that fact we are disappointed this week to learn of the defeat in Congress of the Federal-school-aid bill. It seemed to us to be a very necessary thing.

Federal agencies are now, and have been for years, spending our tax dollars for far less important things than the education of the Nation's children.

The President, for many months has spoken strongly, and often, about his desire to see a Federal-school-aid bill enacted. Yet, when his proposal came up for a congressional vote a number of Eisenhower Republicans not only voted, but worked against passage of the measure.

Why the Republican leaders in Congress, or the President, for that matter, failed to get behind the bill and get it passed, is a mystery to us. The point is, they did not, and the measure failed passage in the House by five votes. It appears now there will be no consideration of the measure or similar legislation for at least another year.

In the meantime, classrooms will continue to overflow and students will continue to attend half-day sessions in many places where State and local funds cannot keep up with the increasing population.

Coal Competitors

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. NEAL. Mr. Speaker, coal is still the king of fuels but its throne is being severely challenged by its competitors. Its dethronement as a national fuel will have an adverse effect on America's effort to maintain adequate defense production when and if this country becomes involved in an all-out world conflict.

Without sufficient markets enabling the coal industry to preserve potential production during peacetimes, readiness to meet such an emergency will be lost. Time and investment required to reopen and reactivate needed mine operation may mean the difference between victory and defeat.

Three years ago this industry was in a deplorable condition. Decreased domestic demands for coal were so low that many mines were closed leaving 100,000 miners and as many transportation employees out of work. Only through timely Federal aid in making foreign markets available was the industry able to survive. This demand for American coal may or may not last, depending upon the future economies of Europe, Japan, our wavering allies, and the Federal Government's contribution to their purchasing power.

America's coal has become the unfortunate victim of three powerful competitors—fuel oil, natural gas, and electricity. Competition from the latter, however, is compensated to a degree since electric power depends upon coal for much of its production.

Residual fuel oil, a refinery byproduct of no further value to the oil industry, has become a popular substitute for coal for the operation of diesel engines, boiler use, and heating. Since markets for this byproduct of the refineries merely adds so much velvet to their profits, they are in favorable position to undersell to coal users and thereby reap additional profits. Most of this fuel is imported from Venezuela, some of it from the Middle East. The importers of this commodity have had a free rein for many years. They have increased their import volume from year to year, with no effort on the part of the oil companies to voluntarily limit importation, nor have our Government leaders yet recognized that excessive imports of this fuel are not in the national interest. Coal shipments to the eastern seaboard have dwindled alarmingly, while imported residual oil continues to undersell and displace coal as a fuel in many parts of the Nation.

The record shows imports of residual fuel oil to August 1, 1957, amounted to 93,461,000 barrels, which is equivalent to 22,428,800 net tons of bituminous coal. Projected to the end of the year, an estimated increase of residual fuel oil for the year 1957 will be 2 million barrels over 1956. Legislative efforts to limit residual imports have failed repeatedly. In April of this year, the President appealed to the major oil companies to voluntarily reduce their imports of this fuel with no apparent response. The President then appointed a special Cabinet Committee to study and advise remedial action. This Committee recently reported to the President that the continued increase in the importation of oil was not in the national interest and recommended "mandatory programs if the importers failed to cut crude imports to 10 percent below the 1954–56 average." Please note that this report applies only to crude imports but makes no mention of oil products or residual fuel oil.

No matter how successful the Department of the Interior may be in securing voluntary compliance of the importers to limit crude oil imports, it is apparent that no effort to restrict the importation of residual oil is contemplated at this time.

The coal people are alarmed at the gradual increased rate of residual oil imports and the rate at which it is displacing their markets, thereby weakening their investment in present facilities.

Since natural gas offers the householder immeasurable advantages over coal, no attempt by coal producers to discourage its use for this purpose is being made. But the coal people look upon industrial use of natural gas, now estimated to consume two-thirds of present field production, as an unjustified and uneconomical means of depleting existing known reserves. No one can question that the rapid depletion of these reserves will reflect itself in an increased price domestic users will be compelled to pay for this commodity. They do, however, object, and rightfully so, to unfair cutrate sales of this fuel to industrial users, especially when cutrate sales by the pipelines are permitted by the FPC with no regulation of rates. To witness their industrial coal customers convert one by one from coal to gas is further warning that their industry will face the time when their investments in equipment and sales organization will suffer severe losses. It should also serve as a warning to the Nation's policymakers that a defunct coal industry cannot be expected to respond to the Nation's call in time of emergency.

While the freedom of industry to choose the fuel it elects to use is not questioned by the coal industry, unregulated direct and interruptible sales by pipeline companies at costs sufficiently low to induce industry to burn gas instead of coal is considered unfair competition.

In the pending legislation, referred to as the Harris bill, the coal industry is endeavoring to include a provision compelling the FPC to close the loophole in existing law, making it unlawful for pipeline companies to negotiate sales of gas to industrialists at rates lower than that which they charge municipal distributors for resale to domestic customers. An amendment to this effect will be offered when this bill comes to the floor of the House. It is hoped that the Members of the House will recognize the value of this amendment to the overall economy of the Nation.

The United States Air Force Rehabilitation and Restoration Program

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. FULTON. Mr. Speaker, recently a young Air Force recruit of good family, 19 years of age, got involved in some trouble on a liberty while on duty with the Air Force. He and another airman took about $20 from two civilians when the airman needed money to visit further drinking emporiums. He was court-martialed and sentenced to a dishonorable discharge, forfeiture of pay and allowances, and confinement for 1 year.

I became interested in the case, having known several generations of the family of one of the airmen, who reside in my district, and was able to supply people who knew the excellent background and good development of the young man. Air Force official reports indicated that the airmen appeared to be sincerely remorseful for misconduct, and that the young airman whose case I was interested in had maintained an excellent conduct and work record since confinement, and that he was strong in his desire to rehabilitate himself and make amends for his wrongdoing.

During the appellate review of the airman's case, he was selected to participate in the Air Force's retraining program at Amarillo Air Force Base, Tex. In the course of my inquiry into the case with the Judge Advocate General of the Air Force, I had several opportunities to see the progress made by the Air Force in its program of delinquency correction and rehabilitation of offenders. I was very impressed with the thoroughness of post-trial reviews afforded convicted airmen, and particularly the advanced methods employed by the Air Force in the treatment and rehabilitation opportunities afforded delinquent airmen. I should like to submit the following report on the Air Force rehabilitation and restoration program for inclusion in the RECORD:

THE AMARILLO AIR FORCE REHABILITATION PROGRAM—REPORT OF GEN. REGINALD C. HARMON, MAJOR GENERAL, UNITED STATES AIR FORCE, THE JUDGE ADVOCATE GENERAL, UNITED STATES AIR FORCE

In 1948, shortly after the Air Force became a separate and distinct armed force, its

Judge Advocate General became acutely aware of the need for complete post-trial investigations and an effective rehabilitation program. As a result, the Judge Advocate General put into operation a mandatory requirement for complete post-trial reports in all court-martial cases involving the imposition of a bad-conduct or dishonorable discharge as part of the court's sentence.

Prior to initial approval of a sentence by the officer who convened the court, the staff judge advocate of the airbase concerned is required to submit to the convening authority a written review as to the legal sufficiency of the record of trial and a complete report on the military record of the accused, his civilian background, reports and recommendations from supervisory personnel, the confinement officer, chaplain, and all other data pertaining to the accused, together with his recommendations as to the appropriateness of the sentence and the feasibility of clemency action. This report is submitted in written form and it becomes a part of the allied papers to the record of trial. Based on the information incorporated in this report, the convening authority is in a position where he can review the case with the benefit of a complete analysis of the character of the accused, his background, and potentiality for rehabilitation and further military service; and he can take action to approve, mitigate, remit, or suspend such portions of the sentence as he may deem the circumstances warrant.

The post-trial report is also of valuable assistance in the appellate review of court-martial proceedings in the Office of the Judge Advocate General. Being a part of the allied papers to the record of trial, the data contained in these reports is readily available to the board of review for a determination as to the appropriateness of the approved sentence. In addition, the report is carefully considered by the Judge Advocate General in his deliberation on the case for a determination as to whether the exercise of his clemency authority is warranted. These reports have also proved invaluable to the confinement authorities who are charged with the custodial responsibility of airmen prisoners, and the data contained in the reports serves as background information in the treatment, correction, and rehabilitation of the prisoner during his incarceration.

As a result of the requirement for full and complete post-trial evaluation reports, the Air Force found a minimization of disparities in sentences, and it became aware of an increase in the number of convicted airmen who were potentially rehabilitable for further useful military service and who could eventually earn a separation from the Air Force under honorable conditions rather than by punitive discharge.

Recognizing the need for an expansion and implementation of its rehabilitation and restoration program, the Air Force began an exhaustive study in 1951 on the feasibility of establishing a pilot rehabilitation center for the treatment and retraining of delinquent airmen. It became apparent during the planning stages that in a military establishment, as in the civil community, purely punitive methods of dealing with offenders should give way to the development of methods designed to rehabilitate and prepare the offender to meet the responsibilities of military life and thereafter civilian life.

After a study of the open-type institutions at Seagoville, Tex., and Chino, Calif., the Air Force felt that in dealing with offenders, a deemphasis of custody and emphasis on rehabilitation or retraining was a basic requirement in implementing its rehabilitation and restoration to duty program, and this concept permeates the entire handling of its convicted offenders by the Air Force. The Air Force established the 3320th Retraining Group at Amarillo Air Force Base, Tex., which began its operations in February 1952, as a part of this program to deal with airmen sentenced to punitive discharges and those airmen who, even though not sentenced to a punitive discharge would benefit from rehabilitation training.

This retraining facility was specifically designed to prepare selected Air Force offenders for a return to an honorable duty status equipped to meet the demands of the military service as well as civilian life. To accomplish its mission, traditional confinement concepts, such as limited social contact, physical restraint, use of armed guards, strict disciplinary environment were abandoned. Newer concepts of correctional treatment involving personality, character and vocational development were included in the program. The offender is provided with a normal military environment in a permissive, relaxed atmosphere. Through expert, nondirective type of guidance, coupled with self-responsibility and self-understanding, the individual is presented with a potential for becoming a productive, well adjusted airman and a law abiding citizen upon return to his community.

The staff at the retraining group consists of carefully selected and specially qualified personnel, trained and experienced in dealing with behavior problems. Every effort is made to secure specialists in such fields as psychiatry, psychology, social therapy, and in military and vocational training and administration, to work together as a team rather than individually.

This Air Force correctional facility is equipped to handle from 250 to 275 prisoners. Selections are made from all airbases by local commanders on recommendations of their judge advocate and provost staffs; and every effort is made to transfer qualified prisoners to the retraining group as soon after trial as is practicable. Selections are also made by the Judge Advocate General during the appellate review of cases by his Office. Selections are not made solely on the basis of the offenses involved, but are based on the prisoner's potentiality for further useful and honorable service.

Each case is decided on its own individual merits after careful consideration of favorable and unfavorable factors. Favorable factors normally considered are the youth of the offender, absence of a prior disciplinary record or delinquency pattern, prior satisfactory military record, outstanding combat record, as well as extenuating and mitigating circumstances attending commission of the offense. Unfavorable factors such as conviction of serious crimes against the person (murder, rape, armed robbery), conviction of desertion from a unit engaged in combat, a record of homosexuality, chronic alcoholism or drug addiction, ordinarily will preclude selection for retraining. Prisoners with a minimum of 90 days or more remaining on their sentences to confinement and who otherwise meet the criteria can be selected, but there is no fixed maximum sentence. Those with other military or civil charges pending are normally precluded from participation in the program. Many airmen convicted of serious offenses, such as desertion, grand larceny, embezzlement, forgery, etc., and sentenced to substantial periods of confinement, have been successfully rehabilitated and restored to an honorable duty status through what has become konwn as the Amarillo program.

The average length of stay of a retrainee at the retraining group is from 4 to 6 months. Those who successfully complete the required phases of retraining personally apear before a board of officers, which board directs its findings and recommendations to the base commander. The base commander is authorized to take necessary action to remit or suspend unexecuted portions of sentences, including punitive discharges, and to effect the prisoners' restoration to a duty status. Those who are deemed not qualified for restoration and who are not favorably considered are either separated from the Air Force by execution of the punitive discharge and, depending on the circumstances and length of their sentences, may be transferred to a disciplinary barracks for further confinement. However, the Air Force feels that even those who are not restored to duty materially benefit from the program and upon their return to civilian life it can be expected that they will conduct themselves in a productive law-abiding manner.

The retraining program at Amarillo consists of four phases. Phase I is devoted to reception, orientation, and evaluation. This includes interviews with various staff members (personnel, chaplain, medical, and psychiatric) as well as psychometric testing and general evaluation. In this phase, the retrainee (the term "prisoner," for obvious psychological reasons, is never used in referring to personnel at Amarillo) becomes acquainted with the program—what it proposes to do for him and what is expected of him.

There is a maximum of staff contact and a minimum of administrative detail during this phase.

Phase II is devoted to the fundamentals of military and civil life. This includes guided group interaction with stress given to citizenship, history, and the organization and missions of the Armed Forces. Approximately two-thirds of the day is devoted to classroom instruction; the remainder of the day is devoted to supervised activities in athletics, hobbies and vocational interests. A highly qualified social therapist indirectly guides group discussions resembling actual life situations and social living. These sessions provide a wealth of material which becomes of great value in the later individualized therapy techniques. At the end of phase II, the retrainee has some insight into his own problems and has developed an ability to live with himself and others.

Phases III and IV are concerned with specialized counseling and career training which includes formal technical instruction on the air base. The length of this training is flexible and depends on the individual's progress as well as the length of his sentence. Maximum use is made of base facilities in working out special career training for each individual. In addition, academic courses are available for upgrading educational levels. The prerelease period is characterized by an increase in the number of privileges, depending on the individual's progress, attitude, and adjustment. By this time, the retrainee's existence becomes almost identical to the Air Force situation to which he may eventually return.

The most important factor in achieving its objectives is the highly personalized treatment utilized by the retraining group. Retraining is in effect a continuation of human relations in which the subject finds understanding and sympathetic individuals to assist him in achieving an insight into his problems. The open atmosphere with complete absence of cells, fences, guards, and guns provides an excellent environment for the healing of diseased emotions. Each retrainee lives in regular military-type barracks, under conditions similar to any air base. From a physical viewpoint, the retraining group is indistinguishable from other activities on the base; and the retrainees wear no distinguishing clothing nor any other feature which can identify them as prisoners. The only restraint is that of a moral obligation to remain within the group area—there is no physical restraint.

Since its activation in February 1952, the retraining group has handled a total of about 3,300 retrainees. Of these, 1,645, or about 50 percent, have been restored and returned to a duty status. Of the 1,645, or 50 percent,

restored, continuous followup studies reveal that 70 percent of the restorations have been successful; that is, those restored have committed no further offenses and are either on productive duty status or have earned a subsequent separation from the Air Force under honorable conditions. The rate of recidivism among restored retrainees runs about 18 percent.

The United States Air Force has, therefore, within the past 5 years seen its retraining experiment become an accepted correctional facility. It has seen the value of the program at Amarillo not only as an effective treatment and preventive method of dealing with offenders, but as a means of salvaging manpower in a military organization. Similar to other experiments in the field of corrections, the Retraining Group was not readily understood or accepted at the outset. However, despite many handicaps, the Air Force has aggressively pursued this retraining experiment at Amarillo, and its worthiness is becoming more and more apparent.

Many leading penologists and correctional authorities have visited the Amarillo operation and have commended the Air Force on its accomplishment. They have strongly advocated its further implementation and expansion. At the 38th Annual National Convention of the American Legion, held at Los Angeles, Calif., in September 1956, the Special Committee on the Uniform Code of Military Justice and the United States Court of Military Appeals commended the Air Force on its Amarillo program, and in its report it recommended that the Congress enact legislation which will give statutory authority to insure the continuance of the Air Force's retraining program at Amarillo. The committee further recommended that such congressional action extend the program to the Army, the Navy, and the Coast Guard.

The Air Force has established an effective program for the rehabilitation of its offenders and so long as an airman is under Air Force control, he is offered every opportunity, consistent with the maintenance of discipline and good order in a military organization, to rehabilitate himself and to regain an honorable status. The Air Force recognizes, too, that because of youth, immaturity, or family problems, certain offenders fail to avail themselves of rehabilitation opportunities and are subsequently punitively discharged in accordance with the sentences of their courts-martial. After return to civilian life, these individuals become acutely aware of the effect and consequences of a punitive discharge and seek some way of securing another type of discharge. Section 8253 (b), title 10, United States Code, which is the basic statute covering enlistment in the Air Force, provides that no person whose service during his last term of enlistment was not honest and faithful may be enlisted in the Air Force. However, the statute provides that the Secretary of the Air Force may authorize the enlistment or reenlistment in the Air Force of such a person if his conduct after that service has been good. In the implementation of the Air Force rehabilitation program even beyond the period of actual military service, the Secretary of the Air Force has, consistent with the aforementioned statute, recently established policies and procedures whereby a person last separated from the Air Force by dishonorable or bad conduct discharge may make application for enlistment after a period of 2 years has elapsed since his discharge and/or release from confinement. The applicants are screened for proof of exemplary conduct and character since return to civilian life and under established procedures are considered for enlistment with a waiver of the punitive discharge which historically had been a bar to reenlistment. The applicant must, however, be otherwise physically, mentally and morally qualified for enlistment. The Secretary of the Air Force has also established procedures whereby a person last separated administratively by undesirable discharge may make application to the Air Force Discharge Review Board and upon favorable action by that Board, he may be enlisted if he is deemed otherwise qualified.

The Air Force concept of correctional rather than punitive treatment of offenders is far reaching. It affords to any airman who sincerely desires to clear his record, an opportunity to regain an honorable position not only in the service but also upon his return to civilian life. Moreover, it provides a source of manpower which under a more arbitrary system would be lost, as would be the investments in recruiting, training, and utilization of specialized skills. The Air Force's program is firm in that it requires the individual offender to earn a better discharge. The type of discharge received by a member of the Armed Forces must reflect the character of service he rendered for his country. Certain emoluments result from the faithful and honest serving of one's country, which should of course be reserved for the deserving.

Under its progressive programs, the Air Force affords even those who erred during their service as airmen an opportunity to redeem themselves. There is no outright forgiveness of wrongdoing; rather the burden is put squarely on the offender. Depending therefore on the sincerity of his desire to make amends, the delinquent airman must work and conduct himself in a manner wholly satisfactory to his commanders; and upon termination of his term of service, he can look forward to the reward of an honorable position both in the military and civilian communities.

Dulles Fiddling

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of August 3, 1957:

DULLES FIDDLING

Secretary of State John Foster Dulles is still fiddling around with an erroneous decision the State Department has supported for many years, to bar American newsmen from Communist China.

In the first place, the State Department has no right to bar American newsmen from Communist China and Dulles' quibbling over this edict only reveals a growing suspicion—in the State Department and possibly on Dulles' part—that the State Department is wrong.

In a meeting with six news executives recently, Dulles again offered to permit a limited number of newsmen to go to China, but he and the news executives could not agree on any such limitation. Most of them believe that the State Department has no right to prevent American news coverage of Communist China.

Eventually, Dulles will have to retract the now-famous and arbitrary order. Further quibbling about it, in trying to limit the number of newsmen, is a ridiculous approach to the situation. The question is whether the basic principle of free newspaper reporting in all parts of the world can be ignored by a United States Secretary of State, who was not originally intended to be a supercenor of United States news publications.

And, what difference does it make whether 6, or 10, reporters are in China? Actually, 3 reporters could do just as much harm—if there is any harm to be done—as 12. As we see it, then, Dulles has no argument whatsoever.

Mrs. Sadie Wolf

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. LIPSCOMB. Mr. Speaker, it is a privilege for me to insert in the CONGRESSIONAL RECORD House Resolution 253 of the California State Assembly commending Mrs. Sadie Wolf, of Los Angeles. I consider myself most fortunate in having Mrs. Wolf as a resident and constituent of the 24th Congressional District, and have been privileged to call her a friend for several years.

This recognition of Mrs. Wolf by the California State Legislature is richly deserved, and I could not let this opportunity pass without adding my own words of praise for her many accomplishments and contributions to her community, State, and Nation. Mrs. Wolf not only is a devoted wife and mother, but has found the time to take charge of and assist in numerous worthy civic projects in her community and church. She has played an extremely active and effective part in Republican politics in the State of California, serving as vice president of the Los Angeles County Republican assembly, and later as vice president of the California State Republican assembly, the oldest volunteer Republican organization in California. Although Mrs. Wolf is active in Republican circles, she is greatly respected and admired by, and has a host of friends in the Democratic Party as well.

Mrs. Sadie Wolf is surely an outstanding example of American womanhood. The resolution, which was introduced in the California State Legislature by Assemblyman Seth Johnson of the 56th Assembly District, follows:

CALIFORNIA STATE ASSEMBLY HOUSE RESOLUTION 253 COMMENDING MRS. SADIE WOLF

Whereas the attention of the legislature has ben directed to the noteworthy accomplisments of Mrs. Sadie Wolf, of Los Angeles; and

Whereas Sadie Wolf was born and reared in Hope, Kans., moving to Denver, Colo., in 1910, where she lived for 14 years; and

Whereas she was married to William E. Wolf, a captain in the Denver police department in 1916, and subsequently moved to Los Angeles in 1924; and

Whereas following her arrival in her adoptive state, Mrs. Wolf became intensely interested in politics, serving for many years on election boards in her district and organizing 68 precincts in the 56th Assembly District; and

Whereas in recognition of her exceptional abilities as an organizer she was selected as vice president of the Los Angeles County

Republican Assembly, and later as vice president of the California State Republican Assembly, the oldest volunteer Republican organization in the State; and

Whereas over the years Mrs. Wolf has given liberally of her time and energies to social welfare problems and has been an enthusiastic supporter of numerous civic projects in her community; and

Whereas she has also served as president of the Women's Missionary Society of the South Hollywood Presbyterian Church, and has been an active worker in that church for many years: Now, therefore, be it

Resolved by the Assembly of the State of California, That the members highly commend Mrs. Sadie Wolf for her devoted civic spirit and extend their sincere gratitude on behalf of the citizens of the entire State as well as of her community for her many outstanding activities in the public interest; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit a suitably prepared copy of this resolution to Mrs. Sadie Wolf.

Republicans Seen at Fault in Defeats

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. DINGELL. Mr. Speaker, Mr. Gould Lincoln, an editorial writer whose column appears in the Washington, D. C., Star, on July 27, 1957, had some interesting remarks on how the Republicans have been responsible for defeats in several vital programs. He referred specifically to the defeat and abandonment of section 3 of the civil-rights bill, as well as the killing of the school bill, and the foreign-aid cuts.

It appears to me that this is a matter of considerable importance. The President's own party has killed three items which he considered to be essential portions of his legislative program. It is interesting to note that Republican responsibility for these defeats is clearly delineated in this article:

REPUBLICANS SEEN AT FAULT IN DEFEATS

(By Gould Lincoln)

This has not been a good week for the Eisenhower program in Congress. And in more than one case it has been the Republicans in Senate or House who have been largely responsible for ditching the President's proposals. Take a look at the record.

First off, Republican Senators abandoned section III of the civil-rights bill, striking out all provisions of this measure relating to enforcement of desegregation in the public schools—in the South, particularly—and other rights than that of voting.

Further, the Republicans in the Senate are now hesitating over a Democratic-sponsored amendment which would force jury trials in cases involving contempt of court orders relating to registering and voting. If enough of them support the jury-trial amendment or amendments, the victory for the Southern Democrats will be almost complete in this latest tussle over civil rights legislation.

Then, in the name of economy, the House, with plenty of Republican aid, cut some $700 million out of the program for foreign aid—aid which President Eisenhower has contended again and again is vital for overall national defense.

SCHOOL AID BILL KILLED

Third, the President's school bill, designed to aid the States in building vitally needed schoolhouses, was defeated in the House, and here again the GOP members were clearly responsible in great measure. The vote was extremely close—208 to 203. And what did the Republicans do? One hundred and eleven of them supported the motion of Democratic Representative HOWARD W. SMITH of Virginia to strike out the enacting clause, which meant sudden death for the measure. Voting against the Smith amendment were only 77 Republicans. It is sufficient to note that 126 Democrats voted to keep the bill alive, while only 97 of them supported the Smith motion. This measure would have authorized the expenditure of $1.5 billion for school construction, to have been used where that aid is particularly needed. It is true the bill was not helped by adoption of an amendment offered by Representative WAINWRIGHT, Republican of New York, designed to deny school aid in any local district where schools operated in violation of the Supreme Court's decision outlawing segregated schools. But most of these same Republicans then turned and voted for the Smith motion which killed the bill. Among them were two of the principal Republican leaders in the House—HALLECK of Indiana and ARENDS of Illinois. If the Republicans in the House felt they were making any hay with the Negro voters of the North or South by these tactics, they must believe them mighty stupid.

And fourth, in the face of the strong opposition of the President and his administration, the House went ahead and supported strongly a bill to give the postal employees—some 500,000 in number—a 12½ percent increase in pay. If such measure becomes law, it will increase Government costs by $279 million annually. Further, such action is encouraging to those who are supporting a general increase for 1 million civil service employees, which would cost a great deal more.

VOTED TO CUT FOREIGN AID

Economy doesn't run, apparently, a straight course in some congressional minds. These same Members of Congress had voted, in the main, for a $2.3 billion cut in the national defense appropriations asked by the President, not to mention the costs in the foreign aid bill. It is true that President Eisenhower can, and is expected to, veto the bill or bills increasing Federal pay at this time. But he has to take the cuts in national defense and foreign aid, or run the risk of getting even less.

With an election coming up, however, Congressmen will have made their record in support of the increase in postal and other Federal salaries. Good politics, perhaps—they let the President save the money of the voters in this instance, while at the same time they ingratiated themselves with the Federal employees who vote.

The fight in the Senate over the proposed jury trial amendment to section IV of the civil-rights bill may result in a very close vote. Its adoption, supporters of the bill insist, would result in nullification in some of the States of the deep South; they contend a jury trial in Mississippi, Alabama, and Georgia, for example, where feeling runs strong would result invariably in acquittal, thereby injuring chances for assuring more Negroes the full franchise in those areas.

The supporters of the jury trial amendment, on the other hand, not only insist that denial of jury trials is un-American, but now point to the conviction in Knoxville of seven defendants in a case involving criminal contempt of a Federal court which had ordered desegregation in a Clinton, Tenn. school. They say this conviction shows that an all-white jury in the South will convict when justified.

That part of Tennessee, however, is strongly Republican and always has been since the days of the Civil War. It is no criterion, so far as juries in other southern areas are concerned.

Michael Late Benedum—The Great Wildcatter

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to include an article from the Petroleum Engineer, July 1957. The article, Petroleum Profile, is a fitting tribute to one of West Virginia's greatest and most magnanimous citizens, Mr. Michael Late Benedum, the Great Wildcatter.

The article follows:

PETROLEUM PROFILE

There is but one living man still actively engaged in the search for oil throughout the world who pioneered in the Appalachian area almost 70 years ago when wells of post-hole depth (800 to 1,500 feet) supplied all of America's demand for petroleum products.

That man is the Great Wildcatter,[1] Michael Late Benedum, of Pittsburgh, who is reputed to have discovered more oil than any other individual in history. Now nearing his 88th birthday (July 16), this last remaining link with the romantic and boisterous days of the industry's infancy is still carrying on new breathtaking exploratory projects. Individually and through companies which he controls, Uncle Mike, as he is known, is drilling in every oil-producing area of the United States and has only recently initiated large-scale undertakings in South and Central America and Africa on a total of more than 3 million acres.

In his office daily from 9 to 5, including Saturdays ("I didn't find oil and make money working only 40 hours a week."), Mike Benedum is familiar with the last detail of every project in which he has an interest. He also finds time, personally to direct the distribution of a large portion of his fortune. ("I do not regard this money as belonging to me. Providence has seen fit to make me the trustee of it, and it is my obligation to use it for the benefit of others.")

How well "Uncle Mike" has discharged this obligation can be measured to some extent in terms of the 700-odd students in 26 colleges in the Pittsburgh area who are beneficiaries of Benedum scholarships and student loan funds. Dozens of churches, hospitals, and other like institutions in the same section of the country receive financial support from him.

The small West Virginia community of Bridgeport, where the great wildcatter was born and reared, has been the object of much of the Benedum philanthropy. The population and wealth of that town has quadrupled in the last 10 years, during which period its most beloved and distinguished native son

[1] The book, The Great Wildcatter, by Sam Mallison, is not only the story of Mike Benedum, but an excellent history of the petroleum industry.

built a $2 million church; a community center, with library, auditorium, dining room, clubrooms, swimming pool, ice-skating rink, and playgrounds at about the same cost; and restored and beautified the town's old cemeteries at a total cost of about half a million dollars.

Instead of the flamboyant character most people associate with oil wildcatting, especially those who were active in the early days of wild and woolly boomtowns, Mr. Benedum is a quiet, shy, and soft-spoken individual. Despite his advanced years, he still walks as erectly as a West Point cadet. Widowed since 1951, and childless since 1918, when his only son died while serving his country in the First World War, the great wildcatter lives alone on an 8-acre estate in the heart of Pittsburgh's residential East End.

There business associates and friends are frequent dinner guests, later joining "Uncle Mike" before 1 of the 3 television screens in his 23-room mansion. It is entirely in keeping with his vision and pioneering spirit that his favorite programs are of the Superman and Science Fiction type.

"I know that you boys think I am in my dotage," he says to associates, "but do you realize that the things they show you in these plays are not half as fantastic as what we actually have today would have been to my father and mother."

"Uncle Mike" may have something there. It is a fact that he has had something through the years as he risked his money and endeavors on the future he envisioned, but which most of his contemporaries regarded as pure fantasy. Some thought he was suffering from the mid-summer heat of Louisiana when, at the time of his discovery of the Caddo field in 1907, he predicted the day would come when America would consume 3 million barrers of oil every day. When that day arrived, he went out on another limb with the prophecy that this demand would treble in three decades.

Now, as the great wildcatter looks at the space men on his television, he says that many now in the oil business will live to see the day when domestic demand reaches 15 million barrels a day.

Funny thing is that no one laughs at his predictions any more.

Ambassador Gluck and the Tongue Cluckers

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. CRETELLA. Mr. Speaker, an editorial in the New Haven Register of August 2 has a message for our colleagues who hunt headlines first and think about United States foreign relations second.

There is every reason to believe Mr. Gluck will assume his duties as our Ambassador to Ceylon as, if it must be painfully pointed out to his senatorial adversaries, he is already confirmed by that body.

That a qualified and successful man goes to Ceylon as our Ambassador in a something less than favorable light should rest on the conscience of those who would use United States foreign relations as a subject of banter and catcalls.

The editorial follows:

AMBASSADOR GLUCK AND THE TONGUE CLUCKERS

We hold no brief for the failure of our Ambassador-elect to Ceylon, Maxwell Gluck, to do a little rudimentary boning up on Ceylon before he faced the Senate Foreign Relations Committee. Reference to any good encyclopedia, year-book, or almanac might have informed him superficially on such things as the name of Ceylon's prime minister or the best pronunciation of Jawaharlal Nehru.

And we agree that diplomacy is a serious business today—requiring a serious and competent approach.

But we also believe that urbanity and sincerity are not necessarily the same thing, and that expert knowledge of any of the world's countries—as our diplomatic performance in Asia and much of the Middle East has shown since World War II—does not necessarily lead to the best exposition of United States purposes or the surest protection of American interests.

Think of all the smooth careermen with their precise mastery of mandarin Chinese and their sensitive appreciation of Peiping jade, who were involved—wittingly or unwittingly—in the American policy debacle in China.

Maxwell Gluck has certainly gotten off on the wrong foot in his first diplomatic venture. And he's not being helped at all by those who might want to make antiadministration capital out of his blunder in Washington—or anti-American capital out of his blunder in sensitive Ceylon.

But as an ordinary American of good heart and good sense and decent competence in anything he has undertaken privately, he may still be able to bring to Ceylon and the Ceylonese people something that the striped-pants traditionalists might never bring.

Let's quit all this tongue clucking.

Senate Earns Respect

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Lancaster, S. C., News of August 1, 1957:

SENATE EARNS RESPECT

Regardless of the outcome of the civil-rights debate now going on in the Senate of the United States, partisans on both sides have been impressed with the temperate, searching manner in which every word and phrase of the proposed act is being examined. Instead of an agonizing filibuster, opponents of the bill have talked to the point with skill and ability, reminding citizens of this country that the Senate is still the greatest deliberative body in the world.

The debate has produced some surprising changes of attitude. Senator JACKSON, of Washington, who has given full support to the bill from its inception, including the defeated section III, announced this week that he was joining the southerners in insisting on jury trials in civil-rights cases. His reasons were clearly stated.

He noted that section IV of the bill gave the Attorney General of the United States and his assistant the choice of granting or withholding the right to jury trial in all cases where the offense was also a violation of other and existing laws. This would mean, he said, that jury trials would be allowed in areas where convictions could be expected and denied in areas where conviction was in doubt.

"If a violation of voting rights occurred in Chicago, where the Government thought a jury would convict," said Senator JACKSON, "it could move for an indictment and jury trial. But if an identical case occurred in Mobile, the jury trial could be neatly bypassed through the injunctive process.

"Thus the prosecuting attorney would have the option of barring or bestowing the right to trial by jury. He could decide, in effect, that what is good for New York is bad for New Orleans.

"Let us not forget that trial by jury, just as the right to vote, is one of our traditional civil rights. And, like all civil rights, it is designed to shield the individual from the potential tyranny of the State. We need not be so fearful for the future of the voting rights that we now endanger one civil right to guard another. The adoption of an appropriate jury trial amendment is essential if we are to prevent a piecemeal assault on the foundations of our legal system."

Communism in Guatemala

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a news story from the Washington Post of today's date which points up the fact that Communist terrorism is still a foot in our neighbor nation of Guatemala.

The recent tragic death of President Carlos Castillo Armas at the hands of an assassin was, according to Guatemalan Ambassador Jose Luis Cruz Salazar, traceable to the Communist conspiracy.

On my visit to Guatemala recently, I was most favorably impressed with the economic and political advances made under the leadership of Castillo Armas. In 1955 I saw the beginnings of the moderate government which had overcome Communist agitation for control. This was a great victory for the side of freedom, and I expressed at that time the hope that this freedom would be zealously guarded.

It is now apparent that efforts must be redoubled, not only in Guatemala, but everywhere, to the end that those nations desiring to advance under a free government may retain that privilege. The State Department must not lessen its concentration on the problems of our neighbors to the south, for the old adage still applies: an ounce of prevention is worth a pound of cure.

The article follows:

CASTILLO'S DEATH IS LAID TO REDS

(By Warren Unna)

Guatemalan Ambassador Jose Luis Cruz Salazar declared yesterday that the July 26 assassination of President Carlos Castillo Armas was an attempt by Latin American

Communists to intimidate his country in its recent economic and political advances.

But Cruz's remarks, at a chancery press conference, left to future investigation the specific links between the assassination and a Communist conspiracy.

Cruz indicated that so far the principal evidence of communistic backing has come from a statement by Juan Jose Arevalo, Communist president of Guatemala from 1945 to 1951, who declared from his place of exile in Santiago:

"Romeo Vasquez Sanchez (Castillo's assassin) enters history as a symbol of Latin American struggle against those who would attempt to transform them into colonies. Those who tried to sell or lease Guatemala to foreign commercial concerns will fall one by one under the terrible judgment of popular vendetta."

Cruz said that in the past 18 months, not only Castillo, but Panamanian President Jose Antonio Remon and Nicaraguan President Anastasio Somoza had also fallen under assassins' bullets. Cruz said he could think that the deaths of Remon and Somoza had also been caused by Communists.

The Ambassador declared that Communists were now operating throughout Latin America. He particularly singled out ex-Guatemalan President Jacobo Arbens Guzman, ousted by Castillo in 1954, as directing operations from Montevideo.

Ambassador Cruz said he (a potential candidate in next December's presidential election) along with other Latin American anti-Communists, were now marked for future assassinations. He added: "We will not be intimidated."

Cruz credited United States mutual assistance with greatly assisting Guatemala's fight against communism.

Some of the incidents surrounding President Castillo's assassination which were touched upon at yesterday's press conference were:

How Vasquez, Castillo's assassin, came to be hired as a presidential palace guard 2 months ago when he had been discharged by the Guatemalan Army for political instability in 1955. (Cruz explained that the Ministry of Defense, which has charge of the army, has no control over the palace guard.)

How Vasquez happened to leave behind such a detailed account of his scheme. (Cruz explained a diary, found in a trunk in Vasquez's room, "showed his intentions to kill the President and how much he liked the Communist movement." Cruz also said envelopes were found, mailed to Vasquez from Moscow. He declined to discuss what happened to the letters inside.)

How Vasques happened to be placed in the palace guard by the Communists. (Cruz said Bernardo Vides, a Guatemalan attorney and former member of the Liberation Congress, had recommended Vasquez for the post and then fled to El Salvador immediately after Castillo's assassination. Cruz added there was as yet no evidence that Vides is a Communist.)

Golden Spike Centennial of the B. & O. Railroad

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I wish to include an address given by Walter L. Hays, president of American Fire & Casualty Co., Orlando, Fla., at the B. & O. Golden Spike Centennial, on July 4, 1957, at Shoals, Ind.

The address follows:

Mr. Chairman, distinguished guests, ladies and gentlemen, it is a privilege to be here—it is a privilege for two particular reasons:

First, this country is "home."

Second, my family's history is deep in the roots of this community.

According to an inscription on a flyleaf in a Bible I have, my great-great-grandfather, William Hays, driving by ox team from North Carolina, arrived in the Indiana Territory in 1805. I can only presume he came to this area because he bought land here. He purchased an extensive tract of land from the Federal Government in 1817—a year after Indiana became a State. The land is not far from here on White River. After a few years, he sold this land to Whitfield Force, and the farm is still in the Force family.

My great-great-grandfather had the pioneer spirit. Again, in 1830 he forged on west to Illinois. He went to the vicinity of what is now Virden, near Springfield. I have visited his grave.

When he left here, 1 son and 2 daughters remained. The son was Joseph Hays, who married Elizabeth Dobson. Joseph Hays was my great-grandfather. One daughter married Elijah Halbert, who was the son of one of the original settlers in this community.

My mother's father, William Mitchell, operated a hotel here in Shoals about the year 1890. It stood on land now occupied by your library. He reared his family on the Ed Hewitt farm, not far from here in the direction of West Union.

My great-grandfather James Stephen Wood (my Grandmother Hays' father) was county commissioner of Martin County at the time this railroad was built. He is buried near here on the bluff overlooking the White River in the Wood family burial plot on the O'Brien farm.

I have often said "Men, not geographical locations, build cities."

Men built the town of Shoals. Most towns in this area came to the railroad, they were built because of the railroad. In the case of Shoals, the railroad came to Shoals. Shoals was a thriving community long before the railroad was here. In fact, it was one of the earliest settlements in the State.

Transportation has always been looked upon as the lifeblood of a community, of a community's growth. However, years before the railroad was built here—in spite of handicaps—men walked, came on horseback, and by oxcart, and started the community we now call Shoals. They were the kind of men who build communities.

In the beginning, this community was called Halbert's Bluff on one side and Dougherty's Shoals on the other. With its splendid leadership the community grew, and in 1844 the name was changed to Memphis.

In 1857, a great thing happened—a great blessing to this community—the railroad came. People here could travel to the outside world, swiftly and comfortably. They could ship their produce and livestock to the big city markets. They could quickly receive shipments of manufactured goods from the factories. Now, the whole community increased its tempo, took on new life, and enthusiasm for the future ran high.

The name was changed to Shoals—this was a growing, thriving community—a community of men and women who were on the forward march. At that time there were such leaders as Halbert, Benefield, Coffin, Henley, Chenoweth, and many others.

Fifty years later, the community was still growing. Those in the forefront in leadership were Uncle Ben Johnson, Charles Slates, Perry Albaugh, Sam Ross, Mike Shirley, O. L. Stiles, T. V. Allbright, Drs. H. W. Shirley, G. M. Freeman and I. N. Plummer, Judge Hillary Houghton, and Publisher Al Hackler.

Today, on this Fourth of July, we celebrate the 100th anniversary of the building of this railroad and we find the leaders here now are descendants of those who pioneered this community more than 100 years ago.

When originally built, the railroad was called the Ohio and Mississippi, or the O. & M. Abner T. Ellis, of neighboring Vincennes, was president of the railroad at the time it was built. Construction on the O. & M. started at St. Louis and Cincinnati, and the crews worked toward each other, meeting here in Shoals, just a few days before the Fourth of July 100 years ago. This is where the Golden Spike was driven when they met.

On the 4th of July, a day like this—except that we have more people here—exactly 100 years ago, about this time of day, the first passenger train steamed into the Shoals' station. It was an extremely modern train for its time. Aboard were many notables and officials, and others anxious to make this historic trip. President Buchanan was represent by Secretary of State, the Honorable Lewis Cash. It was an exciting occasion. Not only were a large number aboard the train, but the people came here to Shoals from everywhere. A large crowd gathered to witness and take part in this memorable event. They wanted to take part in it and, too, they wanted to see a modern passenger train. The train stopped here for some time and it was a very festive and exciting occasion.

It was only fitting that an old pioneer like the Baltimore & Ohio would soon take over and join with the men who were pioneers here to develop this country.

The B. & O. was truly a pioneer. Not only is it one of the greatest railroad systems in the Nation, but it was the very first railroad in the United States.

Its expansion into this Central West has been the very backbone of the vast development of this country. We owe much to this great railroad system and its foresight—its energies, which were expended here.

Towns the size of Shoals are coming into the own. People ar discovering the virtues of the small town. With good roads and all modern inventions—TV, deep freezes, etc.—people find it a privilege to live in the small town, and it offers many advantages over the city.

Industry feels the same. For several years, industry has been decentralizing and moving to the smaller communities. You here in Shoals have a new industry in the mining of gypsum. This is growing to be a gigantic industry. Other industries are coming your way. You have an abundance of undeveloped and undiscovered natural resources. Your future never looked brighter. It is bright with the promise of great things to come.

Shoals is nestled in the heart of Indiana's beauty spot. Tourists testify that this countryside is the beauty spot of the Nation.

You people here are real folks—the kind of people who make this Nation great. You are independent thinkers. You are people who are self-supporting, who come nearer to producing what you use than folks anywhere else. You ask only for opportunity. You will make your own security.

You are the kind of people who balance your budgets and want to see the Federal Government balance its budget.

Our Government keeps spending and spending. Our national debt gets bigger and bigger. As the debt grows bigger, our dollar grows smaller.

If we keep this up until our dollar has no value, that's the day the Communists are looking forward to—that's when they stepped in on other countries.

To save this Nation we must stabilize our dollar. We must do it now. We should start by cutting our Government expenses, then trimming the national debt.

Let's go back to the principles our forefathers fought for.

Let's give States' rights back to the States. Let's give the Government back to the people. Let's give business back to business.

We should take business out of the Federal, State, and local governments. Our great industries were built on free enterprise and free competition. That is what made this country the greatest country in the world in which to live.

Abraham Lincoln said: "You cannot help men permanently by doing for them what they could and should do for themselves." When a nation does for its people what they should do for themselves that nation is weakened.

Mentioning Lincoln, reminds me that he did pass through Shoals in 1860 traveling from Illinois to make a speech in Cincinnati.

The only thing we will ever have that is worthwhile is what we get for ourselves. With this goes self-respect.

I know the people here believe in the philosophy that the people support the government not the government the people.

The pendulum of our Nation has swung too far to the left, towards socialism, and away from free enterprise and free competition. The pendulum will eventually swing back, but a lot of damage will have been done.

I know that you people here in Martin County are the kind of people who will be in the forefront in swinging that pendulum back to the center.

The people of this community have carried on the tradition of the Pilgrims who landed 337 years ago. They were seeking freedom—opportunities. From the birth of the United States of America in 1776 to 1933, this country sky-rocketed in industry, in education, in every kind of development. No other country has ever equaled this record. Our foundation was based on free competition and free enterprise—on "opportunities"—not on security. The people had the opportunity to provide their own security.

Beginning in 1933, people in this country, like those of other countries in the past, were promised security, and this trend is still being carried on. For this alleged security, we have given up a certain amount of freedom, and there has been a lessening of opportunities.

We find ourselves regulated and taxed—taxed and regulated. Furthermore, we are entangled in the tentacles of an octopus of a bureaucratic government from which we haven't been able to shake free. Anything that harms your business, harms you. Anything that injures the people, injures our future. Our progress or our failures are reduced down to the responsibility of every citizen. If we do not assume the responsibilities of citizenship, we may be relieved of them in due time. If we are relieved of responsibilities, we may also be relieved of our freedom.

We should pass on to our children the freedom we inherited from our ancestors. Instead, are we going to pass on to them a bureaucratic, regulatory nation without freedom and weighted down with debt—a debt which they may never be able to pay?

Speaking of education, most of our colleges are Government-subsidized in some form. There are not many independent colleges left. However, you have a number of good, independent colleges in Indiana, and you have the Nation's outstanding system of supporting these independent colleges by business. We should emphasize the advantage of the development of free enterprise and the American way of life as we once knew it, not the one toward which we are drifting.

My charge against many colleges is not that they teach Marxism, socialism, communism, and fascism; my charge is that they do not teach enough Americanism. It's only right that they should teach all forms of government. A student must know what he is up against. On the other hand, little is taught about Americanism or the capitalistic form of government, under which the student is to live. Our educators must believe that we are supposed to know our form of government. The truth is, we are not well enough informed. Our boys and girls should be taught the advantages of a capitalistic form of government, and to understand it. We must spell it out so that it is thoroughly understood.

It is our hope that through the educational halls of this country, we will be able to emphasize to the students of today and tomorrow the importance of carrying on our form of government, preserving our freedoms, and continuing our system of free economy. Our hopes for the future lie with those who will carry on our responsibilities.

When Paul was saved from a Jewish mob and stood before a Roman captain to be examined by scourging, not for any offense but on the theory that anyone attacked by a mob must be guilty of something, he saved himself by declaring his Roman citizenship. The astonished and unconvinced captain asked, "Art thou a Roman? With a great sum obtained I this freedom." The captain said he paid a great sum of money for his freedom. Paul answered drily, "But I was born free."

We, too, were born free. Thanks to God, and thanks to all the brave men who have paid a great price, who have given us that inheritance, and all who have fought and died to preserve it.

We are free, and heir and joint-owner of the greatest Nation ever built on this earth. We are the most favored and most fortunate people the world has ever seen. But American citizenship is not all privileges. We have a responsibility, too.

Our responsibility is as coruler of this Nation—to make ourselves worthy of being Americans.

Capitalism Will Not Work Without Capital; and Capital Comes From Savings

---

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. JUDD. Mr. Speaker, for many years in the thirties Americans were fed the Keynesian dogma that to save was not a virtue but a vice. In fact, it was taught that almost the only economic crime was not to spend. So more and more people abandoned age-old habits of thrift and spent not only all they had, but all they could borrow or get on credit. Now our economy is unable to expand as rapidly as we wish for lack of capital. We are paying for the failure to build up savings. We are being painfully reminded of the simple fact that a capitalistic system will not work without capital. Credit is sound only if based on capital; it is not a substitute for capital. Capital comes from savings. There is no Aladdin's lamp.

Mr. Speaker, this thesis is developed—with all its dire portents—in the following article by J. H. Kelleghan of the staff of Economic Trend Line Studies:

WHO WILL TOLL THE MIDNIGHT BELL?

With supreme self-assurance, not to say blissful ignorance, we Americans are accustomed to assume that our national economy is expandable at will and at an accelerating rate. We calmly ignore the inescapable fact that an industrial economy at any given moment has relatively rigid limitations. Being all of one piece, it must be expanded in toto rather than section by section. Raw materials, transportation, manufacturing processes, distribution; the economy is a complex of integrated facilities and processes, not a conglomeration of separate and independent units.

We look at a factory and we know that the factory's output can be increased only by adding the necessary facilities in terms of plants, equipment, personnel, and distributing organization. We look at the individual components of the economy almost at random and we readily accept the same conclusion.

We know that a railroad, or a trucking company cannot increase its capacity without increasing its facilities. We know that a mine must expand its access to available mineral deposits before it can increase its total output. Yet when it comes to accepting a check on our efforts to expand our individual operations and activities, we refuse to acknowledge these elementary facts and are ready to blame our frustration on "tight money" and the cost of credit.

Perhaps this is a heritage from our pioneer ancestors who were willing to accept only the sea-washed sands of the Pacific as a barrier to their migratory ambitions.

At any rate, an industrial economy, like a continent, does have definite and recognizable limits. These limits, moreover, can be expanded only by adding to the whole complex of facilities and services that go into the structure of an industrial economy and determine the limits of its effective capacity.

Blissfully ignoring these hard truths, our National Government administrations for two decades persistently promulgated the myth that the expansion of the economy required only an increase in the purchasing power of the American people. Converted into terms of immediate application for political purposes, this meant simply handing out more money, first to the people who needed it most, then to ever strengthening pressure groups whose demands have now become insatiable. This was expected to stimulate business, set the wheels of industry whirring faster and generally push out the limits of economic activity.

This simple solution of the extremely complex problems associated with the expansion of individual incomes, and inferentially our industrial economy, has a universal and irresistible appeal. It is the modern version of the myth of the magical increase in worldly treasures from Aladdin's lamp. It is an eternally flowing cornucopia with a bank paying teller's window at the business end.

Sign a paper, walk to a window of a bank or loan office, pick up a check and you are dispatched on the realization of your fondest dreams. If you are the president of a corporation, you call your banker for an interview, sign a paper and start the construction of that new plant, purchase the latest equipment or buy a company that an aging management must sell.

If you are an executive head in the Federal Government, you budget your hopes and dreams and fondly anticipate the collection of the necessary taxes from an unwilling but virtually helpless body politic.

It is all so easy. All it requires is for banks and the monetary system to make the necessary money available. People have been taught that money is the instrument that controls everything. The relatively slow and arduous processes by which the things are produced that money buys are secondary. In fact, it would be much more in keeping with present-day attitudes if banks and loan companies decorated the fronts of their quarters with replicas of ancient and magical oriental lamps and huge black genii rather than with Grecian columns and neon signs.

Our preoccupation with credit as the open sesame to material well-being is little short of hypnotic. We no longer measure our purchasing power in terms of dollars of actual income but in terms of how many time payments our income will cover. The credit upon which these purchases are based is considered inexhaustible. Indeed, many businessmen consider it a downright outrage that they have to even think of the unpleasant reality of exhausted bank credit.

One wonders if the people who lived in that shadowy past when the tale of Aladdin's magic first enthralled men's minds, actually believed that Aladdin's lamp was real. One searches his imagination for the reality which may have clung to Cinderella, her prince, and her pumpkin carriage. One feels a sympathetic understanding for the victims of all the get-rich-quick schemes that have deluded people down through the ages. One begins to perceive that the monetary inflation of modern times is but the fulfillment of the fairytales of all ages that magically opened the coffers of wealth and affluence. Is it any wonder that people believe that modern science with its technology, its electronics, its nuclear physics, has achieved a triumphant breakthrough, has smashed the walls of cold, unyielding reality, and loosed the flood of all the wonderful things that modern science and industry together have created.

How are we to tell our people that the present monetary abundance is just a fairytale, the modern version of all the eager, hopeful longing that has filled the human heart from the beginning of time? How are we to make them understand that our modern industrial economy harnesses human effort more completely and more relentlessly than any other economic arrangements that have ever existed? How are we to shatter their illusions and their dreams about money, and force them to see that the money for which they reach is and must remain an incorruptible system that must function with the precision and perfection of all the other scientific and mechanical processes if it is to serve adequately the economy of which it is an integral part.

Sooner or later the lamp will vanish into thin air, the carriage will become a pumpkin again and the reality of an inelastic paycheck will subdue the ready credibility of unchanging human hearts. Who among our industrial leaders, our politicians, our Presidents, will have the temerity, the courage, to toll the midnight bell?

Plight of Modern Republicans

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. DINGELL. Mr. Speaker, the wavering and vacillation of the President of the United States has reached such a disgraceful state that the newspapers are commenting quite openly on it. In that connection I am inserting into the Appendix of the RECORD a comment by Mr. Thomas L. Stokes appearing in the Washington, D. C., Evening Star of July 31, 1957, wherein the whole sad tale of Mr. Eisenhower's leaping from one side of an issue to another is well cataloged.

The article follows:

PLIGHT OF MODERN REPUBLICANS—EISENHOWER STAND ON RIGHTS AND SCHOOLS AND REGULAR G. O. P. BLAMED

(By Thomas L. Stokes)

It is 9 months since President Eisenhower, in the triumphant hour of his reelection, proclaimed a victory for modern Republicanism. Today the modern Republican wing of the party, which did not flourish as the President hoped, is at a low ebb.

For there are two reasons. One is the President, himself. The other is the regular G. O. P. in Congress which has been using its strength there and its skill to gather power to itself to an extent generally overlooked until circumstances invite an exploration, as they do now.

As for the President, he has let down the modern or Eisenhower Republicans who are, to be sure, a minority of the party in both House and Senate. The recent surrender on the school-construction bill, without a fight, was a sign of the virtual abdication of the President as leader of modern Republicanism.

With increasing misgivings, the beleagured Eisenhower Republicans have watched the President waver indecisively on one after another issue in which they are concerned and for which they were prepared to fight. Indeed, he appeared at times within the space of a few days to be on both sides.

The first, you will recall, was the Eisenhower budget which was welcomed by Eisenhower Republicans as an adequate budget that they were prepared to champion. They saw the President begin to wobble when Secretary of Treasury Humphrey, who retired this week, expressed fears that the budget was too big. The President was on all sides of that issue.

He was bluffed on the civil-rights bill by Senator DICK RUSSELL, of Georgia, who did a variation on oratory of the Reconstruction era. That seemed to frighten the President, as it was intended to do, though it was old stuff to southerners of DICK RUSSELL'S generation who went through that routine in Friday afternoon debates and declamations in grammar school, high school, and even in college. You have seen the results in the retreat the President began to beat on the civil-rights bill, with which he was not too familiar. His party leader in the Senate—Senator KNOWLAND, of California—who wants a good bill as an issue in his own campaign for the 1960 Republican presidential nomination, has been desperately trying to stem the tide of retreat to salvage something.

On the school-construction bill, the President was talked out of making a fight for it by his party leaders in the House—floor leader, JOE MARTIN, of Massachusetts; assistant leader, CHARLIE HALLECK, of Indiana, and party whip, LES ARENDS, of Illinois. We saw the old familiar coalition at work again. Southern Democrats under Representative HOWARD SMITH, of Virginia, joined with Republican old-guardsters under Messrs. HALLECK and ARENDS and beat the measure just as they did in the last Congress.

The discouragement and disillusionment of the modern Republicans is deepened by something else they saw during the retreat on civil rights, the surrender on schools, and indecision on the budget. This was how energetic the White House staff can be under the whip of Sherman Adams, and how compliant the President can be with his signature to letters they prepare for him, on other issues that are not advertised in the modern Republican handbills.

To kill the bill in the House Interior Committee for a high Federal dam at Hells Canyon, as championed by conservation forces, President Eisenhower signed a letter to a member of the committee after Sherman Adams had used all the necessary pressures to line up Republicans. Before that, the President signed another letter to the House Interstate Commerce Committee which had received a few days before, on his behalf, a recommendation for two amendments to the natural-gas bill to protect the consumer. The oil and gas industry has protested the amendments. The President's letter, which followed the oil and gas outcry, said in effect it would be all right if those amendments were dropped. They were, naturally.

Any analysis of the renaissance of the GOP Old Guard must take account of the weakening effect on the influence of the President and of the Eisenhower Republicans caused by the constitutional ban on a third term. He is the first President in history to have the burden of this now-generally-recognized handicap which loosens his grip on the party. The regulars under Senator KNOWLAND are capitalizing on that handicap.

Attempts To Trade With Communists Are Not Realism—They Are Illusion and Frustration

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following illuminating article from the Christian Science Monitor as condensed in the Reader's Digest:

THEY TRIED TO DO BUSINESS WITH THE SOVIETS

(By A. Wilfred May)

Nowhere has the Soviet scheme to divide the Western allies been more successful than on the question of East-West trade. A British businessman, who is a Conservative and a genuine friend of the United States, argued with me that the West not only can but must do business with the Soviet-bloc countries.

"It is the only realistic policy," he said, "especially since your tariff restrictions permit the rest of the free world little choice."

This is a point I have heard made many times by businessmen in Great Britain and on the Continent. They are encouraged by the insistence of the Soviet Union that it desires nothing more than normal international trade relations.

Lately, some outstanding industrialists in the United States have been inclined to agree. Our businessmen, they say, ought not to spurn a satisfactory, profitable contract just because they don't like the politics of the men with whom they make it.

"Satisfactory." "Profitable." The words are persuasive, but the facts are not.

The answer to the question of whether we can do business with the Soviets lies in the experience of those who have tried to. In a recent journey through Europe and the Middle East I asked many businessmen their judgment on the actualities of the East-West trade situation.

"Berlin businessmen certainly would like to do business with the East," said Bernhard Grodzki, managing director of the Berlin Chamber of Commerce, "but that seems almost impossible because the U. S. S. R. has never offered us anything in exchange that we could use."

In Bohn, Dr. Günther Altenburg of the Industrie und Handelstag declared that "repeatedly, the goods the Eastern Zone promises have not come through. Moreover, quality is not up to Western standards."

Swiss industrial and banking circles told me their postwar trade agreements with Poland, Czechoslovakia, Hungary and Rumania were disappointments. The Poles defaulted on their coal-delivery contract. Wheat imported from Rumania last year proved inferior in quality and was priced well above the world market. A Geneva importer complained that the quality of Czechoslovakian automobiles is below that of German, British and American cars, and the prices are relatively high.

In Greece, the situation was theoretically more conducive to trade with Soviet-bloc countries because Greece has an abundance of tobacco and dried fruits, products certainly usable by the Soviets, and these products could be traded for needed oil, coal and other minerals high on the Soviet list of exportable goods.

However, Greeks have found it next to impossible to sell their commodities to the Soviet Union because of the Russians' persistent unreliability—manifested in price juggling when they buy, and uncertainty in the time and quality of their deliveries when they sell.

Alexander Tsatsos, head of the Federation of Greek Industries and president of the General Cement Co., which produces 45 percent of Greece's cement, stated that his firm has become disillusioned about sales to the Soviet Union. "They are completely uninterested in a free and natural market," he said. "They continually price their exports out of the market. It is unwise to depend on them."

Greek trade with Soviet-bloc countries is further complicated by the Communists' unwillingness to extend credit. Other countries give time drafts up to 18 months; the Soviets and their satellites customarily demand at least half cash when the order is placed, and the balance covered by a draft.

In Ankara, Turkey's Premier Adnan Menderes said: "The Russians have often dangled petroleum supplies before us, but always with strings attached such as demanding to send along troublesome commercial missions or trying to tie us up on long-term contracts."

"We have had to face the hard reality," says Kazim Taskent, one of Turkey's leading businessmen, "that free-enterprise people that can't do business with a state-controlled economy."

Mulkieve Rifat Edin, textile wholesaler in Istanbul, whose business is largely dependent on imported woolens, snipped a piece from a bolt of cloth from Czechoslovakia and handed it to me. It fell to pieces at a mere touch. "As you can see," he said demonstrating with samples from other bolts, "the quality from Britain and France is much better, and I can get it at the same price."

In Lebanon, Phillipe Tamer, president of the Association of Lebanese Industries, admitted that from the economic view trade with the Soviet Union would be advantageous. "But from the political point of view it is highly dangerous," he said. "Our businessmen are concerned lest, through economic channels and their clever propaganda, the Soviets gain political control over us."

A private British trade mission to Moscow in February 1954 returned home with word that the Soviet was interested in buying 400 million pounds' worth of equipment over the next 3 years. Since then the British have actually booked orders amounting to only 40 million pounds, and of these but half were approved as nonstrategic by the British authorities.

Everywhere the record is one of constant irritation, frustration, and distrust. The interviews I have cited show that the source of the trouble does not lie in the political or economic policy of the United States or other free countries, but simply in the difficulties of doing business with the Soviets.

Moreover, it is questionable whether the U. S. S. R. could pay for a greatly stepped-up import program. Its presumed vast gold supply is open to doubt. The Soviet Union's ability to pay for imports depends largely on its grain and timber—and its grain production is in a notoriously poor state.

In spite of all this, the drive for more East-West trade continues. In an aura of idealism it is pushed here and abroad by businessmen and appeasers who maintain that revising the strategic-minerals list would bring in the business. The facts and figures prove that this is a dangerous illusion.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

The French Crisis

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. HUMPHREY. Mr. President, Thomas Jefferson once said: "Every man is a citizen of two countries: his own and France."

It is because the civilized world has for so long had a vested interest in French culture and French democracy that the turmoil and tragedy besetting France today has been a cause of deep concern and sorrow for friends of France around the world.

In the midst of recurring crises, we should not lose sight of the valiant and constructive steps which have been taken in some areas of French policy. The affirmative French ratification of the European common market and the European Atomic Energy Community—EURATOM—are worthy of highest commendation. In these fields of growing European unity, France has set her face toward constructive and realistic policies. As Americans we should rejoice that this has happened and lend all possible encouragement.

Unfortunately, Mr. President, these constructive steps have been taken in the midst of the continuing French national crisis—a crisis of domestic political and foreign involvement. At the heart of this crisis remains a cancer of the Algerian war.

Two astute Minnesota citizens have recently commented on that situation and its deteriorating influence on French national life. One of these commentators is the distinguished president of the Minneapolis Star and Tribune, Mr. John Cowles, who has just returned from Europe. The August 4, 1957, issue of the Minneapolis Tribune contains an article by Mr. Cowles entitled "Dictator May Rise as French Crisis Deepens."

Mr. Robert W. Smith of the editorial page staff of the same paper contributed an article to the July 28 issue entitled "Algeria—Will France Pay a Tragic Price?"

I ask unanimous consent that the text of these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune of August 4, 1957]

COWLES ON EUROPE: DICTATOR MAY RISE AS FRENCH CRISIS DEEPENS

(By John Cowles, president of the Minneapolis Star and Tribune, who has just returned from Europe)

France is headed for a major political and economic crisis, one so serious that its repercussions likely will dominate the front pages of the newspapers this fall just as the news from Suez and the Near East did last autumn and winter.

There is 1 chance in 3 or 4 that General DeGaulle, wartime leader of the Free French forces, will become dictator of France before this year ends.

Unless the Algerian war is speedily concluded and drastic additional tax and fiscal reforms put into effect—neither of which now appears likely—France shortly will exhaust its last monetary reserves and foreign credits.

When and if that happens almost all the French political parties, except the Communist, may vote to suspend the constitution and open the way for DeGaulle or some other "strong man" to try to save France with unlimited dictatorial powers.

"MESS" DIFFICULT TO UNDERSTAND

It is difficult for Americans who have seen France's productive farmlands to understand how such a basically rich nation could have got itself into such a mess.

There are three principal explanations:

First, the French, remembering the two Napoleons, deeply mistrust giving their executive real authority. The constitution of the fourth and present French republic, drafted after World War II, does not give the executive branch of the government the power it needs to function effectively. The situation is made worse by the existence of many, instead of only 2 or 3, political parties, so that coalition cabinets are always necessary.

Second, French tax enforcement is and always has been notoriously lax. Most Frenchmen feel there is no more moral turpitude involved in evading income taxes than many Americans felt when back in our prohibition era they patronized bootleggers and speakeasies. Many if not most French business concerns keep two sets of books, one for the tax collector and the other for the owners.

Third, the expense of carrying on the Algerian war is a heavy drain. France has well over 400,000 troops in Algeria now, or about as many as the United States and Britain combined had in all of North Africa when we were fighting the Germans and Italians there in 1943.

FEAR A "COMMUNIST SATELLITE"

The French have not yet reached the point where they can seriously contemplate the possibility of their now granting the Algerians real independence. They emphasize instead their obligations to the 1,200,000 Europeans who live in Algeria.

They also genuinely believe that an independent Algeria would probably speedily become a Communist satellite, with dire consequences to the other nations bordering on the Mediterranean.

Unless France within a few months offers a proposal satisfactory to the Algerians, probably one with a timetable specifying the dates of a step-by-step program leading to complete local autonomy and self-government, Algeria eventually will prove another Indochina.

France's deficit in foreign exchange is running more than $120 million a month and growing. In addition, the domestic government's internal budget is deeply in red ink.

When one realizes that France's national income is less than a tenth that of America's, the magnitude of the French deficit becomes apparent.

Currently France is having an inflationary boom. Like rouge masking pallid lips, it gives a false impression of healthy prosperity.

Every sophisticated person expects another French currency devaluation. Consequently, people with money deposited in French banks which they can't transfer elsewhere are rushing to buy property. Prices of Paris real estate are soaring.

Paintings and other works of art are eagerly purchased for twice what they would have brought a couple of years ago.

GOLD RESERVES NEAR EXHAUSTION

The French Government's gold reserves are declining steadily. They probably will be exhausted in a few months. Except for the possibility that West Germany may lend France $100 million or so through the European Payment Union, no additional foreign loans now appear available.

The heart of the entire NATO military supply setup is France. The United States has invested billions in the huge complex of airfields and pipelines and supply depots in France, against the possibility of a Russian attempt to overrun western Europe.

If the American public sometime this fall suddenly comes to realize that the Government of the French Republic is bankrupt and our whole NATO defense logistics setup is seriously endangered, the shock may be considerable.

Perhaps a dictatorship by General De Gaulle, followed, one may hope, by a satisfactory settlement of the Algerian war and the creation of a new French constitution that will give the executive branch of the Government the powers that modern conditions require, will be the solution.

[From the Minneapolis Tribune of July 28, 1957]

ALGERIA—WILL FRANCE PAY A TRAGIC PRICE?

(By Robert W. Smith)

Whatever your feelings about the rights or wrongs of the French position in Algeria, if you are a friend of France, you can't help regretting and resenting what its north African colonial policy is doing to the land of liberty, equality, and fraternity.

The direct economic cost of the Algerian war to France can be expressed in many ways. A year ago, for example, the direct annual cost to the Government was estimated at a billion dollars. The present French budget allocates nearly $3 billion to the campaign—more than a quarter of the entire budget.

Another estimate, apparently more conservative than that of the Government budget makers, is that the Algerian war costs $2,875,000 a day.

The indirect costs are as heavy, though not as obvious. The drain on the Government budget, for example, is crippling French economic growth. For, because of the semi-Socialist nature of the economy, in postwar years up to 60 percent of the capital investment in French industry has come directly from the Government. Thus important industrial projects have had to be canceled because of the Algerian affair.

And this in a nation on the brink of taking the economically desperate step of devaluing its currency in order to step up exports and limit imports and domestic consumption.

There are other indirect drains, too: wine-gorged France—whose surplus-grape growers extort irrational annual subsidies from the Government—imports great quantities of wine from Algeria, which, because Algeria

is officially part of France, are also Government-subsidized; also, the French economy can ill spare the productive potential of the 200,000-plus reservists mobilized to fill out the 400,000-man army in Algeria. And so on.

The moral costs of the conflict are equally hurtful. Granting the excesses of violence which can be pinned on the Algerian rebels, the conscience of a nation boasting the civilization and culture attributed to France cannot go unscathed by such brutality and counter-terror as have been charged to French forces by reliable, responsible Frenchmen. An example is the scathing indictment contained in Lieutenant in Algeria, a book by Servan-Schreiber, the editor of L'Express who was recalled to active duty in a vain attempt to silence his newspaper's criticism of government policy.

A growing number of reports of this sort appear to be having some effect on sections of French public opinion hitherto unstirred by other developments in Algeria. France's influential intellectuals especially are beginning to revolt against the "pacification" policy.

A measure of the ideological cost of the Algerian contest can be seen in the increasing measures taken against French newspapers which publish anything which shows the Government in a bad light. Not a month has passed this year in which responsible newspapers have not seen whole editions confiscated, in France as well as in Algeria, because they contained critical articles.

This repression of the press has gone so far that the International Press Institute report for June contained this paragraph: "Pierre Lafitte, editor of Herria, a small weekly published in French and Basque, is indicated in Bayonne for an article on Algeria." This is the country of Voltaire.

Last week France began to tot up the political cost of its Algerian adventure. Premier Bourges-Maunoury won a vote of confidence on his demand for special police powers, within France, to cope with Algerian rebels—officially "French citizens"—who have spread their terrorist activities to metropolitan France. The official tally was 280 to 183 for the Premier. But that is misleading.

Actually, 29 Socialists—whose party is the mainstay of the government—officially abstained while another 100 deputies did not vote at all. And most, if not all, of those not voting oppose the government's policies.

The new police powers are alarming; they include the right of night search of Frenchmen's homes, the right to intern all individuals convicted of carrying arms or "endangering public security," and the right to imprison suspects for 21 days (at a time).

The powers are, of course, aimed at Algerians. But many Frenchmen remember that similar powers were given to Premier Daladier in 1939 to be used against Communists and Nazi agents—and then were used by the Vichy government against Daladier himself and French leaders like Leon Blum, General Gamelin and other anti-Nazis. There's this saving feature: the present special powers are for the life of this government only.

But a precedent has been set, and many Frenchmen are uneasy. One disquieted man is the venerable Socialist leader Andre Philip, who recently warned his fellow citizens that "France is in a condition of prefascism."

That wolf-warning has been made often before in politically unstable France. It may be unwarranted now—it probably is. But more and more citizens and friends of France are wondering how long the Algerian "pacification" can go on without intolerably increasing the chances for a new Bonaparte or Petain.

Protests Against Oil Imports Reduction Show Inconsistency

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. JOHNSON of Texas. Mr. President, it is my earnest hope that the President's recent action in signing an order designed to curtail excessive imports of petroleum into this country will remove a distinct threat to our national security and also bring some relief to our hard-pressed independent oil producers.

Some protests against the President's action have been voiced. The Wichita Daily Times, of Wichita Falls, Tex., editorially points out that there is a certain lack of logic in some of these protests. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CRY IN THE DARK

Protests against the move to reduce the flow of foreign oil into the United States, lodged by a number of eastern Senators of both major political parties, are hardly logical in the face of the protectionist idea traditional to that part of the country.

New Englanders have always fought for an umbrella of tariffs in the legislative Chambers of the Federal Government to shield the industries nestled there.

Now that the shoe is on another foot, however, the New Englanders jump to the other side of the fence and cry, "Foul ball." They are in the role, for once, of consumers.

Fie on their inconsistency.

And their fears are groundless that reduced quotas of foreign-oil imports, which is just a variation of the protective tariffs they have long enjoyed, cloak a move for exorbitant increases in the price of petroleum products.

In European countries, where all petroleum is imported and most of it is cheap Middle East oil, consumers pay 3 to 5 times more than the going prices in the United States. Any American tourist, even those from Maine, Vermont, or Massachusetts, has only to check the cost of petrol at the filling station pump abroad to know this is so.

It is just as important to protect the well-being of the domestic oil-producing industry, as all of the New England industries lumped together. In fact, it is even more important, for oil is only where it can be found, and industry has no particular home, as its migration from the East in recent years has proved.

Farm Income

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. NEUBERGER. Mr. President, an editorial in the July 25, 1957, issue of the Central Oregon Midstatesman, is worthy of note. The editor, commenting on the tobogganning farm income, centers his attention on the experience of farmers of one of the Northwest's great reclamation projects, the North Unit project of central Oregon.

Basic commodities are not grown on these irrigated acres. But the economic history of these acres, to which the editorial refers, is the repetition of the story of agriculture in all areas in the past 5 years.

I ask unanimous consent, Mr. President, to have this informative editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Amos Bierly, county agent for farm crops at Madras, threw some light on the farm squeeze when members of the Bend Chamber of Commerce visited that city on their recent jaunt to Pelton Dam. Although Bierly talked about "extremes," he clearly pointed out that the farmers are having a rough go of it.

Taking figures from the North Unit irrigation project, Bierly showed the group that the income for average farms of the area dropped from a high of 1950 of $19,500 gross cash income to $9,000 in 1956.

Farm incomes are noted for their elevator-type patterns. The year 1950 showed a return of about 15 percent of the investment, which is terrific. The farmer netted over $10,000, including his costs for living.

In 1956 it was a different story. The farmer showed a net loss of $1,040. With so many different things affecting the farmer income, weather, surplus, yields, etc., the farmer has learned to expect a variation in income.

What makes it rough, not only on the farmer but everyone else, is farm income is the base of our entire economy. When the farmer lives high on the hog, it is reflected in the economy with greater sales, more employment, and more spendable money for all of us.

Only through adequate farm income can we hope to continue our big production, full-scale employment, and high standard of living.

Outstanding Work of Advertising Council of the United States

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. WILEY. Mr. President, on other occasions I have pointed out to my colleagues the invaluable work performed by the Advertising Council of the United States.

In its 15th annual report, it describes once again its achievements in the public service in alerting the people of America through all media of information to important public causes.

I was pleased to read in the August 1, 1957, issue of the Janesville Daily Gazette a writeup of the advertising council's splendid record.

I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SELLING PUBLIC ON ITS NEEDS

Advertising via newspapers, radio, and other media is not aimed exclusively at the sale of merchandise and services. The extent to which it serves an unselfish purpose of encouraging the public to do things which it ought to do for society's own good is disclosed in the 15th annual report of the Advertising Council.

The council backed 16 major campaigns and gave help to 54 lesser projects during the past year. Donations amounted to $149 million in commercial advertising time and space for the national project, compared to $125 million the year before.

Through the campaigns of publicity, motorists were urged to drive carefully and prevent accidents; citizens were alerted to fight for better schools and against creeping slum blight; the public was coaxed to attend religious services; United States savings bonds were pushed as an investment; and forest fires were prevented by the example of Smokey the Bear who always puts out his campfires.

The results of the campaigns are somewhat difficult to measure accurately, but sometimes can be put into dollars. For example, the Hungarian relief campaign resulted in contributions of $7 million and the Red Cross enrolled 24 million and raised $85 million in its last campaign backed by the council. This year three new national projects have been accepted—aid to higher education in behalf of the Council for Financial Aid to Education, mental health for the National Association for Mental Health, and NATO.

Figures indicate success along other lines as well as in money contributions. The council is credited with a "major breakthrough" in its forest fire prevention crusade. In 1942 there were 210,000 forest fires which burned 32 million acres, and last year, 145,000 fires which burned 8 million acres. Meanwhile traffic through national parks and forests has greatly increased.

Partly in response to the "register and vote" campaign, 80 million registered last year and 62,118,936 voted. Summer and fall safety campaigns last year probably helped to reduce traffic deaths by 2,000 below the National Safety Council estimate for the year.

The response to the campaigns is proof that the public is glad to respond to movements which save lives, give relief and comfort, support spiritual and social values, and build better communities and families. First, however, they must know where the needs are, and it is here that public service advertising campaigns meet a national need.

Soil Day in West Texas

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. JOHNSON of Texas. Mr. President, the Abilene Reporter-News, a progressive newspaper in west Texas, annually sponsors a Soil Day program, during which the attention of landowners is called to sound soil conservation and use practices for their area.

This year's Soil Day was held last week, and the Reporter-News devoted an editorial to explaining the nature and purpose of the annual observance. I ask unanimous consent that this wise editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABOUT SOIL DAY

Elsewhere in this issue will be found full details of the fourth annual Soil Day program sponsored by this newspaper, scheduled for Tuesday on the Comer Haynes Farm near Merkel.

At the end of June, with more than 25 inches of rainfall up to then, it didn't look as though west-central Texas and almost all the balance of the State had any serious agricultural worries at all. But before the end of June the moisture situation was beginning to get a little tight, and the blazing sun took over. July came in hot and dry, with only sixty-two hundredths of an inch of rainfall, and the agricultural situation with the possible exception of cotton worsened rapidly.

For some 75 years now, since discovery that west Texas had vast agricultural potentials, it has been an alternation of good crops and destructive droughts. But only slowly has it soaked in on our people that climatic conditions in the area called for a special kind of agricultural practice to minimize the effect of dry spells. Crops especially adapted to the climate were discovered and developed, including drought-resistant feed grains.

But that proved only a partial answer. How fully to utilize the moisture that fell, to conserve the soil from wind and water erosion, became an absolute must if west-central Texas was to sustain the limited agriculture she had so painfully developed, and to go on to develop its magnificent potential still further.

The problem has many angles, and most of these angles will form the subject of Tuesday's Soil Day activities. The principles of a balanced and stable agriculture in an area of uncertain rainfall are well known. It remains to put them fully into practice.

That, as the Reporter-News sees it, is what Soil Day is all about. We are firmly convinced that only in a prosperous and stable agriculture can this city and its immediate area hope to prosper and grow. To foster, encourage, and bring about the development of our full agricultural potential seems to us a matter of the utmost importance to us all.

Our Privilege To Pay Taxes

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Our Privilege To Pay Taxes," which appeared in the July 25, 1957, issue of the Townsend (Mont.) Star, which is edited by Mrs. Grace A. Hollaway.

"It's a privilege to pay taxes," writes Mrs. Holloway. "We have to pay," she writes, "for the pleasures and privileges of living a life of freedom not equaled by a single other State."

She points out that the home folks have to pay heavy taxes because—

Big business would rather come in here and acquire our oil, our metals, yes, and even our livestock and forage crops, and ship them out, to be manufactured into products east, west, or south—but not in Montana.

I disagree with the editorial in one respect, although I may add here that that fact does not diminish in any way my respect for the views of this able newspaperwoman. She does not believe it is "in the cards" for big industry to come to Montana. Some have come already, and I firmly believe that more industry will come to Montana as we develop our rich resources, and that Montana will one day attract businessmen, just as now it attracts hundreds of thousands of tourists, who come to enjoy the State's unequaled scenery and recreation.

In Montana we have enough space and resources to permit industrial development without impairment to the Montana way of life. We welcome the industrialist and the tourist.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR PRIVILEGE TO PAY TAXES

The way I see the tax picture in Townsend and Broadwater County is one of satisfaction. This statement will bring some shrug of shoulders from some and others will agree.

We all know the people are taxed very hard these days—in this atomic age, shall I say. Up in Washington the billions that are spent are past the comprehension of most taxpayers. There are world-involved programs that startle the thinking of the most astute economist. Financiers of high knowledge can't quite grasp the extent of it. Reading the lines and between the lines, it seems that even this world situation is gradually righting itself. Many experiments that have cost the United States taxpaying public have failed and will be dispensed abroad. In countries where Uncle Sam had extended a helping hand to teach and dole, there is now becoming less need as the people have learned to help themselves. Threat of war seems less prevalent. The United States of America is learning gradually that this great land of promise will do well to stay home and not try and instill democracy in the old countries who have had governments and religions centuries before this country was ever seen by white man. Governments that have made happy and prosperous people in many countries and religions, Christian and the other great world religions, that have satisfied and still satisfy millions of soul-seeking people.

It is well for each person to try and understand the Federal spending, talk with and write to our Congressmen. They are ready to hear and accept suggestions.

This will apply to State government also. Just as State matters are easier to reach than Federal, our own county problems are much more clear to understand.

And thus we come down to county and city levels.

The way I see the tax problems in Montana and that means Broadwater County and Townsend, is one of a privilege to pay taxes.

We have to pay for the pleasures and privileges of living a life of freedom not equaled by a single other State. We have a unique life here in this northwestern State in that we who live here know others who do not know publicize us as a cold, frigid State, many still believing we are illiterate, infested with wild animals and Indians and if a suggestion was made for them to come in here with industry or even to live, the idea would be ridiculed.

Montana is gaining a reputation through consistent advertising of being a summer recreation and scenic place for trips through it. But as for big industries coming here to operate, it isn't in the cards. Freight rates, long distances, shorter year for operation and many features enter in to discourage industry. Big business would rather come in here, acquire our oil, our metals, yes, and even our livestock and forage crops and ship them out to be manufactured into products east, west, or south—but not in Montana.

As a result the people that love this old State—the ones that want to live here and enjoy the glorious summers and also the winters—for the winters are better than most States—have the whole taxload to carry.

Just because we live here, by choice, is no reason we aren't just as intelligent (if not more). We insist on the good things of life for ourselves and our families. We want good roads to travel upon. We want good churches, libraries, schools. We want the recreation apropos of the locale. In short we want to live just as good, as the other fellow, and we do. But because there are fewer to pay, the ones that are here must pay heavier.

Of course we do not have the extravagant public works that the big cities and countrysides have, but we fare very well.

When we talk taxes at home then, it means that we are paying for the simple things of life that we see provided right in front of our very eyes. Everything is free and aboveboard and every taxpayer can have a personal chance to solve all problems—make suggestions for progress—help keep and maintain our good life.

Then am I wrong in stating it is privilege to pay taxes? For every advantage we enjoy from our tax dollar, it is through the services of a public servant, hired by those who pay taxes. He or she is merely carrying forward a mandate engaged by the people.

If those servants aren't progressive they will become about as popular as a mosquito digging his bill in on this hot summer August day.

If you are one of those who wants to cut taxes, don't start cutting out progress, for if you win, more will begin to seek homes away from this place and the ones left will have more and more taxloads to carry.

Let's pull together to have and to hold for ourselves and our posterity all the good things of life in a State not equaled in the entire United States. This, of course, is the big secret. We know it—we live here. It isn't such a bad idea to keep this glorious part of the United States a little select as it is—not too many people—not too many smoke-noisy factories. We have the real life here and we're willing to pay for it. The budgets are being examined now. If there are things we want and do not have, now is the time to go forward.

Racial Disturbances in the North

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Not 'News' in North," from the News and Courier, of Charleston, S. C., of August 1, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT "NEWS" IN NORTH

It is too bad no seismograph records the range of press hypocrisy in the North. The handling of the Chicago race riots would have registered severe shocks in some big cities.

Editions of the New York Herald Tribune for Monday and Tuesday received in Charleston contained not a line about a serious racial clash in the country's second largest city.

The New York Times on Monday printed an Associated Press dispatch 7 inches long on page 10. The Times, with unrivaled facilities of its own for gathering news all over the world, did not even see fit to print the full AP account. Tuesday's issue of the Times sent to Charleston contained no story at all on further disorders occurring in Chicago on Monday.

The handling of the local story by the Chicago Daily News also is interesting. It was printed on page 3 under a headline saying "Man Fined $50 in Race Flareup." The Daily News devoted its entire back page to pictures of earthquake damage in Mexico City. No pictures showed the race riots in the city where the Daily News is published. The riots were called racial disturbances throughout.

Does any reader wonder how these newspapers would have displayed racial disturbances had they occurred in South Carolina, Mississippi, or elsewhere this side of the Paper Curtain? Race riots aren't news in the North.

Return of German Assets Seized During World War II

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Bilge," published in the Washington Post of August 3, criticizing the administration's proposal to return German assets seized during World War II.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BILGE

The persistent and predatory effort, now openly backed by the administration, to return German assets seized during World War II amounts to an outright pilfering of American pockets. These assets, estimated to amount with appreciation to more than $200 million—and perhaps much more—belong legitimately to the American people. The giveaway effort is made all the more outrageous by the sanctimonious bilge with which its proponents—and now the White House itself—have sought to disguise and justify it. The administration's plain, though unacknowledged, purpose is to help purchase the reelection of Chancellor Adenauer. The effect of this subterfuge, which has been masterminded by an adroit lobby, would be to bestow a tremendous windfall on the stockholders of German cartels who have no equitable or moral claim whatever on the United States.

Return of the German assets, said James C. Hagerty, the President's news secretary, in a statement issued on Wednesday, is designed "to reflect the historic American policy of maintaining the sanctity of private property even in wartime." Bilge is the only word for it. Under the terms of the Paris Reparation Agreement of 1946, the Allied nations, including the United States, agreed to forego reparations from Germany on the express condition that Germany assume responsibility for the confiscated assets of her nationals abroad. This was done in order to facilitate German economic recovery; and, indeed, it helped so materially to that end that Germany is today the most prosperous nation in Europe.

No question as to the sanctity of private property enters into this. The sanctity of private property was recognized in the Paris Agreement. Certainly the owners of the confiscated assets are entitled to compensation. But the compensation should come from the German Government, not from the United States. Moreover, as Senator SMATHERS pointed out recently in a letter to President Eisenhower, return of the confiscated assets by the United States "would constitute a breach of obligation under the Paris Reparation Agreement and would create difficulties for other signatory governments."

There are many good uses to which the proceeds of the confiscated assets can be put—the payment of legitimate war claims of Americans against Germany to which they were originally committed, a scholarship fund for the education of young scientists and technicians as Senator SMATHERS and others have suggested, or even (please note, Mr. President) Federal aid to school construction. To use them for the reelection of Chancellor Adenauer and the enrichment of Herr Schmidt, of Germany, at the expense of Mr. Smith, of the United States of America, would be wholly without warrant either in justice or in commonsense.

The Increasing Cost of Voluntary Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Cross We Bear," written by Murray Kempton, which appeared in the July 12, 1957, issue of the New York Post.

Mr. Kempton raises some pertinent questions about the increasing cost of voluntary health insurance.

Early this year, upon introducing a bill to establish a program of national health insurance, I stated that:

Voluntary health insurance has done much and it can do more, but there is nothing in its history or promise to support an expectation that this device will ever remove the financial barriers to medical services for substantially all who need ready access to such services.

The facts in Mr. Kempton's article show that increasing costs of voluntary health insurance may force many needy citizens to withdraw from even this inadequate type of insurance. So far this year, reports Mr. Kempton, Blue Cross has raised its rates 17 percent in New Jersey; 11 percent in Durham, N. C.; 19.8 percent in Wilmington, Del.; and 12 percent in Michigan.

I firmly believe, Mr. President, that ere long the American people and their

elected representatives will realize that they have been misled by the hucksters who organized the opposition to decent medical care for American citizens, and will demand a comprehensive program of national health insurance.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CROSS WE BEAR

(By Murray Kempton)

The best business in America is sickness. Every statistic on the rise in prices since 1952 is puny beside the great leaps taken by hospital costs, which are up 41 percent per patient in the last 5 years.

No one talks about national health insurance any longer; we accept the principle of voluntary health insurance, whose largest embodiment is the Blue Cross plan. So far this year, Blue Cross has raised its rates 17 percent in New Jersey; 11 percent in Durhame, N. C.; 19.8 percent in Wilmington, Del., and 12 percent in Michigan.

The unions, previously occupied with the depredations of ordinary racketeers on their welfare funds, are beginning to awaken to the discovery that they are suffering much more from these perfectly legal exactions. Most of the time the only protestants against Blue Cross' demand for more and more are union leaders whose health benefit plans are thereby curtailed.

For what must be the first time in what has otherwise been an unbroken series of victories, Blue Cross lost a bid for a rate hike here this month. It filed with the State insurance department a request for higher rates on the claim that it had lost $4,600,000 last year.

More than 200 different unions wired the State insurance department demanding a public hearing on this request. Very quietly, Blue Cross withdrew its bid and resigned itself to going along another year with things as they were.

The complainants based most of their protest on a report on the state of Blue Cross' existing financial stature drawn up for them by Harold Faggen, the insurance consultant. Faggen's case is an enlightening portrait of the development of the managerial revolution in a nonprofit corporation devoted to the public service.

"The 1956 annual report issued by Blue Cross for public consumption states that hospital benefits provided for subscribers during 1956 amounted to $123,940,232. * * * It comes as a shock to learn from the reports filed with the State insurance department that the actual cost of claims paid during 1956 was only $103,397,922 instead of $123,940,232 as reported to the public.

"The fact is that Blue Cross ended 1956, its 22d year of operation, with more assets than at any time in its history. On December 31, 1956, ledger assets amounted to over $99 million, an increase of approximately $2 million during 1956."

"Blue Cross," Faggen concluded, "is supposedly a nonprofit organization operated for the public good. We believe that it should be forced to operate in a goldfish bowl. The public knows less about the operations of this tax-free hundred-million dollar giant, than it knows about the operations of most corporations which are owned by investors and which pay their share of costs to the Government."

Blue Cross is not a profitmaking enterprise; it is run for the public good. It is a painful but inescapable reflection of our social customs, that an organization devoted to the public welfare with $99 million in reserves, will assert the right to raise the cost of a gallbladder operation to a charwoman. Our social workers act like our businessmen, and file one set of figures with the public and another, supposedly private, with the Government.

The effects of this kind of operation are precisely what they would be if Blue Cross's managers were ill-motivated private profiteers. The costs they charge off to the public are the costs which taxable private business charge off to the public.

Last year, Blue Cross spent $2,400,000 for the expense of soliciting subscribers and $465,549.96 for advertising. Those are budgetary items more suitable to a biscuit company. They listed the salary of their president at $58,769.15 along with 4 vice presidents who make more than members of President Eisenhower's Cabinet. Salaries of officers, directors, etc., amounted to $5,961,566.27. In sum, $9 million of the $112 million collected in premiums went for operating expenses.

The 20 singlepaced pages of Blue Cross's list of salaried employees who make more than $5,000 a year, include 1 man who also represents a number of unions to which Blue Cross sells. He is listed as getting $21,500 as an insurance consultant to Blue Cross. The possibility of conflict of interest warrants looking into.

Blue Cross thus becomes an organization whose operations are not noticeably distinguishable from those of any monopoly which issues stock and seeks a profit. The motives of its managers are not really relevant; the motives of any group of men given unchallenged control over any great hunk of property for any length of time are generally the same with habit.

Industrial Opportunities in Minnesota—Construction by International Business Machines Corp. of Plant at Rochester, Minn.

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the St. Paul Sunday Pioneer Press, St. Paul, Minn., August 4, 1957, written by Fred Leighton and entitled "Rochester Has Million-Dollar Friend."

The article tells its own story of a community effort, with all citizens putting their shoulders to the wheel. It is a compliment to International Business Machines Corp. that it recognized the potential in the Rochester, Minn., area, in its manpower and its facilities. Long noted as one of the outstanding medical centers of the world, Rochester is to be complimented that it was not content to rest on laurels won over the past century.

Minnesota has some of the most skilled workers to be found anywhere in the Nation. I invite other business firms to establish their businesses in Minnesota.

There being no objection, the artice was ordered to be printed in the RECORD, as follows:

IBM RIGHT AT HOME AFTER 17 MONTHS—ROCHESTER HAS MILLION-DOLLAR FRIEND

(By Fred Leighton)

ROCHESTER, MINN.—International Business Machines Corp. made a terse announcement from New York 17 months ago of plans for an $8 million manufacturing plant at Rochester.

It was a stunning surprise to this city of 35,000. The plant would employ 2,000 persons. About 80 percent of them would be hired in Rochester and its area and trained by IBM. The plant would be complete and operating at full potential early in 1958.

To community leaders, the IBM announcement had dizzying implications for new business, new home building, bulging retail sales and services. Rochester citizens asked one another, "What manner of outfit is this IBM?" And IBM management personnel, most of them easterners, sought answers to the question, "What sort of city is Rochester?"

In 17 months both questions have been answered to the abundant satisfaction of the askers. And there has blossomed in this neat, well-to-do, world-famed medical center a mutual affection so profound that other Minnesota cities of comparable size can be excused for an envy tinged with bright green.

FULL COOPERATION

Charles J. Lawson, Jr., dynamic 36-year-old general manager of IBM Rochester, says, "We could not possibly be more pleased with our reception by the people of Rochester."

Joseph Cotter, president of the city's chamber of commerce, says, "We can't say enough good for IBM in the way the company has taken its place in the community."

Mayor Claude McQuillan enthuses: "There's so much nice to be said for IBM that I don't know where to start."

In fact, however, Mayor McQuillan and other city officials and businessmen had made quite a start long before IBM acquired any very firm notions about Rochester. Many months before the IBM announcement, businessmen of Rochester formed Industrial Opportunities, Inc., to bring new industry to the city. In 10 days they raised $200,000 to be used for acquisition of acreage to develop a planned industrial site with utilities.

The fund campaign was launched one morning with the boom of a toy cannon at a downtown intersection. There was much sidewalk hustle and bustle, and, by coincidence, two out-of-towners happened to be standing across the street watching the excitement. One of those was Mr. Lawson.

The general manager recalls that IBM, with the help of a firm of New York consulting engineers, investigated quietly the resources of more than 80 midwestern cities in 5 States before settling on Rochester. Presumably, the curbside incident played a part.

In any event, Rochester was ready for IBM and had the resources for which IBM was searching—"availability of manpower of the right type, transportation facilities, schools and hospitals, utilities, recreational facilities, and other features," in the words of Albert L. Williams, IBM executive vice president, in a speech shortly after the corporation's decision was announced.

"We were impressed by Rochester's signs of strength," he said. "The Mayo clinic, the Mayo civic auditorium, the plans for the new high school, the art center, the civic theater organization, the fine musical groups. All in all we found no warmer, more intelligent community than Rochester."

What has happened in the months following the IBM decision has an almost storybook aspect.

Industrial Opportunities was asked by IBM to put up a 50,000-square-foot building which IBM pledged to lease for 10 years. Ground was broken May 1, 1956, and IBM was astonished that it could occupy the building 120 days later.

BUILDING STARTS

In the meantime, IBM launched construction July 30, 1956, of its 552,000 square-foot,

$8-million plant on a 397-acre site 2 miles northwest of Rochester on Highway 52. Today the corporation has already occupied 1 building on its permanent site, a 60,000-square-foot warehouse now in temporary use as an assembly and machining plant. Most of the site has now been annexed to the city of Rochester.

IBM has sought every means—with Rochester's enthusiastic help—to get into business as quickly as possible. A former supermarket downtown is the IBM local purchasing division headquarters. St. Pius grade school five blocks from the IOI building has leased classrooms to the company for use in its educational programs for its employees. The motherhouse of the Sisters of St. Francis, only a few blocks from the IOI structure, has leased 12,000 square feet of space, including a cafeteria, to IBM's engineering department.

What has been the impact of all this feverish activity on the economy of Rochester?

Oddly enough, a construction project as vast as IBM's plant has made not the slightest bulge in the chart of Rochester's construction boom. Since 1950, this city has had more than $75 million of new industrial and commercial construction.

ONE THOUSAND TWO HUNDRED ON PAYROLL

But in other respects, Rochester has felt IBM's coming markedly. IBM already has 1,200 persons on its Rochester payroll. This will move gradually to a 2,000 peak as the plant nears completion early next year.

Total Rochester employment in all categories topped 18,000 for the first time in history in June, according to George L. Sergeant, office manager of the Minnesota State Employment Service here. Manufacturing alone has picked up 1,186 in a year, most of them IBM.

Retail sales in Rochester in May increased by a greater percentage than any other city in the six-State Ninth Federal Reserve District. Rochester sales were up 17 percent over May a year ago, and the first 5-month average was 13 percent over 1956. By contrast, the average Minnesota gain was 3 percent in May. Rochester has 383 retail stores doing business at the rate of $66,046,000 annually, and the figure is climbing steadily.

Mr. Cotter said, "IBM's coming has been felt most directly in retail sales and in the services. For a while we felt that we might be slightly overcrowded in the retail sales field, but that has now been rectified."

HOME BUILDING

Home building is in an unprecedented boom. Garnet Spring, city building inspector, reports that 1,547 homes were built in Rochester in the 7 years 1950 through 1956. But, says he, at the current rate of home construction this year, "We will put up over 500 houses, the biggest year in our history."

The homes cost about $15,000, not including the lot, and real estate has become a shoe with a slight pinch. Improved lots are going for $3,000 to $4,000. Behind the scenes, though, IBM executives and Rochester business leaders have worked closely in a joint effort to make available the home which the average IBM employee wants and can afford. In the words of one IBM executive, "This house should have three bedrooms and cost between thirteen and seventeen thousand."

From the city's standpoint, the IBM shoe has pinched even more painfully. The sudden need for new street and gutter improvements and water and sewer connections in the city's mushrooming residential additions and IBM's call for adequate electric power are Rochester's big problem areas.

Mayor McQuillan says, "The company kindly invited 12 of us to go east to their Poughkeepsie, N. Y., plant to see how they operate. We knew what was coming."

He adds, "I want to emphasize that these problems are ones we are happy to have."

BONDS APPROVED

Rochester civic fathers have contracted to buy additional power from Dairyland Power cooperative through the municipally-owned plant July 16, Rochester citizens approved a bond issue for $3,442,999 in civic improvements including extension of the sanitary and storm sewer system, expansion of the sewage disposal plant, improvement of streets and construction of a second municipal swimming pool. A park proposal for $170,000 in improvements was defeated.

Rising on Rochester's west side—only a stone's throw from the IOI building—is the city's new $4,850,000 senior high school for which Rochester citizens happily bonded themselves. The school will be ready for use in September 1958.

Now, after nearly a year and a half of living together, Rochester and IBM enjoy a complete and mutual respect. IBM officials say their employment experience is "beyond our best expectations."

C. Walton Koock, head of the plant's personnel division, says, "We're delighted with the quality of applicants, their personalities and their abilities." Approximately 1,600 of the 2,000 IBM force will be hired locally. The balance will be key manufacturing personnel with extensive IBM training imported from other IBM facilities. The corporation has 11 plants in the United States including Rochester's.

TOWN'S BENEFIT

More than 90,000 persons live in or within a 25-mile radius of Rochester. Fifty-one communities in the Rochester area are home for Rochester-employed persons. More than half the working populations of Chatfield, Stewartville, Kasson and Pine Island are employed in Rochester. IBM heads calculate that the corporation's hiring experience will probably follow this pattern.

Fourteen percent of IBM's work force comprises highly-trained professional engineers. Another 17 percent are technical, and the remaining 69 percent are employed hourly. Here is a situation to the company's advantage in its Minnesota location.

"In Minnesota," says Mr. Koock, "our position is favorable so far as technical people are concerned." He points out that graduates of engineering schools in Minnesota and neighboring States are surplus in the sense that many must leave the State to find an outlet for their skills.

"We are seeing a lot of mothers and fathers and brothers and sisters who come in to ask whether we have an opening for their son or brother, trained in Minnesota but now working perhaps a thousand miles away," says Mr. Koock. "And frequently we do have."

MIDWEST PERSONNEL

Mr. Lawson comments: "I wouldn't say we are importing technical knowledge. Only about 15 percent of our personnel needs have we brought in. The rest of our people we are getting from the Midwest. Almost all schools in the Midwest have furnished us with technical personnel. All we brought from the East was the core."

Decentralization of its manufacturing facilities, Mr. Lawson adds, has become a settled policy of IBM, and the corporation aims to bring its top management to full flower from within the organization.

Charles H. Withers, city editor of the Rochester Post-Bulletin, summarizes Rochester's attitude toward IBM: "If we had gone out and deliberately chosen an industry to come to Rochester, we could not possibly have done better."

A. Eugene Haylett, manager of the Rochester Chamber of Commerce, says: "I think we should emphasize that IOI or the chamber did not persuade IBM to come to Rochester. IBM made that decision independently of us, but their decision was influenced by what they found here."

Mr. Haylett points to a framed legend on the wall of his office. It says: "Luck is what happens when preparation and opportunity meet."

International Business Machines Corp. is the world's largest manufacturer of office equipment, electronic computers, accounting equipment, and associated machines. It employs 73,000 persons in the United States and 79 foreign countries. Besides its manufacturing facilities in this country, it has 14 factories abroad. Its gross sales last year totaled $734 million, an increase of more than $170 million over 1956.

IBM Rochester is now in production on the collator, a machine which merges, matches, and sequence checks punched cards and performs related functions. Also in production are two models of a gang summary punch.

Increase in Oil Firms' Earnings

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Oil Firms' Earnings Up 17 Percent in 6 Months." This factor alone has raised the average of earnings of American business, which otherwise would have fallen. This increase in prosperity of the oil and gas firms is particularly interesting in view of the gas bill which is pending in the House, and may come to the Senate for action.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of August 2, 1957]

OVERALL GAIN IS 4.5 PERCENT—OIL FIRMS' EARNINGS UP 17 PERCENT IN 6 MONTHS

NEW YORK, August 1.—American business profits are running ahead of last year by 4.5 percent—thanks in large part to a profitable 6 months in the oil industry.

So far 588 corporations—covering all fields except financial and accounting for roughly one-half of total corporate profits in the Nation—have reported net income after taxes for the first 6 months of 1957.

Of these 308 show an increase over the first half of 1956, while 280 fall behind the year-ago figures. This year 21 operated at a net loss, compared with 19 the previous year.

The major role of the oils in pulling total 1957 profits ahead of last year is shown in the industrials. This group of 503 corporations shows 266 gaining and 237 declining from year-ago figures. Combined the 503 have net income of $4,741,464,757, which is 5 percent above a year ago.

But the 28 oil companies in the list have the largest combined earnings of any group—$1,400,615,206, up 17.2 percent over the previous year. Subtract the oil group from the industrial list and the combined profits of the remaining 475 are only 0.7 percent ahead of 1956's first half.

As returns trickle in from the host of corporations yet to report, oil's weight in the total of profits may be reduced.

The 24 utilities reporting show the usual steady gain in profits, up 5.9 percent this time. The 50 rails, with 36 reporting declines, reveal a combined profit decline of 10.3 percent.

Among the industrial groups the best gains over a year ago are reported by aircraft equipment, coal, auto equipment, oil, food, aircraft, autos and trucks, business machines, drugs, tobacco, and machinery.

Nonferrous mining companies report sharply lower profits this year, due largely to the weakness in metal prices. Also declining are textiles, entertainment, meatpacking, paper and its products, building materials and appliances. The airlines are down and surface shipping up.

Altogether the 588 corporations show profits of $5,702,835,632, compared with 5,453,040,348 the same companies made in the first half of 1956.

This gain of 4.5 percent compares with a 5.5 percent advance last year over the first half of 1955, an increase of 34.7 percent that year over the first half of 1954, and the 2 percent gain of 1954 over the 1953 first half.

The Department of Commerce puts total corporate profits in 1956 at $21 billion. In the first 3 months of this year the annual rate advanced to $21.5 billion. But early reports indicate that the rate of increase slowed perceptibly in the second quarter.

The Next School Bill

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Next School Bill," published in the St. Paul Pioneer Press of August 1, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NEXT SCHOOL BILL

Congressmen who are filling the air with laments for the failure again this year of the school-aid bill might prove their sincerity next session by coming up with a version that meets with the approval of President Eisenhower.

This year for a second time the bill was encumbered with a school segregation provision against the wishes of the President. His position is that civil rights should not be mixed up with an emergency measure to help States catch up on the shortage of school classrooms. What is more, such a provision dooms the legislation in the Senate. Whether the bill could have been passed in the House this year with more pressure from the White House is therefore an academic question. It was going nowhere in the Senate anyway.

The reason for the President's lack of enthusiasm for the bill is well known. He brought it up again at his press conference Wednesday. His conception of the program is that the Federal Government on a temporary and emergency basis will help out States and localities that are financially unable to overcome the schoolroom shortage. But last year and again this year this concept lost out in committee. There it became a pork barrel proposition. The Federal money would be distributed not in accordance with need but would be handed out as a grant to all States on basis of school population.

This principle of the Federal handout may get votes but it perverts the principle. President Eisenhower is against it also because it is hard for the Federal Government to get out of the handout business once it starts. If the Federal Government gives money for school buildings for 4 years, it will be expected to assume this part of educational costs indefinitely. The President thinks it will be much easier to prevent the program from becoming a permanent burden on the Federal taxpayer if the grants are based on need. There would be much less pressure for continuing the program unnecessarily.

The President is asking for a bill which he can support with a clear conscience. It accomplishes nothing to give him a bill that he can accept only with serious reservations and then blame him for not putting his heart into fighting for it.

Partial Financing—A Costly and Wasteful Feature of H. R. 8002

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. CANNON. Mr. Speaker, in recent weeks key officials of the executive branch have unequivocally characterized as expensive and unsound the practice of partially financing Government programs and projects, which is the heart of H. R. 8002, the so-called accrued expenditure bill. It is installment buying—and installment buying results in more spending, not less spending.

On July 1, Secretary Wilson advised the Committee on Appropriations:

I do not believe in partial financing. In other words, under partial financing you start more things than you can finish with the funds made available and you have a lot of future trouble if you engage in such a procedure. We have taken action to stop partial financing.

* * * * *

I think the statement that I do not believe in partial financing is a good one to put out.

* * * * *

You see, there is some discussion, quite frankly, about the Hoover Commission recommendations on an entirely different way of appropriating expenditure money and making you live within the expenditures. If that were the way we were trying to do it we would be arguing now about the $38 billion expenditure estimate, not the $38½ billion NOA we started out with. We would be arguing about the $38 billion and you might be trying to trim that down to $36 billion or something of the order. Then we really would be in trouble because we are already in trouble by $2,250 million. I would be in trouble for $2 billion more. That would just cause one of those big shifts in the military program which have been so expensive in the past and waste so much money and possibly risk the security of the Nation.

The Director of the Budget, in a letter reprinted in the CONGRESSIONAL RECORD of May 23, had this to say:

I believe we should continue to follow the sound procedure of fully funding the procurement of all items necessary for the full operation of such major things as airplanes, tanks, and ships when the initial appropriation is made. We would lose budgetary control of these programs if we adopted a policy of partial funding for such items.

Those who advocate H. R. 8002 ought to read and re-read these and definite accurate remarks of the Secretary of Defense and the Director of the Budget on the question of partial financing. They oppose precisely what H. R. 8002 would require. Their opinions in this connection are especially important. The Budget Director is chief architect of the entire spending budget. The Secretary of Defense administers expenditure of over half the budget.

Like former Secretary Humphrey, they have at times made divergent and conflicting statements but no one can mistake the meaning and significance of these quotations.

Increasing Federal Grants

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. CHAMBERLAIN. Mr. Speaker, the steady increase in Federal grant-in-aid programs is a matter of great concern to advocates of economy in Government. Under leave to extend my remarks, I include the following editorial, entitled "Federal Grants Increasing," which appeared in the State Journal, Lansing, Mich., on August 4, 1957:

FEDERAL GRANTS INCREASING

Tax Foundation, Inc., an organization dedicated to reduction in Federal, State, and local taxes, has compiled statistics to show that Federal grants to States have grown from $222 million in 1932 to $3 billion in 1956. The number of programs embracing Federal grants increased from 18 in 1932 to 97 in the fiscal year which began July 1 of this year.

During this period, the greatest expenditure increases were in public-welfare programs, from $1 million to $1,452 million; highways, from $191 million to $739 million; education, from $12 million to $344 million; employment security, from nothing to $219 million.

The growth of these programs and particularly the participation of the Federal Government in the programs can be traced back to the depression when the various States requested Federal assistance. Long after the depression was ended, the Federal Government not only continued to remain in the programs but actually vastly increased its appropriations for financing these activities, most of which were previously regarded as strictly State responsibilities.

It is interesting to note that there were only two labor and welfare programs in 1934 in which the Federal Government provided financial grants to States. Now there are 36 such programs in the labor and welfare category alone. In the field of commerce and housing, Federal grants to States increased from 2 programs in 1934 to 20 in 1957.

In addressing the Conference of Governors recently, President Eisenhower pointed out this mushrooming of Federal grants and called upon the States to reclaim some of these programs as their own sole responsibility. The President pointed out that withdrawal of the Federal Government from some of these programs is essential if the Federal budget is to be whittled down.

Such a program to be effective, of course, must be two sided. The Federal Govern-

ment must withdraw from some tax fields so that the States can secure the funds that they will need to supplant the Federal grants. The conference of governors, while admittedly lukewarm to the President's proposals, nevertheless approved a resolution setting up a task force to examine the situation.

Even if all of these programs are considered essential services, it is certain that considerable tax money can be saved by a return of these programs completely to the States. Moreover, this can be accomplished without any reduction in the services rendered. The savings would come from the so-called Federal brokerage, the process of sending tax money to Washington and then having it returned to the States in the form of Federal aid.

Actually, the economies effected would undoubtedly be considerably more than the Federal brokerage because of vastly increased efficiency in conducting these programs. The operation of State government may seem unwieldy and inefficient in comparison with the operation of private business, but State governments are models of efficiency in comparison with the operations of the Federal bureacracy.

There is still another and perhaps even more important argument in support of a return of these programs completely to the States. It would serve to halt the growing acceptance of a fallacious theory that every problem that arises is a Federal problem that can be easily solved by drawing upon the inexhaustible wealth of the United States Treasury.

Most Americans are so far removed from Washington that they fail to realize that there really is no inexhaustible Federal Treasury. The only wealth that the Federal Government has is contained in its ability to tax the same people that the States must also tax for their financial requirements.

Realization of this is a prerequisite for a return to the States of programs that are rightfully State responsibilities.

Tuskegee Negroes "Squeezed"

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. HUMPHREY. Mr. President, last week I had the honor along with other Senators to meet with Negro citizens from Tuskegee, Ala. A transcript of our discussion will perhaps be inserted in the CONGRESSIONAL RECORD at a later time. The highlights were summarized by Edward P. Morgan in one of his broadcasts last week.

I ask unanimous consent that an excerpt from his broadcast which appeared in the AFL–CIO News for Saturday, August 3, and which is entitled "Tuskegee Negroes 'Squeezed'" be printed in the Appendix of the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

MORGAN SAYS: TUSKEGEE NEGROES SQUEEZED

(This column is excerpted from the nightly broadcasts of Edward P. Morgan, ABC commentator, sponsored by the AFL–CIO. Listen to Morgan over the ABC network Monday through Friday at 7 p. m., e. d. s. t.)

Two Negro citizens of the town of Tuskegee, Ala., dressed in grey suits and wearing soft yellow neckties, came to Washington and tossed a small but painful saga of frustration into the middle of the Senate debate on civil rights.

Their testimony before an informal bipartisan group of liberal Senators headed by PAUL DOUGLAS revealed the ironic fact that during the very course of the debate in Congress on the bill to protect the rights of individual citizens their own civil rights, already curtailed, are being compressed even more.

Not only are Negroes being denied the right to vote in Tuskegee and Macon County but they are systematically being denied the right of orderly protest against that denial.

W. P. Mitchell, a physiotherapist, and Linwood T. Dorsey, a hospital business office worker, were the witnesses. They are members of the Tuskegee Civic Association. For more than 40 years the association had enjoyed a peaceful existence, concentrating on making Negroes better citizens, with a program it described as "courageous, civic, and political action."

But twice within the last week the State attorney general has raided the association's office, seized documents and membership lists. There has been no further legal action but officials dropped broad hints, unsubstantiated by any revealed evidence, that there was something subversive about the group.

The trouble stems from a new State law, pushed by Macon County's own State senator, Sam Englehart, who is also a White Citizens Council official, changing the town boundaries of Tuskegee so that only 10 of Tuskegee's 420 registered Negro voters could vote in municipal elections.

Pending before the State legislature is another bill to abolish Macon County and divide it among five other counties in such a way as to disfranchise nearly all the registered Negro voters. The county's population consists of 28,000 Negroes, 4,761 whites.

Negro voting difficulties in Tuskegee, home of the famous Tuskegee Institute, did not begin with Englehart. For 18 months the Macon County board of registrars did not function publicly so no Negro could even apply to register. Between last June 3 and July 5, 73 Negroes appeared for registration, none were certified. The board chairman also heads the county White Citizens Council.

Senator JAVITS, Republican, of New York, asked, "What keeps you going, what sustains you in these circumstances?" "I believe," Linwood T. Dorsey replied, "that this is a country of decent people and we are living for our children."

Two Editorials in Los Angeles Evening Herald Express

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials in the Los Angeles Evening Herald Express, one under date August 1, 1957, entitled "Help From the People," and one under date August 2, 1957, entitled "The Duty of Congress," by the publisher, David W. Hearst:

[From the Los Angeles Evening Herald Express of August 1, 1957]

HELP FROM THE PEOPLE

Without help from the people, the FBI and police agencies of cities, counties, and States throughout the Nation would be practically powerless in the war against crime.

The man living next door to the criminal, or even perhaps a person he regards as his best friend, may be the informer who uncovers the Communist traitor or the dope wholesaler.

And so it is easy to understand why the words of J. Edgar Hoover, the brilliant director of the FBI, whose whole career has been patriotically devoted to the war against treason, enemy agents, and supercriminals of America, are so important.

In a sharp warning on the sad effects which a United States Supreme Court will have in the Nation's struggle against crime, Mr. Hoover has spoken out strongly on the necessity for protecting FBI files, and the identities of confidential informants contained in the files, and preventing them from being delivered over to the enemy—the accused criminal.

In the Jencks case, the Supreme Court ruled such files must be delivered in their entirety to the defense, if the defense so requests, without any screening by a presiding judge to determine what is confidential, and dangerous in the hands of anyone except the official law enforcement agency which captured the accused criminal.

Said the FBI chief: "The very basis of our success in safeguarding America's domestic security is the FBI's assurance to this country's citizens that the information they give will be maintained in the strictest confidence."

For instance, take the case of the honest, average citizen who has become suspicious or aware of the activities of a Communist agent or important narcotics purveyor and has telephoned the police or the FBI. Mr. Citizen has a wife and three children. Under the Supreme Court's ruling, he knows that now his identity may be revealed and that he or his entire family may be assassinated as an underworld warning to others.

Civil-rights legislation now before Congress is highly important to the Nation, but may run into a filibuster which could last all summer and fall. In the meantime, crime detection and prosecution is almost at a standstill on many fronts.

Law enforcement needs the help of the O'Mahoney bill, Senate bill 2377, designed to correct the disastrous consequences of the Supreme Court ruling, and now awaiting action by the Senate.

Mr. Hoover's words correctly emphasize the necessity of such legislative action. It should be acted upon immediately to halt the enemy at our doors.

Every citizen should take time to write to our California Senators in Washington, Senators THOMAS H. KUCHEL and WILLIAM F. KNOWLAND, asking that they push this bill through at the earliest opportunity.

[From the Los Angeles Evening Herald-Express of August 1, 1957]

THE DUTY OF CONGRESS

It is the duty of the President and Congress, who represent the people of the United States, to take effective action to gird our country against Communist infiltration and aggression.

This was clearly set forth the other day before the American Bar Association, meeting in London, in a dynamic report from the association's committee on communism, which pointed out the necessity of new laws to undo damage caused to national security by the United States Supreme Court.

The report, which concerned the recent decisions of the Supreme Court which have

no weakened the country's defenses against subversive plots and conspiracies, corresponded to the comment and conclusions which the Hearst newspapers have been expressing.

To the point, the report warned that the Supreme Court has failed to consider that we as a free nation have a basic right to protect ourselves against our enemies, whether they be American Communists bent on overthrow of the Government by force and violence or spies and agents of a foreign power.

The American Bar Association committee forcibly said that vitally important is the right of self preservation, which it said is mankind's first law.

In what might be regarded as somewhat of a conciliatory understatement, the committee report said the High Court had become overzealous in the protection of theoretical individual rights.

However, it wasted no time in vigorously outlining the program of legislative correction which has been made urgently necessary by the succession of judicial errors which has stunned most patriotic Americans and brought chuckles to Communist rank and filers.

Unless there is quick legislative remedial action, for instance, the condition of nakedness of the unevaluated files of the FBI which the Court has brought about by its decisions will remain a source of danger to this Nation in its war both against subversives and against major crimes of many sorts.

The Court's amazing rulings also has practically stripped the powers of congressional committees investigating communism to the point where they might as well pack up and go home.

Denial of the Federal Government's right to free itself of security risks in the nonsensitive employment classifications also lays our internal defenses wide open.

And the overprotection of deportable aliens against questioning about their guilty associations certainly has completely knocked down another defense against those who would destroy our country.

Also, what kind of thinking did the Supreme Court use to decide that Congress did not intend, when it made the Smith Act a law, to prohibit the advocacy and teaching of the overthrow of the United States Government by force and violence?

The American Bar Association committee has said it plainly. It is the right and duty of Congress and the administration to correct the Supreme Court errors and pass laws which will turn back the enemies of this great free Republic.

The Problem of Off-Reservation Indians

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hill 57: The Problem of Off-Reservation Indians." The article was written by Milton Colvin, a native of my State, and assistant professor of sociology and anthropology at Montana State University. The article appears in the summer issue of Montana Opinion.

I commend to all my colleagues and to all students of Indian affairs this first-hand study of a group of Americans who are not being treated justly by the Federal Government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HILL 57: THE PROBLEM OF OFF-RESERVATION INDIANS

(By Milton Colvin)

"Tell your people that since the Great Father promised we should never be removed we have been moved five times. * * * I think you had better put the Indians on wheels and you can run them about wherever you wish." (Statement of a Sioux chief, Sioux Commission, August 1876.)

"Now, therefore, be it

"*Resolved*, That the Congress of the United States make a thorough study of the effects of promoting off-reservation migration upon the American Indian." (House Joint Memorial 6, 35th Legislative Assembly of Montana, February 1957.)

Five miles almost due west of the center of the city of Great Falls, Mont., there is a hill full of Indians. It is called Hill 57, supposedly after a Heinz 57 variety sign which once stood on its eastern slope, and there is scarcely a literate Montanan who has not heard of it and about it. Indeed, it is known in faraway Washington, D. C., where Senators MURRAY and MANSFIELD and Representative METCALF have repeatedly brought it to the attention of their congressional colleagues and to officials of the Indian Bureau there. In itself, as an Indian settlement on the outskirts of Great Falls, it is of no particular importance except for the fact that it is a collection place of considerable human misery; but Hill 57 as a foreshadowing of unpleasant things to come, and as a symbol of what happens to the off-reservation Indian, is a matter of vital concern to all Montanans.

What does it look like? The bottom part of the hill is called the camp. It is a scattered clustering of tumbled-down tarpaper shacks, overturned automobiles, wrecked and rusted, and meandering automobile tracks. There is no water and no electricity. A lack of both sanitation and the most primitive conveniences is readily apparent. In one house 15 children under the age of 18 are living in 2 rooms. The top of the hill is somewhat better. It even has a name: Mount Royal. There is some electricity here and the houses have cold water faucets. There is no indoor plumbing, however. Tarpaper has given way to wood boards salvaged from railway box cars, so the houses have a more sturdy appearance. The best houses are rented to the Indians by a non-Indian. The difference between the camp and Mount Royal is the difference between a low bottom and a high bottom slum.

The permanent residents of the hill number more than 300. Transients from reservations or from similar hills in Helena, Havre, Harlem, and other places within the State bring the population total up beyond the 400 mark. More than half of the families living on the hill identify themselves as American Chippewa Indians with traditions leading back 5 generations to the shores of the Great Lakes, or, more recently, to the Turtle Mountain exodus out of North Dakota 60 years ago. Others on the hill are Cree Indians of Canadian background. Many are an admixture of Cree-Chippewa, and this they call themselves. It is a point of genealogical fact, however, that a good share of those on the hill are Metis, half-breeds of French-Indian background. They are the so-called Red River people or ex-Pembina group, and among them are names like LaPier, LaMere, and LaFramboise. Records of the now disestablished St. Peter's Mission, once 35 miles southwest of Great Falls, put some of these names in Montana as far back as the 1860's. However, in spite of their French voyageur heritage, they regard themselves, and are regarded by others, as Indians. A few Blackfeet also live at the camp, and a scattering of others from tribes never found in Montana, such as the Yakima, are occasionally there. All on the hill can be termed off-reservation Indians. They are not, however, all non-reservation Indians. The distinction is important. Many families have claims on reservations outside of Montana; some have corporate interests in tribal property within the State.

There are sad historical and economic reasons for most of them being where they are. The ancestors of the Chippewa were driven off their reservation in the Dakotas by military force in the 19th century. The ancestors of the Cree sought political asylum in the United States after the collapse of the Riel rebellion in Canada in 1886, in which they had been, at least in part, participants. These two groups tended to band together and became known to Montanans around the turn of the century as the landless Indians, though this term is not quite correct; even today they have claims against the Government for lands taken from them in Minnesota and Dakota.

In 1917, as a result of the extreme economic plight of these two semiamalgamated bands and the courageous championing of the Great Falls newspapers to get them land like the other Indians in Montana, Rocky Boy's Reservation was created. It is near Box Elder, Mont., about 100 miles north of Great Falls, and the Indians enrolled there officially list themselves as the Chippewa-Cree Tribe of the Rocky Boy's Reservation. Unfortunately, the reservation has never been able to support more than a fraction of those whose tribal descent might give them rights there. The result is that many leave the reservation and seek to make a living in and about the towns and cities of Montana or in rural communities. An indication of why this must be can be gleaned from the knowledge that Rocky Boy's Reservation can support at a minimum standard of living no more than 300 persons, yet more than 1,000 are enrolled there. When times get bad—that is to say, worse than normal, keeping in mind that normal means just barely getting by—the reservation conditions approach the "famine stage." (This phrase comes from a letter of the superintendent of the agency there during the depression of the mid-thirties.) There are Indians living there now who think the winter months of 1955–56 were about as terrible. Little wonder that the August 1956 Spokane meeting of the Affiliated Indian Tribes of the Northwest went on record as stating:

"The need of Montana Indians in the winter months is greater than that of any other Indians west of the Dakotas."

This applies to on- and off-reservation Indians.

And now we come to the incredible part of this whole problem. The Federal Government, whose responsibility it is to improve the lot of the reservation Indians, seems hellbent to get the Indian off the reservation and make him seek his livelihood in the white man's world. In 1954 Public Law 280 was passed by Congress. Whatever its wording may be, it is in fact, a coercive policy of assimilation for the American Indian, encouraging the sale of tribal-held lands and the withdrawing of Government support to Indians who want to remain Indians. Here is an example of how this can be done: Adjoining Rocky Boy's Reservation are 57,000 acres of tribal-held land. Many of the Indians on the reservation could make a better living if this land were made available to them. Instead, the Indian Bureau insisted it be put up for lease on the basis of the highest bidder. In this particular case, the highest bidder was a Great Falls doctor. The Indian who lost the lease sadly

remarked, "Well, I'll be on Hill 57 next year. * * *" The excuse for this sort of economics is that the Indians get the lease money paid to the tribal council and the more money obtained, the more to pass out among the tribe. Here is the point which is not seen by the tribal council, but is, I suspect, quite clearly seen by the Indian Bureau: The tribal land will all be held by non-Indians, and the Indians will come to Great Falls to make the living they might have made at home up on the reservation. In this way, of course, the Indian will at last be made to stand on his own two feet. He will become an individualized, nontribal Indian. In fact, he will become an American. This, at least, is the argument of the Indian Bureau. And so also argues many a taxpayer who is tired of paying taxes to keep up the reservation as "damn curiosity shops."

Let's go back to Hill 57 and see how this fine theory works in practice. There we have the individualized, nontribal, free enterprise-minded Indian competing in the urban labor market. What are the results? They are certainly not what the Commissioner of Indian Affairs would have the general public believe. The first thing we see is a set of rather horrendous statistics. Cascade County has about 700 Indians (there are other hills besides Hill 57.) This makes up slightly more than 1 percent of the county population. Nevertheless, Indians take more than 25 percent of the county general relief, more than 23 percent of the county medical load, more than 7 percent of the categorical assistance. Where does the money come from? Who pays what? The county alone foots the bill for general relief and medical aid. County, State, and Federal funds are used for categorical assistance, which gives help to the blind, disabled, etc.

Indians enrolled on a reservation, but not living there, are ineligible for much of this aid. In spite of the fact that section 71–211 of the Montana Codes makes it quite plain that in matters of general assistance, Indians are to be dealt with in the same manner as other citizens, local and State agencies are reluctant to help them. Reservation enrolled Indians are wards of the Government, and as such it is felt they are the responsibility of the Federal Government. The Indian Bureau washes its hands of them unless they return to their reservations. So somewhere to the number of Great Falls Indians who are needy and receiving aid should be added the number of those who are needy but get no aid. It does seem that too many Indians leave the reservation only to wind up in the welfare office.

But statistics don't tell all of the Hill 57 story. Not long ago Columbus Hospital in Great Falls had to dismiss a young Indian employee when it was discovered she could not read the numbers on the trays. A little bit of checking showed that she had grown up in Great Falls but had never really gone to school. An unusual case? Not at all. Welfare workers estimate that not more than 20 percent of the hill children of school age get anything like a regular and continuous education. No resident of Hill 57 has ever graduated from high school. Few attend. There are good reasons for this. Most of the family heads are at best temporarily employed. They lack money for the basic school needs of their children. In the winter months when employment is hard to get, the children have to walk long distances to school. There is no school bus. In spring and summer work becomes available in the country, such as rock picking for farmers, and all able-bodied members of the family go along to pitch in on the job and earn money.

Hill 57 offers pretty good evidence that, by and large, the off-reservation Indian does not fare well in a competitive urban employment market. His lack of education and lack of technical training greatly handicap him. His cultural heritage does not fit the tempo of our industrial society. He becomes a casualty. But what about the validity of some of the slogans, such as "individualized" and "nontribal," which are used to justify his existence in this strongly competitive world?

"The best interests of the Indian as for any ethnic group are served when they are accepted and made a part of the community in which they live." (Letter of Commissioner Emmons, of the Indian Bureau, to Senator MIKE MANSFIELD, of Montana.—From CONGRESSIONAL RECORD, Senate proceedings, 84th Cong.)

This is a long way from being accomplished as far as the Indians on Hill 57 are concerned. Nor do they particularly wish it to be accomplished. The Hill 57 population tends to point up the homogeneity of city Indian colonies. If we ever have sudden mass removal from Indian lands, the Indians will probably regroup in city areas along tribal lines. This is what has happened on the hills we already have on the fringes of Montana cities—the tribes we shall have with us a long, long time.

It is not just accidental that Indian settlements are at some distance from regular city neighborhoods. Nor is it always a matter of real estate values. The plain fact is that the Indian does not yet wish to lose his identity as an Indian. He will take his time, and it may be that he will decide that his Indian values are the values he will wish to keep. For the time being his choice is to live on the reservation if he can but make a living there.

On March 11 of this year, Iliff McKay, secretary of the Blackfeet Tribal Council, sent to all members of Montana's congressional delegation and to State welfare agencies and to interested persons a statement about the Indian situation. One short paragraph is worth quoting:

"Plans for Indians should be based upon the realization that there is a certain strength and self-sufficiency to be gained from living and growing up in a community where social acceptance, language barriers, and cultural underdevelopment (according to the standards of the majority of the population) are no problems. But these communities must be stable and not constantly harassed and in state of frustration for fear of annihilation."

There is possibly no better plea than this for keeping the Indians on their reservations and insisting that the Federal Government meet its responsibilities and obligations to provide economic opportunities there.

It will be said, of course, that in the long run the reservations must disappear, that the Indian will have to make the adjustment which will make him not separate from our society but a part of it. It is not the purpose of this article to argue the pros and cons of this point. But it should be clear that the Indians coming into the cities and towns of Montana are adding burdens to themselves and to us—that unless we can make it possible for them to make a living on their reservations, that we Montanans will have many more Hill 57's.

A Lesson From Senator George

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. CRETELLA. Mr. Speaker, in memory of Walter F. George, one of the most distinguished Senators in the history of the Senate, I would like to call to the attention of my colleagues the enclosed article as written by David Lawrence and appearing in the August 6 Washington Evening Star:

A LESSON FROM SENATOR GEORGE—EXECUTIVE LEADERSHIP GROUP REMINDED OF F. D. ROOSEVELT'S DEFEAT IN GEORGIA

(By David Lawrence)

The past speaks to the present. That is one way of expressing the significance of the life of Senator Walter George of Georgia, whose death is being mourned by the whole country.

For in George's career is a poignant lesson to all those modernists who have been confusedly demanding the vigorous exercise of executive leadership and punitive discipline by the President over members of his own political party. Here is the story that made political history:

The time is 1938. Franklin D. Roosevelt, author of New Deal reforms, finds Senator George, Democrat, out of tune with his legislative proposals, particularly Roosevelt's scheme to "pack" the Supreme Court. Heeding the cry that Presidential "leadership" must compel obdience to its commands, Roosevelt undertakes a "purge." He makes a speech advising the people of Georgia to defeat their Senator for renomination in the forthcoming primaries.

There is nothing personal in the dispute—just a piece of political pressure to require a Senator to forget his own convictions and obey the dictates of the White House. Roosevelt speaks in Georgia—in the presence of Senator George, on the same platform—as follows:

"The senior Senator from this State cannot possibly, in my judgment, be classified as belonging to the liberal school of thought * * * Let me make it clear that he [Senator George] is, and I hope always will be, my personal friend. He is beyond question a gentleman and a scholar * * * I am impelled to make it clear that on most public questions he and I do not speak the same language. * * *

"I have no hesitation in saying that if I were able to vote in the September primaries in this State, I most assuredly would cast my vote for Lawrence Camp."

The people of Georgia resented the attempt to "purge" as an unwarranted interference in their affairs. They renominated and reelected Senator George by an overwhelming vote. He continued for years to serve his country irrespective of party politics. What would have happened to the career of Walter George if the "purge" had been successful? The Senate and the Nation would have lost the services of a statesman just because he chanced to disagree with a President. It's a lesson worth pondering.

The episode underlines, of course, a tendency that still prevails today in so-called liberal circles—the very places where it might be thought there would be unwavering confidence in the right of the people in each State to select their own representatives without coercion from the President or anybody else in the Federal Government.

But the demand which arises even now and is pressed upon President Eisenhower—that he must crack the whip over dissident members of his party—is due to a curious faith in Presidential power. When the late Senator McCarthy was the center of controversy, Eisenhower told his press conference one day that he had received letters from the public urging that he remove the Wisconsin Senator from office. A year ago when Senator WILEY was up for renomination in Wisconsin, there was a consistent effort to persuade Eisenhower to throw his weight behind WILEY and thus take part in the primaries. Some leading newspapers in the East editorially criticized Eisenhower for failing to use the primaries as a means of Presidential or party discipline.

All this proceeds no doubt from impatience with dissenting viewpoints and involves a certain intolerance of any opposition. The image which too many people, even in intellectual circles, have of a President is that of a benevolent dictator. They want power centralized in one-man government, and they do not object to the doctrine that the beneficient end sought justifies any means to achieve it.

Strangely enough, the instinct toward totalitarianism is sometimes strong in segments of the electorate in democracies. Many people in the United States probably would be glad to make it possible for a President to select or dismiss Members of Congress.

Political parties in America have survived the binding party caucus and the attempted purges by the Presidents. There are splinters and factions in today's major parties, but they manage to check one another. It isn't a smooth-working machinery, but the tasks in governing 170 million or more people in a democratic system are never as simple as they are under a dictatorship. Cumbersomeness in government is not too high a price to pay for the enjoyment of the blessings of democracy.

Comment on Jury-Trial Amendment to Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BRAY. Mr. Speaker, the debate over adding a jury-trial provision in contempt cases under the civil-rights bill has been carried on not only in the Congress but throughout the land. I believe it is interesting to note the reaction of the largest morning and afternoon newspapers in the State of Indiana after the action by the Senate of adopting the jury-trial amendment. From the Indianapolis News of August 3, 1957, I insert the following editorial:

THE GREATER RIGHT

"This was one of the saddest days in the history of the Senate, because this was a vote against the right to vote."

That was Vice President NIXON's incredible comment on the United States Senate's smashing victory over those who would have abridged the right of trial by jury in the name of "civil rights."

Charitably, we shall assume that Mr. NIXON merely spoke thoughtlessly in the heat of administration efforts to push through a civil-rights measure cynically based on the power relations of domestic politics.

But we also must assume that Mr. NIXON will live to rue his comment. You do not say such things as that about 51 United States Senators, whose numbers include some of the finest men on the current American scene, and get off scot free.

Moreover, the Vice President was in grievous error. The Senate adoption of a jury-trial amendment to the civil-rights bill was not a vote against the right to vote. It was a vote to protect a right of the heirs of Anglo-Saxon civilization that dates back to Runnymede and 1215.

Did the sponsors of unchecked Federal power of injunction actually think they could sneak a thing without precedent in the Anglo-Saxon world since the destruction of the divine right of kings through the United States Senate?

They did get a sort of confused administration blessing. And they did soft-shoe it through the House.

But the Senate is—and, thank God, always has been—made of sterner stuff.

And so it was that the superb marshalship of LYNDON JOHNSON, Democratic leader, made child's play of those forces which for a variety of reasons—some no less cheap than a desire to win some election votes—would have turned back the clock of criminal procedure to the Dark Ages.

Let Mr. NIXON, Senate Minority Leader KNOWLAND and many others—good Americans all in essence—ponder on their staggering defeat. Let them review their heritage as Western men—a product of tens of centuries of struggle and sacrifice. Perhaps their sense of relative values then will be restored to them.

The triumph of the jury-trial amendment need not be the death knell of an effective civil-rights measures. Its sponsors were Democratic Senators O'MAHONEY, of Wyoming; CHURCH, of Idaho, and KEFAUVER, of TENNESSEE—none of whom by any stretch of legitimate criticism can be called a white supremacist. Indeed, only that rotten Communist rag, the Daily Worker, has dared even hint they are such.

The Senate majority has only decreed that a great and ennobling right, hard won in the strife of ages, is not going to be abridged in favor of other rights that assuredly should come into being.

From the August 3, 1957, edition of the Indianapolis Star, I insert the following editorial:

CIVIL RIGHTS TRIUMPH

In the emotional heat of battle, a great deal of foolishness is being uttered about Senate approval of a jury-trial amendment to the civil-rights bill. Even such a normally temperate person as Vice President RICHARD M. NIXON has described the Senate's action as "a vote against the right to vote." Others woefully say the whole civil-rights bill is now doomed. The amendment is generally pictured as an accomplishment of Southern opponents of civil-rights legislation. With all these reactions we respectfully disagree.

The amendment was adopted 51 to 42 after some of the most seriously thoughtful debate witnessed on the floor of the Senate for many years. Veteran observers of congressional action, including both radical and conservative partisans, have been astounded by the statesmanship exhibited by both sides. Even such a pseudoliberal magazine as "The Reporter," in an article by Douglass Cater, commented prior to the vote on the amendment that, "Suddenly the Senate seemed to come alive and the dialogue took on an unexpected vigor and clarity. * * * Reporters witnessed the rare spectacle of Senators seriously attempting to make up their minds."

It was serious business they were considering. No matter how many denials were made, here was a proposal which would have canceled, in a vast new area of human relations, the right of every person to a jury trial when charged with a criminal offense. In the name of civil rights, the proposed legislation would have partially destroyed a civil right which has been described as the most basic one of all. This was the conclusion reached by the Senate in solemn hours of debate. It was the reason for the amendment.

The jury-trial debate tentatively won for Southern Negroes the right to serve on Federal juries no matter what restrictions a State may place on jury service. It favored retaining for every person, no matter what his color, the right to a jury trial when the charge against him is essentially a criminal one. These are provisions which favor civil rights; they belong in a civil-rights bill. They were decided upon by a majority of the Senate in honest discussion, not forced by any parliamentary squeeze play from the South.

As the bill now stands, what harm has been done to efforts in behalf of Negro voters in the South? Under no circumstances could the civil-rights measure have applied to any elections except those in which Federal candidates were involved. If the bill is passed as amended, southern Negroes can sit on southern juries hearing criminal contempt cases against alleged civil-rights violators. And if a southern Federal judge willfully refuses to empanel Negroes for jury service, who is naive enough to believe that the same judge would be any fairer in hearing a case on his own?

The twin amendments, one preventing States from keeping Negroes off of Federal juries and the other restating the traditional American guarantee of trial by jury, are in fact, a victory for civil rights. We commented earlier, in another editorial, that a mere "right to vote" provision would be political window dressing and ineffective in any practical way in the South, but we did not then foresee the jury service amendment. We wish we had thought of it. We are glad someone did. The wider opportunity for Negroes to serve on southern Federal juries can give them an opoprtunity to dispel prejudice in the most effective way of all—by good performance.

The civil-rights bill, even if it eventually came out a gem of polished perfection, would not solve all the problems of racial prejudice. No legislation could do that. No legislation should be expected to do it. The full job will be done only by a growth of human intelligence and sensible tolerance. But the civil-rights measure is a better bill now than is has been. It comes closer to deserving its title.

We hope the Senate continues its unexpected but welcome high level of civil-rights debate.

Congress Should Approve Legislation Granting a Congressional Charter to Veterans of World War I of the U. S. A.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. VAN ZANDT. Mr. Speaker, the Veterans of Warld War I of the U. S. A. have been in existence for 8 years and have demonstrated through their nationwide activity and membership that they are entitled to a congressional charter so that they may be accorded the recognition enjoyed by major veterans organizations.

Aside from many other important reasons why this organization of World War I veterans should receive national recognition is the fact that it is a great asset to its service officers in representing World War I veterans with their claims with the Veterans' Administration.

In view of the fact that a subcommittee of the House Judiciary Committee after hearings on legislation to grant a congressional charter have submitted a favorable report, I am hopeful that the full committee will approve the recommendations of the subcommittee so that the House will have the opportunity of approving the legislation before adjournment.

The following editorial from the August 8, 1957, issue of the National Tribune—The Stars and Stripes, Washington, D. C., is a timely discussion of

the need for favorable action by the Congress in granting a congressional charter to the Veterans of World War I of the U. S. A.:

A CHARTER FOR WORLD WAR I VETS

On July 24 the Veterans of World War I of the U. S. A. appeared before a subcommittee of the House Judiciary Committee to present arguments to show why this new organization should be granted a congressional charter giving them equal privileges with other recognized veterans organizations.

The organization was well represented by the present national commander, Harlan W. Barnes, of Oregon; Past National Commander Emanuel Levy, and by Merle E. Hopper, chairman of the legislative committee of the Veterans of World War I.

Hopper made the presentation and set forth in completeness the reasons why the organization should be granted a congressional charter. (The full text of his presentation appears in this issue of the National Tribune-The Stars and Stripes.)

We are happy to report that a favorable decision on the granting of the charter was forwarded to the full House Judiciary Committee and in the light of this action we are inclined to believe that the charter will be granted.

There is no reason why a congressional charter should not be given to the Veterans of World War I of the U. S. A. We have referred to them as a new organization but as a matter of fact they have been in existence 8 years. Their beginnings were slow as is always the case with any new group trying to identify itself as something different.

Their struggles were many but, eventually, they found themselves on a solid footing and from then on the organization grew by leaps and bounds.

With little or no backing in the beginning their ranks have grown until they can now count their members in the tens of thousands, with splendid reports of new barracks forming throughout the country.

As we have pointed out previously, there is no reason why the charter should not be granted. As far as the cost to the Government is concerned, that can be discounted. It requires only a little paperwork by both Houses of Congress and the signature of the President of the United States. Any cost will have to be borne by the veterans themselves in the way of setting up necessary offices to aid their comrades and their dependents in claims before the Veterans' Administration. This may sound repetitious but nevertheless it is true.

Here is a group of veterans representing a distinct class—a group of veterans which has proven that despite vicissitudes it has become a growing power, with the possibility of ever greater development as the years pass.

Its recognition by the Congress of the United States seem inevitable. An old and striking advertisement carried the slogan "Eventually, why not now?"

There is no reason why Congress should wait longer to grant the request of the Veterans of World War I of the U. S. A. for a charter. The proof of their stability is before the Congress and their recognition, alongside of other veteran organizations is just. They plead a cause which we of the National Tribune-the Stars and Stripes consider worthy. Congress itself in studying their request for recognition must realize this and in all good conscience grant it.

The Veterans of World War I of the U. S. A. are soon to meet at their national encampment. What a splendid tribute to the men who have battled for this recognition that they might be able to report to their national convention that the Congress of the United States has recognized their claim and has granted their simple request.

We realize that the veterans of the First World War have fallen into a class of forgotten men. It is only human nature to forget the past in considering the problems of the present.

That is understandable, but the people of our country should never foreget the sacrifices these men of 1917–18 have made, and the men and women who make up the Congress of the United States are human, and with a little thought will realize that granting a charter to this representative group of war veterans is but a mild token of appreciation toward them and one well worthy of the men who seek it and the Congress which has it in its power to grant it.

We realize the difficulties that lie ahead of Congress in the next few weeks in connection with important legislation, particularly before the Senate, but we do think it would be a nice gesture on the part of both Houses of Congress if they could find time to pass this piece of legislation which cannot harm the country but which can do much for the future growth of a worthy veteran organization.

Import Competition Faced by Our Pottery Industry

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. HAYS of Ohio. Mr. Speaker, I have on numerous occasions called attention to the disastrous import competition faced by our pottery industry. The situation has not improved and it is high time that some effective action be taken.

When I say this I am aware how deeply we have become bogged down in our trade relations with other countries. Each year that the executive branch continues to maintain its control over the regulation of our foreign commerce the complications become more involved. The burden of seeking a remedy gets more cumbersome, to the point where a domestic industry hardly knows where to turn.

Even such remedies as have been provided by legislation, such as the escape clause of the Trade Agreements Act, are backstopped by the President and he relies on the State Department and like-minded executive agencies for his advice.

The point has been reached where the fancied effects on international relations of any action proposed to save a domestic industry override all other considerations. Let employment drop; let workers walk the streets; let local communities dry up—all this is nothing. It makes the State Department's work easier if we do nothing about it. Yes; it is so much easier in playing international politics if you can use pawns supplied by someone else rather than those supplied by your own intelligence and competence. It is so much easier to buy your way through.

But I for one am getting tired of this kind of diplomacy. The people back home whose pawns are so recklessly played on the international table are getting tired of it.

Recently the International Brotherhood of Operative Potters addressed themselves to this subject in their annual convention. President E. L. Wheatley has supplied a copy of two resolutions adopted on import quotas and the OTC. They speak for themselves and I insert them in the RECORD at this point on leave previously granted:

RESOLUTION ON IMPORT QUOTAS

Whereas the importation of household pottery products, both chinaware and earthenware, has long been detrimental to the pottery industry and therefore to the members of the International Brotherhood of Operative Potters;

Whereas these imports have captured a heavy share of the domestic market almost entirely because of the lower wages prevailing in the countries of origin and promise further encroachment on our jobs and pressure on our wages;

Whereas the tariff rates have been reduced under the trade agreements program despite our protests and despite the obvious results that would occur and that have in fact occurred;

Whereas the possibility of obtaining a remedy under the escape clause borders on zero because of State Department interference;

Whereas a limitation on imports that would recognize the right of domestic producers to retain a fair share of the home market is necessary in order to assure a halt to the progressive increase in imports which bids fair to annihilate our industry in a mater of time: Therefore be it

Resolved:

1. That the International Brotherhood of Operative Potters reaffirms its previous resolution in favor of establishing quotas on pottery imports.

2. That it lend full and vigorous support to the Lanham general-import quota bill (H. R. 2815) and urge the Congress to pass it.

3. That copies of this resolution be sent to the membership of the House Committee on Ways and Means and the Senate Finance Committee of the United States Congress; to President George Meany, of the AFL-CIO, and to the heads of the legislative and the industrial union departments of the same body.

RESOLUTION ON OTC

Whereas the membership of the International Brotherhood of Operative Potters has had long and discouraging experience with the problem of import competition from countries in which extremely low wages prevail;

Whereas this experience covers the period under which the Department of State of the Federal Government has virtually replaced Congress as the branch of Government that regulates foreign commerce;

Whereas the administration of our tariff and trade laws during the past 20 years has been without sympathy or regard for the welfare of our domestic industry, but, on the contrary, very solicitous of the improvement of the economies of many other countries all over the world, to the extent of pouring scores of billions of dollars into such countries, while at the same time reducing import duties and thus increasingly exposing the jobs and wages of our members to the competition of underpaid foreign labor;

Whereas the Congress of the United States and not the State Department is specified in the Constitution as the branch of the Government that is to regulate our foreign commerce and to control the tariff;

Whereas Congress is responsible to the people who elect its Members, while the State Department is not;

Whereas the proposal to make the United States a member of the OTC (Organiza-

tion for Trade Cooperation) which would be headquartered in Geneva and in which the United States would have but 1 vote in 35, is now before Congress in the form of H. R. 6630;

Whereas congressional approval of OTC membership would underwrite or confirm the loss by Congress of its power over tariffs and trade and lodge such authority in an international body, thus destroying all hope of recapture of its power by Congress: Therefore be it

Resolved:

1. That the International Brotherhood of Operative Potters in convention assembled condemn severely the administration of our trade and tariff laws under State Department domination;

2. That we call for the restoration of the regulation of our foreign commerce to the hands of Congress, where it belongs, and from which it should not have been removed;

3. That we call for the defeat of H. R. 6630 or OTC membership bill; and

4. That the officers of the brotherhood disseminate copies of this resolution to the membership of the House Committee on Ways and Means and the Senate Finance Committee of the United States Congress; to President George Meany, of the AFL–CIO, and to the heads of the legislative and the industrial union departments of the same body.

Lead-Zinc Crisis

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. DIXON. Mr. Speaker, several days ago I inserted in the RECORD my testimony before the House Ways and Means Committee which held hearings last Thursday and Friday on the crisis in America's domestic lead-zinc industry induced by excessive foreign imports of these metals.

A concise statement of the problems affecting the industry was presented for the committee record by Clark L. Wilson, vice president of the New Park Mining Co., of Keetley, Utah.

Because this is an important and urgent issue now before the House Ways and Means Committee I ask that Mr. Wilson's statement be printed in the RECORD for study by the Members of both Houses.

The statement follows:

STATEMENT OF CLARK L. WILSON, VICE PRESIDENT, NEW PARK MINING CO., AUGUST 1, 1957, TO THE COMMITTEE ON WAYS AND MEANS OF THE HOUSE OF REPRESENTATIVES ON THE SUBJECT OF IMPORT TAXES ON LEAD AND ZINC

The New Park Mining Co. operates the Mayflower Mine at Keetley, Utah, in the famous old Park City Mining District, 30 miles east of Salt Lake City, Utah. New Park is an independent mining organization owned by over 4,900 stockholders located throughout the United States and foreign countries. Our ore is shipped direct to a custom mill so that our income is dependent solely on mining operations. This means we do not have income from milling or smelting operations. We feel that our problems due to the depressed lead-zinc market are particularly typical of the few independent mining organizations left in the lead-zinc industry, and illustrate the need for domestic tariff protection.

HISTORICAL BACKGROUND AND PRODUCTION RECORD

Our company was incorporated 25 years ago in May of 1932 as a consolidation of several mining companies that controlled the Park-Galena Mayflower Mine. Work on this prospect dated back to the 1880's. Following incorporation as New Park in 1932 it took 8 years to finance and develop the Mayflower Mine as an active producing property and 1940 was the first year of operation at a profit. Since that time the company has operated continuously at a profit through 1955 paying over $2 million in dividends to our stockholders. This past year of 1956 we lost $113,840.

During the past 20 years our company has produced 127,500,000 pounds of lead and 165,900,000 pounds of zinc. Our annual production rate now averages approximately 6 million pounds of lead and 9 million pounds of zinc. The importance of this production is quite apparent as it affects the economy of our mining district, local communities, State of Utah, and the preservation and protection of the safety of our Nation, particularly in times of worldwide shortages. Our continued production of these metals is very questionable due to the low lead-zinc metal price situation resulting from excessive imports of foreign lead-zinc.

The Park City Mining District of Utah has produced over $450 million of metals in an 80-year period of time. An asset such as this must be protected and can be done only by continued operations of its mines.

NEW PARK'S POSITION AS A COMPETITIVE PRODUCER

I would like to establish at this point that New Park is an old reliable mining company with a sound production and profit record. Based on this record we do not consider our present financial difficulty to be a result of corporate management or operating problems and ours is not a so-called marginal producer as our ore grade and mining costs are commensurate with other good operations in the United States.

WHAT THEN IS OUR PROBLEM?

Other interested mining people will present to your Committee the facts and figures on excessive foreign imports of lead and zinc. The resultant surpluses not only kept metal prices from rising in proportion to increased operating costs, but have reduced combined lead-zinc prices by 18½ percent in 2 months' time, May and June 1957. An operation that lost money when combined lead-zinc prices were 29½ cents per pound cannot exist at 25 cents per pound even with a drastic revamping of its operations. We have been operating at a loss in hopes that the long-range mineral program would be presented to Congress early this year. To stay in business even on break-even basis we cut out all lower grade working areas and dropped approximately one-third of our employees. A substantial percentage of our surface workers were either transferred to production jobs underground or were retired as overage employees (over age 65). All possible mechanical and operating efficiencies have been improved, and tons of ore produced per man-shift have increased to an all-time high, but decreasing metal prices far exceed these improvements. Let's consider the prices that would have been needed last year (1956) for New Park to operate on a break-even basis. As previously mentioned, we lost $113,840. If this loss is equally apportioned to lead and zinc it would require an additional 1 cent per pound on each metal to equal the loss. This would be a combined price of 31½ cents per pound, or 17½ cents for lead, and 14½ cents for zinc. The present prices are about 24 percent below this level.

EFFECTS OF LOW METAL PRICES

1. The immediate effect of low metal prices is readily apparent in operating losses that will eventually lead to closing the Mayflower Mine. We have 185 employees who will lose their jobs. This will have an immediate effect on their families and the communities they help support, involving several thousand people in our area. The reduction in county, State, and Federal taxes through closure of a natural-resource industry will be a real loss to our communities. The only true wealth generated in our country comes from its natural resources and our national policy should be to develop these assets.

2. The value of the ore reserves in any mine fluctuates with metal prices and as prices are lowered there are some mineral areas that can't be mined at a profit and must be reserved for the future if they are then available. A wet mine such as ours must be constantly maintained during a shut-down period, otherwise timber rots and rockfalls block the mine openings. This maintenance is an expensive operation. The expense of reopening a mine may be greater than the value of the ore blocks left, due to economic conditions such as we are now experiencing. In other words, a shut-down may mean the permanent loss of a valuable resource.

Our geologists estimate that our normal 2-year ore reserve has been reduced to approximately 6 months by the recent price reductions. What was profitable ore at 31½ cents combined lead-zinc price, cannot now be mined at present metal prices and costs.

The reduced value of our ore reserves due to the low lead-zinc prices is shown by comparing the value of our ore at 16 cents for lead and 13½ cents for zinc in April 1957, with the same ore at the present prices of 14 cents for lead and 10 cents for zinc. For this example I have used in the calculations a typical lot of ore shipped from the mine during the month of April. The value of this ore after treatment charges were paid was $23.96 per ton in April 1957. The same ore at present prices will net us only $17.67, a loss in value of over 26 percent.

3. We have a saying in the business that "You have to mine ore to find ore." By this, we mean that generally as long as a mine is operating profitably, management will reinvest a portion of its earnings in new exploration that will eventually develop new ore bodies. Low metal prices over the past few years have eliminated, at New Park and other properties, any long-range exploration that must be done to insure the existence of our industry. Over the long term this is the most serious effect of our present economy as the future security of our country will be affected.

OUR METAL PRICE NEEDS AT NEW PARK

Our economic situation has been explained to the Congress and the administration during the past few years and was fully recognized by the action of the Tariff Commission in May 1954, with a unanimous recommendation for increased tariff protection. As you know, this recommendation was rejected by the administration and various other plans were tried. In our estimation the failure of these attempts to stabilize metal prices has proven that a tariff or import tax, preferably both, is the only equitable solution to control of excessive metal imports. We appreciate the recognition of these principles by the administration as shown in the long-range mineral policy statement and proposed legislation of Secretary Seaton and as presented in various bills now before Congress. Secretary Seaton suggests a peril point on lead of 17 cents and zinc 14½ cents. No tax would be imposed at these price levels or above. As shown earlier in this testimony we must have these prices at New Park to permit a break-even operation with a minimum of exploration and development.

We respectfully suggest to your committee that in your consideration of recommended legislation these price levels be con-

sidered actual minimums for operation of domestic lead-zinc mines under the present-day cost of wages and materials. The tariff or tax applied must be sufficient to control excessive foreign imports of lead and zinc.

The United States is not a have-not nation. With the proper incentive our industry will develop new mineral reserves producing new wealth for our country and its people. This has been proven many times in the past. We feel it is imperative that the standard of living of the American miner be maintained and this will be done only by proper tariff protection.

We earnestly request that your committee approve proposals for the necessary protection of the domestic mining industry.

Amending Tariff Act of 1930

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. JENKINS. Mr. Speaker, on yesterday August 6, I introduced H. R. 9132, as an amendment to section 313 (b) of the Tariff Act of 1930. The purpose of this amendment is to extend to all imported merchandise the privilege of substitution of similar domestic merchandise for the purpose of drawing back duty paid on imported merchandise upon the export of equivalent American-made goods.

In 1930 this privilege was extended to sugar and nonferrous metals. In 1949, at my recommendation, Congress extended it to all metals, as well as linseed and linseed oil. In 1956, Congress again extended the privilege to printing papers. The Customs Bureau has now had enough experience with this practice of substitution that they are now prepared to support the ending of the discrimination that the present law still continues against all other commodities and merchandise, as proposed by this bill which I am introducing.

The advantages of this privilege to importers engaged in the reexport of such goods and the employees engaged in their production are adequately set forth in the records of the Ways and Means Committee in connection with the action taken in broadening this privilege on previous occasions. It enables the American manufacturer faced with the competition of cheaper foreign materials available to his foreign competitors to improve his competitive position in foreign markets and thus assist in maintaining a higher level of domestic employment in the United States at higher wages, than would otherwise prevail. It is a privilege which Canadian producers have enjoyed for over 30 years. It is a step forward in the direction of freeing foreign trade, not from necessary tariffs, but from unnecessary handicaps to American exporters in meeting foreign competition in foreign markets on more even terms. As in all past cases, the proposal has bipartisan support. I trust the House will approve this progressive measure for freeing exporters of American goods from unnecessary and uneconomic handicaps in their struggle to increase their sales in foreign markets.

American Foreign Aid

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. PATTERSON. Mr. Speaker, I am sure that all Members of this body receive complaints from constituents regarding the extent of American foreign aid, which many of them think is strengthening the hold of Communist Russia over satellite countries. Our colleague, Representative EARL WILSON, of the Indiana Ninth District, has discussed that matter in his current news letter to constituents. Believing his report is most worthy of thought, I am herewith submitting it for reproduction in the RECORD:

WASHINGTON NEWSLETTER
(By Congressman EARL WILSON)
PUBLIC ENEMY NO. 2

My last newsletter discussed the growing threat of inflation as American public enemy No. 1. I attempted to show that communism—Enemy No. 2—cannot take over the United States unless inflation first gets the best of us. A strong economy with full employment, stabilized money and sound government will keep us invincible.

I have much mail—and I am sure this is true with other Congressmen—urging drastic cutbacks in American foreign aid; particularly to those nations dominated by Soviet Russia. "Why," I was asked by one writer, "should we use American dollars to stabilize Soviet satellites and thus deaden the determination of these enslaved peoples to rise against their oppressor?"

It is indeed hard to justify such American aid, and I am not trying to do it. That whole field of American policy may well be in need of a searching congressional inquiry.

If we are to turn the tide of international communism, shouldn't we enlist the active aid of the subject people in satellite countries? They are the ones to overthrow their Communist overlords. Yet, when we pour American aid to them we take from them the sense of urgency and we fortify the power of their rulers.

There are many Members of Congress and other thoughtful people throughout the land who insist that our policy should be toward undermining—socially, politically and economically—the outlaw regimes in the satellite nations. This can be done, they reason, through non-recognition, trade embargoes and through a ceaseless propaganda barrage against Soviet imperialism.

Whatever American aid that goes to Communist-dominated countries should proceed from the highest humanitarian principles—aid for food and medical supplies to stem or reduce human suffering. It should not be aid that would serve to bolster or stabilize, even slightly, the political overlords—for that would be aiding communism and not the subject people.

Such a stiffening of American policy would almost immediately force greater hardships on Soviet Russia itself and severely weaken the economic base of the entire Kremlin imperialist system. We now know that many crises exist behind the borders of Russia—a struggle for the reins among top Reds, a breakdown in the industrial and agricultural strength of the country and a general dissatisfaction among the masses of the Russian people.

The latent power of enslaved satellites is feared more today by Russian rulers than is the military might of America and all the NATO countries combined.

This is a most critical period—it might well be the opportune period—in our dealings with communism. Let us avoid contributing toward the building of a communistic commonwealth of nations.

The Federal City Council, Washington Star, and Washington Post Strongly Support Bill To Establish a Standing Joint Committee on the District of Columbia

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the Federal City Council, the Washington Evening Star, and the Washington Post and Times Herald strongly support my bill to establish a standing Joint Committee on the District of Columbia.

I have been concerned with this matter for a long time.

It is a workable bipartisan plan, and, I am proud to say, a number of my colleagues in the House and Senate have joined me in sponsoring it.

In the House the bill has been cosponsored by the gentlewoman from Pennsylvania [Mrs. GRANAHAN], the gentleman from Pennsylvania [Mr. SCOTT], and the gentleman from South Dakota [Mr. MCGOVERN].

In the Senate a companion measure was introduced by Senator JOSEPH S. CLARK, JR., Democrat, of Pennsylvania, for himself and Senator WAYNE MORSE, Democrat, of Oregon.

My bill is designed to reorganize congressional relations with our Capital City in order to expedite solutions to urgent problems now facing that city, and to lessen the burden falling on Congress as it acts as City Council for Washington.

It is being introduced simultaneously in the Senate by my good friend, the distinguished junior Senator from Pennsylvania, who has played a major part in helping to develop the measure as it now stands. I am delighted to have the following Members of Congress join me as cosponsors in the House: Representatives HUGH SCOTT, Republican, of Pennsylvania, GEORGE S. MCGOVERN, Democrat, of South Dakota, and KATHRYN E. GRANAHAN, Democrat, of Pennsylvania.

Few subjects confronting us today are as important as this one. Better legislative methods for dealing with District

problems are absolutely vital to preservation of the economic well-being of our great Capital City. They are equally indispensable to saving the time and energy of many of my colleagues in both Houses of Congress.

Today our Nation's Capital—the foremost city of this Nation and of the free world—is in dire trouble. It faces problems, governmental, social, and financial, which threaten its very future unless they are dealt with promptly and effectively.

In our role as City Councilors for the Capital City, we have a prime responsibility for helping find answers to the city's dwindling tax base, its costly slums, its traffic congestion, its rapidly mounting financial burdens, and so on.

You would expect under these circumstances that the legislative machinery for dealing with the District would be the best that congressional ingenuity could devise. I regret to say that it now falls short of this mark.

Responsibility for control over District affairs is now divided among four congressional groups—Senate and House District Committees, and the Appropriations Committees in both Houses. As a recent editorial in the Washington Post-Times Herald put it:

> This diffusion of authority contributes greatly to pulling and hauling over relatively minor issues and compels an excessive number of national legislators to familiarize themselves with local problems.

We all know how frequently District bills bounce back and forth between Senate and House because of conflicting actions of each. We have seen this process result in delays and financial losses to our great Capital City. And many of us are all too well aware of the excessive and unnecessary load of work placed on us by this system.

Indeed, the inefficiency and waste motion of this procedure help explain why so many legislators regard an appointment to a District Committee with so little enthusiasm. It is a large part of the reason why our Nation's Capital has so long remained the forgotten stepchild of Congress.

Needless to say, the most satisfactory way out of this dilemma is home rule, perhaps coupled with a fixed-formula Federal payment in lieu of local taxes.

But short of home rule, there is a positive first step we can take toward better and more responsible local government for the District, and toward a more efficient method of discharging our own responsibilities.

This is to be found in the standing joint committee of the Senate and House, recommended in my bill which would consolidate the major legislative functions affecting the District, thereby providing some continuity to Washington city government and reducing the drain on congressional energy.

I would like to emphasize, Mr. Speaker, that this proposal coincides with a general trend toward greater legislative efficiency. Today, for example, there are a dozen joint congressional committees—about double the number which existed 10 years ago. Among them is the Joint Committee on Atomic Energy, on which the proposed Joint District Committee is closely modeled.

The idea of a Joint Committee on the District is one which has elicited strong bipartisan support in the past. In 1948, during the 80th Congress, the House District Subcommittee on Home Rule and Reorganization recommended such a joint committee, and this proposal received strong support from members of both parties.

My conversations with civic leaders here in Washington have indicated widespread enthusiasm for creation of this proposed committee. Such an important organization as the Federal City Council, for example, backs my proposal in principle. The policy of this citywide group is shaped by such leading citizens as Ambassador George Garrett and bankers Frank Addison, Jr., and Robert Fleming.

Newspaper support for the Joint District Committee has also been demonstrated in frequent articles and editorials on the subject. Last November 18, in his excellent column on District affairs, Mr. Robert C. Albrook, of the Washington Post and Times Herald, proposed a committee similar to the one set forth in this bill.

I would also like to call your attention to a recent statement of Brig. Gen. Thomas A. Lane, retiring engineer Commissioner of the District of Columbia. Speaking before the annual convention of the Washington Real Estate Board last June 20, this distinguished official said:

> In my personal opinion it is time for a deliberate restudy of our District of Columbia government. If as a practicable matter the Congress is not going to restore home rule, it should reexamine the present government to correct its present inadequacies and modernize it so that it will be a fitting instrument to handle the problems of today.

In short, the time has come to make the Joint District Committee a reality. By such action we can speed badly-needed solutions to District problems, conserve the time and energy of Congress, and provide a permanent supervisory committee for the District at that time when home rule is put into effect.

For these reasons, I urge my colleagues to support this measure with all the means at their command, and to help ensure its enactment during the current session of Congress.

I include here the text of a letter I have received from the president of the Federal City Council, the Honorable George A. Garrett, former Ambassador to Ireland.

Included, too, for the information of my colleagues, are two supporting editorials from the Washington Evening Star and the Washington Post and Times Herald.

FEDERAL CITY COUNCIL,
August 5, 1957.

HON. FRANK THOMPSON, JR.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: I am writing you on behalf of the Federal City Council to commend you for all the work you have done in developing and supporting your bill to create a Joint Committee on the District—an effort which culminated Wednesday in your introduction of the measure in the House.

We believe that this measure, if passed, would represent a long step forward toward better government in the District. This is true because, as you have pointed out, a Joint District Committee would greatly reduce the burden of Congress as it acts as a city council. It would also result in immeasurable saving of time and energy on the part of local officials and individual citizens who testify and assist Congress in its job.

As the Washington Star pointed out on July 31 in an excellent editorial supporting your proposal, a lot of time has been saved in the past when the House and Senate District Committees have resolved themselves into a joint committee to consider such matters as public works and taxes. We agree with the Star that: "The same principle would be represented in abolition of the House and Senate District Committees in favor of one standing, joint committee—as the bills provide."

I note that this measure has been sponsored in the Senate by Senator JOSEPH CLARK, of Pennsylvania. Now that it has been introduced in both Chambers, we feel that early hearings on the bill are imperative. It is our hope that your proposal will be enacted into law by Congress as speedily and expeditiously as possible.

Noting the reference to the Federal City Council in your introductory remarks, I would like to reiterate my conviction that only through continued cooperation between civic organizations, District officials, and Congress can the problems of our city find any lasting solution.

This cooperation, of course, is predicated on the presence of legislators who are statesmanlike enough to recognize that our Capital City belongs to all citizens, including their own constituents.

You have consistently had the vision to perceive this, and your latest bill is only one of many contributions to a better Washington. We would like to thank you for your unremitting efforts in this direction, and to express our hope that Congress will implement your suggestion for streamlining the present system of District government.

Sincerely,

GEORGE A. GARRETT,
President.

[From the Washington Evening Star of July 31, 1957]

GOOD IDEA, ANYWAY

Creation of a Joint Committee on the District of Columbia, as proposed in legislation sponsored by Senator CLARK of Pennsylvania, Representative THOMPSON of New Jersey and others is a good idea. It always has been a good idea and we think it always will be.

In some special circumstances—the drafting, for example, of legislation for control of alcoholic beverages following prohibition repeal; the public works program; several local tax laws—the House and Senate District Committees resolved themselves into a joint committee. The joint committee conducted the hearings, agreed in principle on the legislation, and then the legislation was separately considered by the two committees. A lot of time was saved, and the resulting legislation was improved by the process. The same principle would be represented in abolition of the House and Senate District Committees in favor of one standing, joint committee—as the bills provide.

If such a joint committee could pass on the District budget each year, and support it by the necessary appropriations, it would be a more beneficial reform. For one of the chief problems in local government is the continuing conflict between the legislative and appropriations committees. The legislative committees are responsible for making the laws. The appropriations committees must furnish the money to make them effective. And there are times when the two sets of committees are as far apart as the poles in

what they choose to do—leaving the unrepresented local taxpayer in the middle. The bills do not go that far, because the trespass on the precincts of the appropriations committees would be considered beyond the pole.

We hope the House and Senate bills to create a joint committee will receive, at least, a hearing. In the past there has been reluctance by all of the committees to give up anything they have now and it will be interesting to discover whether human nature is suddenly changing.

[From the Washington Post and Times Herald of August 4, 1957]

LITTLE CONGRESS FOR DISTRICT OF COLUMBIA

The proposed Senate-House Joint Committee on District Affairs is not, of course, a substitute for home rule. Rather, it is a companion measure to the home-rule bill. Both are designed to minimize the burden Congress now carries as city council for the District. Senator CLARK, one of the leading sponsors of the measure, has been shocked by the waste of congressional man-hours in handling entirely local problems. For its own sake Congress ought to pass both the home rule and the joint committee bills.

Some objections have been raised to giving a single joint committee authority to pass upon both legislation and appropriations for the District. The principle of making a separate committee in each House responsible for all Federal appropriations is undoubtedly sound. But the District is not merely a Federal department or agency. It collects its own taxes, and the spending of its funds ought to be kept separate from Federal appropriations. Indeed, the spending of District revenue ought to be wholly in the hands of an elected local government. In the absence of such a government the least Congress can do is to create a joint committee which could bring some degree of expertise to bear upon local legislating and spending.

No doubt the regular Appropriations Committees would have to retain control over the Federal payment to the District, but this should be governed by a fixed formula in any event. With such a formula in operation, an alert joint committe with an expert staff could take over 99 percent of the burden of legislating for the District.

Sampling Public Opinion

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BAUMHART. Mr. Speaker, over the years I have found that face-to-face contact is the most effective and personally satisfying method of sampling public opinion and rendering service to constituents. The personal visit knows no equal when it comes to learning the views and needs of our people.

With this in mind, I have again this year arranged to meet 13th District residents in the county seats of Lorain, Erie, Huron, and Sandusky Counties. Local officials have graciously set aside office space for me during these visits. Individuals and groups may confer with me at their convenience, without prearranged appointments.

The schedule is as follows:

September 16–20: Erie County Courthouse, Sandusky, Ohio.

September 23–27: Lorain County Courthouse, Elyria, Ohio.

September 30–October 4: Sandusky County Courthouse, Fremont, Ohio.

October 7–11: Huron County Courthouse, Norwalk, Ohio.

After the tour has been completed, I will again have an office in the Feick Building, Sandusky, for the convenience of residents in the western end of the 13th District. That office will be open from October 28 until the end of the year.

These arrangements supplement the year-round services which are available at 209 Sixth Street, Lorain. Inquiries may be directed to the Lorain office throughout the year, and any which cannot be taken care of immediately there will be forwarded to Washington promptly for appropriate action and reply.

The Civil-Rights Fiasco

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. AUCHINCLOSS. Mr. Speaker, I am grateful for the opportunity to have printed in the CONGRESSIONAL RECORD the excellent editorial appearing in the Asbury Park Press on August 5, entitled "The Civil-Rights Fiasco." I hope my colleagues will read it because it expresses the view of millions of Americans in a straightforward, clear thinking manner, and I am sure that all who do read it will be benefited by its logic.

The editorial columns of the Asbury Park Press are not only devoted to the interests of the people in its community but I venture to say that with editorials like this one, its influence is felt by American citizens elsewhere. This newspaper enjoys the confidence of the people who read it with its factual coverage of the news, and its stimulating editorials, and I am proud that such a paper enjoys its circulation in the district that I have the honor to represent. I am sure its growth will continue and its influence for good be increasingly great as the days go by.

The editorial follows:

THE CIVIL-RIGHTS FIASCO

A hard core of southern Senators, seeking to keep alive a voting system doomed to eventual failure, and a group of northern associates, actuated by motives known only to themselves, have thwarted President Eisenhower's plan to assure every American citizen his constitutional right to go to the polls. It is a dismal spectacle. We can understand that the President finds the Senate action bitterly disappointing. And along with Mr. Eisenhower's feeling of disappointment the public will experience a sense of surprise to see such names as KENNEDY, of Massachusetts; LAUSCHE, of Ohio; and MARGARET SMITH, of Maine; listed with EASTLAND, of Mississippi; ELLENDER and LONG, of Louisiana; FULBRIGHT, of Arkansas; and TALMADGE, of Georgia.

The civil-rights bill has four major provisions: (1) It authorizes a commission to study the problem and report to Congress; (2) it provides for a new Assistant Attorney General to head up the work in the civil-rights field; (3) it gives the Attorney General new power to enforce the civil rights embraced in the 14th amendment; and (4) it permits a Federal judge to dispose of contempt proceedings against those who violate an injunction against interfering with voting rights. There is nothing startling about the bill unless it be the fact that it is the first serious attempt to implement the 14th amendment since it was written in the post-Civil War period.

The southern Senators moved with the precision of a well-organized army. First they attacked part III of the bill as granting the Attorney General even more power than the administration had intended. Northern Senators, including some so-called liberals joined in the assault and on July 24 a majority of the Senate voted to remove the heart from this section of the bill. With this victory behind them the southerners moved on part IV. They argued that the injunctive power of the Federal judiciary in civil-rights matters should be subject to a trial by jury. This is not a good legal argument because in American Federal jurisprudence the power of a competent court to issue an injunction demanding compliance with its rulings is not questioned nor made dependent upon a jury trial. The strategy of the southern bloc was apparent. It relied upon the fact that whereas a Federal judge might punish a man for interfering with another's voting rights a southern jury would not do so provided the defendant was white and the man who was denied the right to vote was colored. Once again the southerners were able to sell a bill of goods to some of their northern brothers, including again some so-called liberals, and part IV was amended to provide for a jury trial in civil-rights' cases involving criminal contempt. Thus emasculated, the bill will now come up for a final vote. If passed there is good reason to hope the President will veto it.

There are two bits of consolation to be gleaned from the whole fiasco: One is that Congress has at long last seriously considered the matter and will, before too long, pass a satisfactory civil-rights bill; and secondly, New Jersey has reason to be proud that its Senators CASE and SMITH voted on the side of justice and in favor of making the 14th amendment something more than a pious platitude.

"Mr. Gluck of Ol' Kaintuck"

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. HAYS of Ohio. Mr. Speaker, last Thursday I referred to the new Ambassador to Ceylon's publicly recorded ignorance of the affairs of the south Asia area where he is to represent us. I admitted that, although Mr. Gluck claimed to be from Ohio, I had heard no more of him than he had heard of the Prime Ministers of Ceylon and India.

I am glad to learn, from the enclosed article appearing in Monday's New York Times, that he is now officially "Mr. Gluck of Ol' Kaintuck."

The article follows:

RANDOM NOTES FROM WASHINGTON: LONG, WINDING ROAD TO CEYLON

WASHINGTON, August 4.—Hot weather stories are hard to come by, and the Washington press corps was mighty grateful last week to Maxwell H. Gluck, the new Ambas-

dor to Ceylon, a man who could ante up $0,000 to Republican campaign funds uicker than he could say Bandaranaike.

Senator JACOB K. JAVITS, Republican, of ew York, suggested Mr. Gluck for an amssadorial post in January. Mr. Gluck is a usiness partner in New York of the Senar's brother, Benjamin.

However, the State Department told the enator that, with easterners getting the on's share of good jobs, Mr. Gluck's chances ight be better if he could be sponsored om another State.

Mr. Gluck claims Ohio as his home State, ut apparently Senators JOHN W. BRICKER, epublican, and FRANK J. LAUSCHE, Demoat, were not keen on backing him. But rtunately Mr. Gluck has a horse farm in entucky, and Senator JAVITS got Republian Senators JOHN S. COOPER and THRUSTON MORTON to sponsor him.

And so he became "Mr. Gluck of Ol' Kainuck."

SAUCE PIQUANTE

Incidentally, the Gluck affair has given a ertain piquancy to a pamphlet issued in anuary by the State Department entitled The American Ambassador."

The pamphlet says that most of the 19th entury was a "lean time" for American iplomacy. "Diplomatic appointments freently rewarded the generous contributor a campaign regardless of his qualificaons for the post."

All this has happily changed, the pamhlet goes on. "In today's vastly enlarged iplomatic field," the ambassador must be horoughly familiar with "all aspects of life n the country of his assignment."

ase of State Representative Tom Monaghan, of Oregon—Can a Teacher Also Be a Legislator?

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

N THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. NEUBERGER. Mr. President, at time when we are considering civilights legislation, it is well that we remember all Americans should enjoy civil ights—regardless of race, creed, color, eligion, economic status, place of resience, or type of profession.

Occasionally the civil rights even of schoolteacher may be in jeopardy, as my home State of Oregon. There court has ruled that State Representaive Tom Monaghan, elected to that post y the voters of Clackamas County, cant continue as a legislator if he is to aintain his chosen profession of schoolaching. This is a blow both to eduation and to good government, in my pinion.

Although I have no legal dispute with he ruling of the court, it seems to me nfortunate that either a State or Fedral Constitution could be so drawn that teacher cannot also serve in governent at the legislative level.

I believe a cogent and effective edirial from the July 25, 1957, issue of the illwaukie, Oreg., Review, entitled "Tom Monaghan's Case Is No Personal Battle," might interest many of my colleagues, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOM MONAGHAN'S CASE IS NO PERSONAL BATTLE

We shared the disappointment of most people hereabouts and of many throughout the State that Judge Ralph Holman of our circuit court felt he had to decide against State Representative Tom Monaghan in the current appeal over his eligibility to be a teacher and sit in the legislature. Yet the question is admittedly a close one, and the Judge took a position which a strict interpretation of Oregon's State constitution without doubt will permit.

In article II, section 10, our constitution says: "No person holding a lucrative office or appointment under the United States or this State shall be eligible to a seat in the legislative assembly."

Courts seem to lean to the position that teaching is not an office within the meaning of the constitution, but perhaps it is an appointment. We think a broader view must be taken of the whole question.

The Founding Fathers were trying to prevent the executive department, whose possible dictatorship they feared out of experiences with King George, from usurping the authority of the legislative and judicial branches. They never foresaw the era of millions of citizens, now totaling 10 percent of the wage-earners of the Nation, being employed by local, State, and National governments.

The question before us is, then, whether we want to put these many millions into second-class citizenship. The Hatch Act-type laws of only a few years ago further handicapped many of these people from participating in Government.

We think it outrageous to bar schoolteachers, for instance from serving in the legislature if nominated and elected. If teachers are banned, how about firemen? Two of them sit today without challenge in Oregon's Legislature, as they should. And if not teachers, how about lawyers, of which plenty sit at Salem, who are officers of the court, usually are notaries public, and hold many appointive offices under the State and local governments as counsel for school boards and cities and water districts, councilmen, interim committee members, and so forth?

Not only is there no end to this nonsense, but it subverts the purpose of government of, by and for the people. The basic, all-important thing is to keep the power in the hands of the voters. Let the public decide whether a business or professional connection at the civil service level is a disqualifying aspect of a candidate. The public is not stupid. If any elected official—publisher, lawyer, truckdriver, teacher, insurance man, fireman, farmer or contractor—abuses his office by serving too much his own selfish interest, the public has a long history of finding them out. A healthy two-party system will insure criticism and opposition. The danger in stifling citizenship is far greater than in trusting the electorate.

If Tom Monaghan, who symbolizes the issue, loses his appeal to the Supreme Court (which we trust he will not), then Oregonians must be about the business of major amendments of our law to protect all classes of citizens against loss of their rights.

Interposition

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. SIKES. Mr. Speaker, I submit for reprodidction in the CONGRESSIONAL RECORD a very interesting letter from my friend, the Honorable Herbert S. Phillips, of Tampa, and a strong and clear statement by him on interposition. I feel that both are worthy of the consideration of the Members of the Congress.

TAMPA, FLA., *July 29, 1957.*

Hon. BOB SIKES,
Member of Congress,
Washington, D. C.

DEAR MR. SIKES: Thank you for your letter of the 16th instant in reply to my letter to you. I have always contended that our jury system is the greatest bulwark we have against tyranny. When I was United States attorney and Mr. Akerman was judge, I prepared a bill providing that all persons charged with contempt be given a jury trial unless the contempt charged was committed in a courtroom in the actual presence of the judge then and there trying or hearing a matter of which the court had jurisdiction, but I failed to develop any active support for such a bill from the then Florida delegation.

The occasion of my action at that time was the fact that Mr. Cheney, the then probation officer sought to arrest a probationer for not complying with the conditions of his probation. The attempted arrest, which was resisted with force, was made at the home of the probationer in the country. The attorney for the probationer insisted that he be given a jury trial. After looking up the decisions, I decided that the probationer was entitled to a jury trial, and the same was ordered by the court. I think it is very important that your proposed bills be enacted by the Congress.

Since contempt is a medemeanor the Constitution would not have to be amended, if I interpret the decisions of the court correctly. The act, I think, should expressly provide that the punishment should not exceed 12 months or a fine of $100.

I sincerely trust that the gallant fight being made by Senator RUSSELL and his active coworkers to defeat the force-bill provisions of the civil-rights bill, now being considered, will be successful.

In the Appendix of the CONGRESSIONAL RECORD of June 11, 1953, page A3555, Abner Powell sent the President a lettergram chiding him with failing to decisively exercise his integrity. He had special delivery made of the same, and requested that he have a personal reply.

The President's reply, which was immediately made, follows Powell's letter in the RECORD.

In his letter reply, the President, in a most apologetic manner, expresses regret that he had failed to do the things enumerated by POWELL by stating:

"I have your telegram and I want you to know that I appreciate your kind expressions of confidence that I will carry out every pledge that I have made with regard to segregation. I shall continue to devote my earnest efforts to advance both the spirit as well as the fact of equality.

"We have not taken and we will not take a single backward step. There must be no second-class citizens in this country."

The reply of POWELL to the President is also set forth and is most indicative in the light of what has followed.

Just who the President classifies as first- and second-class citizens I do not know, and just how he proposes that the change be made I do not know.

It would, no doubt, be quite interesting if he would state who he considers as first-class and who as second-class citizens. I assume he places himself in the first class. Therefore he should be able to describe the characteristics of the first class and the characteristics of the second, also, thereby enabling the people as a whole to understand just what he means, and the method to be followed to make the change.

It may be that he is counting on Chief Justice Warren as head chemist of his laboratory to work such a miracle.

The only method advanced so far is to abolish segregation in public schools, hotels, restaurants, bathing pools, buses and all means of transportation, and so on ad infinitum.

The whole scheme is political and destructive of the friendly relations that have existed between the whites and the Negroes, it matters not in what manner it is camouflaged.

There is so much doubletalking on the part of those who are in positions of leadership, that all of us who really and truly believe in our dual form of government should be shocked and alarmed.

The Chief Justice and officers and members of the American Bar Association are now in London to say "Hurrah for Magna Carta," but when in the United States they, by their actions and speech, ignore the principles set forth in the Magna Carta. Their alibi is that a decision of the Supreme Court, be it an unconstitutional edict, or what not, must be recognized and followed as the Supreme law of the land.

If that be true, then 9 lawyers who happen to have sufficient political pull to be appointed to the Supreme Court, can destroy this Government and subject the people to judicial tyranny.

Faithfully yours,

HERBERT S. PHILLIPS.

[From the Tampa Morning Tribune of May 26, 1957]

THE HISTORY OF INTERPOSITION

(By Herbert S. Phillips, attorney at law, Tampa, Fla.)

In view of the fact that the adoption of an interposition resolution by a majority vote of the members of the 1957 Florida Legislature has been characterized and denounced by the Governor of Florida to be a hoax, I feel that the people should be given the following historical facts showing the origin, purpose, and successful use of interposition which refute the denunciations of an angry Governor.

On December 21, 1798, the General Assembly of Virginia passed a resolution that was prepared by Madison and Jefferson to have declared as null and void the alien and sedition laws passed by the Fifth Congress, which they regarded and declared to be a "deliberate, palpable, and dangerous exercise of power not granted to Congress by the sovereign States."

Said resolution was as follows: "The General Assembly doth particularly protest against the palpable and alarming infractions of the Constitution in the two late cases of the Alien and Sedition Acts, passed by the last session of the Congress, which exercised a power nowhere delegated to the Federal Government."

In November 1799, the General Assembly of Kentucky passed a resolution declaring that the "several States, being sovereign and independent, have the unquestionable right to judge of the infraction, and that a nullification of those sovereignties of all unauthorized acts done under color of that instrument (the Constitution) is the rightful remedy."

The Sedition Act, which provided for the punishment of any person who published any matter intended to excite the people to resist, oppose, or defeat any law, provoked great resentment among the people throughout the country at that time, which resulted in the passage of said interposition resolutions by the Legislatures of Kentucky and Virginia.

As said Sedition Act, by its own provisions, was terminated on March 3, 1801, no final action was taken to make effective said resolutions, as all persons charged with violating said act were released upon its termination.

The Supreme Courts of Iowa, Alabama, Georgia, Florida, Texas, Louisiana, Mississippi, and other States, have recognized and followed the principle of interposition, when they refused to follow orders and rulings of the United States Supreme Court that nullified the 10th amendment of the Constitution of the United States, which declares in plain, simple language that: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people," and that also nullified section 1 of article 1 of the Constitution, which reads as follows: "All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and a House of Representatives." Nowhere can there be found in the Constitution any words vesting legislative powers in the Supreme Court.

A most outstanding use of interposition, then called protestation, for the protection of the people from tyranny in and by any form of government was the fight led by Lord Coke of England against King James I and his son and successor, Charles I, for the preservation of the common law, the writ of prohibition, the Petition of Right, the writ of habeas corpus, and the Magna Carta. Coke and other able, fearless, determined, and courageous leaders carried their fight for the preservation of the rights and liberties guaranteed to the people by the above-named law and writs to Parliament.

King James declared that he, as King, had the supreme right and power to try and decide any case brought before any court of his realm that he might see fit to try. The King's favorites and the clergy aided and supported him, but the leaders of the people won their fight, and the House of Commons and House of Lords interposed their power and right to stand between the people and the tyranny of the King. By so doing they preserved the great principles of the common law and of democracy which were handed down to our Founding Fathers; restated in our Declaration of Independence; made secure by the Revolutionary War; and became the foundation stones of our democratic-republican form of government.

The adoption by Parliament of the interposition-protestation resolution infuriated King James to such a degree that he prorogued Parliament instanter, ordered Coke to be placed in the common jail in solitary confinement, took the resolution from the records of Parliament, and destroyed it in a rage, lest it might serve as a precedent for similar action in the future. The feeling of resentment against King James became so strong that he feared for his life and released Coke from prison. But Coke kept up the fight and led a group of determined attorneys in demanding and securing from King Charles I the ratification of the Petition of Right which King James had withheld. As King Charles ratified the petition, he said: "Soit droit facit"—"Let right be done."

It is said by eminent writers that sa ratification confirmed for all time the ci liberties granted to the English people Magna Carta 300 years before then.

(See The Lion and the Throne, by Cat erine Drinker Bowen, referred to by the pre dent of the American Bar Association in t April 1957 issue of the Bar Journal, at p 291 and 331. See also the Life of Lord Co by Lord Campbell, the author of The Chi Justices of England, for a detailed and thri ing account of the fight led by Coke f liberty and independence, by the interpos tion-protestation procedure.)

The foregoing historical facts show th the people, by their leaders in the past, w successful in securing the great charters liberty above named, by arousing publ opinion to such an extent as to bring abo positive, aggressive action against tyran It is just such public opinion that tho who, today, oppose interposition and segr gation fear, because they know that a stron healthy, wideawake, fearless, and determin public opinion will eventually elect Senato and Congressmen who will take such acti as they may determine is best to take make it clear and definite that the operati of public schools is a right reserved to ea separate State without any supervision interference by any department or agency the Federal Government, and that article of the Constitution and amendment thereof should still be regarded as the vo of the people of the sovereign States.

In order that the people may be protect from judicial tyranny it may be wise a necessary that Congress pass an act provi ing that the Congress in joint session, sh have the power to hear and determine, an appeal that may be allowed by the pr visions of such act, from any decision of t United States Supreme Court, based on ps chology, speculative theories, or expedien instead of on law and the plain langua of the Constitution.

Our greatest concern in these perilo days should be the preservation of our du form of government and States rights as o strongest bulwarks against a communis dictatorship and an infiltrated communis Feedral-controlled educational system.

Hon. Walter F. George

SPEECH

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. KEOGH. Mr. Speaker, the pas ing of the Honorable Walter F. Geor removes from public life one of the mo widely respected national and intern tional figures of our time. After a thi of a century of service to State and N tion in the other body, Senator Geor at 79, was continuing in the role of d voted servant of the people as spec ambassador to the North Atlantic Trea Organization. A public office was tru a public trust to Walter George. In h painstaking search for the right, he co ported himself always with digni courtesy, and respect for honest diffe ences of opinion. Unreasoning partisa ship was abhorrent to him. As one the architects of the bipartisan forei policy of the United States, he spent h energies freely, despite advancing yea in behalf of the security of his co and peace in the world.

so long as citizens of the intellect and perception of this distinguished Georgian are willing to devote their lives to the public business, the Republic will be in competent and dedicated hands. May his sterling standards serve to inspire others to a continuing solicitude for the common weal.

Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial of tribute which appeared in the New York Times of Monday, August 5, 1957:

WALTER FRANKLIN GEORGE

A majestic decency, a civilized faith in a tenteel, but steel-hard, political conservatism of a kind that is now all but gone into memory; a devotion to a true internationalism that has done no little in these past 30 years to shape the world's affairs, all these qualities are lessened now with the death of Walter Franklin George.

His last mission was as a foreign policy adviser to President Eisenhower; and in this he served with a faithfulness and a small private sense of irony, both of which his friends knew always lived in him.

But his real mark upon our public affairs, and upon the pilgrim's progress toward unity and safety of the western world, was made as George of Georgia. George of Georgia was, of course, Senator George, the former chairman of the Senate Foreign Relations Committee, the former chairman of the Senate Finance Committee, the dean and patriarch of all the Senate.

His melancholy thunders from the floor left no man unmoved; he was the greatest Senate debater of many years. He was the greatest Senator, southern style, of this century, to say the very least.

Certain aspects of what is called economic democracy were not for him; he was safe and he was proud of it, and he closed his eyes in pain at the economic heresies of the last two Democratic Presidents. These he supported magnificently beyond the water's edge; from them he turned in aristocratic horror when they dealt with matters like labor and civil rights.

But, in the last and highest sense, he served nothing less noble than honorable strength and honorable peace, warring first upon Hitler and his confederates and last upon Stalin and those who have followed him in the darkness of the Kremlin.

Well done, George of Georgia—and farewell.

TVA Repayments Into United States Treasury

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. EVINS. Mr. Speaker, the following table shows TVA's repayments into the Treasury through fiscal year 1957 and the estimated total repayments through 1958. In addition, payments of bond redemptions and other payments include an additional $23,631,519. Total repayments through 1957—$240,131,519.

Repayments are far ahead of scheduled repayments.

The repayment table follows:

TENNESSEE VALLEY AUTHORITY

SCHEDULE C–1.—*Payments to United States Treasury from power income under provisions of the Government Corporations Appropriation Act, 1948*

Fiscal year	Minimum payments required under 1948 law		Actual and budgeted payments [1]	
	Year	Total period	Year	Total period
1948	$10,500,000	$10,500,000	$10,500,000	$10,500,000
1949	2,500,000	13,000,000	5,500,000	16,000,000
1950	2,500,000	15,500,000	5,500,000	21,500,000
1951	2,500,000	18,000,000	9,000,000	30,500,000
1952	2,500,000	20,500,000	12,000,000	42,500,000
1953	2,500,000	23,000,000	15,000,000	57,500,000
1954	2,500,000	25,500,000	20,000,000	77,500,000
1955	2,500,000	28,000,000	50,000,000	127,500,000
1956	2,500,000	30,500,000	59,000,000	186,500,000
1957	2,500,000	33,000,000	[2] 30,000,000	[2] 216,500,000
1958	54,059,810	87,059,810	[2] 10,000,000	[2] 226,500,000

[1] In addition to payments under the provisions of the Government Corporations Appropriation Act, 1948, bond redemptions of $8,572,500 and other payments of $15,059,019 were made prior to fiscal year 1948.
[2] Estimated.

Wheat for Feed or Seed

SPEECH
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8456) to amend the Agricultural Adjustment Act of 1938, as amended, to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed or food on the farm, and for other purposes.

Mr. BREEDING. Mr. Chairman, this legislation which affects my area of the country very much, is not what I had hoped for.

While I have never been against a farmer growing wheat for feed or seed, I do object to the growing of wheat in new areas, without restrictions, where it seriously jeopardizes the economic stability of the wheat-producing areas which are under acreage controls and marketing penalties.

This is the effect it has had in recent years on the section of the country which I represent. Not only have we had to cope with the rising costs of production, reduced acreage, allotments, lower supports, and extremes of weather, but we have had to suffer from the ever-increasing production of wheat from the noncommercial areas as well as increased numbers of 15-acre farms in the commercial area.

Wheat growers have increased in numbers because of the acreage restrictions on some of our basic crops such as corn, cotton, tobacco, and so forth. Without exception this new producing area of wheat can and does grow other crops better suited to their climatic conditions.

Wheat is the only agricultural crop that is grown universally in all our 48 States.

When corn acres are controlled what does the corn farmer do—he plants 15 acres of wheat. When cotton acres are cut back they plant wheat.

Some Southern States that have no wheat allotment at all will rank at near the top of the list in numbers of wheat farms in the United States today. Even farmers in the corn country who grow not over 15 acres of wheat can do so without any penalties. All the wheat grown in the noncommercial area can be grown without any acreage controls or penalties, yet both of these classes of farmers can sell their production in direct competition with the wheat producers in the commercial area.

However, my people in the commercial area, and many others who must depend on wheat as our major farm income, are restricted in acreage plantings and must pay a heavy penalty if we overseed.

It is well known that the Great Plains area is best suited for wheat production. It is the one crop that they grow best. It is the crop that has built our communities, sent our children to school, and paid our taxes.

It is the one crop that supported our Nation so abundantly in two world wars and has helped so materially since the war in feeding many of our allies all over the world.

June 6, 1957, I introduced H. R. 7952 to put every acre of wheat grown in the United States under the same controls and restrictions. I thought that this would only be fair. I was encouraged by many from the real wheat-producing area of our country. However, I ran into objections from the more diversified areas.

Today we are debating the bill, H. R. 8456, which, as I understand it, will permit anyone to grow up to 30 acres of wheat providing it is used for feed and seed on the farm.

I hope that this legislation will benefit everyone who wants to produce some feed and seed, but also give some relief to the farmer producing wheat under controls and for sale.

I cannot emphasize too strongly my beliefs with respect to this matter.

Something must be done and soon to protect this great wheat-producing area by eliminating the inequalities that now exist.

Post Office Improvements

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. HUDDLESTON. Mr. Speaker, in my estimation, the postal employees work very hard for very low pay. Whenever the opportunity has afforded itself, I have interceded in behalf of these loyal people who very rarely complain in spite of the poor treatment that they receive.

From time to time, postal employees have had to come to us for an increase in salary, and I was happy, a few days ago, to be able to vote for the bill to provide at least a part of the answer to the salary needs of these people.

Another problem they face is that of facilities. The Alabama branch of the National Postal Transport Association is located in Birmingham. Recently, the branch has been trying to secure improvement in the conditions of the Birmingham terminal. In the Alabama branch notes, printed in the Postal Transport Journal for July 1957, the notation appears that "President Newton reported on recent meeting with Mr. John Miller of the Department. Mr. Miller arriving in Birmingham armed with blueprints of the terminal with a view toward some necessary and long over-due alterations. Among other things promised was a new paint job; fluorescent lights over the pouch rack; more locker and swing rooms and, of all things, a flagpole. Exhaust fans we ask for and a flag we get. Now, to beat the heat, we'll hold retreat."

I hope that the rather modest improvements sought by these people will shortly be forthcoming. Certainly all of them are reasonable and there appears to be no sound reason for withholding reasonable things from reasonable men.

Foreign Aid—Billions for Secrecy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial which appeared in the Wall Street Journal. This question of Government secrecy has reached a ridiculous point and it is being used as an excuse and coverup so the American people will not know what their Government is doing with their tax dollars.

The editorial follows:

BILLIONS FOR SECRECY

If you take the trouble to leaf through the Government's bulky budget book, you can find out how much money each of the armed services gets, how much goes for aircraft procurement and a good many other things.

Not so with either the military or economic parts of the Government's foreign aid program. General figures are available to the public, but precious little else. For example, the taxpayer who foots the bill can't find out how much military aid France receives, nor can he discover how much economic assistance is earmarked for various countries.

The argument for secrecy on military aid is that publication of figures, say for each country, might jeopardize security. This assumes that military aid is indispensable to security—a debatable assumption since in fact one effect of the program is to discourage allies from making sufficient efforts to defend themselves unaided; as long as we continue doing it for them, there is scant hope they will ever do it for themselves.

But even if it were granted that military aid is useful in some cases, it does not follow that revealing information about it would harm national security. It's a safe bet the Russians are a good deal more interested in funds for the United States Air Force than they are in this year's military aid figure for France. What is beyond question is that the American people have no basis for evaluating military aid in the absence of the facts.

As for economic aid, the arguments for secrecy can be charitably described as childish. One is that a recipient country might be miffed if it learned a neighboring country is getting more from Uncle Sam. Another is that a recipient country might be resentful if Congress finally voted less than the administration originally proposed for it.

The obvious answer to that kind of alibi is that if these countries feel that way about economic aid they jolly well don't have to take any. It is an insult to the American people to offer such reasons for denying them information about military and economic assistance programs into which they have been forced to pour some $60 billion since World War II.

Indeed, it is fair to suppose that the real reason for secrecy is that publication of details would raise even more questions than are already being asked about foreign aid. Some hard-working lawmakers from time to time dredge up startling instances of waste and worse; how much more of that would there be if the full story were known?

An even more important question is buried under the secrecy policy. That is the question of the actual impact of all this aid, military and economic, on the economies of the nations getting it. It is easy to talk about production gains in Europe in the wake of the Marshall plan, but how much of France's inflation, for example, is traceable to American aid?

Regarding the so-called underdeveloped countries, the question is sharper still. Here the attempt seems to some people to be a defiance of known economic laws and history; it looks like forced-draft pressure to condense the industrialization process into a few years instead of generations. For all we are permitted to know, the consequences could be the reverse of helpful.

Except in certain limited areas, secrecy in Government is always dangerous, particularly since it feeds on itself. In the case of foreign aid, it is secrecy—and not knowledge—that may jeopardize the national interest.

The Late Honorable Walter F. George

SPEECH
OF
HON. J. L. PILCHER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. PILCHER. Mr. Speaker, I want to associate myself with, and approve of the tributes paid the late Senator Walter F. George by my colleagues. I have never known a man in my life, in any walk of life, that I thought had more integrity, courage, and ability than Walter F. George. With all of his greatness, he was one of the most humble, gracious, and kind men I have ever known. He loved people; he loved his State; he loved his Nation.

On any question, politics never entered his mind. His country came ahead of Democrats or Republicans. He shunned both society and publicity, and demagoguery just was not in his book.

Walter George was never too busy to answer his phone when one of his colleagues called, or to see them in his office and lend a helping hand with their problems.

The Nation has lost a great man, the family has lost a wonderful husband and father, and I have lost one of the truest friends I have ever had. To Miss Lucy, Heard, and members of the family, I offer my condolences and sympathy in their great loss.

Right-To-Work Law

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. SMITH of Kansas. Mr. Speaker, I am enclosing herewith an editorial from a smalltown country editor in Kansas, Mr. Ned Huycke. Mr. Huycke presents some facts that I believe are meritorious. They are particularly meritorious to those citizens who believe that a right-to-work law is one of the best means of approaching the evil that now exists in many of the large, boss-ridden unions—namely, to stop compulsory unionism.

Mr. Huycke most forcefully sets out the advantages in such a law. I commend his editorial.

[From the Ellsworth (Kans.) Reporter of August 1, 1957]

WHOSE BUSINESS?

Then Honorable Dave ("David") Beck, president of the Teamsters' Union, and his tender little son, have just been indicted charged with pocketing the proceeds of the sale of a few Cadillacs which were allegedly the property of his union.

Why all the fuss? What business is this of any outsider? Wasn't it union money? Maybe Mr. Beck's membership is so fond of this lovable old gentleman and that frolicking youth, his son, that they are welcome to whatever number of Cadillacs they think they need—paid for by union dues. Why should Government butt in?

The trouble here is that Mr. Beck's membership is not free. Under the kind of deal Mr. Beck prefers to sign with an employer if a driver becomes disgusted with Mr. Beck and stops paying union dues, instantly he loses his job.

Mr. Beck has further used the power of his union to force into union membership workers in other industries who do not want to pay union dues by shutting off all truck-delivered supplies to the business firm until its owner agrees to collect and deliver union dues from all the employees involved, whether or not they see any value in union membership.

Something like this seems to have happened in a recent Kansas City strike.

In the last election a right-to-work bill which would have prohibited involuntary union membership was defeated by the voters in Washington, Mr. Beck's home State, after a heated campaign. More recent testimony in the Washington hearing on labor racketeering hinted that half a million dollars from the dues of Mr. Beck's teamsters went into the election to defeat that law which would have allowed Mr. Beck's teamsters to resign from his union, if any so chose, and still hold their jobs.

So why all this commotion about a fistful of Cadillacs? Both the sum of money and

e principle involved are peanuts compared
the question of whether or not Mr. Beck
ent half a million of his members' dues
defeat a law which would have let them
ve his union.

Why should not Congress go into this
ashington election—and others like it—so
at people may know just what union money
doing in politics these days?

Labor can clean labor's house. But only
ee labor can do it. And no union boss
ould be allowed to spend his members' dues
forge these shackles tighter.

Secretary of State Dulles on Proposed Lead-Zinc Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. DAWSON of Utah. Mr. Speaker, last week the House Ways and Means Committee held hearings on the administration's proposal to impose a sliding scale of excise taxes on imported lead and zinc as a means of bolstering market prices of those metals to a break-even point where our domestic mining industry can survive the competition of cheap-labor foreign production.

An objection frequently voiced is that this proposal, if enacted, would be a retreat from the foreign trade policies which this Nation has pursued for many years, and perhaps would set a precedent for further retreats.

Reserving comment on whether such a retreat would be a good or bad step, I include under leave to extend my remarks a statement by Secretary of State John Foster Dulles that the lead-zinc recommendations do not represent any basic change in trade policy.

The following excerpt is from the State Department's record of Secretary Dulles' Tuesday press conference, as republished by today's New York Times:

Question. Sir, do you think that our position on liberal trade at the forthcoming Buenos Aires conference will at all be weakened by the Department's support of new lead and zinc restrictions? I understand that several Latin-American countries who are economically dependent on lead and zinc exports have already protested to the Department on the matter.

Answer. I think it's unfortunate that the situation in the lead and zinc industry here at home is such that it does seem necessary to take certain measures to protect it and keep it in existence as a healthy industry. I do not think that that means, in fact I'm sure that it does not mean, any basic change in the attitude of this administration toward trade, and our desire to have a liberal flow of trade to mutual advantage. There are always going to be special situations that come along and which as a practical matter have to be dealt with. And the fact that there are exceptions does not in any way vitiate the rule of seeking to have free and liberal trade.

Now, this situation about lead and zinc has been one that has been plaguing us for several years. It came up rather acutely about 4 years ago, I think in 1953, and at that time it was possible to handle the situation through a combination of voluntary restraints by some foreign countries on their exports of lead and zinc to the United States and stockpiling program. Well, the stockpiling program has come to an end. The price of most metals is rather weak at the present time and the situation is back, to be dealt with in some way. The program for dealing with it, as I understand is on a sliding scale basis, so that when prices recover, then the duties will go down. We can all hope that there will be a revival of strength in these metals so that in fact any new duties based only upon low prices will not have to be maintained.

Eighth in a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. MICHEL. Mr. Speaker, today I should like to insert the eighth editorial letter of the series wrtten by F. F. McNaughton, publisher of the Pekin Daily Times, Pekin, Ill.

The letter follows:

[From the Pekin (Ill.) Daily Times of July 30, 1957]

THE EDITOR'S LETTER

(By McNaughton)

I meant to tell you in yesterday's column about going to church in Russia, that the Russians are again treating Sunday as the day of rest and recreation. You know that for a while (perhaps to break up religion by making people forget when Sunday was), they changed the number of days in a week.

But now Sunday is Sunday.

It is a holiday.

But not for store clerks.

Because Russians work 6 days a week (I think it is 6 hours on Saturday; 8 the other days), Sunday becomes their 1 day off. So the stores all stay open on Sunday.

Then most close Monday.

The Russians are like Americans in many ways. For one thing, they want things big. Although nearly all Europe makes and drives tiny cars (like the old Austin), Russia makes no tiny car.

They do, however, make a car considerably smaller than American cars. It is about the size of—no, it is some bigger than Sweden's Volvo which is now being introduced into America. This popular Russian car is called the Moskvich and sells for about $1,500. Their "Cadillac" sells for around $4,000 and is a fine automobile.

Their cars run well.

I didn't see one in trouble.

And their clocks work.

When we were here before, they told us the car in which we were riding was a Stalin. My nephew (named Ford, and since then a car dealer) was along, and when they said the car we were in was a Stalin, he asked the interpreter to ask the chauffeur to stop the car.

He stopped the car.

Ford got out, lifted the hood, and said: "Stalin, your foot; it's a Buick." It was. They had bought tools from the United States of America and were making only Buicks and Fords then. But that is all past now, and they have their own cars now—and good ones.

Trouble is that they don't come near making enough to go around. Evidently "the Eleven Men" think there are many more important wants to be satisfied in Russia before the average man can be allowed to own an auto. New apartments plainly do not foresee ownership of autos as did that new apartment house I told you about in Sweden which has a huge garage under the playground.

Too Much Escape

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following article, by Mr. George Sokolsky, appearing in this morning's Washington Post, is perhaps a very good one for us, as Members of the House of Representatives, to read, ponder, and inwardly digest.

Toward the end of this most frustrating session, it is daily becoming more and more obvious that we are not facing the facts and that we are constantly looking for "escape."

We may look, but we will look in vain; we cannot escape from the truth, and we cannot, especially, escape from ourselves and our own consciences, so do not let us try.

TOO MUCH "ESCAPE"

(By George E. Sokolsky)

The vogue of the whodunits is caused by the same psychological rejections as the vogue for pornographic and gossip magazines. It is the same rejection that makes television so important and frightens people away from controversial personalities. It is a rejection of reality; an insistence upon escaping from the facts that face our lives. The same trend can be found in our current folk music. The reversion to barbarism is not accidental; it is part of the fear of quiet and solitude.

Today we require noise, unbelievable noise to satisfy our needs. For were there no need for such noise, there would be no such thing on the television which is very sensitive to public desires, more so than radio or the movies ever were. Television has become a noisy instrument because that is what the public wants and it wants noise to avoid introspection. It is another form of escape. It is another way of running away from the uncertainties of personal problems.

But the problems grow in number and in seriousness. The Government has to pay 4 percent for prime short-term bonds. There was a time when every four-corner storekeeper and every cracker-barrel philosopher would have understood what that meant and the storekeeper would have looked to his inventory and his accounts receivable. There was a time when such characters as William Jennings Bryan or, in our day, Father Coughlin, would have had much to say on such a subject. And when to it is added the recent discovery that our gold reserve at Fort Knox is down to $9 billion from the $28 billion with which we started in 1933, then somebody's goose would be fried by American public opinion.

But not today. We prefer to let our minds dwell upon a comparison between Marilyn Monroe and Jayne Mansfield, not too unusual dames. But if one's mind dwells on female measurements, it cannot dwell at the same time on the dissipation of our gold reserve and the fact that published official statistics are often strictly phony.

The way it is done is to mark the stuff, "earmarked," then it can be included in our reserves and make them look like a lot. But who owns the gold? Do we own it or is it earmarked for some other country because some other country owns it? And is it not true that the earmarked gold is owned by countries to which we still pay subsidies because they are broke? And is it not true that Soviet Russia owns as much gold as the United States does, and is it not a perilous situation to be in?

But why bring all that up? Do you have to bring up unpleasant stuff all the time? Be smart. Only talk about what people like to hear. Say that Nasser is a bum. Nasser has no friends in the United States. Why not pick on him? Do you always have to talk about Khrushchev? I counted, writes a reader, and you mentioned Russia 12 times in 10 articles. What did he want me to mention, Ghana, Tripolitania, my grandmother, or why Kim Novak eats with a fork?

Well, I have had my say and the question still remains whether it is better to read the wisdom of the ages or Ellery Queen—to listen to Bach or to Welk's orchestra or even to Spike Jones; to read history or read of a Representative calling the President of the United States a liar. I don't know, you can be an escapist and still have some manners.

The Old Order Changeth

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BEAMER. Mr. Speaker, it is most appropriate that tribute be paid to some of the farm leaders in the agricultural State of Indiana. This leadership has displayed not a selfish interest in the business of farming but it has worked for cooperation and understanding between all economic groups. Most important, it has stressed sound Americanism.

Under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the August 2, 1957, issue of the Farm News, the Wabash County, Ind., Farm Bureau newspaper.

The editorial follows:

THE OLD ORDER CHANGETH

A new pattern of farm leadership is slowly emerging in Indiana. It is definitely a form of leadership though it differs from the robust mastery to which we have grown accustomed, as exemplified best, perhaps, in the persons of M. J. Briggs and Hasil Schenck.

Briggs, still active as a consultant, retired in March as general manager of the Indiana Farm Bureau Cooperative Association. Schenck, in a surprise move, recently announced his retirement this coming December as president of the Indiana Farm Bureau, Inc.

Over at Purdue, Earl Butz takes over as director of agricultural activities, as Harry Reed retires. On the women's front, Mrs. Guy Gross succeeds the late Mrs. Paul Flinn as director of the women's department of the Indiana Farm Bureau. More changes are sure to come.

Why must the form of the new leadership differ? The pattern can be found in the agriculture it serves: fewer farms, larger farms; less hard labor, more paper work; shorter hours, more technology; less production research, more market research; not the building of organizations, but the strengthening of organizations.

Much remains to be done, but the foundation for a prosperous agriculture has been laid. The pioneers are moving on; the administrators carry on. Henceforth, new ventures will require more planning, more research—farmers have more to lose and less to gain from every new risk. No less bold than formerly, leadership must, by necessity, become more conservative in its approach.

Agriculture is becoming agri-business—a scientific pursuit of productivity and profits for the good of all concerned. Inevitably, a way of life is changing and the form of leadership changes also.

You of the new leadership will, we hope, pardon a touch of sadness at the thought that this must be so. If, in the future, you sometimes catch us wondering—"Now, what would Schenck, or Reed, or Briggs, have said"—remember that it is not you, but we, who are out of step with the times. Another generation, accustomed to your leadership, will not want to see you leave.

H. R. 8996, the Authorization Bill for the Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. PRICE. Mr. Speaker, in the past several days there has been considerable discussion over the proposed authorization bill for the Atomic Energy Commission. Some of the comment on the bill, as contained in the minority report and some editorials, has tended to indicate that the bill will be the subject of bitter partisan controversy. In view of the great importance of this legislation to our atomic energy effort, I would like to express the hope that debate on the measure tomorrow will be free from such bitterness and will be confined to an objective discussion of the bill on its own merits.

In this connection I would like to draw the attention of the Members to a speech delivered last June in Chicago at the dedication of the Dresden plant by my good friend and colleague, the gentleman from North Carolina, who is chairman of the Joint Committee on Atomic Energy, on which I have the honor to serve. I believe that this speech outlines in clear language the approach of the committee majority to the development of a vigorous and well-balanced nuclear power program. Under unanimous consent I therefore insert the text of the speech in the RECORD at this point.

The text of the speech follows:

REMARKS OF HON. CARL T. DURHAM, CHAIRMAN, JOINT COMMITTEE ON ATOMIC ENERGY, AT CEREMONIES TO COMMEMORATE THE START OF MAJOR CONSTRUCTION WORK ON THE DRESDEN NUCLEAR POWER STATION, JUNE 12, 1957

I appreciate the opportunity which you have given me personally as well as on behalf of the Joint Committee to say a few words at your ceremonies here today in commemorating the start of major construction on the Dresden Nuclear Power Station.

As I understand it, this plant will be the largest nuclear power station which has been scheduled in this country, or so far as I know, in the world.

The Joint Committee has been actively interested in your project from its inception and has been kept abreast of progress on your program through reports from Mr. Gale and Mr. LeClair at the committee's annual statutory hearings on the atomic energy industry. Our members, such as Mr. PRICE here, and Senator PASTORE, have also visited with you from time to time to be brought up to date on the status of your planning and design work. We are all very pleased that you are now entering the large-scale construction phase of the work through the General Electric Co., which is fabricating the reactor itself, and the Bechtel Corp., on the facility side.

Only a couple of weeks ago I had the pleasure of attending ceremonies marking the completion of the General Electric Vallecitos project near Pleasanton, Calif., where much of the experimental work for your Dresden reactor is being carried on. Earlier this year, several of my committee colleagues and I had the privilege of attending the ceremony in which the Argonne experimental boiling water reactor was placed into full power operation. This reactor, together with its borax predecessors designed and constructed by Dr. Zinn and his staff at Argonne National Laboratory, established the boiling water principle at the pilot plant stage which is being used for your Dresden reactor with some variations.

These ceremonies which are occurring during this year, 1957, fall into two general categories: Those, such as the Argonne EBWR or the North American sodium reactor experiment, which represent the completion and operation of Government-owned pilot plant reactors, and the Government-sponsored Shippingport project constructed by Westinghouse and Duquesne, under the AEC 5-year experimental reactor program, sponsored by the Joint Committee; and those, we hope, which will involve the beginning of construction of large-scale prototype reactors scheduled for completion from 1960 to 1962.

It is no secret that the joint committee would like to see more of these prototype power reactors undertaken in the next few years. As a matter of fact, we would have like to have seen several started last year. Unfortunately some differences of philosophy and conception got into the way of the practical realities of forging ahead in the development stage of our nuclear-power program.

I am happy to say that the Commonwealth Edison Co., through its chairman, Willis Gale, has consistently advocated that we get along with our atomic-power program rather than fight the windmills of particular philosophies. I am glad to see, also, that the General Electric Co., through Mr. Francis McCune, has also been cooperative in wanting to move ahead into this program, recognizing the role that Government must play in one form or another during this crucial stage of development.

I do not intend today to go into the various problems we have in reconciling our philosophies in order to get to the realities of the current situation. I will limit myself to expressing the hope that industry generally and the Government will take a more objective approach to the need for accelerating our atomic-energy program, conceding as do Commonwealth and General Electric, the good faith of those of us who are fully in favor of private development but who recognize that the Government must play a large role for the next 10 years.

In the next few weeks ahead in Congress, the ability to reconcile these differences of philosophy in the context of the need to move ahead in our program where economy

is the watchword, will be sorely needed. The example set by Commonwealth in moving ahead with the construction of this large scale project, even in the face of legislative uncertainties, is a fine example of industry's intention to achieve success in our atomic-power program.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. FORRESTER. Mr. Speaker, many courageous and loyal citizens have unmasked the so-called civil-rights legislation, exposing its iniquities and violations of our beliefs and concepts. For the first time, their efforts are bearing good fruit, and good people all over our country are beginning to realize the terrific dangers so adroitly and deliberately hidden therein.

It is a wonderful privilege one has to represent constitutional government and our American traditions, and I extend my sincerest thanks to everyone who has made the slightest contribution to the exposure of this civil-rights legislation.

I desire to particularly express my appreciation to Hon. David Lawrence, for the magnificent fight he has waged. With no ax to grind, but simply in accord with truth, justice, and the American way, he has done more than any other individual in this country to warn the people of the utterly absurd and un-American provisions of that legislation.

It was Mr. Lawrence who exposed the attempt of Mr. Brownell to designedly destroy the existing right of trial by jury in contempt cases, by substituting the name of the United States as the party plaintiff.

It was Mr. Lawrence who exposed the attempt of the Justice Department to designedly take from the 16 defendants in Clinton, Tenn., their existing right of trial by jury, by the expedient of having the United States named as a party plaintiff in the case instituted by individuals, in which those defendants were charged with contempt because of alleged violations of the injunction granted upon the petition of private individuals. Certainly, the good people of this country could not be expected to suspicion the Department of Justice, and to even imagine that the Department of Justice would deliberately attempt to destroy existing rights of American citizens, but Mr. Lawrence knew that the Justice Department had done so, and it was Mr. Lawrence who proved it to the American people. It was Mr. Lawrence who demonstrated that Mr. Brownell wanted government by injunction.

Mr. Lawrence says in an article appearing in the Evening Star, August 5, 1957, that the advocates for this iniquitous legislation have reached their high-water mark, and the present opportunity is the last chance for the advocates to obtain civil-rights legislation. I believe Mr. Lawrence is right.

I congratulate Mr. Lawrence for his magnificent service to his people and his country. I am certain that if he continues to inform the people, the people will, as they always have, rise up and demand that constitutional government and our American way of life be preserved.

Attack on a Big Item

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item, of Wednesday, July 17, 1957:

ATTACK ON A BIG PROBLEM

Seldom are the practical politicians and the political scientists agreed on the problems of American politics.

But there is one point on which they do agree. That is that campaign contributions have become the all-important key to getting candidates elected.

Campaign costs have gone so high now that it is virtually impossible to run for office without first finding sponsors with large hunks of cash to contribute.

Many politicians deplore this because it makes campaign fundraising a backbreaking job and it puts the big contributors in a position to dictate strategy to the professionals.

Serious students of government deplore it even more because it distorts the very principle of democracy.

This country's founders planned its Government carefully. Every elected official was to serve each of his constituents equally. Special privilege and power was offered to none.

But they did not foresee a time when campaigns would cost so much that candidates could not hope to get elected without becoming obligated to big financial backers.

This problem has been brought up time and again in Congress. Bill after bill has been introduced and piously debated. One of these authored by Representative BOGGS, of New Orleans, has been kicked around for 4 years without action.

The Boggs bill is really a mild measure. And so are the other such proposals at which Congress has boggleed. Nobody, including Representative BOGGS, has even suggested anything more drastic than putting generous ceilings on campaign funds and then requiring that the names of contributors and the amounts of their contributions be honestly recorded and reported to the public.

Puerto Rico, meanwhile, has taken a direct approach that really is drastic.

A new law, just signed by Gov. Luis Muñoz-Marín, sets up public funds for the use of all major political parties in Puerto Rico. Each party may draw up to $75,000 a year, and in an election year the amount is raised to $150,000 plus anything left over from the annual allowances for the previous 3 years.

These funds are to be used for such expenses as electioneering, office rent, salaries, transportation, etc.

In addition contributions from individuals and private groups are limited to a maximum of $400 in ordinary years and $600 in election years.

To qualify for public funds a party must be able to show that its candidate for governor in the previous election received at least 10 percent of the total votes cast.

This may not be the best way to meet the issue. There are many arguments against public financing of election campaigns. But at least it is an attempt—which is more than our Congress seems capable of making.

The Federal Inspection System

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the August 2, 1957, issue of the Produce News, a publication dedicated to the best interests of the fruit and vegetable industry.

Mr. Speaker, this article presents a comprehensive explanaton of the mechanics of the Federal inspection system. Everyone is familiar with the important part that Federal inspection plays in the marketing of fresh fruits and vegetables, proving a benefit to both the producer and consumer. And each of us is aware that inspection of commodities is more and more being recognized as an implement for helping to cure some of the marketing problems that confront the fruit and vegetable industry. In view of this, I am inserting this article in the RECORD, hoping that it will prove of interest and help to the Members of Congress:

HOW INSPECTION SYSTEM WORKS—EXTENT OF ITS INFLUENCE SPELLED OUT

(By E. E. Conklin)

WASHINGTON, August 1.—It may take more than one bad apple to spoil a carload, but it doesn't take many more to alert a fresh fruit and vegetable inspector to a low-grade packout.

Always interested in maintaining uniform quality, the Federal-State fruit and vegetable inspectors keep a watchful eye on the produce that passes through their hands. At shipping point and terminal market, they watch for the bad apples that may spoil the grade.

Their job is to offer an inspection service that will help the producer and shipper get the best possible returns for their products and guarantee to the distributor that the produce he receives meets its grade designation.

INTERPRET GRADES

In short, the fruit and vegetable inspection program makes for a more efficient buying and selling of fresh produce. The grades provide the yardstick for measuring quality; the inspectors, the interpretation of these grades.

Directed by the Fruit and Vegetable Division of Agricultural Marketing Service, the inspection service is available in all 48 States, Puerto Rico, and Hawaii. In 1956, inspection covered 1,386,663 carloads of fresh fruits and vegetables.

The inspection program itself is divided into two main categories—shipping point inspection and terminal market inspection.

Bulk of inspection is conducted at shipping point as the produce is being packed for shipment to market. At its destination, inspection may be performed to determine the present grade of the shipment either for the receiver's use in handling the lot or to settle questions on a quality which may arise between shipper and receiver.

HAS MANY MEN

Shipping point inspection is conducted jointly with the various States through cooperative agreements between the Federal Government and the State agency, usually the State department of agriculture. A carefully structured operation, it encompasses some 3,800 Federal-State inspectors.

Basically, the Federal Government is responsible for the technical phases of the service, such as training, licensing, supervision, and grade interpretation. State agencies handle the administrative phases—recruitment, salaries, and inspection fees.

Inspection of fresh fruits and vegetables is voluntary except in those areas where producers have adopted Federal or State marketing orders which establish minimum quality standards. In all such instances, Federal-State inspection is mandatory in order to assure that each shipment complies with the effective quality standard.

GO TO HIGH TOTAL

Fees are charged to the applicants. These cover the costs of inspection with State appropriations being made in some instances to cover a portion of these costs. Inspection fees paid by producers and shippers in 1956 amounted to more than $10 million.

The basic core of the Federal responsibility is handled by Federal field supervisors who are assigned to each State. These men conduct the day-to-day supervision of the shipping-point service in cooperation with the appropriate State officials who work closely with them. Currently, there are 388 inspectors under their jurisdiction who are designated as key men to supervise the activities of the 3,800 licensed journeymen inspectors.

These 3,800 men do the actual inspecting of the produce, many of them moving with the harvests as they are needed throughout the State or area. All State employees, they are trained, licensed, and supervised by Federal personnel.

KNOW EACH ONE

Inspectors are specially trained for each vegetable or fruit they inspect. Often an inspector deals with only one product. Sometimes, though, where large shipments of many kinds of produce are handled, an inspector moves from product to product. For each he is carefully trained, then licensed to inspect only those for which he has demonstrated special fitness.

At the packinghouse, the fresh-fruit and vegetable inspector works closely with the shipper. If a packout looks as though it will fall below the desired grade, the inspector warns the foreman. The line is stopped immediately; sorters in the plant are cautioned to be more discriminating; and more samples are quickly taken. If necessary, some of the produce already packed is removed, resorted, and repacked.

UP TO SHIPPER

It's not an order that the inspector issues—simply notice that the lot is not meeting the requirements of the desired grade. It's up to the shipper whether he takes action or not. But slipshod grading practices can mean a U. S. No. 2 grade rather than a U. S. No. 1 designation. It's usually just good business to see that the packout meets the best possible grade.

Along with inspection of produce for shipment to the fresh market, Federal-State inspectors inspect raw products for processing at many canneries and frozen food plants. This phase of the inspection service has grown rapidly the last few years. In 1956, it amounted to 462,687 carloads.

Here the fresh fruit and vegetable inspector operates outside—rather than inside—the plant. USDA processed food inspectors check the pack as it is canned or frozen; fresh fruit and vegetable inspectors located outside the plant frequently determine the grade of the produce as it is delivered to the plant.

GETS THE PRICE

In this way, there is no need to dicker about the merits of a particular load. If it meets certain standards specified in the contract between producer and processor, it deserves a certain price. The processor knows it and so does the producer.

Besides the regular commercial and processing plant inspection services, shipping point inspectors also check farmers' stock peanuts and conduct continuous inspection under consumer grades. In all, shipping point inspection during fiscal 1956 covered 1,293,391 carloads of fresh produce.

The remaining 93,000 carloads which were inspected last year came under the second type of inspection service—at terminal markets. This program is handled by Federal inspectors in 38 of the larger cities throughout the country and by Federal collaborators in about 40 smaller cities where the State wishes to provide such service to producers and market dealers.

OVER MANY ITEMS

Like their counterparts at the shipping point, these inspectors are also carefully trained. But instead of confining their inspection to one or a few fruits and vegetables, market inspectors must be qualified to check many different commodities.

Market inspectors may be called in to see if the produce has changed in condition during transit. Their reports may be used in making final settlement with shippers and for the purpose of aiding in fixing responsibility for any deterioration during transit.

In addition, receiving-market inspectors check supplies for many Government and private agencies, such as the Navy, Quartermaster Market Center, Marine Corps, Coast Guard, steamship lines, and various city and county institutions. During 1956, inspection for these agencies totaled 46,636 carlot equivalents—about half the total amount of the inspections made at terminal markets.

NEARLY A MILLION

Charges for all inspection services at terminal markets are borne by the applicant for whom the inspection is made. Receivers have contracted to underwrite the cost of the service in several markets where the volume is insufficient to meet the costs at the established fees per carload. Total collections in Federal markets during 1956 amounted to $854,000.

Works by Finnish Composer, Jean Sibelius

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "A Treasure Discovered," published in the New York Times of May 24, 1957. The editorial comments on the recent announcement of the discovery of previously unlisted works by the great Finnish composer, Jean Sibelius. While the editorial is several weeks old, I feel that it is sufficiently important to warrant printing in the RECORD at this time.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A TREASURE DISCOVERED

One of the happiest episodes in the whole history of the Fulbright scholarships has just been reported from Finland. Dr. Harold E. Johnson, of Butler University in Indianapolis, in Finland on a Fulbright grant, has been able to announce the discovery of 20 previously unlisted works by the greatest of Finnish composers, Jean Sibelius. Some of them are of considerable scope and stature. Others will help to fill gaps in the hitherto known Sibelius literature.

This is one of the world's best types of treasure hunt. What has been found enriches the cultural life of the whole world, not only because it adds still other compositions to the long list of the Sibelius masterpieces but also because it will shed more light on some phases of his work that have been obscure. Naturally, we want to know as much as we can about Sibelius and all his work. He has long since been recognized as one of the real giants of our time. But he has been so modest that often we have seemed to have had to learn about him almost against his will.

The exchange of students and scholars is being more and more widely recognized both as a contribution to better international understanding and to scholarship itself. The Fulbright idea was a good one from the start. If ever it needed vindication it has had, now, an excellent example of what can be accomplished through such projects.

Reduction in Oil Imports

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a very timely editorial appearing in the July 31 issue of the New York Times entitled "Protecting Our Oil."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROTECTING OUR OIL

Petroleum is one of the very basic raw materials of our modern industrial society, and few considerations can be more important than the need to assure an adequate supply for the indefinite future. It is in this framework of the national interest that the President's decision, obviously made under pressure from domestic oil producers, to call for a voluntary reduction in oil imports must be judged. In this framework serious doubt must be expressed about the wisdom of this decision.

If the oil companies accede to the President's request, the tendency will be to reduce the supply of oil coming onto the domestic market, which in turn, will tend to inflate prices for gasoline and other oil products. A Government move tending to raise prices for such widely used products is hard to understand in the light of current concern over inflationary trends and in the light of

other severe Government moves aimed at hindering price rises on other products.

The President's action is an obvious attempt at Government interference with the free play of the market forces of supply and demand. It contradicts the often-expressed policy of seeking the freest possible international exchange of goods and services. We know from past experience how much resentment has been aroused abroad by other similar protectionist measures aimed at artificially aiding one or another group of American producers.

But perhaps most fundamental is the contradiction between this move and the ever-darkening picture of our oil-reserve situation. At the end of last year our proved crude-oil reserves were equivalent to only 11.8 years' supply at the 1956 rate of production. It is becoming increasingly difficult and expensive to find new oil supplies within our territory, and it has been estimated that it now requires 6 to 10 times the effort and cost to find a new barrel of oil here as compared with less than two decades ago.

From the conservation point of view, therefore, the case would seem irrefutable that we should encourage the use of imported oil while conserving our known domestic oil supplies against the possibility of future emergencies. Yet the President proposes, in effect, that we speed up the use of our own oil. The argument is given that this is needed for national defense, since otherwise further oil exploration by private interests here will be discouraged.

But in any case it is clear that our oil resources are finite and that we are using them up at a rate which must give rise to concern for all interested in the future welfare of this Nation. There are many ways to encourage exploration for oil, whether by private or other interests. But every barrel of our oil used up is an irreplaceable resource gone forever, never again to be available for our future needs.

Natural Gas Legislation

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. W. J. Bassett, executive secretary of the Los Angeles County Central Labor Council, which is typical of the many letters that come to my office opposing the natural gas bill. I believe that Mr. Bassett's letter accurately reflects the views of organized labor, and is therefore of particular interest:

LOS ANGELES COUNTY CENTRAL LABOR COUNCIL,
Los Angeles, Calif., July 31, 1957.

Hon. JAMES ROOSEVELT,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN ROOSEVELT: I have been instructed to urge you to vote against the Harris bill H. R. 8525. In the opinion of this council, the adoption of this bill would bring about exorbitant increases in the cost of natural gas and would lay the groundwork for price increases for oil and electric customers.

It is our opinion that this bill would benefit a small number of large companies who at present are making exorbitant profits and at the same time would add to the inflationary spiral the general public is now facing.

We shall sincerely appreciate it if you will vote against this legislation and use your influence in enlisting opposition to the bill by other Congressmen.

Respectfully,
W. J. BASSETT,
Secretary.

Ambassador Maxwell Gluck

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 7, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Hans Morgenthau, of the department of political science, University of Chicago, and published in the Washington Post and Times Herald of August 6, 1957, relating to the issues in the Gluck case.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ISSUES IN THE GLUCK CASE

You have performed a public service in giving in your issue of July 28 prominent place to the interchange between Senator FULBRIGHT and Mr. Gluck on the occasion of the latter's confirmation as United States Ambassador to Ceylon. This episode makes sad and disquieting reading. It puts into sharp focus three issues vital to the United States.

The first issue is the sale of public office; for this is what the appointment of campaign contributors, regardless of qualifications, to positions of responsibility actually amounts to. Within limits and insofar as it affects positions of secondary importance, such a system may be tolerated as part of the price which we must pay for democracy.

When as a general system of government it is applied to the most vital concerns of the country it becomes indeed intolerable. For the system is bound to operate in an utterly haphazard fashion, since the considerations which determine the appointment have no bearing upon the qualifications necessary for the successful discharge of the official duties.

The episode also raises in concrete form the issue of the consequences of the system for the quality of our representation abroad. The interrogation by Senator FULBRIGHT makes it perfectly clear that Mr. Gluck not only is completely ignorant of contemporary foreign affairs but also knows as much about what foreign policy is all about as I know about the operation of a chain of stores, which is nothing.

While I am confident that he will learn how to pronounce the name of the Prime Minister of India, I doubt that he will ever know what an ambassador is supposed to do.

The most serious issue of all, however, is the complete indifference of the Senate, with the exception of Senator FULBRIGHT, not only to the nefarious results of the system in general, but also to the demerits of this particular appointment. Of the 15 members of the Foreign Relations Committee, only 4 were present when Mr. Gluck was interrogated, and only one, Senator FULBRIGHT, voted against confirmation.

The plenum of the Senate did not find it worthwhile even to debate the appointment and confirmed it as a matter of course. If the appointment of a postmaster is disposed of in such cavalier fashion, one can shrug it off in view of the limited demands of the office and the limited consequences of failure. Yet an Ambassador of the United States is a general who commands a sector of the ramparts of the free world, and his ability to discharge his duties is one of the factors upon which the survival of the United States and of western civilization depends.

Mr. Gluck, knowing nothing about Asia, about Ceylon, about what an Ambassador has to do, about the very nature of foreign policy, is incapable of performing these functions. While he might well have done a great deal of good in a position for which his experience qualifies him, as Ambassador to Ceylon, with the best of intentions and in complete innocence, he is bound to do a great deal of harm.

This is an injustice to the man, to the country, and to Ceylon; for Ceylon, which has sent one of its most brilliant sons to Washington, deserves better than that and must resent the implicit slight.

When we must try to repair the consequences of such folly by appropriating millions for propaganda and foreign aid, the Senate is very much interested. Would it not be wiser and cheaper for the Senate to interest itself in the quality of our Ambassadors, infinitely more important than either propaganda or foreign aid?

In this matter the majority party has a special responsibility to bear, not only because it is the majority party but also because it is represented in the Foreign Relations Committee by a galaxy of extraordinarily able, knowledgeable, and conscientious men.

These men cannot plead ignorance or lack of judgment. What can they plead?

HANS MORGENTHAU,
Department of Political Science,
University of Chicago.

Knoxville Chamber of Commerce Resolution Opposes National Chamber of Commerce Policy Regarding TVA—Urges Passage of Sound Financing Plan for Continued Development

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. EVINS. Mr. Speaker, numerous local chambers of commerce continue to pass resolutions opposing the position of certain policies of members of the National Chamber of Commerce with respect to the Tennessee Valley Authority.

In this connection, I have asked unanimous consent that a resolution adopted by the Knoxville Chamber of Commerce on July 22, last, and signed by Mr. Leonard Rogers, president of this organization, be reproduced in the RECORD.

The resolution follows:

Whereas the Knoxville Chamber of Commerce is aware of statements made by Mr. Louis V. Sutton, of the Carolina Power & Light Co., in the name of the Chamber of Commerce of the United States, favoring the selling of all Tennessee Valley Authority

properties utilized in the production of electrical power to private industries; and

Whereas the Knoxville Chamber of Commerce does not subscribe to such a policy; and

Whereas the Knoxville Chamber of Commerce feels that the development of the entire Tennessee Valley area—through a course of events which the people of the valley area had little influence in shaping but which now is recorded in the political and economic history of this area—has been closely related to the development of the Tennessee Valley Authority; and

Whereas the future development of this area is closely related to the continued development of the Tennessee Valley Authority on a sound basis: Now, therefore, be it

Unanimously resolved by the board of directors of the Knoxville Chamber of Commerce, That the request to sell TVA made by Mr. Sutton in the name of the Chamber of Commerce of the United States is officially denied by this organization, and we do further unanimously urge the members of the Tennessee delegation of the United States Congress to exert every effort to secure a sound financing plan for TVA, for the continued development of the valley area.

Adopted and approved this the 22d day of July 1957.

LEONARD ROGERS,
President.

Foreign Aid Facts Are Carefully Kept From Taxpayers' Eyes

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I include an article by Mr. John R. Gibson which appeared in the Wall Street Journal on August 6 on the subject of foreign aid spending. He points out that the real facts are kept from the American people and in effect, we are giving secret aid to other countries, a policy which should be condemned.

The article follows:

STACKS OF FACTS ABOUT FOREIGN SPENDING ARE CAREFULLY KEPT FROM TAXPAYER'S EYE

(By John R. Gibson)

WASHINGTON.—Whatever your opinion of United States foreign aid, there is one undeniable fact about the program: The taxpayer who puts up the cash can't find out just exactly how his money is to be spent.

Some foreign aid information, mostly of a general sort, is available to the public, it's true. But vast fields of facts and figures are shrouded by military and diplomatic secrecy. Only domestic military and atomic energy measures are so tightly screened from public view, and neither of those ordinarily stirs up as much controversy as foreign aid appropriations.

This aspect of foreign aid has prompted cries of "Government by secrecy" in the Senate—a charge that naturally burns sensitive administration ears. The International Cooperation Administration, which runs most of the aid program, replies that it bares all available plans and estimates to the appropriate congressional committees. So it does, but a liberal use of the censor's shears keeps many of the facts from being available to the public.

Aware of secrecy complaints from their colleagues, members of the Senate Foreign Relations Committee decided this year to make available "complete, detailed figures * * * for confidential examination by any Senator." That still isn't much help to the average taxpayer, unless he gets himself elected to the Senate.

To the bureaucratic eye the amount of information revealed to the public doubtless looks large. Certainly there is no mystery about the broad outlines of the current foreign aid bill.

MONEY AGAINST MALARIA

President Eisenhower asked for a total of $3.9 billion this fiscal year. Of that, $1.9 billion would go for straight military aid, $500 million for a start on an economic aid loan fund and $900 million for defense support, which covers roads and other economic projects that are regarded as directly helping a country's defenses.

The rest of the cash would go as handouts for such things as unforeseen international emergencies, malaria eradication, atomic research reactors and technical cooperation. That last item is a $169 million one which would continue the old Truman point 4 program designed to educate and improve the health of our less advanced foreign friends.

Congress, to be sure, won't give the President all this. After Congress acts on the present authorization measure it will still have to appropiate the actual money in a separate bill. The upshot is expected to be closer to $3 billion than to the $3.9 billion requested.

The inquiring taxpayer can get somewhat more specific about the distribution of the largess—but always and only up to a point. He can find out that Yugoslavia is ticketed for $2.5 million of technical aid, $15 million of economic grants and some military assistance. Aside from learning that most of the $15 million will go for coking coal, however, the inquirer finds the details of the economic and military grants cloaked in secrecy.

The Pentagon confides that France will get more military aid in the current fiscal year than in the last one. But it's not telling what the figures are in either year.

Defense Secretary Wilson's aides will also disclose that from January through December 1956, they delivered our allies nearly $1.1 billion worth of planes, $118 million of tanks and combat vehicles, $110 million of ships and $189 million of electronic and communications equipment, among other aid. But they won't say how much of what went to which allied.

For this year, they will reveal how much military aid they want to give various regions—$340 million to Europe, $390 million to the Near East, South Asia, and Africa, $690 million to the Far East, $25 million to Latin America, and lots more millions on a nonregional basis. But the Pentagon won't say how much goes to individual countries.

PLANS FOR THE FUTURE

You can find out that Israel, Afghanistan, Nepal, Tunisia, Bolivia, Guatemala, and Haiti are among those scheduled to get economic grants. But details are secret. You can discover that the aid dispensers are already scanning a batch of construction projects for which they may lend dollars under their planned soft-loan program—but it may be entirely different projects that would actually get the green light.

In short, the taxpayer can pry out totals, round figures, generalizations, and some samples of what's being planned. But there is little in the way of precise information on what's going to be built in what country and how we are going to spend the secret amount of dollars slated for the Republic of X.

All this not only denies facts to the American people. Ironically for the Government, the secrecy about details denies officials an opportunity to make a chapter-and-verse defense of the things they want to spend the dollars on. Why, then, do they persist in hiding information?

The outgoing head of ICA, John Hollister, recently gave one explanation to the Senate Foreign Relations Committee. Concerning military information he said: "For the same reasons that we are not willing to reveal the planned disposition around the world of our own forces and of arms and equipment to be provided them, we believe it is in the national interest not to show in detail the disposition of our contributions to the military forces of our friends and allies." In addition, the ICA argues that official release of military aid figures would be grist for the Russian propaganda mills.

The Administration explains secrecy about economic aid partly as an attempt to keep peace in the international family. When one country hears that a neighboring country gets more from Uncle Sam, they say, there's a great squabble. It becomes a "keeping up with the Joneses" situation. The aid men maintain, in effect, that it's best to keep the Smiths from knowing what's going on at the Joneses, at least as far as Uncle Sam's plans are concerned.

AVOIDING RESENTMENT

They also contend that revelation of aid plans would tie the hands of United States negotiators. "In virtually every country program and project, it is our policy to obtain contributions in cash, goods, or services from the host government," the ICA asserts. "Knowledge of the level of aid contemplated by the United States Government would give the host country negotiators a considerable advantage."

Besides, the Administration argues, "this Government wishes to avoid the possibility of resentment occurring in the event the final programs approved (by Congress) are less than those initially proposed."

How much appeal these explanations have is likely to depend on the individual's attitude toward foreign aid. But whatever their merits, the explanations do not alter the fact that the taxpayer is putting up a tidy packet—some $60 billion since World War II—while being kept in the dark about its use.

H. R. 8002

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. COLLIER. Mr. Speaker, in recent weeks, H. R. 8002, designed to implement recommendations of the Hoover Commission, has been the subject of considerable discussion among Members of Congress as well as in editorial commentaries in newspapers all over the country.

In taking a stand in opposition to that of the distinguished chairman of the Appropriations Committee, I submit that there is also strong support of this legislation among authorities on our national economy and fiscal system.

I am gravely disturbed to find this measure now the target of indifference and controversy just as it has reached the threshold of becoming law. There

can be no question that this bill will taper Government spending through the elimination of waste and inefficient operation. Aside from my own deep conviction in the necessity of this legislation, particularly in the face of the tremendous national debt, I have taken particular note of the fact that leading newspapers in every section of the country support this proposal. In all my reading I have found but one which agrees with the chairman of the Appropriations Committee in his opposition to H. R. 8002.

It is my hope that the Congress will have an opportunity to vote on this bill before we adjourn the first session of the 85th Congress. Sound efforts to achieve Government economy do not necessarily lie in percentage figures on minor bills which involve comparatively small expenditures but principally in the efforts made by Congress to economize through adoption of laws which will clamp down upon waste and excessive spending wherein the dollar value offers nothing to the general well-being of the Nation. Support of any measures which limit Government spending through efficiency in operation are needed more today than ever before in our history.

I take this opportunity to cite for the record typical appraisals of H. R. 8002 by newspapers from the North, South, East, and West. I believe these comments truly reflect the sentiment of the American people today in their hope for both tax relief and a reduction of our national debt.

New York World-Telegram and Sun:

We especially commend H. R. 8002 to Members of the House who may be deluded into believing this bill isn't a good way of doing business.

Washington (D. C.) Daily News:

This bill wouldn't take from Congress a control it no longer enjoys—it would restore it.

Washington (D. C.) Evening Star:

In the light of wide agreement that Federal economy is both desirable and essential, particularly in this period of inflationary pressures, the House leadership should give high priority to completing action on this legislation.

The Wall Street Journal:

The most important point in favor of the bill is that the present budgetary procedures are a wasteful mess. The measure may not be ideal—what is in this world?—but it is a useful step.

New York Daily News:

It will be a shame if one of the really precious fruits of the Hoover Commission is permitted to rot unharvested in this session.

The New York Times:

If Congress is really serious about controlling expenditures and is willing to take the responsibility that goes with this power it will pass this bill which has the endorsement of the President, leading Members of Congress, and thoughtful private citizens.

Manchester (N. H.) Union-Leader:

It's about time the Federal Government's financial structure was placed on a sound accounting basis.

Miami (Fla.) Sunday News:

This reform is so simple, so needful, so important; why should there be any opposition to it?

San Francisco Examiner:

We would recommend to taxpayers that it is very much in their interest and in the interest of sound government economy to let their representatives know they want this bill passed.

Los Angeles Examiner:

In effect, the idea is to have the annual budget actually represent expenditures. This would end the wasteful system whereby Congress never really knows who's spending what money in what year.

Cincinnati Enquirer:

It is difficult to see how any Member can justify a refusal to support this conscientious effort to reduce the huge cost of government.

Mr. Speaker, as you can see, these editorial comments represent all sections of the country, the New England States, the South, the Midwest, and the Far West. From all parts of the country have come demands for action on this important piece of legislation. The people are being called to rally behind their representatives fighting to regain control over the Federal purse strings. It is estimated H. R. 8002 would save us up to $3 billion annually. And should one question this estimate, let me say that if this bill does no more than place the responsibility once again on the shoulders of Congress to account for every penny spent, it would certainly be worth supporting.

Appointment of Ambassadors

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. SPARKMAN. Mr. President, in today's issue of the New York Times, Mr. James Reston has written a very objective article dealing with the practice of appointing Ambassadors, and in that same connection, Mr. President, in today's issue of the New York Times there is a news article entitled "Nineteen Envoys Gave $218,740 to GOP."

Mr. President, I ask unanimous consent that both these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE ENVOY AND HIS GIFTS—A VIEW THAT ADMINISTRATION'S PRACTICE DOESN'T FOLLOW ITS PRINCIPLES OF SELECTION

(By James Reston)

WASHINGTON, August 5.—Secretary of State Dulles rushed to the defense of Maxwell H. Gluck, the new United States Ambassador to Ceylon, today, but the controversy over the administration's ambassadorial appointments continues.

The reason for this is that the question has been allowed to get away from the principle of executive appointment laid down by General Eisenhower himself in the 1952 campaign.

In that campaign, one of General Eisenhower's most effective arguments was that he stood for merit in Government jobs, regardless of partisan considerations.

It is a new world, he asserted, in which old habits of political reward are no longer justified. He seemed then, indeed, to stand above party, and this appealed wherever he went to the independent "plague on both your houses" attitude of the electorate.

"We will call to the high offices of the Government," he said all over the country, "the best men and women, the ablest and most reliable in the land."

This was his principle, and the general feeling here in a period of lively diplomatic activity is that it is the correct principle to apply in the Gluck case.

HAVE THEY OBSERVED PRINCIPLE?

The issue is not whether the Eisenhower administration is being more political in its ambassadorial appointments than the Democrats, or whether these jobs should be given to the top-career men in the Foreign Service, but whether the appointments have met the President's principle of appointing the best man available, regardless of party, wealth, or foreign service record.

Mr. Dulles made the points today that Mr. Gluck was a man of integrity, that a man's campaign contributions were "by no means a determining or important factor in our appointments," and that some Democrats had been appointed to important posts.

Nobody has questioned Mr. Gluck's integrity. As a matter of fact, in this whole controversy he has come nearer to the truth, the whole truth, and nothing but the truth, even when the truth hurts, than anybody else. He admitted he didn't know the name of the Prime Minister of Ceylon, or the name of the United States Ambassador to India, or how to pronounce "Nehru." Nobody has been that frank in Washington since Harry S. Truman wrote to Paul Hume, the music critic of the Washington Post.

DON'T SPEAK THE LANGUAGE

The question remains, however, whether the appointments, including the Gluck appointment, have met the President's own test. Among the factors in this are the following:

In the non-English-speaking North Atlantic Treaty Organization countries, the Eisenhower appointees do not speak the language of the country in France, Germany, Belgium, the Netherlands, Norway, and Turkey.

In the whole of the Arab-speaking world, where the prestige and interests of the United States are now deeply involved, only three United States Ambassadors speak Arabic. They are Raymond Hare in Egypt, George Wadsworth in Saudi Arabia, and James S. Moose in Syria—all Foreign Service officers.

Llewellyn E. Thompson, Jr., the new Ambassador in the Soviet Union, is the only United States head of mission appointed by the President to a Communist country who speaks the language of the country to which he was assigned.

In Asia, the United States Ambassadors do not speak the language of Japan, Nationalist China, Korea, Burma, Thailand, Vietnam, Indonesia, or the Philippines.

This does not mean that these were all bad appointments. Many of them were excellent, regardless of the language difficulty, but it is an indication that the principle of the best man available has not always been followed.

PROBLEM OF ALLOWANCE

The President, for example, has said publicly in response to questions that the Congress should make available representation allowances so that he does not have to choose Ambassadors for expensive posts from the limited ranks of those who have sufficient money to meet the social obligations of posts in London, Paris, and elsewhere.

This was not followed, however, by any White House action to carry this principle into effect. In short, as most observers here see it, the administration has pronounced correct principles on the problems of Ambassadorial appointments but has not followed them.

What has happened here, most well-informed men believe is merely that the administration has carried on the pork-barrel system as before, with three exceptions:

1. It has given more posts to Foreign Service officers than to political appointees—53 to 23.

2. It has introduced a new system of changing almost all political appointees at the end of its first term and appointing new ones.

3. And finally, it has differed from the tradition of the past by denying that campaign contributions are an important factor in choosing Ambassadors.

If it had not denied this last practice, the Gluck appointment would have been merely an amusing 1-day story about an honest man getting caught in an ancient political game. But because the administration has pronounced such noble principles, and then departed from them while proclaiming its innocence, the argument is prolonged to nobody's advantage.

NINETEEN ENVOYS GAVE $218,740 TO GOP—CAMPAIGN CONTRIBUTIONS NOT AN IMPORTANT FACTOR IN APPOINTMENTS, DULLES HOLDS

(By E. W. Kenworthy)

WASHINGTON, August 6.—Campaign contributions may not be an important factor in ambassadorial appointments, as Secretary Dulles insisted today, but contributions of ambassadors and ambassadors to be are an important factor in party finances.

According to data compiled by the Senate Subcommittee on Privileges and Elections, 19 men who had been or were to be appointed as ambassadors by President Eisenhower donated a total of $218,740 to the 1956 Republican campaign.

Of the 13 noncareer men named as envoys since last January 1, 6 contributed $91,800. They are:

John Hay Whitney, Ambassador to Britain, $37,500.

Maxwell H. Gluck, Ambassador to Ceylon, $21,500.

John C. Folger, Ambassador to Belgium, $11,500.

Joseph S. Farland, Ambassador to the Dominican Republic, $9,000.

Amory Houghton, Ambassador to France, $8,500.

Earl E. T. Smith, Ambassador to Cuba, $3,800.

Seven men who were appointed in the President's first term and still hold ambassadorships contributed a total of $64,400. They are:

Jefferson Patterson, Uruguay, $21,000.

L. Corrin Strong, Norway, $20,500.

James D. Zellerbach, Italy, $8,500.

Robert H. Thayer, Rumania, $6,000.

Robert D. Coe, Denmark, $4,940.

Whitney Willauer, Honduras, $2,500.

Wiley D. Buchanan, Luxembourg, $1,000.

Six former ambassadors gave a total of $62,500. They are:

C. Douglas Dillon, formerly in France and now Deputy Under Secretary for Economic Affairs, $27,500.

Clare Booth Luce, formerly in Italy, who with her husband, Henry Luce, magazine publisher, gave $25,000.

Arthur Gardner, Cuba, $5,500.

Winthrop Aldrich, Britain, $2,000.

Fred M. Alger, Belgium, $1,500.

Horace D. Hildreth, Pakistan, $1,000.

Mr. Dulles said, "We have appointed more than one ambassador who has made a substantial contribution to the Democratic campaign fund during the last year."

When asked to name them, the Secretary said, "I think I know who they are but I prefer not to name them here."

The records of the Senate subcommittee show only one present envoy who contributed more than $500 to the Democratic campaign. He is David K. Bruce, Ambassador to Germany. He gave $1,000.

Ambassadors Without Portfolio From Austin College

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. YARBOROUGH. Mr. President, Texas is sending 40 good-will ambassadors across the seas to represent America on a tour of Europe.

From Austin College, the third oldest college in Texas, a 40-voice choir will go abroad. Dr. Robert Wayne Bedford, the choir director, is to be commended on building a choir worth an international hearing.

Austin College, although it has only about 500 students, is noted for the high quality of scholastic schooling and training. Many of the leaders in business, government, and the professions of Texas have come from that great school.

Austin College was founded in 1849 in Huntsville. But it was later moved to Sherman, where it stands today.

The Sherman Democrat, published by a great American, Frank Mayborn, and a fine editor, Albert Nibling, pays a fine tribute to this choir, which is representing America as ambassadors without portfolio.

The Sherman Democrat, its own history going back over three-quarters of a century to 1879, is one of the State's leading journals of news and opinion.

I ask unanimous consent of the Senate to insert in the Appendix of the RECORD this fine tribute from the Sherman Democrat to the Austin College Choir.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sherman (Tex.) Democrat of August 4, 1957]

GOOD VOICE AND HAPPY LANDINGS

They are American ambassadors without portfolio.

They speak the universal language of music, and have the universal appeal of youth.

The Austin College choir of 40 students leave today for a European tour and an appearance in an international contest in Italy.

It would be hard to select a group better fitted to carry the message of young America abroad.

Most of these young men and women were brought up in small southwestern towns, attended public schools, took part in church activities and received little musical training beyond that given by their choir director, Dr. Robert Wayne Bedford.

They are being schooled in a small denominational liberal arts college, an institution typical of the American educational system.

And they represent a college that is notable for the alumni it has sent into government, medicine, business, science, education, and religion.

It is not often that a small college with limited endowment can send such ambassadors abroad. It is through the generosity of a patron who has faith in American youth and its possibilities that the trip is made possible.

And with this generous financial backing are the interest and contributions of the students themselves, the vision and untiring effort of their director and the practical suggestions and patient work of their travel agent, Jasmine McGee.

These are not professional musicians. They are young Americans—singing.

It is with complete confidence in their ability to represent the best in Sherman, Austin College, Texas, and America that we say to Austin College Choir:

Good voice and happy landing.

Record of the Wyoming Farm Bureau Federation

EXTENSION OF REMARKS

OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, August 7, 1957

Mr. BARRETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Every County Farm Bureau in Wyoming Tops Its 1957 Membership Quota," published in the American Farm Bureau Federation's official Newsletter for August 5, 1957. I join in commending the Wyoming Farm Bureau for its fine record in this connection.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVERY COUNTY FARM BUREAU IN WYOMING TOPS ITS 1957 MEMBERSHIP QUOTA

The Wyoming Farm Bureau Federation—one of the first in the Nation to meet its 1957 "forward together" membership quota, has set two new records.

Last week, Farm Bureau membership in Wyoming reached a new high of 8,659 farm families.

At the same time every one of Wyoming's 23 county farm bureaus reported reaching its county membership quota.

The Wyoming Farm Bureau Federation's outstanding accomplishments in the membership field have prompted favorable comment by the State's newspapers, such as this editorial from the Wyoming State Tribune:

FOR THE 11TH TIME

If you belong to an organization frustrated by difficulty in increasing or holding its membership, maybe effective help is available through the Wyoming Farm Bureau Federation. It knows how to get the job done.

That organization, which operates under the presidency of one of southeastern Wyoming's best known men Reuben V. Anderson of Pine Bluffs, has just reached its State membership quota for the 11th consecutive year.

Ponder that, 11 steady years of growth. Not one setback in membership since 1946.

The bureau's 1957 State quota was 8,457 family, not individual, memberships. As of July 1, the total achieved hit 8,525.

That's not the size of it. According to Bill Hicks, of Laramie, the bureau's organization director, the family membership will reach 8,600 before the end of the fiscal year.

If ordinary averages apply to the Farm Bureau, a family includes at least 4 persons. That means that 8,600 family memberships will come out to nearly 37,000 persons, in a State with a total population of just over 300,000.

The Farm Bureau has long been the State's largest independent agricultural organization, a position it also holds in various other States. When you study that membership, which extends over all of the State's counties and into every Wyoming town and city, it is not at all difficult to define the impressive influence exerted by the organization in State affairs.

Representative Resolutions Supporting Sound TVA Self-Financing

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. EVINS. Mr. Speaker, I am sure that many Members of this body from outside the TVA area, as well as those from it, share my gratification at the news that the Public Works Committee has reported favorably to this body a carefully considered and workable bill to permit the TVA to finance future additions to its power program through the sale of bonds. During the hearings on the bill before the above-mentioned committee some attempt was made to give the impression that the business community and particularly the chambers of commerce of the Tennessee Valley were not supporting this bill. My esteemed colleague BOB JONES, of Alabama, and others have received many communications which clearly indicate that those chambers of commerce who know the TVA best and who have experienced the stimulation which the TVA gave to free enterprise in the valley, strongly support TVA and favor a sound and workable self-financing bill.

Under unanimous consent I include several resolutions and letters in this connection in the Appendix of the RECORD. A representative number of these include: resolution from the Giles County, Tenn., Chamber of Commerce, signed by Lambeth Lester, president; Tullahoma, Tenn., Chamber of Commerce, signed by James H. Henry, president; resolution of the Murfreesboro and Rutherford County, Tenn., Chamber of Commerce, signed by Sam Lasseter, president; letter from M. L. Medley, president, Putnam County Tenn., Chamber of Commerce; letter from J. M. McCullers, manager, Decatur, Ala., Chamber of Commerce; and letter from Orbel Erwin, president, Athens, Tenn., Chamber of Commerce. These follow:

RESOLUTION OF PULASKI-GILES COUNTY CHAMBER OF COMMERCE

Whereas the county of Giles and the city of Pulaski are in the heart of the Tennessee Valley Authority zone of operations, the city of Pulaski being the first municipality in Tennessee to purchase TVA power and benefit from the unlimited advantages offered by said TVA; and

Whereas the Pulaski-Giles County Chamber of Commerce understands that certain views have been expressed by Mr. Louis V. Sutton purporting to be the views of the National Chamber of Commerce favoring the conveyance of all TVA properties utilized in the production of electrical power to private industries; and

Whereas the TVA has for years efficiently produced and marketed electricity on a sound basis and the entire Nation has benefited from its operation; that in addition to the production of electrical power, it has saved the country many millions of dollars through its flood-control-water supply and conservation program; that during World War II, private industry was unable to provide the power necessary to develop the atom bomb and other essential defense plants which TVA did efficiently produce and thus, saved untold millions of dollars and the lives of many of our fighting men; and

Whereas the national chamber has never advocated the sale of TVA properties to private industry so far as we have been able to ascertain and in its annual policy declaration, issued on May 1, of this year, no such proposal was approved; and whereas a sound and economical plan of self-financing for TVA, which, we believe, is to the best interest of the entire Nation and TVA, has been introduced in the Congress of the United States: Now, therefore, be it unanimously

Resolved by the board of directors of the Pulaski-Giles County Chamber of Commerce, That the self-financing proposal as introduced by Congressman CLIFFORD DAVIS of Tennessee, and Congressman ROBERT JONES of Alabama, be and the same is hereby approved and we do further unanimously urge the Members of the Tennessee delegation of the United States Congress to exert every effort to seek the passage of this vital legislation; be it further

Resolved, That a copy of the foregoing resolution be sent to (1) the Members of the Tennesse congressional delegation, (2) the Pulaski Citizen, and (3) that a copy of the same be spread upon the minutes of the Pulaski-Giles County Chamber of Commerce.

Adopted and approved this 21st day of May 1957.

LAMBETH LESTER,
President.

RESOLUTION OF TULLAHOMA CHAMBER OF COMMERCE

Whereas Louis V. Sutton, president of the Carolina Power & Light Co., recently appeared before a House Public Works Subcommittee and stated that the United States Chamber of Commerce felt that Congress should permit no further funds to be used to build or operate TVA power facilities and that the Chamber advocated the outright sale of the TVA; and

Whereas it is the opinion of the Tullahoma Chamber that the actions of Louis V. Sutton constitute a flagrant misuse of the purpose and program of the United States Chamber of Commerce; and

Whereas the views of the Tullahoma Chamber of Commerce are diametrically opposed to those views apparently held by Mr. Sutton and purportedly the United States Chamber of Commerce and feel that this fact should be made known: Now, therefore, be it

Resolved by the Tullahoma Chamber of Commerce, That the unwarranted, unreasonable and unfair attack of Louis V. Sutton on the TVA and his recommendations for its disposition be and the same are hereby condemned and declared to be wholly inconsistent with the views of this chamber; be it further

Resolved by the Tullahoma Chamber of Commerce, That copies of this resolution be furnished to the Representatives of Tennessee in Congress, in order that they might be apprised of this action and the views of the Tullahoma Chamber of Commerce.

This the 13th day of May 1957.

Attest:

JAMES H. HENRY,
President.
FRANCIS BILK,
Secretary.

RESOLUTION OF MURFREESBORO AND RUTHERFORD COUNTY CHAMBER OF COMMERCE

Whereas it has been brought to the attention of the Murfreesboro and Rutherford County Chamber of Commerce that Mr. Louis V. Sutton, of the Carolina Light & Power Co. has issued a statement purporting to represent the views of the National Chamber of Commerce and stated that the national chamber favored the selling of all TVA properties utilized in the production of electrical power to private industries; and

Whereas Congressman JOE L. EVINS, of Tennessee, has called attention to the fact that Mr. Sutton has misrepresented the views of the National Chamber of Commerce and certainly did not represent the views of this organiaztion; and

Whereas the TVA has for years efficiently produced and marketed electricity on a sound basis and the entire Nation has benefited from its operation; that in addition to the production of electrical power, it has saved the country many millions of dollars through its flood control water supply and conservation program; that during World War II, private industry was unable to provide the power necessary to develop the atom bomb and other essential defense plants which TVA did efficiently produce and thus, saved untold millions of dollars and the lives of many of our fighting men; and

Whereas the national chamber has never advocated the sale of TVA properties to private industry so far as we have been able to ascertain and at its annual policy declaration, issued on May 1, of this year, no such proposal was approved; and

Whereas Congressman ROBERT JONES, of Alabama and Congressman CLIFFORD DAVIS, of Tennessee, have presented a sound and economical plan of self financing for TVA, which, we believe, i sto the best interest of the entire Nation and TVA: Now, therefore, be it unanimously

Resolved by the board of directors of the Murfreesboro and Rutherford County Chamber of Commerce, That the self-financing proposal of Congressman ROBERT JONES and Congressman CLIFFORD DAVIS be, and the same is hereby, approved and we do further unanimously urge the members of the Tennessee delegation of the United States Congress to exert every effort to seek the passage of this vital legislation; be it further

Resolved, That a copy of the foregoing resolution be sent to (1) the members of the Tennessee congressional delegation, (2) the local newspapers, and (3) that a copy of the same be spread upon the minutes of the Murfreesboro and Rutherford County Chamber of Commerce.

Adopted and approved this the 31st day of May 1957.

SAM LASSETER,
President.

CHAMBER OF COMMERCE
OF PUTNAM COUNTY,
Cookeville, Tenn., May 29, 1957.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN EVINS: It has come to my attention that the National Chamber of Commerce has suggested a 10-point program for the Tennessee Valley Authority which, if carried out, would in my opinion result in irreparable and tragic consequences to the millions of American citizens and thou-

sands of private enterprises in the area served by TVA and indirectly to the entire Nation.

These proposals definitely and positively did not and do not have the endorsement of the Putnam County Chamber of Commerce and in my opinion none of the chambers in this entire area would endorse such drastic and unjustified statements by our national officials.

The members of the Putnam County Chamber of Commerce are in favor of and urge your support of an adequate and reasonable self-financing bill for the Tennessee Valley Authority which will permit it to operate efficiently and will insure that the needs of this great region for electric power will be met as and when necessary.

Sincerely yours,

M. L. MEDLEY,
President.

DECATUR CHAMBER OF COMMERCE,
Decatur, Ala., May 16, 1957.

Hon. BOB JONES,
Congressman, House Office Building,
Washington, D. C.

DEAR BOB: I read with interest your bulletin of May 11, and judged by its content the question in your mind regarding local chamber of commerce support of the bill introduced by you and Congressman DAVIS regarding TVA.

We unhesitatingly and emphatically disagree with the policy as outlined by Mr. Louis V. Sutton, president of the Carolina Power & Light Co. and representing the United States Chamber of Commerce, and we unfalteringly support your bill in the interest of the preservation of TVA.

We in the Tennessee Valley area realize the value of such an authority, the results of which, in our opinion, could not be obtained by private capital. We bear in mind too, the socialistic trend of such governmental agencies but for the full realization of its value to the people of this area one has to but visit the area and learn the whole story to become a true believer. The agricultural, reforestation, game reserves, flood control, power and other programs that are enveloped in the Tennessee Valley Authority have meant more to the people of this area than the average mind can imagine.

There are more than 3,200 chambers of commerce and trade associations affiliated with the United States Chamber through membership, but that affiliation does not necessitate the adoption of its policies by local chambers. We believe that the United States Chamber, an organization consisting of some 20- million business men and women, has done much for the betterment of man's economy but we unhesitatingly disagree with the policy as outlined by Mr. Sutton on the TVA issue.

We are grateful to you for the fine work that you are doing and when I, or the facilities of this office, can lend you a hand we will be honored to have you call on us.

Sincerely,

J. M. MCCULLERS,
Manager.

ATHENS CHAMBER OF COMMERCE,
Athens, Tenn., May 23, 1957.

Hon. JOSEPH L. EVINS,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN EVINS: The board of directors of the Athens Chamber of Commerce has instructed me to protest the statements made by Mr. Louis V. Sutton before the House Public Works Subcommittee in Washington.

It occurs to us that Mr. Sutton's appearance before the subcommittee as a representative of the United States Chamber of Commerce was in extremely poor taste in view of his connections with the privately owned electric utilities. It seems that his statements were obviously made for the purpose of advancing the interests of the privately owned utilities at the expense of the people of this section. His 10-point program, if adopted, would not only impair the progress of Tennessee Valley Authority but ultimately result in its complete dismemberment.

It is the feeling of the people of this section that Tennessee Valley Authority has served a most useful purpose for the people of America generally in that it has thrown the spotlight upon the efforts of the private-power monopoly to place the use of our natural resources beyond the reach of our average citizens. It is true, further, that Mr. Sutton, and others in similar positions, do not take cognizance of Tennessee Valley Authority's record in national defense, flood control, navigation, forestry, and the other phases of the Authority's overall program.

We feel that the action of the United States Chamber of Commerce in sponsoring Mr. Sutton was a distinct disservice to this area and to the Nation as a whole. It is our feeling, further, that we in the Tennessee Valley are in better position to observe and evaluate the accomplishments of Tennessee Valley Authority than is Mr. Sutton.

Sincerely,

ORBEL ERWIN,
President.

Opposed to Harris-O'Hara Bill

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to commend to the attention of the membership of this House a telegram which I just received from Mr. Louis J. Mosakowski, city clerk of the city of South Milwaukee.

The telegram reads as follows:

Hon. CLEMENT J. ZABLOCKI,
House Office Building,
Washington, D. C.:

Common council of city of South Milwaukee opposed to Harris-O'Hara bill as reported out by House Interstate Commerce Committee.

LOUIS J. MOSAKOWSKI,
City Clerk.

Mr. Speaker, I have carefully studied this legislation to see whether it would protect the interest of the consumers in my district and in other areas of the United States. I believe that this proposed legislation weakens the safeguards which we have on the statute books today in the interest of our natural-gas consumers.

I have testified against this legislation at length before the Committee on Interstate and Foreign Commerce and I shall actively oppose it when it reaches the floor of the House. I shall do it because the interest of natural-gas consumers in South Milwaukee, in the fourth district as a whole, and throughout our country would be jeopardized by the passage of this legislation.

Jewish War Veterans' National Memorial, Inc.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my statement before the House Committee on the Judiciary in support of H. R. 3338 to incorporate the Jewish War Veterans, U. S. A., National Memorial, Inc.

The statement follows:

JEWISH WAR VETERANS' NATIONAL MEMORIAL, INC.

(Statement of Congressman THOMAS J. LANE supporting a bill to incorporate the Jewish War Veterans, U. S. A., National Memorial, Inc., House Committee on Judiciary, August 7, 1957)

Mr. Chairman, the city of Washington, D. C., is the seat of our National Government.

It is not necessary to belabor the significance of this material fact. Every American citizen is conscious of its presence, its power, and its meaning to him.

To the millions of Americans, young and old, who visit Washington on a patriotic pilgrimage, this city is something more; it is the shrine of our national spirit.

The White House, the Capitol, and the Supreme Court are impressive; but they do not inspire the reverence that people feel when they enter the Lincoln Memorial, or bow their heads before the Tomb of the Unknown Soldier, or look up at the monument that depicts the flag raising at Iwo Jima.

Memorials in honor of the individuals and the groups who have contributed so much in courage and in devotion to the principles of freedom, constantly remind us of our responsibilities and our duties to perpetuate that heritage.

From the time of the Revolutionary War, Americans of the Jewish faith have given their lives and their fortunes to win and protect our independence. No group has been more dedicated in its devotion, or has made greater sacrifices in proportion to its numbers.

In recognition of their services to the Nation, I respectfully and sincerely request the endorsement of H. R. 3338, the bill I have introduced to incorporate the Jewish War Veterans, U. S. A., National Memorial, Inc., or H. R. 109, or any other bill with the same purpose.

The object, purposes, and activities of the corporation shall be:

"(a) To maintain and conduct a national memorial and museum dedicated to and commemorating the service and sacrifice of Americans of the Jewish faith and especially those who died in the armed services of the United States during a period of war.

"(b) To acquire and maintain the necessary building or buildings in the District of Columbia for the purpose of housing the said national memorial museum, as well as the national headquarters of the Jewish War Veterans of the United States of America and the national headquarters of the National Ladies' Auxiliary, Jewish War Veterans of the United States of America, and the utilization of the facilities of such building or buildings and the said national headquarters to gather, collate, edit, publish, and exhibit the memorabilia, data, records, military awards, decorations, citation, etc., for the

purposes of preserving the memories and records of patriotic service performed by men and women of the Jewish faith while in the armed services of the United States of America in time of war."

Incorporators from 33 States and the District of Columbia indicate the nationwide scope of this nonprofit corporation.

On or before the first day of April of each year the corporation hereby created shall make and transmit to the Congress a report of its proceedings for the year ending December 31 preceding, including a full, complete, and itemized report of receipts and expenditures of any kind. Said report shall be printed as a public document.

As diversity is the rich and fertile background from which we draw our vital faith in freedom, we should encourage all voluntary efforts to honor and perpetuate the contributions of each large group to our national unity and brotherhood.

The long and distinguished history of the Jewish War Veterans, U. S. A., has earned for them this right to a place of honor in our National Capital, where they can establish a shrine to preserve the proud evidence of their service to our common cause, for the appreciation and respect of all.

Through H. R. 109 and H. R. 3338, or any similar bill, I ask congressional authorization from the Jewish War Veterans, U. S. A., National Memorial, Inc., to achieve the noble purposes set forth in this bill.

To Strengthen Reliable Allies

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two articles by Mr. Constantine Brown which appeared in the August 5 and 6 editions of the Washington Evening Star, containing an account of his interview with Generalissimo Franco of Spain, and study of Spain's ailments.

The articles raise the question whether it is in the interests of the free world to promptly strengthen those nations which, like Spain, lie on the periphery of Europe, and which have been staunch in their anti-Communist position.

Only recently, a congressional resolution was adopted expressing the sense of the Congress that Spain join the NATO. In view of the passage of that resolution, I believe that we may well consider the issues raised in the articles, which follow:

STRENGTHEN RELIABLE ALLIES, FRANCO URGES

(By Constantine Brown)

(This interview with Generalissimo Franco is the third dispatch from Mr. Brown on his around-the-world tour.)

MADRID, SPAIN.—Generalissimo Francisco Franco feels that German unity is the main problem of Western Europe and he fears that Western interest in coexistence with Russia may lead soon to withdrawal of American and allied forces from Germany in order to obtain reunification of that divided country. To meet that situation he favors strengthening of reliable European countries.

Franco's small study with its Empire desk piled high with files, newspapers, and letters to be answered, was the same as when I last saw it some 5 years ago. The same magnificent Goya tapestries decorated the paneled walls. Nothing had changed except El Caudillo. He is a few pounds heavier.

The ruler of Spain does not speak English, although he seems to understand it well. He likes to talk to unofficial foreigners and enjoys hearing other than the dreary official reports. He is also candid in expressing his own thoughts.

Franco's main worries of repairing the damage which was inflicted by the civil war are over. Eighteen years later he rules over a united country. Internationally Spain has once more taken its place among the western nations—or nearly so.

A couple of months ago the American Congress passed a resolution expressing its sense that Spain join the NATO. The White House and State Department fully concurred. But to be admitted to that exclusive club it is necessary to have a unanimous vote of the members.

For the time being Norway has indicated that it will not vote for Spain. This hurts the pride of the Spaniards. Franco, however, takes it philosophically.

He believes that international socialism—much as it says it is opposed to Communist imperialism—is still against the man who so succcessfully defeated the objective of Moscow to establish a satellite in the most important strategic corner of Europe.

El Caudillo believes that Soviet aggression against Europe is not imminent. The Russians, he contends, have the capability of launching an attack and could be successful in the first phase of aggression. What makes them hesitate, however, is the unreliability of their satellites.

Franco believes that western propaganda—with all its defects—has had a real impact on the peoples of the suppressed countries. It may be that the satellite armies—some 70 divisions—may remain obedient to their Soviet-imposed masters for a while. But the people themselves would rise in the eventuality of Soviet aggression. Russia's armies might be faced with the same problems as Hitler's forces at Stalingrad—their lines of communication would be heavily harassed by guerrillas.

The main problem of Western Europe, Franco contends, is German unity. This Nation is potentially the most powerful single element in the West. For her, the chief problem is the unification of her territory. Germany's internal policy will turn around this problem as long as unification is not attained.

"I fear," El Caudillo said, "that the spirit of coexistence, which appears to be a feature of western policy, may lead in the near future to the withdrawal of the American and allied forces stationed in Germany in order to obtain German unity. This would satisfy not only the Germans but also the Russians. The possibility has to be foreseen. To meet it, I think the reliable European countries should be strengthened."

When this reporter pointed out that while we would have to pull our four divisions 3,700 miles across the Atlantic, the Russians need only withdraw less than 500 miles across land, El Caudillo intimated that the limited American forces in Europe count for little against potential Russian concentrations.

If Europe wants, he said, she has more than enough people to create greater effectives. The cost of a Spanish division is approximately one-third that of an American division, and the forces of the European nations on which America can rely could form the spearhead of Western resistance in an emergency.

The NATO countries are well prepared to counter a Soviet air aggression. The American bases strategically situated in Morocco, Britain, and Spain are in a position at this very moment to give more than a good accounting in the event of a surprise attack.

The NATO ground forces, however, are weak and in a difficult position in Germany. Moreover, the British are now economy-minded and are drastically reducing their military establishment. It is expected that by the end of next year they will reduce their forces in Germany by two divisions.

The French have a heavy war on their hands in Algeria. It is expected to continue for some time since the Kremlin is determined to keep it going. Most of the forces earmarked for the NATO have been withdrawn from the Rhine and sent across the Mediterranean. The Benelux forces are negligible.

The chains of mountains which divide the Iberian peninsula from the rest of Europe are an obstacle not easy to overcome even in these days of jet bombers flying faster than sound at very high attitudes.

These forbidding natural obstacles prevented Hitler from invading Spain in World War II and forced him to accept the so-called "Spanish benevolent neutrality."

It must be remembered that in those days Franco's so-called air force consisted of less than 100 old-fashioned "crates." Today there are four American bases in Spain—the most efficient in the world—from which the American Strategic Air Force can operate. In addition, the Spanish air force itself has more than 150 jet fighters, manned by highly skilled American-trained pilots. This number will be increased substantially this year and next.

MADRID, SPAIN.—A number of liberal American newspapermen and columnists are now visiting Spain for the first time since the civil war. They are trying, especially, to discover the country's ailments. In talks with Spanish and American officials they complain that the Spaniards are far from becoming progressive.

The Spaniards, and especially the peasants, the newsmen say, are still painfully backward. They conclude that the situation in Spain is hopeless because the liberal movements of the industrial populations in the north are being suppressed by the Franco dictatorship.

Much of this is true. The Spanish people are nothing like Americans, nor for that matter like any of the Western Europeans.

The French Revolution which shook the Western World in 1789 had no impact on this country. The industrial revolution which so radically changed Western Europe more than a hundred years ago never crossed the Pyrenees, either. Thus it is not surprising that the Spaniards still remain somewhat backward, conservative individualists, the likes of whom cannot easily be found elsewhere.

Only in recent years have things begun to change—mainly in cities with important industrial populations. And here we see the American influence: Neon signs, air-conditioning in a number of hotels, many more automobiles than in the past, and a marked modernization in industrial plants. Spain is now changing from a purely agricultural economy into an industrial state with all its advantages and evils.

Spain's changes are coming about under unbelievable difficulties. At the end of the civil war the country was broke. The ravages of that bitter struggle were as devastating as those in Europe and Japan in World War II. Spain's gold reserves of close to $1 billion had been plundered by the Russians and by members of the "loyalist" government when they fled the country.

After World War II when the wounds of Europe were being healed by UNRRA, the Marshal plan, etc., Spain was suffering from an unofficial blockade applied by the western nations in the hope of overthrowing dictator Franco.

We have not spent on Spain anywhere near as much as we have on Britain, France, Japan or any other countries in either loans or gifts. The amount lent and given to Spain does not exceed $350 million. Indirectly we have given the country approximately $65 million more. The construction of the 4 air and 2 naval bases has cost the American taxpayers $300 million so far. About 30 percent of this went to Spanish workers and for Spanish raw material going into the building of the great landing strips. There is no doubt that both the Madrid government and the Spanish people appreciate America's timely help.

Our aid to Spain is a two-way street—we help Spain and ourselves as well. The airbases capable of taking the heaviest jet bombers are the most secure we have in Europe and the Mediterranean. There may be a time when Moscow will give an ultimatum to Britain that unless the American air squadrons based in that country are evacuated Britain will be attacked from the air. If at such a time Laborites such as Aneurin Bevan hold the reins of government it is possible that we may be "invited out."

Our bases in Morocco are equally uncertain. For the time being our relations with the new sovereign Moroccan government are cordial. But nobody can be sure what will happen in the event the Russians unleash a war in Europe. The best available intelligence shows that there are numerous Communist agents in the country. Even if they did not succeed in overthrowing the Sultan, they could make our bases ineffective.

No such thing can happen in Spain. No threat whatsoever could induce Franco and his government to yield to Russian blackmail. And the number of secret Communists in this country is so infinitesimal that in the opinion of our security officers here damage to the American bases can be completely discounted. They are as safe, if not more so, than our bases at home. Spain may still be a backward country, as our ideological investigators maintain, but it is at present our most dependable ally in Western Europe.

Possessing only a small industry, Spain is not tempted by the Muscovite carrot of "trade with the Soviets." Its anticommunism is not centered in the government alone. It spread to the people themselves, who remember too well the horrors perpetrated by the Reds in the civil war.

Golden Eggs at $9.58 per Egg Are the Exception Rather Than the Rule

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, as a refreshing—if somewhat unrealistic—change in my recording of egg prices, under unanimous consent to insert in the RECORD an item taken from today's Washington Daily News.

The article follows:

EGGS $9.58 EACH

EAST AURORA, N. Y.—It's a pretty valuable chicken that can lay a dozen eggs worth $115.

But Ralph Mosely of East Aurora voiced the top bid for the prize dozen—produced by Nelson Graves, Holland poultryman. That's $9.58 per egg and may set a record for the price of hen fruit.

Our Military Manpower Problem

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks last Monday, I inserted in the Appendix of the RECORD an article which appeared on that day in the Washington Daily News by Mr. Jim G. Lucas, famed staff writer for the Scripps-Howard Newspaper Alliance. The article I inserted at that time was the first in a series of three articles on Military Manpower—Down the Drain, and that article pointed out why the United States is losing many of its best-trained men in the services.

The second and third articles in this outstanding series of three articles by Mr. Lucas appeared in the Washington Daily News of yesterday and today, respectively. The second article refers to the Cordiner plan as a key to the Nation's military survival. The third article points out that the armed services have been watching helplessly while an extremely high percentage of its best men, who have been trained at high cost to the Government, are being lost to private industry due to an unrealistic military pay scale.

In order to provide a complete picture as given in this excellent series of articles by Mr. Lucas, and so as to commend these articles to the attention of all persons interested in national security and Government economy, I am inserting these articles in the RECORD at this point.

The articles follow:

[From the Washington Daily News of August 6, 1957]

MILITARY MANPOWER: DOWN THE DRAIN—CORDINER PLAN IS REGARDED KEY TO ARMED SERVICE SURVIVAL

(Second of a series)

(By Jim G. Lucas)

It costs the Air Force $100,000 to train a jet pilot, and 70 percent of them quit after one 3-year hitch.

For each pilot that quits, a second $100,000 has to be spent to train a replacement.

After 3 years, he's gone. And so it goes. On and on.

This illustrates, in financial terms, the problem created by the staggering turnover in military manpower with which the Armed Forces must cope.

PAY PLAN

In an effort to do something about it, the Defense Department early this year drew up a revolutionary pay plan. It suggested paying a man what he is worth; relating his paycheck to what he knows and what he can do.

This was the Cordiner plan, so named for the man who headed an advisory committee's 6-month study. Ralph J. Cordiner is president and chairman of the board of the General Electric Corp.

Turnover inevitably results in vast expense. But that isn't the only—or even the most important—consideration.

The heavy preponderance of relatively greenhands in military service multiplies accidents. These take lives—which cannot be replaced—and destroy expensive equipment—which needs time in the building. It reduces efficiency. It limits the Armed Forces power to retaliate effectively in case of aggression.

Finally, by creating a demand for more and more manpower, it necessitates continuation of a peacetime draft or at least magnifies its size.

The Cordiner Committee found that building a professional corps of skilled servicemen would increase combat efficiency. Or putting it another way, it would permit reduction of at least 350,000 men in the total size of the armed services.

QUESTION

At the outset, the big question the Cordiner Committee had to answer was:

Why do servicemen quit?

To find the answer, it visited bases from Korea to Alaska, Africa to Europe and Asia. On board ships, at remote airfields, and in dozens of Army camps, its members asked what was wrong.

They also asked: "What would induce you to stay?"

They got many answers. Men all over the world told them the most important aspects of any job are a feeling of belonging, a pride in their job and assurance of continuity, individual rights and dignity, good bosses—in other words, firm discipline and fair treatment. They talked about higher living standards, better housing, and the like.

But running through every interview was the insistence that the military pay a man what he is worth, that it base pay on intelligence, energy, and ability.

OUT OF DATE

Our military pay system is tragically out of date. It was copied from the British after the Revolution and has been little changed since. Under it, a man is paid largely for how long he has been in uniform; not for what he can do.

A second lieutenant who stays out of trouble can reasonably expect to wind up a colonel. He needs merely to wait for his number to come up on the promotion lists. If he shows initiative, sticks his neck out and makes controversial decisions, he may also wind up a colonel in the same length of time—provided he doesn't step on somebody's toes and get shunted out of service altogether.

To remedy this, the Cordiner plan would give the services authority to pay persons in the so-called scarce skills—electronics and radar men, communication specialists and aircraft mechanics—more money than truck drivers and cooks of the same rank.

Under this plan, all services would start their enlisted men at the same salary and advance them in grade up to a point where training for more technical jobs begins. This would be corporal in the Army, third class petty officer in the Navy, airman first class in the Air Force, and sergeant in the Marines.

Lower grade enlisted men now drawing higher pay—and some have been in long enough that they're paid more than men who outrank them—would not take a pay cut.

HOW IT WORKS

But pay rises would be weighted in favor of the more skilled and ambitious. A man would be required to make the most of his capabilities. If a truckdriver were found capable of performing a more skilled job, he would have to train for it or run the risk of being discharged when his enlistment was up.

The Cordiner plan would provide substantially higher pay for those in positions of responsibility—in top commissioned and enlisted ranks. In the past, Congress has yielded to political pressure and voted pay boosts principally for privates. Most of these have no intention of staying.

Moreover, it would give an immediate increase to some critically needed persons now

in uniform. Many are ready to quit in disgust.

FIVE HUNDRED MILLION DOLLARS

Mr. Cordiner admits his plan would cost more money initially—perhaps as much as $500 million a year. That is the emergency feature, the desperate effort to keep men ready to quit. But he insists it will save up to $5 billion a year by 1960 once it gets going.

That initial cost apparently is the stumbling block. Secretary Wilson said he "bought the philosophy" of the Cordiner plan, but could only agree to pay rises totaling slightly more than $100 million. The Budget Bureau objected that a program of such size—at a time it is trying to hold down expenses—would be an inflationary pressure. President Eisenhower, while conceding the need for reform, went along. As a result, little has been done.

But Mr. Cordiner has not been satisfied to let his plan die. Once mentioned as Mr. Wilson's possible successor, he has taken on the role of gadfly, turning down no invitations to speak and be heard. He has appeared on TV. His prestige has given the drive tremendous impetus. Cordiner has referred caustically to those—apparently including Wilson—who would adopt the philosophy but reject the substance of his plan.

As a result, he has become a hero among military people. The Cordiner plan—while scarcely known outside the services—is regarded by most careerists as a key to the Nation's military survival.

[From the Washington Daily News of August 7, 1957]

MILITARY MANPOWER: DOWN THE DRAIN—REALISTIC PAY SCALE WILL KEEP MEN IN UNIFORM, BURGESS SAYS

(Last of a series)

(By Jim G. Lucas)

The Armed Forces are keeping their cooks. But they are losing their electronics technicians.

Carter Burgess, now president of TWA and a former Assistant Secretary of Defense for Manpower, recently cited these figures:

Electronics technicians reenlist for second hitch at the rate of only 14 percent, compared with 40 percent for cooks and food handlers. The rate for communications specialists is 20 percent. For security guards—who need little training—the rate is 38 percent.

PAY IS SAME

The reason found by the Cordiner Committee is simply that in these diverse fields the pay is the same.

"This," Mr. Burgess told a meeting of generals and admirals at Quantico just before he left the Pentagon, "leads men to seek out the less arduous and demanding assignments. That is why we are 25 percent short in the top 3 combat grades of the continental Army and 25 percent over in clerks and typists."

The Cordiner plan, in substance, would offer financial rewards for the more difficult and rarer skills. It would provide opportunities for advancement somewhat comparable to those in private life. Its backers believe it would reduce the rate of turnover, and increase the quality of defense. And, in the long run, that it would cost less than defense flow does now because it would reduce the cost of constantly training new men.

The Defense Department spends 45 percent of its annual budget—more than $17 billion this year—on people. And that doesn't include housing.

No corporation spends anywhere near that. Yet it is not enough to keep badly needed, skilled men in uniform. Only 23 percent of those now in service will sign up for a second hitch, and these will be largely in what the military calls soft skills.

THE ANSWER

The answer, obviously, is not more dollars, but a better distribution of those now being spent. And that, in a nutshell, is what the Cordiner Committee proposes.

Since 1955, the Pentagon and Congress have done a lot in what is known as the career incentive field. President Eisenhower effectively described the problem in a special message to Congress in January of that year.

"To sustain our active forces at required levels of strength and efficiency," he said, "it is necessary to increase the present rate of voluntary enlistments * * * and to induce volunteers, both officers and enlisted men, to continue in the services on a career basis.

"These objectives require compensation which is more in line with that paid by private industry. They also require the strengthening of the traditional service benefits in recognition of the unusual difficulties facing the serviceman and his family."

MANY STEPS

Since 1955, a number of steps have been taken, all to the good.

The first was the reenlistment bonus act of 1935, heavily weighted to increase the reenlistment of first-termers. It gave 1 month's pay for each year of reenlistment. It also created increased incentives for second and subsequent reenlistments.

Other measures include survivors' benefits, dependent medical case, regular officer augmentation, doctors' career incentives, and ROTC-military academy longevity credits.

These have helped. The overall reenlistment rate is slightly higher today than in 1955. Yet, obviously, they are not enough.

"The fact is," Mr. Burgess says, "that lesser skilled individuals are reenlisting at a far greater rate than are those who require lengthy and expensive training. This is the real crux of the problem."

ANNUAL DRAIN

There has been an annual drain on the military of a million men since the end of the Korean war, according to Mr. Burgess. These losses, he says, "make it necessary for us to rebuild one-third of our forces each year, and even then we fall far short of the proper mix of skills and abilities.

"This strikes me as an upside down military structure. Forty-five percent of our men have less than 2 years' service, and almost two-thirds have less than 4 years'. Only one-tenth have served 10 years of more."

Without a realistic pay scale, the services have watched helplessly while industry syphons off the cream of the crop—often after it has spent millions training these men.

The Army's Effort To Recruit Brains

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I wish to present herewith an editorial which appeared in the Shreveport Times, on Thursday, August 1, 1957. The Army is of vital importance to all of us and this editorial gives much food for thought on the problems of Army personnel and the welfare of our country.

The editorial is as follows:

THE ARMY'S EFFORT TO RECRUIT BRAINS

The Army is on sound ground in asking Congress for legislation which would authorize the President to defer from the draft young men with low intelligence ratings. The purpose of such deferment would be to guarantee that the Army—and other branches of the Armed Forces—would get men in the draft who are of higher intelligence than the average now inducted.

The reason the Army wants men of higher intelligence is that men of low intelligence simply cannot operate the modern weapons which fill the military arsenal. There was a time when a man who could march 30 miles in a day carrying a heavy pack, plus a rifle and a bayonet was looked upon as just about the ideal soldier. The weakness of his mind meant nothing if there was sufficient strength in his back.

Those days have gone—they went long ago, in fact. Today's weapons are highly complex. Instead of pulling a trigger on a fieldpiece, the soldier today may have to do quite a bit of figuring in mathematics to aim the weapon and make it effective. That applies to infantry forces—in other branches of the Army or other armed services, the complexity may be much greater. The Army bluntly puts it this way:

"Experience has shown that an appreciable number of personnel who meet current minimum statutory mental standards do not possess sufficient aptitude to assimilate training in even the most basic military skills."

Putting it a little more bluntly, this means that there are too many young men being drafted into the service who are too dumb to be of any value—not through any action of their own but simply because they were not born with enough brains.

It costs the Armed Forces—actually the taxpayers—several billion dollars a year to train young men to be soldiers. This cost is increased by the number of duds in each complement of youth brought into service—the number who, it is found, cannot be trained to be good soldiers because they are not mentally capable. Higher intelligence ratings in the Armed Forces not only will increase the fighting efficiency of those forces, but will in the end save money for the taxpayers.

There is one obvious objection to the Army's proposal, and that is that it would force men with brains to carry the military load while men with not so much brains would get out of military service. That might be necessary from the standpoint of efficiency but it is not very equitable and it could be very dangerous.

It would mean that, in war, an enemy would—in successful combat—be wiping out the brains as well as the brawn of the Nation.

That could be carried to a point where the United States could win a war and still lose from the standpoint that it would not have enough of its brainy youth left to carry on the progress of civilization and its own welfare.

The answer, if there is one, probably would lie in not exempting persons of low intelligence from all types of military service but of putting them only into service they were capable of performing. None of the military services ever really have been willing to do this. For example, men who can play professional baseball or football for a living are exempted from military service because of some physical injury to the knee or back or arm. They would be entirely capable of filling desk jobs and almost any kind of work behind the lines even if not able to go into combat. Assigning them to such tasks would be a long step toward a more equitable draft system and toward greater efficiency in the armed services.

One of the troubles with all of the Armed Forces today is that they yell constantly for

men of special intelligence and then assign these men to duty that any person not too close to the dumbbell classification could fill.

But one thing is certain: The Army and the other armed forces do need men these days of intelligence that was not necessary back in the days when a strong back offset a weak mind. As a step in that direction, the Army's proposal for deferment of the low intelligence draftees has some very good points.

AEC Bill Favors Public Power

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. COLE. Mr. Speaker, in recent days, certain of my colleagues on the joint committee who do not agree with the minority views contained in House Report 978 relating to the authorization bill for the AEC have taken the floor in both Houses of the Congress to express their views on this bill.

I would like to cover just one highly objectionable feature of this bill.

I refer to the statement in the minority report, H. R. 8996 is heavily slanted in favor of public power and Federal ownership of atomic facilities, and against private industry and private ownership. Other Members of the committee deny this statement. Without acrimony or bitterness, and with only the best of feeling toward my colleagues on the joint committee who do not agree with my views, I would like to attempt to state for the RECORD the evidences of favoritism for public power in the bill, as I see them.

I take this position, and make this statement with some regret because I do not wish to engage in a heated discussion with some of my good friends and colleagues on the Joint Committee. However, when a bill is slanted in favor of public power, in my opinion, and especially in this new and terribly important field of atomic energy, I feel it my duty to state my views, for the record and to voice a word of alarm to those who rely upon us for guidance.

In my opinion, H. R. 8996 is heavily slanted in favor of public power and Federal Government ownership, and against private industry and private development and ownership in the following ways:

1. IT FAVORS FEDERAL CONSTRUCTION OF ATOMIC POWER FACILITIES

Section 101 of the bill authorizes $58 million for construction of reactor facilities not requested by the Commission. One of these is only $3 million for a design study, but if it should be followed up by construction of the reactor next year, the cost for that project alone would ultimately run well over $100 million. The majority report indicates that it favors for this particular project a dual-purpose reactor which would generate substantial quantities of power, as well as plutonium, from a federally owned reactor.

2. BREAKDOWN OF FUNDS AUTHORIZED

Section 111 authorizes the sum of $129,915,000 for use in the AEC power demonstration reactor program. If we break down this figure, we find that $98,415,000 is allocated to reactors to be owned by the Federal Government for the benefit of public power distributing agencies, and only $31,500,000 is designed for assistance to power reactors which will be largely constructed by private industry and privately owned. This is a ratio of more than 3 to 1 in dollars in favor of the public-power groups. Now, when we consider that there are only about one-fifth as many conventional kilowatts generated by public-power groups in the country as by private-power groups, we see that this is a 15 to 1 favoritism for public power.

3. "SAVING" THE PUBLIC POWER GROUPS

Section 111 (a) (1) of H. R. 8996 provides for direct contracting between the Federal Government and the reactor manufacturer, and would remove all risks for the public power groups, large and small, which have submitted proposals. This "saving" provision would include the large scale reactor plant to be constructed in Nebraska by the Federal Government for the benefit of the Consumers Public Power District of Nebraska, which I might point out is a utility company much larger and with more financial resources than many small privately owned utilities.

It has been repeatedly said that the public power reactors are the program of the Commission, and that the majority report is only attempting to strengthen this program. In my opinion, this is not correct. Section 111 (a) (1) was not proposed by the Atomic Energy Commission. In fact, the Commission is strongly opposed to this section.

The Commission has not yet accepted any of these proposals for reactors construction made by the public power groups. They have submitted five proposals, but as time has passed, it has become increasingly clear that they have little or nothing to offer for the development of atomic power.

At page 16 of the majority report itself, the majority observed that the cooperative and publicly owned agencies did not demonstrate to the committee any particular competence or experience in the design, construction, or management of research and development projects, including atomic reactors.

In my opinion, unless the public-power groups indicate a willingness to provide more capital, assume more risk, and not ask for special favors, some or all of them should and would be dropped from the program. They should be treated on the same basis as the private-power projects.

Therefore, in my opinion, it is not correct to state that this is the Commission's program, because there is no assurance that some or all of these public-power reactors would ever have been able to reach fruition under the Commission program.

Therefore, I do not believe that we should save these groups. They should be left to continue their negotiations with the Commission, without directions or dictates from the Congress to save them. If they cannot make satisfactory proposals, similar to the proposals of private groups, they should be dropped.

4. ATTEMPTED CUTBACKS OF FUNDS FOR THE ONLY PRIVATE PROPOSAL

Only one proposal made by a privately owned and financed group was submitted by AEC for authorization in this bill. This was the proposal by the Power Reactor Development Co., requesting work in AEC laboratories, to be valued at $4,206,000. All of the information would be public knowledge.

All of the information would be useful in helping to prove or disprove the safety of the design of this particular reactor. Nevertheless, the committee voted to cut the funds authorized for this project from $4,206,000 to $1,500,000, and the committee report—which does not properly state the committee intent—even implies that this amount should be cut to zero.

Since this was the only private proposal submitted to the committee, requesting a modest assistance, to be matched by over $50 million in private money, it is obvious, in my opinion, that there was discrimination against private industry.

Objections have been raised as to the safety of the PRDC reactor, but this is the subject of a current administrative hearing, and the Congress should not abrogate the contract until the allegations are proven. Moreover, most of these funds will be used to explore questions of safety and, therefore, it appears to me ridiculous to deny funds because of supposed objections on safety grounds.

5. RESTRICTIONS UPON THIRD ROUND

Subsection 111 (a) (3) would place restrictions upon the third round of the AEC power demonstration reactor program. This round is intended to encourage ownership of reactors by private industry, on the approach that the Government will contribute only a limited amount, to be matched by a majority of the funds coming from private industry. This round encourages private ownership of reactors in new reactor concepts.

Restrictions on this round would have the effect of discouraging private industry and private ownership. The follow-up next year would be to call for more Government construction and more Government ownership.

6. SECTION 111 (B)

Section 111 (b) provides that before the Commission enters into contracts providing assistance for construction of reactors, it must submit the basis of the contract to the Joint Committee on Atomic Energy for review.

Although I did not originally object to proposed section 111 (b), I am now concerned because of some of these other provisions which I have discussed, and which were added to the bill after the language of section 111 (b) was originally discussed. If there exists a bias in the Joint Committee in favor of public power and against private ownership as indicated by the other provisions in this bill which I have discussed, I now fear

that section 111 (b) could have the unfortunate effect of discouraging private industry to submit proposals in the future.

In summary, Mr. Speaker, this bill, H. R. 8996, offers a dangerous precedent if it should emerge from the Congress in its present form.

The atomic power industry is just beginning, and by the act of 1954, Congress attempted to encourage private ownership and private participation.

I fear that a pattern is now beginning to take shape where this great new source of power will be devoted to public rather than private ownership.

Now that our last great sites for hydro power are becoming exhausted, public power advocates are turning to atomic power.

Just as the arguments of navigation and reclamation were applied to encourage Federal ownership of important hydro facilities, it now appears that the argument of research and development is being applied as a cover to encourage Federal ownership of atomic facilities. I believe that research and development should be limited to research and development, and not to construction of power reactors.

In the case of the five proposed public power reactors, there is a category of research and development, and there is a category of construction of reactors both calling for funds. In the case of privately owned reactors, there is only a category of research and development assistance, and I believe that this is the proper use of Government funds.

If Government funds are limited to strictly research and development, the taxpayer will receive more reactors, and more atomic power for his dollar, because private funds will be used in the program.

If all ownership continues to be Federal, and if private ownership is discouraged by the Congress, the great potentiality of the atomic energy power program will wither on the vine.

In order to be strong both at home and abroad, we must have a strong private industry participating energetically in the atomic power program.

I hope that my good friends and colleagues on the Joint Committee as well as elsewhere in the Congress will take a good look at the provisions which I have discussed today. I believe that a good look clearly shows that the bill is slanted in favor of public power and Federal ownership and against private ownership and industrial participation.

I hope that these features can be corrected when H. R. 8996 is scheduled to come before the House for consideration tomorrow.

Reemployment Rights of Reservists

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, the purpose of this bill, H. R. 8522, is to amend and clarify the reemployment provisions of the Armed Forces Reserve Act of 1952 and the Universal Military Training and Services Act. The bill will also put National Guardsmen on the same basis as other members of the Reserve components insofar as reemployment is concerned, after participating in Reserve training.

The law now provides that persons performing training duty, such as 2-week encampments and weekly drills, have 30 days to apply for reemployment in their jobs, and it is believed that this period is unreasonably long in relation to the amount of time away from the job. The bill would remedy this situation by requiring that application for reemployment be made at the beginning of the next regular scheduled work period after expiration of the necessary travel time, or within a reasonable time thereafter.

With respect to the period in which an application for reemployment must be filed by any member of a Reserve component, the bill will permit the application to be filed after a 1-year period of hospitalization incident to training. This would eliminate the present inconsistent treatment which grants those on active duty in the Armed Forces a 1-year period of grace for hospitalization, some reservists a 6-month period, and other reservists none at all.

One of the main reasons, however, for this legislation is to cover National Guard men who take the 6-month training course. Because of a quirk in the law a member of the Army Reserve who enters the 6-month training program has his reemployment rights insured, but a National Guard man does not. This bill will place all on the same basis.

The Department of Labor recommended this legislation and the Bureau of the Budget interposes no objection. There will be no cost to the Government because of this bill's enactment.

Exempt Certain Wheat Producers From Liability

SPEECH
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. BAUMHART. Mr. Chairman, we have taken a short but at least progressive step in approving H. R. 8456—S. 959—which will exempt certain wheat producers from liability under the Agricultural Adjustment Act where all their wheat crop is fed or used for seed or food on the farm.

This bill has special significance for many farmers within my own district. Like so many others, they have been severely hampered over the years by their inability to grow in excess of 15 acres of wheat without penalty, even though every bushel of wheat produced has been consumed on the premises and has never been diverted to the open market.

If nothing else, our remedial bill is likely, in the words of Secretary Benson, to "remove the dissatisfaction of many small wheat producers with the program as it must be operated under present legislation."

However, the bill we have just passed is far from ideal. It gives the farmer only a fraction more of the operating freedom he should have. Regrettably, he has been given an exemption only up to 30 acres of wheat production and even so he must apply to his county ASC committee for the exemption or become subject to penalty.

Further, he cannot turn any portion of his grain over to a miller in exchange for milling services. Every grain of wheat sent off the farm for milling or other processing must be returned for consumption on the farm.

On top of this, no surplus wheat may be stored on the farm at the end of the crop year; every bit of it must be consumed on the farm if a penalty is to be avoided.

I feel, too, that there has been a grievous omission in our failure to adopt a retroactive forgiveness clause already approved by the Senate. In the words of Senate Report 458 on S. 959:

> If exemptions were obtained on the 1954, 1955, or 1956 crops, penalties paid on such crops would be refunded; wheat stored to avoid such penalties would be released from storage; and the Secretary would pay producers the value of any wheat delivered to him to avoid such penalties.

The Department of Agriculture has been subjected to much criticism for the way it has handled wheat penalty cases, but in fairness to that agency we should not lose sight of the fact that it endorsed the principle of retroactive forgiveness at least as early as January 1956 and did so again in January of this year.

It is my personal hope—and I am sure it is shared by many of my colleagues—that retroactive wiping out of penalties will prevail in the final version of S. 959 which is to become public law.

Recognition and correction of the patent injustice which has been forced upon small wheat producers through the exactment of penalties, will go a long way toward making S. 959 a vastly more constructive piece of farm legislation.

A Ray of Hope for the Family Farmer

SPEECH
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. HARRISON of Virginia. Mr. Speaker, it is heartening to be given the opportunity to vote on a measure intended to give the family farmer a little relief from the stifling regulation and regimentation which presses in on him. Over a period of years, I have contended that it is unjust, unreasonable, and arrogant for a government to tell a man how much grain he may produce on his own soil, in cooperation with nature, for consumption by his family, his livestock and

his poultry on the farm, or for use as seed. Probably nothing in the rickety structure of agricultural controls has produced so much resentment among the operators of small farms as the limitation on production for use on one's own place.

This is justified resentment. The family farmer has been forced to take up the study of accountancy and law in the struggle to avoid heavy fines and the threat of jail for violations, often inadvertent, of regulations which he finds not only complex but ridiculous. The hard-working farmer who has retained his spirit of independence in continuing adversity has found that he may not even tell his Government he does not want any "help" in running his farm. His Government will help him with allotments, quotas, and restrictions anyway.

The present bill is hardly an excuse for dancing in the barnyard. It does not knock the shackles from the farmer. It merely loosens one slightly. At present, a farmer may grow up to 15 acres of wheat for home consumption without penalty. The bill will permit him to grow 30 acres of wheat for family use. Even so, some redtape remains, as the farmer will have to apply for an exemption certificate from his county ASC committee if he wants to take advantage of the change. He will have to use the wheat on his place during the crop year in which it is grown—he may not carry over any. He will not be able to trade any of this wheat for milling or other processing services.

We should pass this bill, Mr. Speaker, though it be but a tiny step in the right direction, as an expression of the determination of this House to reverse the trend of agricultural regimentation.

A Charter for World War I Vets

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting editorial that appeared in the National Tribune-The Stars and Stripes, in the issue of Thursday, August 8, 1957:

A CHARTER FOR WORLD WAR I VETS

On July 24 the Veterans of World War I of the U. S. A. appeared before a subcommittee of the House Judiciary Committee to present arguments to show why this new organization should be granted a congressional charter giving them equal privileges with other recognized veteran organizations.

The organization was well represented by the present national commander, Harlan W. Barnes, of Oregon; Past National Commander Emanuel Levy, and by Merle E. Hopper, chairman of the legislative committee of the Veterans of World War I.

Hopper made the presentation and set forth in completeness the reasons why the organization should be granted a congressional charter. (The full text of his presentation appears in this issue of the National Tribune-the Stars and Stripes.)

We are happy to report that a favorable decision on the granting of the charter was forwarded to the full House Judiciary Committee and in the light of this action we are inclined to believe that the charter will be granted.

There is no reason why a congressional charter should not be given to the Veterans of World War I of the U. S. A. We have referred to them as a new organization but as a matter of fact they have been in existence 8 years. Their beginnings were slow as is always the case with any new group trying to identify itself as something different.

Their struggles were many but, eventually, they found themselves on a solid footing and from then on the organization grew by leaps and bounds.

With little or no backing in the beginning their ranks have grown until they can now count their members in the tens of thousands, with splendid reports of new barracks forming throughout the country.

As we have pointed out previously, there is no reason why the charter should not be granted. As far as the cost to the Government is concerned, that can be discounted. It requires only a little paper work by both Houses of Congress and the signature of the President of the United States. Any cost will have to be borne by the veterans themselves in the way of setting up necessary offices to aid their comrades and their dependents in claims before the Veterans' Administration. This may sound repetitious but nevertheless it is true.

Here is a group of veterans representing a distinct class—a group of veterans which has proven that despite vicissitudes it has become a growing power, with the possibility of ever-greater development as the years pass.

Its recognition by the Congress of the United States seems inevitable. An old and striking advertisement carried the slogan "Eventually, why not now?"

There is no reason why Congress should wait longer to grant the request of the Veterans of World War I of the U. S. A. for a charter. The proof of their stability is before the Congress and their recognition, alongside of other veteran organizations, is just. They plead a cause which we of the National Tribune-the Stars and Stripes consider worthy. Congress itself in studying their request for recognition must realize this and in all good conscience grant it.

The Veterans of World War I of the U. S. A. are soon to meet at their national encampment. What a splendid tribute to the men who have battled for this recognition that they might be able to report to their national convention that the Congress of the United States has recognized their claim and has granted their simple request.

We realize that the veterans of the First World War have fallen into a class of forgotten men. It is only human nature to forget the past in considering the problems of the present.

That is understandable, but the people of our country should never forget the sacrifices these men of 1917–18 have made; and the men and women who make up the Congress of the United States are human and with a little thought will realize that granting a charter to this representative group of war veterans is but a mild token of appreciation toward them and one well worthy of the men who seek it and the Congress which has it in its power to grant it.

We realize the difficulties that lie ahead of Congress in the next few weeks in connection with important legislation, particularly before the Senate, but we do think it would be a nice gesture on the part of both Houses of Congress if they could find time to pass this piece of legislation which cannot harm the country but which can do much for the future growth of a worthy veteran organization.

A Democratic Exchange of Views About Taxes

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, under unanimous consent, I insert in the RECORD the exchange of views over taxes, which appeared in the Argyle Messenger of August 1. It seems to me that Mr. Bouvette's analysis of the need for taxes at the present rate and under the present world conditions, is clear, succinct, and logical. I also was very much interested in his comments about those who are the greatest complainers about high taxes, "who have never had it so good":

TAX VIEWPOINTS AIRED

Editor Cliff Bouvette, of the Kittson County Enterprise, this week, furnishes the majority of the editorial comment contained in the following paragraphs.

Mr. Bouvette directed his comments to us because of an editorial we ran last week, wherein we presented favorable comment in connection with a tax reform bill introduced in the House by Representative A. N. SADLAK (Republican, of Connecticut). The bill introduced by Representative SADLAK would provide for uniform annual reductions for each bracket of income tax, over a 5-year period and would reduce both individual and corporate income taxes to a top rate of 42 percent.

Now we don't pretend to be any fiscal expert, either taxwise or otherwise, but we do believe, that any time there is presented any measure or opportunity for an orderly and/or sensible reduction of taxes, on the Federal, State, or local level, we're going to be all for it. Economy in government has got to be started someplace and what better place could it start than with a reduction of the taxes that is providing the ever higher rate of spending in every governmental unit from the local on up to the Federal level. Without so much tax moneys to spend, governing costs would have to come down. That's why when that good Democrat, HARRY F BYRD, of Virginia, preaches economy in government we listen to him with respect and would like also to see many of his proposals enacted. The same goes for Representative SADLAK's tax proposal.

We will agree with Editor Bouvette that we do not favor tax economy to the extent that it will endanger our national security program or our foreign aid commitments with our NATO or other allies. But there is much Federal spending nowadays that does not come under that heading and that could be somewhat curtailed to the benefit of John Q. Public.

Now, we invite you to read Editor Bouvette's comments in his recent letter to us:

HALLOCK, MINN., *July 25, 1957.*

ERNIE HOLMLUND,
Editor, Argyle Banner,
Argyle, Minn.

DEAR ERNIE: Enclosed is clipping taken from your last issue. It is hard for me to understand why a good Republican newspaper sees fit to find fault with the Eisenhower tax proposals.

Inasmuch as I do not like Ike's policies, I will agree with him completely that taxes are one thing no American should kick about in these days. Under the Democrats we had high income taxes, just as we have under the GOP but the facts and circumstances sur-

rounding these taxes make them mandatory and the worst part of it is, that as time goes on and science finds new ways of making more destructive missiles, our taxes are going to mount and they should.

There is no nation on earth today that gives its subjects more freedom than we know here. We have more of the world's luxuries by far than has any other country. We have more telephones, more bathrooms, more cars, more radios and televisions, we have more social security, we have more of everything under the sun. I know in my case when income tax rolls around it hurts like everything to pay the taxes I have to pay. I no longer have dependents except my wife, so my taxes are higher and I don't like paying them.

Today we spend millions to get one type of plane or a new missile off the drafting board, perhaps make the first one, when along comes Russia with something superior to the one we made, so we have to junk the works and start all over again. If we would remain in the forefront of scientific manufacture in order to swing a club big enough to command Russian respect, how are we going to cut our taxes?

The Sadlak bill to which you refer is nothing but another piece of legislation designed to get votes. It certainly is not prompted by a real, sincere and honest desire to protect our country. The President wanted far more money for his budget than Congress gave him. In spite of the fact that Congress denied Eisenhower the money he asked for, leading and dependable economists of all political ranks agreed that in spite of anything Congress may do, the money they did appropriate would not be enough and that more would have to be spent.

Another thing, our Communist adversaries are controlled by ruthless people who think nothing of murdering Hungarians and who also compel the forces of labor within their own countries to work for whatever figure is necessary to defeat the United States of America in the world's markets of trade and in the manufacture of various engines of war. We in our land must pay labor a profitable wage, while at the same time pay the captains of industry who own the big works that make these things for us, a fee in keeping with the payment of reasonable dividends. With a situation like that confronting us, we are up against hard going and it takes taxes to keep it up. If we were not capable of producing a war machine better than the Russians can produce, then I would say within a span of 5 to 10 years, we could all bank on the contention of being ruled over by Moscow. The only reason under the sun Russia has not tackled us is because they are afraid of the United States might. Any time you find a country doing what Russia did to Hungary, one of their own satellites, then what pity, what consideration can we expect from them?

This year the United States Steel Corp. declared its highest dividends in history. General Motors reports the same way and yet we are paying labor the highest pay scales they have ever known and on top of this, we are paying income taxes far beyond those of any other years in our history. Yet, with all this, we still are the richest, most progressive people on earth and the proof of it lies in the fact that we enjoy more of the world's luxury living than any other people. We can pay taxes, we should pay them and we should be glad to do so, realizing that our money goes to safeguard our lives and those of our children and from atomic destruction. A devastating war may come regardless, but, if it does, we will know that we have at least tried to live side by side with our neighbors in peace. If we can get along with England, France, Germany, Japan, and the rest of the allied world, then why is it that we cannot get along with the people of Communist countries? Russia, to my knowledge has made many commitments, some of which looked encouraging but you name me a single instance in which the Russians have every carried out one commitment they have made. They are a deceitful people, a nation no one can trust and our only protection is to have an Army, Navy, and Air Force second to none anywhere on earth. To do that costs money and constitutes our main bill of expense, income-tax wise.

I know there are many who advocate small reductions in income-tax payments, but bunch the many of these together and chances are good you and I would enjoy the privilege of probably buying an extra carton of cigarettes with the saving. It is the enormous cost of making bombs, missiles, aircraft of all kinds, training Army and Air Force as well as naval forces to handle electronic devices used in warfare today, that is costing so much. Sometimes I wonder where it will all wind up, but regardless. right now, we have to pay the fiddler to keep Russia in line—don't you think so?

Fraternally yours,

CLIFF BOUVETTE.

Let these corporations to which the enclosed clippings refer take their industries to some other land and work there. Where would they go? Where on earth could they reap the (restricted?) profits they speak of, due to income taxes? Where could they pay those who toil for a living so much—where could they enjoy the luxury living they have here. Some of these big outfits have a quality of patriotism that certainly is lacking. We are living in an age wherein we sit squarely upon a hydrogen bomb that threatens to annihilate all living things. If we can weather this era a few more years, perhaps we will emerge into an era of peace and security. Right now we need to be prepared. Our country is the leader in the world, the lone, single light shining in a world damn near dark with despair.

C. W. B.

Pennsylvania Supreme Court Justice Honored by United States Navy

EXTENSION OF REMARKS

OF

HON. JAMES C. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. FULTON. Mr. Speaker, it is with real pleasure that I call to the attention of Congress the fine patriotic service rendered to our Government and the American people by Pennsylvania Supreme Court Justice Michael A. Musmanno. It is a double pleasure to honor Justice Musmanno as he is a patriotic citizen of our local community and a good personal friend, whose untiring service in many fields has won him the respect, loyalty, and affection which he certainly deserves.

Justice Musmanno comes from a family of patriots which has made the supreme sacrifice to our good country of one of its four sons, Neal Musmanno, brother of the justice, who lost his life on the battlefields of France in World War I.

Judge William F. Cercone, of Stowe Township, one of our distinguished and successful judges of common pleas court of Allegheny County, is one of the 11 nephews of Justice Musmanno who served on active duty in World War II.

It has been a pleasure to be a personal friend of Justice Musmanno, Judge William F. Cercone, and the entire family.

[From the Pittsburgh Legal Journal of August 5, 1957]

JUSTICE MUSMANNO IS NOW A REAR ADMIRAL

Pennsylvania Supreme Court Justice Michael A. Musmanno, who has been laden with honors in his active and history-making life, has now achieved one of the most renowned in the official life of America. Last week the Navy Department notified him that "having been specially commended by the Head of the Executive Department for your performance of duty in actual combat you have been transferred to the Naval Reserve retired list with the rank of rear admiral. Your records indicate that you served a total of 6 years, 3 months and 9 days of active duty, not including active duty for training."

Vice Adm. J. L. Holloway, Jr., Chief of Naval Personnel in Washington, D. C., in congratulating Admiral Musmanno on his promotion said: "Our country owes a debt of gratitude to you and to other officers of your calibre who, during your most productive years, sacrificed so much by making your services available to your country. Your devotion to duty has contributed in a large measure to the security of this Nation. I know that the Navy can depend upon your support during the years to come." Admiral Musmanno, although now on the retired list, is subject to recall for active duty at any time.

Admiral Musmanno first enlisted in the Naval Militia when he was only 17 years of age. He participated in both World Wars, although in neither war was he subject to conscription. He was too young to be drafted in World War I, and he was above the draft age in World War II.

Musmanno comes from a family of patriots. There were four sons in the family: Pasquale, Neal, Samuel, and Michael. Neal made the supreme sacrifice as a soldier on the battlefields of France in World War I; Samuel won a lieutenant's commission in battle in the same war; Pasquale, now a retired lieutenant colonel, served in Colonel Theodore Roosevelt's famed Rough Riders in Cuba and the Philippines. Admiral Musmanno has 11 nephews. In World War II, all of them were in active military service.

In World War II, Admiral Musmanno, then lieutenant commander, was twice wounded in action. In addition to the Purple Heart Medal, twice conferred, he was decorated with the Bronze Star for Valor, Legion of Merit, Navy Expert Pistol Shot Medal, and Army Commendation Ribbon. In addition, he received citations from the Sultan of Morocco, the King of Italy, and the Republic of Italy. In his Supreme Court chambers one can see a case luminous with 19 medals.

In December 1943, Musmanno commanded a ship which was sunk by enemy gunfire in the Adriatic. After clinging to a plank in the water for several hours he was rescued by Italian fishermen. In February 1944, he was wounded at the Battle of Minturno, and later that year, at Mt. Formichi, he was hit in the knee by an aerial bomb fragment. From the Italian Air Corps he received the Gold Flying Badge, the citation for which reads: "This decoration is in recognition of your devotion to duty demonstrated in the flights accomplished during the battles which achieved the liberation, by the valorous troops of the Fifth Army, of Cassino and Bologna."

Musmanno served, during the last months of the war, as naval aide to Gen. Mark W. Clark, who commanded the American Fifth Army and then the 15th Army Group. Musmanno was at Clark's side when the great

general made the historic crossing of the Po River. He was also with General Clark when the German forces in Italy surrendered.

While Musmanno was on duty in Italy he was visited by Adlai Stevenson, at that time Assistant Secretary of the Navy, who said to him: "I have heard some very fine reports about your work and I congratulate you." Stevenson, who was making an investigation for a report to President Roosevelt on conditions in Italy, was accompanied by Musmanno through the war zone.

While still in Navy uniform, President Truman appointed Musmanno president of International Military Tribunal II in Nuremberg, where he presided over the biggest murder trial in history. Twenty-four defendants were charged with 1 million murders. In handing down the judgment in that case, which resulted in the death sentence for 14, Musmanno laid down the now-accepted doctrine in international law that anyone found guilty of mass murder may not escape punishment on the plea that he was obeying superior orders if in fact it is established he helped to formulate such orders.

Reunification of Germany Necessary if Peace Is To Prevail in Europe

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am inserting what is called a general plan for the reunification of Germany in peace and freedom. This material has been prepared by the American Council for the Reunification of Germany with headquarters in the city of Chicago. It is a significant contribution to discussions now in progress relating to the necessity for reunification. Germany is the key to the problem that now exists and in the plan submitted an analysis is made and suggestions are contained in the plan as to how reunification can best be accomplished.

Mr. Speaker, more than 12 years have elapsed since the war in Europe ended. At that time the Russians had moved into eastern Germany and the nation was left divided. It is still divided. Every effort must be made to solve this critical situation and when it is an accomplished fact Europe and the world will be a step closer to peace. The plan follows:

GENERAL PLAN FOR THE REUNIFICATION OF GERMANY IN PEACE AND FREEDOM

(A) PREAMBLE

Reminiscent of the historical significance of national unity as the basis for the unparalleled development of the United States, and the sacrifices for its restoration,

Conscious of America's international responsibility as the leading power of the free world, and its legal and moral obligation to work for the reunification of Germany in freedom,

Aware of the supreme importance of Germany's reunification for peace and prosperity in Europe as well as for the security of the United States,

The American Council for the Reunification of Germany, a private and independent organization of citizens of German descent, resolves to offer constructive proposals to the United States Government and the American public and to this end submits the following general plan for the reunification of Germany:

(B) ANALYSIS OF THE GERMAN PROBLEM

"The strategic location of Germany, its large and skilled population, and its economic potential make Germany a key factor in the future of European security. Divided as it is now it looms like an unhealed sore in the heart of the Continent. Its continued partition between the Communist and free world would be a festering menace to international peace, and any attempt to establish a lasting European system of security without ending that partition would be an illusion."

With this concluding comment on the focal position of Germany as the key to disarmament and peace in Europe, the Subcommittee on Disarmament of the Committee on Foreign Relations of the United States Senate summed up its staff study No. 5, published on December 11, 1956.

I—Great power responsibility

On June 5, 1945, the four allied occupation powers, the United States of America, Great Britain, France, and the U. S. S. R., through the Allied Control Council, assumed supreme authority and thereby full responsibility in Germany. From this responsibility the four great powers have never been released.

The United States, as well as England, as signatories of the Potsdam Agreement of August 2, 1946, are under a legal obligation to treat Germany as a national entity. As is well known and proven by the development since 1945, the United States Government has continuously worked for German reunification, when the German central administration, as visualized in the Potsdam Declaration, could not be put into practice due to Soviet obstructionism in the Allied Control Council.

It is also known and universally recognized that the Soviet Union, represented by Prime Minister Nickolai Bulganin, at the Geneva Summit Conference on July 23, 1955, agreed to the reunification of Germany through free elections. It was the Soviet Union, at the subsequent Foreign Ministers meeting of the four powers at Geneva in November 1955, who made the realization of the four-power directives by the heads of givernment impossible through the introduction of new elements in the discussion, such as the perpetuation of political and economic conditions now existing in the so-called German Democratic Republic (the Soviet Occupation Zone of Germany.)

II—No two German states

Since October 22, 1956, the Soviet Union in its notes to the Western Powers—Britain, France, and the United States—has consistently held the view that there are two German states in existence on the territory of the former German Reich and that German reunification can only be brought about through direct negotiations between the governments of these two German states.

This point of view has repeatedly been rejected by the Western Powers as well as the Federal Government of Germany. Indeed the Soviet theory of two sovereign German states is in flagrant conflict with international law, which rules that governments may change, but the state remains. The German Reich however, has never legally been dissolved. Moreover, the Government of the so-called German Democratic Republic has been imposed, through the force of arms by the Soviet Union upon the population of the Russian occupation zone against their will.

Being the executive branch of a foreign power, it therefore can never claim to be the legitimate government of the GDR, let alone of Germany at large.

On the other hand, the Federal Government in Bonn has diplomatically been recognized by a majority of sovereign nations throughout the world, even including the Soviet Union itself. By most of the free nations, the Bonn government is considered as the only authority entitled to speak for the German people as a whole.

Under these circumstances, the Russian theory of two German states can never hope to be accepted by the American nor by the German people.

C. PROPOSALS

The practical proposals subsequently submitted are partly based on the Eden plan for German reunification, modified and supplemented by suggestions emanating from the discussions at the Geneva Foreign Ministers Conference and the development thereafter, in order to make the plan more acceptable to the Soviet Union, upon whose agreement the success of Germany's reunification will depend.

1. All-German council

Before free all-German elections can be held, a representative body has to make the necessary preparations. It must be vested with authority to inspect and supervise the elections in both parts of Germany and to give the necessary instructions to the administrations in both parts of the country, to insure that the elections are free and orderly conducted.

For this purpose an all-German council should be established, organized on the same principle as the United States Senate, with two members from each German state, be it large or small. The 20 representatives from the 10 German states making up the Federal Republic of Western Germany shall be elected by their state legislatures. Two members from each of the five old German provinces now located in the GDR: Saxony, Thuringia, Saxony-Anhalt, Brandenburg, and Mecklenburg—in the absence of congruent administrative or legislative units—shall be elected to the Laenderkammer (States Assembly). The city of Berlin should also elect 2 delegates to the all-German council, 1 from east and 1 from west Berlin. This would bring the total of the all-German council to 32 members, 21 from the west, and 11 from the east. While rejecting the Soviet zonal demand for representation on par with the Federal Republic, this numerical relation still provides for a proportional preponderance in favor of the GDR in regard to the relation of population (50 : 20—west : east).

The all-German council should render its decisions by a simple majority, as is the case in all democratically operating parliaments.

Its primary task would be the preparation of free elections in all Germany within a reasonable stretch of time (perhaps 3 months) after its constituting session. The council should elect its president and other officers among its midst. One of the most important tasks for the council would be to determine, according to which election law free all-German elections should be held. The council should, therefore, consider and decide, whether the draft laws of the German Bundestag or the Volkskammer (Peoples Chamber) should be applied. If there is no agreement on this question, an integrated version should be worked out. If this proves impossible, too, the election law of the Weimar Republic should be used.

Through the formation of an all-German council no de facto recognition of the GDR would be effected. No direct contract between the Bonn and the Eastern Berlin Government would be necessary either.

2. Free elections

Free elections in both parts of Germany should be held under the authority and supervision of the all-German Council, combined with international observation.

Guaranties should be sought that these elections are truly free, secret, equitable, and direct. The council should see to it that free exchange between both parts of Germany of newspapers, magazines, books, films, pictures and all other mediums of information are guaranteed. To this end it may seek contact with the administrations at Bonn and East Berlin to enlist their cooperation.

The Communist Party in Western Germany and all democratic parties in the Soviet zone (which are presently outlawed) should be readmitted for the specific purpose of free elections to the German National Assembly. Candidates of all parties and from all parts of Germany should be admitted without waiting periods, regardless of their present domicile.

International observation of the elections should be effected by establishing a commission of representatives from the United States, the Soviet Union, Britain, and France, as well as from one neutral European power (Austria, Switzerland, or Sweden). The neutral representative should be selected upon mutual agreement between the four powers. The International Commission should not have the authority to interfere directly in the election process. If irregularities or violations of the election law are reported, they should be brought to the attention of the all-German council. The council, in turn, should form a sufficient number of field teams, one in each election district, including representatives from both East and West Germany, who should be endowed with authority to make local decisions, if necessary, to insure an orderly election process. All violations and the action taken by the field teams should be reported to the council. Throughout the elections the council should remain in continuous session.

As the council's seat, Western Berlin would offer itself as the natural choice. The international observation teams should be attached to and travel with the German inspection teams.

Foreign press radio, TV, and film correspondents from all countries should be admitted in the entire election territory.

3. National assembly

The National Assembly emerging from all-German elections should constitute itself shortly after election, preferably in Western Berlin.

Its primary task shall consist of drafting a German constitution. Besides, it should have preliminary legislative powers as well as the authority to form a provisional all-German Government. As soon as the National Assembly would start functioning, the all-German Council would cease to exist.

The future domestic political, economic, and social system of Germany shall be subject only to the decisions of the German National Assembly, including the Russian postulates to maintain so-called social achievements such as land reform and free education.

After a constitution has been adopted by the German National Assembly, the basic law of the Bonn Republic and the constitution of the GDR automatically expire. The National Assembly should then assume full legislative authority as the Parliament of Germany and elect a permanent German Central Government. The governments in Bonn and East Berlin should then cease to function.

4. European security system

The United States and its allies should—at a new Four Power Summit Conference with the Soviet Union—seek an agreement about a European security system, which would enter into force as soon as Germany is reunified.

It goes without saying that the question of Germany's reunification is closely and inextricably linked with the problem of a European security system.

Such an arrangement should replace the present military pacts of the Western European Union (WEU) and the Warsaw Treaty through a treaty of collective security in Europe. In particular, the new system should contain the following:

(a) A nonaggression commitment of the contracting partners;

(b) Arbitration for the peaceful settlement of differences;

(c) An area of limited armaments and troops between the Western German border and Russia and effective plans for the control of armaments;

(d) Renunciation of the production and stationing of atomic weapons within this territory;

(e) A mutual commitment of support by all partners against any aggression without the possibility of blocking action through a veto;

(f) A mutual guarantee by the United States of America and the U. S. S. R.;

(g) Economic aid to promote regional federation and European integration;

(h) Registration of this treaty with the United Nations as a regional agreement.

(United Nations Charter—Chapter VIII—Regional Arrangements.)

"Article 52: 1. Nothing in the present Charter precludes the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action, provided that such arrangements or agencies and their activities are consistent with the Purposes and Principles of the United Nations.

"2. The Members of the United Nations entering into such agreements or constituting such agencies shall make every effort to achieve pacific settlement of local disputes through such regional arrangements or by such regional agencies before referring them to the Security Council.

"3. The Security Council shall encourage the development of pacific settlement of local disputes through such regional arrangements or by such regional agencies, either on the initiative of the states concerned or by reference from the Security Council.

"Article 53: 1. The Security Council shall, where appropriate, utilize such regional arrangements or agencies for enforcement action under its authority.

"Article 54: The Security Council shall at all times be kept fully informed of activities undertaken or in contemplation under regional arrangements or by regional agencies for the maintenance of international peace and security."

As a first step, Poland, Czechoslovakia, and reunited Germany should be released from their treaty obligations in the Warsaw Pact and NATO, respectively, to form the nucleus of this European Security System. Ironclad guaranties should be sought—possibly through the U. N. Security Council—for the territorial integrity and political independence of these nations during a transitional period, until the European Security Treaty (EST) is fully in force.

The second step should include Hungary, Rumania, Bulgaria, and Albania in the EST. Other nations—such as Yugoslavia and Sweden—could join through their own free decision, if they so desire.

Practical machinery should be created to enforce the provisions of this European Security Treaty, such as a Permanent Ambassadorial Conference and/or an International Court of Arbitration, if the member nations do not prefer to accept existing media of international arbitration and reconciliation by the United Nations or the International Court of Justice in The Hague.

Above all, a guaranty by the United Nations and the Soviet Union would give EST the necessary political stability, without committing these two great powers directly as members.

As EST would grow into a truly comprehensive European organization, it could—and should—absorb such institutions as the Council of Europe in Strassburg and other European agencies. As new and undoubtedly highly suitable site for an all-European Parliament, the city of Vienna has repeatedly been suggested.

As far as the willingness of the German people itself is concerned, to join a system of collective security in Europe, the Bonn Basic Law, in its article No. 24 has already declared to sacrifice some of its own sovereignty for the sake of peace:

"(1) The Federation may, by legislation, transfer sovereign powers to international institutions.

"(2) In order to preserve peace, the Federation may join a system of mutual collective security; in doing so it will consent to those limitations of its sovereign powers which will bring about and secure a peaceful and lasting order in Europe and among the nations of the world.

"(3) For the settlement of international disputes, the Federation will join in a general, comprehensive, obligatory system of international arbitration."

5. Military alliances

At the Geneva Conference, the problem of Germany's membership in NATO caused the Russians to refuse free elections in their zone, if reunited Germany was also to become a member of the North Atlantic Alliance. Russian fears of NATO, however unjustified, would be greatly enhanced if it were spearheaded by a reunified, armed, and again powerful Germany.

All western assurances that the NATO is meant purely for defensive purposes and that a reunited Germany would not be obligated to join NATO, but rather be free to join any military alliance she wanted to, failed to allay these Russian fears. This fact has been brought to light repeatedly through statements by V. M. Molotov, Nikita Khrushchev, and Marshal Nikolai Bulganin. The Soviet leaders have made it quite clear that nothing would satisfy their security requirements, but the restriction for Germany to join any military alliance with one of her former enemies in World War II.

This Russian demand has been branded in western circles as a bid for Germany's neutralization. However, this need not be so. Congressman HENRY REUSS, in a speech before the Steuben Society of America on May 21, 1955 (published in the CONGRESSIONAL RECORD of May 23, p. A3560) had this to say about the subject:

"At the same time, by dropping our insistence that Germany adhere to the western bloc for military purposes, we might force Russia to consent to the unification of Germany under what, in the last analysis, would be western auspices for every purpose other than military. * * * While no longer a member of the western military alliance, Germany would not be required to forego membership in the European Coal and Steel Community, the Organization for European Economic Cooperation, the Council of Europe, even of a transatlantic economic and political NATO, nor of the United Nations."

6. Troop withdrawals

Naturally, the complete reunification of Germany and creation of a European security system would depend on the withdrawal of all foreign troops from Central and Eastern Europe. It is here, where the crux of the whole problem rests.

The great powers, quite understandably, want to make sure that the territory they now hold in Central Europe must not fall into the military orbit of their opponent, if and when their own troops withdraw. In the absence of mutual trust and an effective con-

trol system, the troops of West and East simply stayed where the end of World War II left them. Thus the unfortunate and unjust frontier runs right across Germany, dividing the German people into two different military camps.

American opinion on the question of troop withdrawal has recently been focussed by spokesmen of both political parties in almost identical terms. Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, member of the Foreign Relations Committee of the Senate in a speech before the Overseas Press Club in New York on December 20, 1956, had this to say:

"Germany is the crux of this matter. A revolt in East Germany in any way comparable to that which occurred in Hungary would have even more serious repercussions. It behooves us, therefore, constantly to seek new ways and means of achieving our objective of a reunified Germany. It might be worthwhile, for example, to consider a European security arrangement of which an important part might be an agreement whereby we would pull our troops out of West Germany if the Russians would pull their troops out of East Germany."

Congressman LAWRENCE H. SMITH, Republican, of Wisconsin, concurred later on with this statement: "In Europe the potential for peace is Germany. Every effort should be exerted to unify that unhappy land. Our military policies need to be reexamined. The German people should work out their problem under a withdrawal plan of United States and Russian military forces. This is not an impossible solution. Western Europe looks to Germany as a stopper against further Communist aggression."

The Western Allies, France and Britain, have already started to substantially reduce their military forces in Western Germany, without a political settlement of the German question and no equivalent on the part of the Soviet Union. The United States, therefore, if and when it becomes necessary to reduce its troops in Germany, should not forfeit its right for a political compensation from the Russians, that is, to secure Russian withdrawal from Germany at the same time and under the same conditions as the American withdrawal is effected.

Meanwhile, as the Western Powers prepare for their withdrawal from German territory, no power vacuum will be created. The Western German forces of the "Bundeswehr" have reached—at the time of this writing—approximately 100,000 men. These forces could further be built up to approximately 250,000 men, a strength which is being considered by German military experts both feasible and sufficient. No potential aggressor could dare to attack Germany in the face of such forces and go unpunished, while the troops of the great powers are leaving German soil.

"In further negotiations relating either to demilitarization or to troop withdrawals," Senator HUMPHREY summed it up, "the United States would need to be alert to several factors: (1) any redeployment of troops in the zone must not weaken the overall relative military strength of NATO powers in Europe and in no case should American troops be withdrawn from the European area; (2) the security of all European states from armed aggression from any source must be assured; (3) the agreement on setting up the zone of limited armaments and forces must include provision for the reunification of Germany in freedom; and (4) a balance of armed forces and armaments between the sides within the zone must be maintained."

7. Regrouping of NATO

Although the Federal Republic of Germany—upon ratification of the European Security Treaty by the all-German parliament—will have to be released from its NATO obligations (just as the GDR from the Warsaw Pact) the overall strength of NATO forces in Europe need not be weakened. This could be accomplished by the admission of Spain into NATO, which commands more than 20 divisions as well as an impressive strategic position on the southwestern peninsula of Europe. The United States—already possessing air and naval bases in Spain under a mutual military treaty—would then be in a position to redeploy their troops from Western Germany to Spain.

The Iberian Peninsula would then become the most important American glacis on the European Continent. Under these auspices, the regrouping of NATO and the redeployment of military forces from Germany to Spain would not only replace the expected 12 German divisions for the Western Alliance, but in every way more than compensate its defense contribution to NATO.

In brief, the center of gravity of American military power would then shift from the endangered center of Europe to its safe periphery. Through the advancement of intermediate ballistic missiles the heartlands of the Soviet Union would still be within the striking range of American forces.

8. Peace treaty

All questions pertaining to the German problem, which cannot be solved through an agreement on German reunification and European security, should be left open and postponed for a peace conference between the former Allies and the German Reich. In particular, unsettled border disputes such as the Oder-Neisse line between Germany and Poland should be settled—in accordance with the Potsdam agreement—through a peace treaty. Also the right of the German refugees to return to their native lands—if located outside the German borders of 1937—should be subject to such a peace treaty. To this end, peace negotiations should be initiated as soon as the new German Central Government is ready to operate.

Germany should become a member of the United Nations, as already suggested at the Berlin Conference in 1954, where the Soviet Union as well as the West pledged to support a German application for membership, after the country is reunited under one government.

D. CONCLUSIONS

More than 12 years have elapsed since the cessation of hostilities in Europe, but Germany is still divided. The nations of the world are engaged in a hectic atomic arms race, which threatens to culminate in a nuclear holocaust of apocalyptic proportions. It is now universally acknowledged that the key to the solution of the international stalemate in East-West relations lies in a solution of the German problem.

European security and world disarmament hinge on the question of Germany's reunification. It is therefore imperative that an early solution be sought to this problem and the most energetic efforts—coupled with skill and perseverance—be undertaken to bring it to a successful conclusion.

May this plan help that the reunification of Germany in freedom may set off a chain reaction for peace throughout the world, as atomic energy can set off a chain reaction for war.

The division of Germany has brought untold human suffering over a large number of innocent individuals. Its continued partition cannot—and will not—in the long run benefit the aspirations of the Soviet Union. On the contrary, this attempt would eventually boomerang and bring ultimate disaster upon those who seek to perpetuate an untenable situation in Europe. For nations—under God—are natural human entities like families, on whom the word of the Holy Scripture applies:

"What God has put together, man shall not take asunder."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Coordinated Water Program for Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. JOHNSON of Texas. Mr. President, there is a widespread and growing recognition among the people of Texas that the tremendous problem of adequate development of our water resources can be solved only through coordinated effort by Federal, State, and local agencies.

Such teamwork is called for strongly by the Wichita Falls (Tex.) Record News in a recent editorial. I ask unanimous consent that this wise and thoughtful discussion be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wichita Falls Record News of August 1, 1957]

WATER PROGRAM

Senator LYNDON JOHNSON announced this week he had requested urgently the Corps of Engineers and the Bureau of Reclamation to give him an overall water program for Texas not later than April 30, 1958. He added he expected the two agencies to respond and to work together down to the field level in devising and carrying out the program thus created.

It has been reliably estimated Texas citizens lost in excess of $100 million this year during the heavy rains because of the lack of a proper water-conservation and flood-protection program.

Further, it is estimated enough water to last the cities of the State for 6 years needlessly flowed downstream and into the ocean because we had not previously devised and created a proper program.

Senator JOHNSON said the cost to the Federal Government of the program would be about $1.3 billions, spent over a period of 25 to 30 years. But he added the investment was justified by the size of the national stake in the water-development program.

The double purpose of preventing flood losses and preventing the State from running out of water are purposes deserving the best efforts of both the State and Federal Governments.

The Senator said the teamwork at State and local levels is essential to the success of the whole proposal. The suggestion is proposed with the premise that Texas is sovereign over its water resources and can best determine how to tie its efforts into those of the Federal agencies.

This deadline set by Texas' senior Senator creates an urgent responsibility for local and State authorities. It proposes we Texans tackle the problem before us and be ready to coordinate our efforts with those proposed for the Federal program.

Neither the local communities nor the State as a whole can afford to not be ready to take complete advantage of a workable program devised for the whole State.

We have water problems in Wichita Falls and will continue to have them as long as this city grows. We all should be ready to meet those problems with diligence and intelligence or we will be left high and dry when a general program for the State is devised and put into action.

Inflation—America's No. 1 Domestic Problem

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address I made over the network in Wisconsin. The subject was "Inflation—America's No. 1 Domestic Problem."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INFLATION—AMERICA'S NO. 1 DOMESTIC PROBLEM

"Inflation—rising prices"—those three words spell out the most difficult single domestic problem facing our country.

Inflation is a pain in the neck, and it is a pain in the pocketbook and wallet.

It is a particular headache, confronting tens of millions of Americans who are living on virtually fixed incomes. These Americans are badly squeezed by static salaries and rising prices.

Here in the Congress, we have been studying this inflationary problem.

The Senate Finance Committee has been holding hearings on the subject of the United States Treasury's financial policies. This committee has been looking at the so-called tight money situation in our country—high-interest rates for example.

And another committee is likewise holding hearings. Our Senate Antimonopoly Subcommittee has been looking at the subject of what are called administered prices. That means prices in key industries, like steel, which don't tend to drop, even when you would normally expect the prices to go down. These administered prices tend to remain stationary or to go up.

Well, what is the net effect of rising prices, the net effect of inflation?

The effect is that every single dollar in your savings bank, in your United States savings bonds, in your old-age pension, in your insurance policy, your annuity, tends to lose its purchasing power.

You and I know that every 100-cent dollar that you possess is really just a 50-cent dollar, compared to what that same dollar would bring back in prewar period.

So, now, the big question is: How can we prevent further loss in the dollar's purchasing power?

The answer is: "Through many steps." For one thing, the Federal Government must avoid a policy of printing press money—wild expansion of the supply of greenbacks.

For another thing, labor and management must cooperate voluntarily, so as not to force huge wage increases and then price increases.

This inflation problem must be licked. We dare not permit Americans to lose confidence in the value of their own money.

Fortunately, I don't think that there is reason for fear.

Your American dollar is still one of the strongest currencies in the world.

When the United States Treasury backs up your dollar and backs up your savings bonds, you have every reason to be confident in the Treasury's pledge.

But it is up to each of us to avoid inflationary pressures. It is up to us to save more of our money. Keep putting your money into United States savings bonds, into deposits in the bank, into the savings and loan association and into insurance.

When you or I save money, we tend to reduce the pressure of inflation. On the other hand, if we tend to take out more credit than we actually need and than we can actually pay for, the net result is more inflation.

Credit is a wonderful instrument. But if you or I go overboard and take out too much credit, if we buy too many things without any downpayments or without substantial downpayments, then, you or I are liable to find ourselves so deep in debt that we can never get out of it.

And the deeper you or I or anyone gets into debt, the more inflation tends to increase.

So, if you and I want to defeat the number one domestic enemy in the United States—inflation—we each have an important role to fulfill. Let's keep prices down.

The American Jeweled Watch Industry

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. DIRKSEN. Mr. President, the importance of the American jeweled watch industry to national security has been attested by three past administrative findings by the Munitions Board, the National Security Resources Board, and the Office of Defense Mobilization.

It is certainly to be expected that the ODM will soon issue another such finding on the basis of the study it has been making for the past 19 months.

But the essential role of the industry in the field of military security should not be allowed to obscure completely the very important contributions by this industry to our industrial and scientific progress and well-being. The skills, the facilities and the products of the American companies are used daily by all segments of our commerce and industry.

A recent story of a contribution to coronary sugery by the Elgin National Watch Co. illustrates the variety of ways in which we benefit from horological re-

search and development. I would like to have printed in the RECORD the story as it appeared in the Chicago Daily Tribune for May 9, together with a letter to the editor of the Chicago Tribune from a reader in Waterloo, Iowa, with some highly significant comments on the story.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of May 9, 1957]

WATCH SPRING KEEPS HER HEART TICKING

DETROIT, May 8.—A year ago a 34-year-old Detroit mother of 5 children was told she had a life expectancy of 6 months. Today she is leading a near normal life—the main spring of a watch serving as a heart valve.

She is Mrs. Mabel Streeter. Wayne State University says that on April 5, 1956, she became the first person in whom a leaky heart valve was replaced by a metal spring.

The artificial valve was developed by doctors from the Wayne University College of Medicine and the Elgin National Watch Co. from an alloy used in watch main springs. The company predicted it would last 300 years.

Mrs. Streeter was considered critically ill 18 months ago, unable to do any housework or walk up steps without aid. Now, her doctors say, she does her housework and some shopping and can climb eight steps without undue fatigue.

When the operation was performed, the doctors described her condition as rapid downhill. The mitral valve in the left side of her heart had calcified and its flaps turned inward, leaving a hole that never fully closed between heartbeats. Rheumatic fever was blamed for searring the valve.

The valve normally opens to let blood from the lungs into the left ventricle—the main pumping chamber—and closes as the heart gushes blood into the aorta or main artery. But Mrs. Streeter's valve permitted the blood to pass both ways between the chambers and the body got only a trickle, so to speak.

Doctors who figured her life expectancy at 6 months decided to try the metal valve technique—used in 110 experiments on dogs, but never on humans. They had a record of installing 45 valves in aortic openings of dogs.

A surgical team at Wayne State had been working for 2 years on perfection of the metal valve for just such an emergency as beset Mrs. Streeter. One of their first steps was to find an ideal metal.

A watch-repair man suggested the new alloy main spring. The doctors went to Elgin, which volunteered to work with them. The valve fashioned by the surgeons, is diamond shaped, as large as a penny, with a nylon web across it. When the heart is pumping it snaps up over the mitral valve opening; snaps down then to let in a new supply into the pumping chamber.

The heart muscle works the valve; it did from the start.

The team which did the job includes Drs. James H. Wible, Lyle F. Jacobson, Prescott Jordon, Jr., and Charles G. Johnston.

They reported at a news conference yesterday that Mrs. Streeter's blood pressure now is normal.

[From the Chicago Daily Tribune of May 28, 1957]

WATCH BYPRODUCTS

WATERLOO, IOWA., May 10.—The story in your paper of May 9 describing the installation of a spring powered valve in a human heart by a group of surgeons supplies another very strong reason for the preservation of the American watch manufacturing industry. The metal used in this spring was developed by an American watch manufacturer. There is no comparable metal used in any other line. This is only another one of the many things first developed and used in this industry that has proven valuable in wholly unrelated lines and in unforeseen ways.

The early steam locomotives used valve mechanisms developed by clock and watch makers. Practically all manufacturing techniques are based on ideas first used in this trade. All production presses are oversized descendants of the common stake tool used by watchmakers for centuries. The now very common three-jaw draw-in chuck was first developed for use by the Boston Watch Co. The automatic progressive milling machine was developed for making watch plates.

The idea of mass produced interchangeable parts is claimed by several industries—clocks, watches, firearms, and typewriters. As these industries were all largely concentrated in New England and Illinois, there was considerable movement of personnel among them and probably considerable exchange of ideas.

American manufacturers were the first to make accurate timepieces available to the masses at prices they could afford. This American industry should be preserved. It has produced revolutionary and successful ideas and is still doing so. It may come up with more in the future.

O. B. MCCHESNEY.

North American Regional Broadcasting Agreement

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mr. Andrew Haley in support of the Third North American Regional Broadcasting Agreement and a separate agreement between the United States and Mexico designed to promote the effective use by both countries of the standard broadcasting band. I am sure that this concise analysis of the provisions and merits of these agreements will be of interest to all those associated with the radio industry, not only in my State but in other States as well.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY ANDREW G. HALEY IN SUPPORT OF RATIFICATION BY THE SENATE OF THE NORTH AMERICAN REGIONAL BROADCASTING AGREEMENT AND FINAL PROTOCOL THERETO AND OF THE AGREEMENT BETWEEN THE UNITED STATES OF AMERICA AND THE UNITED MEXICAN STATES CONCERNING RADIO BROADCASTING IN THE STANDARD BROADCAST BAND

My name is Andrew G. Haley, 1735 De Sales Street NW., Washington 6, D. C.

As an industry adviser, I attended all the sessions of the Third North American Regional Broadcasting Conference held in Montreal, Cuba, and Washington, D. C. I also attended meetings of the United States-Mexico Broadcasting Conference held November-December 1954 in Mexico City, and of the second session held in Washington, D. C., July 1955.

I strongly urge ratification of the North American Regional Broadcasting Agreement and of the agreement between the United States and Mexico concerning radio broadcasting in the standard broadcast band. The official United States delegations at both conferences admirably handled their task of fighting for the welfare of all the United States stations and for the welfare of the public.

As is well known, the control of radio power is accomplished by limiting the power fed to the transmitter or by the employment of a directional antenna. Prior to the signing of the First North American Regional Broadcasting Agreement, which became effective in March 1941, no rules or procedures to control radio power in the North American countries existed. Frequencies were assigned to the North American countries with no thought to the overall effect on radio broadcasting reception. Reception was so bad in the United States, as a result of interference from stations of other countries in North America, that the value of radio broadcasting as a medium of mass communication was severely diminished and the economic ruin of the radio industry was imminent. Without any agreement, the North American nations could use any frequency and any power that suited their purpose and not particularly concern themselves with giving protection to other countries.

The First North American Regional Broadcasting Agreement ran for a period of 5 years from March 1941. This agreement provided for uniform technical standards, licensing procedures, and legalized use of the channels among the nations. The immediate result was a definite improvement over the chaotic conditions and distorted reception prevalent for so many years.

On February 25, 1946, the Second North American Regional Broadcasting Conference was held at Washington, D. C., at which time the governments of the countries in the North American region concluded an interim agreement [modus vivendi] which, in effect, continued the provisions of NARBA in force until March 28, 1949.

Article XV of the modus vivendi provided for the convening of the Third North American Regional Broadcasting Conference on September 15, 1947. By general agreement, it was decided to postpone the conference until September 15, 1949, some 6 months after the modus vivendi had expired.

With the expiration of the interim agreement, the situation was fast returning to the pre-1937 status. All channel priorities had expired and many new stations came into existence. A delegation from the United States was sent to a meeting of technicians held in Habana from November 1, 1947, to December 6, 1947, in an effort to form a basis for agreement. Canada, Cuba, Mexico, and Newfoundland were represented at the meeting. Haiti and the Dominican Republic were represented by observers from their own governments. There were no delegates from the Bahamas. Agreement was reached upon a number of largely technical provisions, particularly technical definitions to serve as a suggested working basis for each country in the preparation of further proposals for the Third NARBA Conference.

The Governments of Canada, Bahamas, Dominican Republic, Cuba, Jamaica, and the United States were represented in a conference in Montreal from September 13, 1949, until December 10, 1949, in an attempt to negotiate a new North American Regional Broadcasting Agreement relative to the use of standard broadcast channels in the North American region. Mexico and Haiti, which were parties to the North American Regional Broadcasting Agreement of 1937, as modified by the interim agreement of 1946, did not participate in the Montreal Conference.

Whether the new treaty should be based upon the principles of the agreement of 1937, as modified by the interim agreement of 1946, or upon entirely new principles to be negotiated, was the main issue at Montreal. All of the governments participating in the Conference, with the exception of

Cuba, were agreeable to negotiating a new treaty utilizing the previous agreement as a basis of discussion. Even Mexico, not represented at the Conference, telegraphed its assent to merely extending the previous agreement until 1953.

Cuba demanded the assignment of clear channel stations to it as well as the abolition of the 650-mile rule of the previous agreement which prevented Cuba from effectively establishing class II stations on any of the United States clear channel stations of the class I–A category.

Both Canada and Cuba took the position that the United States should not have any further right of exploitation of its class I–A clear channels. In this connection, the United States had clearly indicated that since it had not made its final decision with respect to the use of clear channels, it should be accorded continued freedom of action on the class I–A stations which had been assigned to it under previous agreement. Cuba rejected the principle of international radio law to the effect that "prior use of a channel secures prior rights thereto."

Representatives of Cuba and the United States met in February and March 1950, at Habana, in an effort to work out bilateral matters to be presented at the second session of the Third North American Regional Broadcasting Conference. Notwithstanding any agreements which they might reach, Cuba desired to be free to reopen discussion at the forthcoming second session of the regional conference concerning the 650-mile rule; the desire of Cuba for engineering standards which would promote their use of clear channels which had been assigned under earlier agreements for I–A use in the United States; and the protection desired by Cuba for a number of Cuban stations. Since all of this virtually nullified any purpose for seeking an agreement with Cuba, the conference was concluded.

The second session of the Third NARBA Conference met in Washington, D. C., from September 6 to November 15, 1950. The basic issues confronting the conference, at which Mexico was represented for the first time, stemmed from the desire of Cuba and Mexico to use more high-power stations within their countries than could be accommodated without creating serious interference to existing stations in the United States. The main impact of such demands was on the United States class I–A clear-channel stations and upon certain regional stations in the eastern southeastern, and central portions of the United States, using frequencies below 1,200 kilocycles.

In attempting to enhance her right to establish stations in Cuba on United States class I–A clear chanels, Cuba proposed to eliminate the so-called 650-mile rule of the past NARBA which prevented other countries from establishing stations on our clear channels nearer than 650 miles from our border.

The Mexican delegation formally withdrew from the Conference on October 18, 1950. Mexico and the United States failed to reach an agreement largely because Mexico would not accept the doctrine that continued rights to the use of a radio channel are acquired by prior usage. Moreover, they claimed that any rights to the use of class I-A channels acquired under the NARBA agreement of 1937 had expired at the termination of NARBA and that any extension of such rights was subject to renegotiation among the nations of the region. Mexico also felt that the rapid expansion of stations within the United States had precluded Mexico from securing a needed expansion of radio facilities within the terms of NARBA 1937.

Representatives of the Governments of the Bahama Islands, Canada, Cuba, the Dominican Republic, Jamaica, and the United States signed an agreement in November 1950. The Canadian Government recently ratified this agreement. The purpose of the agreement was to establish fair and equitable principles governing and regulating the common use of the broadcasting band in the North American region so that each country within the region might make the most effective technical use thereof with the minimum of interference between broadcasting stations.

The agreement negotiated as a result of the Third North American Regional Broadcasting Conference is a better legal document than the first NARBA and more clearly establishes prior rights to the use of channels. In particular, even though the term of the agreement is only 5 years, it carries with it the provision that it will continue in existence until the signing of a new agreement.

The third NARBA defines a clear channel as a broadcasting channel to which there are assigned primarily one or more class I stations protected by agreement from interference. The conference established 59 clear broadcasting channels. The stations which are permitted to use these clear-channel broadcasting frequencies are set forth in an assignment annexed to the agreement. The conference also determined an order of priority for the assignment of clear channels to class I stations. The power limitation on such stations is 50 kilowatts or more. Class I–B stations were established as a subcategory for clear-channel assignments. These stations operate on the clear-channel designations with the power limitation of 10, 25, or 50 kilowatts, and also receive their assignments on the priority basis established as part of the agreement. All of the class I stations operate on clear-channel assignments to provide broadcasting service over extensive areas by both groundwave and skywave signals.

The agreement also establishes class II stations, which are stations other than class I stations operating on clear channels but designed to broadcast by means of groundwave signals only. Their power range is from 0.25 to 50 kilowatts.

Another category of station was established called a class III station, which is limited in power from 0.5 to 5 kilowatts (except that in Cuba certain stations in this category operate with a power of 10 kilowatts). These stations are designed to provide service by means of groundwave signals only and operate on regional channels. In this connection, the conference determined the frequencies to be designated as regional channels. These are assigned to several broadcasting stations so protected from interference as to provide broadcasting service over wide areas by means of groundwave signals.

The protection to be accorded to channels listed in the third NARBA is specified in the agreement, but the provision leaves the United States completely free to decide the clear-channel case.

The third NARBA contains a few limitations on the privilege of some clear-channel stations to go to unlimited power. These channels are limited in respect to their freedom to change the location of their station, the future use of higher power, and changes in antenna radiation characteristics. The reason for these limitations is to protect Cuba's right to use certain clear channels. However, it is pointed out that these stations do not have to afford Cuba protection as long as they do not change their present operations. Meanwhile, the United States stations on these channels are to be protected by Cuba's use of directional antennas limiting interference. This is a definite advantage to United States rural listeners.

The Bilateral Broadcasting Conference between the United States and Mexico resulted in the signing of an agreement in January 1957, the purpose of which is to promote and maintain the effective use by both countries of the standard broadcasting band and to eliminate objectionable interference between stations of each country. The agreement also declares that the pertinent provisions of the agreement will be incorporated, in substance, into the next North American Regional Broadcasting Agreement that is concluded. The term of the agreement is 5 years and may be terminated by a notice of denunciation by either country to take effect 1 year after the date of receipt of the notice.

The agreement defines a clear channel as one on which the dominant station or stations render service over wide areas and which are cleared of objectionable interference within their primary service areas and over all or a substantial portion of their secondary service areas. The conference established 60 clear broadcasting channels and frequencies assigned as clear channels are set forth in an annex to the agreement. Both parties recognize the priorities of the other in the use of class I clear channels.

Class I clear channels are subdivided into class I–A and class I–B. A class I–A station may operate with power of 50 kilowatts or more, while a class I–B station may operate with a power not less than 10 kilowatts or more than 50 kilowatts.

Under the agreement, Mexico has priority on the use of 540 kilocycles, 730 kilocycles, 800 kilocycles, 900 kilocycles, 1050 kilocycles, 1220 kilocycles, and 1570 kilocycles as class I–A clear channels. In the case of 730 kilocycles, because of the limitation on Mexican use of this frequency caused by the operation of stations in the United States on the frequency 740 kilocycles, the parties are continuing their study to arrive at a satisfactory adjustment in the use of 740 kilocycles by the United States. The United States is recognized as having priority on the use of 25 class I–A clear channels. Both parties have agreed that neither will make nighttime assignments on the channels upon which the country has class I–A priority except as set forth in annex I of the agreement.

Mexico has priority on the use as class I–B clear channels of 690 kilocycles, 850 kilocycles, 940 kilocycles, 1000 kilocycles, 1060 kilocycles, 1090 kilocycles, and 1550 kilocycles. The United States has priority on the use of 34 class I–B clear channels.

The agreement also provides for a class II clear channel which is designed to render service over a primary service area but is limited by and subject to interference as may be received from class I stations. A class II station may operate with power of not less than 100 watts or more than 50 kilowatts. Daytime class II assignments upon which the other country has the class I–A priority are subject to certain power and minimum distance restrictions as set forth in the agreement.

A class III regional channel is one on which several stations may be assigned to operate with power not in excess of 25 kilowatts, or if located within an area of 62 miles of the border, with power not in excess of 5 kilowatts. A class IV local channel is one on which several stations may operate with 1 kilowatt daytime, and 500 watts nighttime, at a distance of 93 miles from the border. Class IV stations located more than 62 miles from the border, but less than 93 miles may operate with a power of 1 kilowatt daytime and 250 watts nighttime.

The agreement also sets forth a notification procedure of new broadcasting station assignments or changes in existing broadcasting station assignments similar to the procedure now followed under NARBA.

The United States-Mexico agreement embodies the most fair and equitable terms available under all the circumstances, especially the recognition by Mexico of the doctrine that continued rights to the use of a radio channel are acquired by prior usage. Because of the rapid growth of the broadcasting industry and the increase of the number of stations now in operation in the United States, it would be folly not to ratify

this agreement when all major differences have been settled and an agreement formalized between the United States and Mexico.

If both the North American Regional Broadcasting Agreement and the agreement between the United States of America and the United Mexican States concerning radio broadcasting in the standard broadcast band are not ratified, foreign stations will cease to recognize any priority rights of the United States on our channels since these rights would have been lost with the expiration of the interim agreement. Thus, legally, other countries could establish high-power stations on our low-power channels completely ruining the vast majority of our small-business men in the radio industry. Also, low-power stations could be put on our 50-kilowatt stations' channels, thus ruining rural coverage.

I strongly urge ratification by the United States of both the Third North American Regional Broadcasting Agreement and the agreement between the United States of America and the united Mexican states.

Progress in Small Towns

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. JOHNSON of Texas. Mr. President, those of us who are so fortunate as to have been born and brought up in small towns and rural communities are fully aware of the many advantages afforded residents of the Main Streets of America.

A smalltown newspaper in Texas, the Royse City American, recently listed some of those advantages in an editorial that is worthy of widespread circulation. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The small town of America is where the progress of our country is made. It is in the small town where its residents are united, often homogeneous and fully patriotic.

It is in the small towns that community projects and self-improvement reach their fullest expression. Community pride and good citizenship are often more apparent in the small towns of the United States than in larger cities.

In addition, life is more wholesome and probably healthier. The product of the small town—the average United States citizen—is usually a more likeable citizen, and a better balanced one, according to the psychologists. This does not mean that those from the metropolitan areas are abnormal or unattractive citizens, but it merely means that the edge goes to those from the small towns—the typical United States community.

Business is realizing the advantages available in small towns and many of the large corporations are moving their huge plants to the smaller towns of the Nation. More and more, the country's top executives and the wealthiest citizens are moving to small towns, where they can enjoy a slower pace of life, a more normal and a more wholesome life.

While the great metropolitan areas are wonderful to visit, containing amazing examples of engineering genius and business and industrial activity, it is the small town and the rural community which is the backbone of America and where the real progress—the real Americanism from the grassroots—is to be found.

Farm Research

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent that an editorial entitled "Farm Research," which appeared in the August 1, 1957, edition of the Journal and Courier, Lafayette, Ind., be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARM RESEARCH

While the population is increasing and living standards are being improved steadily, it is quite likely that overproduction in the Nation's agriculture will remain a problem for some years to come.

It is possible that the day will come when scarcity will raise new and real concerns. But surpluses are the present concern.

Because of this, increasing attention is being given to greater use of agricultural products in industry. A bipartisan Federal commission, established by the 84th Congress, has been studying this question. In its report, now made public, the commission gives main emphasis to greatly expanded research on new uses for agricultural products.

In this respect, the commission comes to the support of Indiana's Senator CAPEHART and other legislators in their efforts to enact legislation of this nature.

The commission makes the point that comparatively little research is being conducted for agriculture, as compared to industry.

It is stated that industry currently is investing at least $3 billion a year, or 3 percent of gross sales, in research. Estimates on research to find new uses for farm products vary widely, from four-tenths of 1 percent to 1 percent. It seems certain, however, that agriculture lags badly in this respect.

One authority states that the Government plans to spend $1 billion next year to increase farm output and no more than $18 million for research. In the long view there can be no question as to the importance of research relating to production and quality. It must be continued.

On the other hand, the whole economy might well benefit if more were provided now for research on new uses for farm products. The immediate problem is oversupply.

Crop overproduction has become an uncontrollable monster, according to one observer, who holds that a different approach might permit Uncle Sam to wash his hands of the perplexing problem of farm surpluses.

It seems that more and more students are coming to the conclusion that research and development provide the answer to the farm problem. Senator CAPEHART, in a recent address on the Senate floor, stated that the latest bill for agricultural appropriations provided $4 billion for the farm program, but only something like $14 million for research on uses of farm products.

He holds we should be spending as much for new industrial uses for farm crops—new markets—as we have been to find ways to increase agricultural production. Instead of price supports and Government funds to take acres out of production, the Senator looks forward to the day when the farmer may till all his acres to the limit and be assured of a ready market at profitable prices.

The commission supports this line of reasoning. It would seem to merit serious consideration.

Encouraging Private Investment Abroad

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. WILEY. Mr. President, if our friends, the nations of Latin America, desire to speed the improvement of their rising standards of living, as I know they earnestly do, then I say frankly: It is incumbent upon them to do for themselves what is necessary to encourage their own private enterprise system, as well as foreign private investments.

I was pleased to read, therefore, in the August 3 and 6 issues of the Christian Science Monitor, articles by Mr. Norman Ingrey. The articles concern the eighth meeting of the Inter-American Council of Commerce and Production, which recently concluded its sessions in Buenos Aires.

The Inter-American Council has its headquarters in Montevideo. The meeting was fully attended by leading businessmen from below the Rio Grande, with a strong United States delegation, as well.

Many specific business problems were taken up. Steps leading to studies of proposals for a common market were initiated. A constructive spirit highlighted the whole Conference.

I believe these articles will be of interest to my colleagues. Therefore, I ask unanimous consent that the articles, which indicate a program of private self-help for Latin American nations, along commonsense business lines, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of August 3, 1957]

PRIVATE ENTERPRISE WINS LATIN AMERICA

(By Norman Ingrey)

BUENOS AIRES.—A resounding victory for the advocates of free enterprise, with new and promising Latin-American attitudes toward foreign-capital cooperation, was manifested in the results of the 8th plenary meeting of the Inter-American Council of Commerce and Production just concluded here.

These registered the greatest progress so far toward a united business front on continental investment and trading while the conference atmosphere itself reflected hopes of increasing—if only gradually—political implementation of the principles and policies adopted.

The Inter-American Council has its headquarters in Montevideo, Uruguay, and this meeting was fully attended by the Latin-American states, with a delegation from the

United States section, approximately 50 strong, led by Hugh A. Davies.

This victory for free enterprise, it should be explained, was not merely a reaffirmation of recognized tenets of fair trading and dealing. The resolutions proclaimed the way to greater understanding and prosperity, with higher levels of living for the common citizens. As such they incite and undoubtedly will survive tests when submitted to all national governments and the continental political authorities.

EQUAL TREATMENT

There were calls for equal treatment of national and foreign interests. But steps were also taken to advance the common-market idea for these southern countries. The conference also raised its sights above the ordinary business level to hasten and welcome the alluring vistas associated with the atoms for peace program.

Being a gathering of businessmen, naturally there was an essentially business approach to problems, but delegates never ignored the fact that free enterprise was inseparably associated with free government and political application of the fundamental democratic principles.

The background of resurgent Argentine democracy was a great stimulus to the conference. Moreover, Argentina's provisional President Aramburu and members of his government, who have directed the country back on the course of economic liberalism, gave official encouragement to the gathering.

As for the results expressed in resolutions, which were also recommendations, perhaps those listed first were also of first importance.

One of these, grouped under economic development, "considering that competition under private enterprise will provide a greater stimulus to technological improvement, increased productivity, and an improved distribution of goods than obtainable under any system of state planning or state ownership of the means of production," made a series of recommendations that the state keep out of business except where it is absolutely essential to the collective welfare.

NATIONALIZATION CURB

It was also said that governments should operate under the same conditions of accounting and taxation as private business, and on a free-market basis, where they are industrially or commercially active.

Other proposals were: Laws should guarantee private firms against nationalization, providing prompt and just indemnification where such action is necessary in special cases of dire national need; equal facilities for foreign and national investments; no public funds to be employed where private capital is available for projects; elimination of double taxation and inflationary imposts which prejudice the formation of corporate reserves for capital reinvestment; promotion of savings, with investment trusts, to add to domestic capital; and encouragement of private enterprise, so that the national per capita income may be increased.

Under the same economic development grouping, the council called for periodical revaluation of capital equipment, so that new values may correspond to real replacement prices. This request was linked with the inflationary situation in various countries. It was charged that lack of readjustment of these assets means that the national treasury, under the guise of profit taxes, is enacting what is tantamount to a capital levy.

It was suggested that foreign loans, as proceeding through the Export-Import Bank and international banks should be complemented by contributions in local currencies, to strengthen the internal economic and financial conditions of the recipient country.

The need for further foreign credit was seen and recommended from advanced industrialized countries, preferably under the direction of private enterprise. It was recommended, to attract and facilitate such credits, that members, within 1 year, draw up a plan of guaranties for these credits, promoting national legislative amendments where necessary, so that free convertibility can be established in this respect for continental countries. Some institutional promotion may be necessary in this connection, it was considered.

The common market idea was embraced under economic development. "Regional integration," as the formula goes for the moment, is admitted to tend to the establishment of a continental common market, "as a previous step to the goal of a world market." The idea, however, "deserves careful analysis," so a common market committee is being appointed to report within the first half of 1958. It was also stipulated that "regional integration" was only acceptable as a step toward greater world interchange, avoiding bloc formation.

INFLATION RAPPED

Under the grouping of foreign trade, resolutions criticized inflation and state planning as contributing to restrictions between many American states, with self-sufficiency aims distorting trade and discouraging regional specialization. Abolition of existing bilateral pacts was recommended and regional integration also brought up again, with the suggestion that a continental congress should be convened, coordinating with the common-market committee.

The council said that countries with farming surpluses should consult traditional exporters before marketing and, where these operations cannot be avoided, the national currency proceeds should be utilized for capital investment within the buying country, giving preference to essential industries, including agricultural production.

Other resolutions advocated national-transport development, extension of insurance, "but in no case in compulsory form," and improvement of ports and waterways.

The group of recommendations under monetary policy was aimed primarily to halt inflation and encourage sound financing. The resolution on atomic energy came under the grouping of technical cooperation.

The council recommended that those states concerned should gradually do away with restrictions on the peaceful use of atomic energy, without projudice to national security. In this connection it saw a great opportunity for collaboration between the American universities and all economic forces.

[From the Christian Science Monitor of August 6, 1957]

INTER-AMERICAN COUNCIL MEETS—PARLEY SPURS FREE TRADE

(By Norman Ingrey)

BUENOS AIRES.—Free enterprise throughout Latin America is likely to be stimulated, vigorously and promisingly, by the recommendations and messages which went forth from the final sessions of the Inter-American Council of Commerce and Production here.

Resolutions were passed upholding the rights of private, and foreign, capital in trade and investment, demanding the abolition of bilateralism where it still exists with replacement by liberal and comprehensive trade and seeking the elimination of restrictive regulations and practices.

But these calls for rights and concessions constituted no negative challenge. The real challenge, positive and rousing, came in the coupling of this championship of rights with the invitation to embrace the promising vistas of prosperity, on national and citizen levels which are the assured reward of courageous acceptance of democracy in business.

This, of course, was essentially a gathering of leaders in the fields of commerce and production. Members believe in business solutions of national problems. But never before perhaps—in Latin America at least—have political conditions encouraged a bold and challenging note and, what is more important, promised more than sympathetic response from the governments concerned.

For this undoubtedly is also the hour of the rising tide of belief in Latin official quarters that free enterprise is the one sure channel to the ocean of abundance for the masses—the ocean which no political authority has yet found in South America excepting, as in oil-rich Venezuela, by fortuitous fate.

Postwar dictatorships, rash ventures in socialism at home, bilateralism in business abroad, State regulation of business and inflation pervading everywhere—all have failed to raise the standards of living beyond the normal results of changing mode and the imposition of science.

CHALLENGING OPPORTUNITY

Not one word was spoken on the subject, but the delegates knew that theirs was the opportunity to speak challengingly and encouragingly to disillusioned governments and political leaders who are bound to be discredited unless then can produce that to which the common citizen considers he is entitled.

The series of resolutions emanating from this council session tells all the people of this Latin subcontinent that the business leaders have no doubt that their way of running things—the free enterprise way—can produce the goods desired, with no prejudice to any guaranties or benefits they have obtained under their social legislation, often claimed as the most advanced in the world but which, apart from semicancellation through inflation, has failed to contribute to any increased living standards.

Thus practically the whole Latin-American world is more receptive now than at any previous time to the message of business leadership which, in its turn, has been the more conscious of its responsibilities. Governments have been listening in and they will also consider the recommendations, just as these will also go to the Council of Finance Ministers of the Organization of American States which meets through the Inter-American Economic Conference in Buenos Aires this mid-August.

MORE RECEPTIVE AUDIENCE

Thanks to this encouragement, the North American delegation, coming from what the Latins still consider the citadel of private enterprise and certainly the showcase for results obtained, found an easier task than before. Nonetheless, from the fund of its experience, came numerous and substantial contributions to the fundamental conclusions, with the assurance of that further cooperation essential to the fulfillment of expressed ideals as these proceed through the trials of political processing.

If the free enterprise representatives of the United States were reaping at this conference part of the reward for past efforts, credit must also be given to those Latin authorities and businessmen who have had the courage to confess their mistakes and to profit from lessons learned.

The Mexican delegation, for instance, contributed substantially to the formation of healthy opinion at this conference. Their hand, too, was detected in many recommendations which North Americans would gladly have authored.

Mexico, of course, offers the best recent example of transformation from a socialistic system to a greater measure of freedom for private initiative, and the success which has attended their efforts is inspiring others.

For it must not be forgotten that Latin-American business communities have contained many nationalistic leaders who readily embraced socialized industry and trade as providing more secure profits. The polit-

ical and social consequences of this blindness to economic truths have helped their conversion.

Today, the prospects of regional integration, with common markets, and the beckoning "atoms for peace" era are firing the new and adventurous minds in Latin business.

But patience is required as well as investment money. National transport systems came into being largely to serve different export trades. These will have to be extended in different directions before community trade can be substantially expanded. This applies specially to those landlocked or inland states and territories, which were the subject of special conference consideration.

Oregon Shakespearean Festival at Ashland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. NEUBERGER. Mr. President, some Americans mistakenly believe that the only sources of culture and dramatic and literary achievements lie in the great metropolitan communities of the Nation. The fallacy of this belief has been demonstrated over the years by the comparatively small city of Ashland, Oreg., located amidst the scenic grandeur of the Rogue River Valley. For over 20 years the Oregon Shakespearean Festival, in Ashland, has been attracting devotees of the theater and drama from all over the world. The founder of this unique undertaking is Prof. Angus L. Bowmer, who teaches drama at Southern Oregon College, one of the Pacific Northwest's outstanding schools of education and now of liberal arts.

Because of the pride which we of the State of Oregon have in the annual Oregon Shakespearean Festival, I ask unanimous consent that there appear in the Appendix of the RECORD an article summarizing this notable event. The article was published in the Oregonian, of Portland, Oreg., on August 4, 1957, and was written by Mr. Herbert L. Larson, drama editor of that newspaper and a longtime authority on the theater.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHAKESPEAREAN FESTIVAL AT ASHLAND IS EPIC DRAMA EVENT

(By Herbert L. Larson)

Pear harvest isn't the only product to come out of Ashland and the Rogue River Valley area.

Right now William Shakespeare is stimulating activity in the town nestling against the ridges of the Siskiyou Mountains just north of California. The Oregon Shakespearean festival is only a few days old. The event has gained national importance, so much so that last week a photographer for Life magazine spent several days shooting hundreds of pictures, a few of which, it is hoped, will be used in a layout of national Shakespearean summer play activity.

In 1935 Angus L. Bowmer, who has and is serving as professor of drama at Southern Oregon College, Ashland, started the festival on a shoestring. After attending Bellingham Normal School, Bowmer transferred to the University of Washington, where he obtained both his bachelor's and master's degrees.

Through the years, with exception of the war period when the festival was suspended, Bowmer has directed and played in many of the productions. Today he is producing director; he plays a part or two and also directs a play to keep his hand in the Shakespearean theater which he loves.

TALENT NATIONWIDE

The festival is presented each year from August 1 throughout the month, in an open-air Elizabethan theater in Lithia Park, almost in the heart of Ashland. Before the present festival stage, four theater buildings have stood during the past half century. Because of tottering structures each has been razed for another building. Plans are now afoot for a rebuilding program.

It is regarded by Bowmer and his staff of directors that this year's company is an outstanding one. Performances watched so far bear out this contention. Ashland is swarming with talented young players who come from all parts of the Nation—Louisiana, Texas, and other scattered States from ocean to ocean.

Some are given scholarships to provide food and shelter; others finance themselves. None are paid on a salary basis.

This season, the 17th, offers four productions. They are As You Like It, Othello, Two Gentlemen of Verona, and Henry VIII. They will be presented in rotation throughout August with the exception of 2 special presentations of Pericles August 23 and 29.

AUDIENCE DRAW FARFLUNG

Through the years and efforts of a considerable staff of hardworking people, the Oregon Shakespearean festival has won national recognition. During the season's month audiences are comprised of folks from almost every State in the Union. This year Mrs. John C. Cotton, of Ashland, is president of the board of directors; Russ Jamison, Medford, vice president; Philip E. Gates, Ashland, secretary; and Rudolph E. Vest, Ashland, treasurer.

On the executive staff are Margaret Bailey, professor emeritus of English at Stanford University. She is director of the Institute of Renaissance Studies, the educational wing of the festival. William W. Patton is general manager of the festival.

In addition to Bowmer, directors are James Sandoe, back after a year's absence, for his sixth season; Robert E. Loper, in his second season, and Richard Graham, who has served as director and actor for 10 consecutive festivals.

The Civil Rights Bill and the Danger of Taking Things for Granted

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Taking Things for Granted," which was published today in the Washington Star, and which comments on the action taken on yesterday by the Senate on the civil-rights bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of August 8, 1957]

TAKING THINGS FOR GRANTED

One of the greatest lessons taught by the Senate's passage of the civil-rights bill is the danger of taking things for granted.

The superb leadership of Senator LYNDON JOHNSON during the long debate on the jury-trial amendment was responsible for bringing that lesson home. The jury-trial issue was raised, debated, and defeated in the House, where the rules necessarily limit debate. When Senator EASTLAND indicated that it would be raised in the Senate, long before the bill ever reached the floor, it was taken for granted that he was doing it as a move to kill the bill. That was a logical conclusion.

Taking that belief for granted, however, led naturally to the next assumption, that as a southerner was raising the jury issue, the jury issue itself was without substance. And that was taken for granted to such an extent that people all over the country, and some of our greatest newspapers, derided the issue, belittled its importance, took for granted that anybody who spoke in favor of it was seeking to weaken or to destroy the civil-rights bill itself, and to make impossible its fundamental objective of protecting the right to vote. Had Senator EASTLAND or some of his southern colleagues been in charge of the amendment, public distrust of their motives would have overshadowed any serious examination of the issue they raised.

When such known liberals as Senator O'MAHONEY, free of the taint of sectional prejudice, took over the argument, the Senate got down to brass tacks. Its approval of the amendment made approval of the bill certain. And, while a great many people still took it for granted that the jury amendment had weakened the bill, an examination of the facts of the matter has convinced a great many doubters that the opposite is true. That conviction, we are sure, will become stronger with greater understanding of the significant step that the Senate has taken in strengthening voting rights—a step that the House, we are sure, will in the end sustain.

We are more ready to take for granted, in this country, the unworthy motives of men in public life than to credit them with convictions on matters of principle. The Senate has demonstrated the error of that sort of cynicism.

Election of Warren G. Moore as Commander, American Legion, Department of Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. YARBOROUGH. Mr. President, the largest veterans organization in the State of Texas is the American Legion, to which I have the honor of belonging. These dedicated patriots, who have made innumerable sacrifices for their country, have joined hands to perpetuate the spirit of those who lived and died to protect the liberties and freedom of this Nation.

Texas legionnaires have especial occasion to celebrate the election of a new departmental commander, recently

chosen to head the organization during the ensuing year. He is Warren G. Moore, of Tyler. An able United States district attorney in northeast Texas for many years, Mr. Moore has served his community and the American Legion well. He has been past commander of Tyler's Favre Baldwin Post of the American Legion, and he has worked in many departmental capacities for the legion.

The Tyler post has produced two outstanding departmental commanders of the American Legion, the other gentleman being Mr. Ernest Goens, who now lives in Dallas.

One of the most influential east Texas newspapers, the Tyler Courier-Times, has eulogized Warren Moore in an editorial of Sunday, August 4, 1957. I request unanimous consent that this fine editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEXAS LEGIONNAIRES CHOOSE WELL

Election of Tyler Attorney Warren G. Moore as commander of the Texas American Legion is a distinct honor to Mr. Moore and to the Tyler American Legion Post.

Mr. Moore, former United States district attorney here and now in the private practice of law, has been active in American Legion work for a number of years. He has served as commander of the Tyler post, and in various capacities of responsibility with the State Legion department.

He is the second Tylerite to hold the title of State Legion commander. First was Ernest Goens, also an attorney. Mr. Goens is now a resident of Dallas.

The Legion is, of course, America's and Texas' biggest veterans' organization, and it numbers within its ranks a large percentage of the men who served this country so well on the fields of battle in World Wars I and II and the Korean war.

Mr. Moore's keen interest in the affairs of the American Legion and his organizational ability, which is well recognized in Tyler, assure the State Legion department of excellent leadership throughout the coming year.

Right of Trial by Jury

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the August 7, 1957, issue of the State, of Columbia, S. C. This outstanding newspaper has been most diligent in its efforts to guard against attempts to destroy constitutional government, which includes among its high principles the right of trial by jury. The State is ably edited by Mr. Samuel L. Latimer, Jr.

There beng no objection, the editorial was ordered to be printed in the RECORD, as follows:

RISKING A FUNDAMENTAL

It is a great pity that a fundamental such as trial by jury should be put in jeopardy, but it is fine to know that a sufficient number of Senators could rise above petty politics, prejudice, and misguidance to guard this great American heritage against destruction.

The argument, of course, was that only under certain circumstances would trial by a jury of one's peers be forfeited. But it is an old trick to break down basic rights by piecemeal, so even if the invasion would have been minor (which it was not) it would have been most alarming for the Senate to have agreed to this provision so illadvisedly made a part of the House bill.

Where the astute analysts were when the measure was before the lower body that such flagrant defects should get by without great protest is a mystery. It was not until the bill became an issue in the Senate that the hidden wickednesses were really brought into proper focus in the legislative hall. When they were, men of right thinking from all sections joined in seeing that they were not imposed upon a helpless public.

It is an old and true saying that two wrongs do not make a right. If there is need for civil-rights reform, the approach is not to do away with the most cherished safeguard a minority has—the due process of the law, which includes trial by jury.

Mark our word, those who voted to make certain that there be trial by jury were the real defenders of civil rights, not those who would have placed this great American fundamental on the altar of politics. And we hope those who have advocated sincerely such a radical change will realize that it would not have been well under the guise of political expediency to have tampered with our basic rights. As to the others, it would seem that as a matter of self-defense, if for no other reason, they would come to this point of view. But votes being what they are, we can hardly hope for them to see the light.

The Algerian Question

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of items relating to the Algerian question. Last week, I placed in the RECORD some articles which indicated some possible new French approaches to this problem. Today's insertions should indicate again the still deteriorating nature of this problem, and underscore again the need for a change of attitude both within the United States and France.

The Economist is a thoroughly independent, sober, and reliable journal of comment and opinion. Mr. Alsop's credentials as a realist and deep thinker on international questions are hardly open to question among Members of this body.

Finally there is included a letter to the New York Times signed by five distinguished leaders and thinkers on international and social problems.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the New York Times of August 3, 1957]

RESOLUTION ON ALGERIA ENDORSED

TO THE EDITOR OF THE NEW YORK TIMES:

On July 2 Senator JOHN F. KENNEDY offered a resolution to both Houses of Congress calling upon the Secretary of State to use American influence and prestige in behalf of a peaceful and rapid solution to the Algerian conflict.

Specifically the Kennedy resolution proposes that the President and Secretary of State exert the influence of the United States behind efforts, either through NATO or through the good offices of the Premier of Tunisia or the Sultan of Morocco to achieve a solution which will recognize the independent personality of Algeria and establish the basis for a settlement interdependent with France and neighboring nations.

In addition the resolution implies, and we specifically endorse, the establishment of sound guaranties for the rights of the French minorities.

Failing satisfactory developments by the next U. N. General Assembly session, the Kennedy resolution further proposes that the United States assume the leadership through the United Nations in bringing about an orderly achievement of independence in Algeria.

We believe that this resolution embodies the most fruitful elements of statesmanship and restraint. At the same time it represents an imaginative and bold departure from the empty policy our Government has pursued in Algeria since the war began.

In the interests of those democratic ideals for which we are prepared to sacrifice so much during these critical times, in the name of our security, and in the hope that we may deter our historic friend, France, from this suicidal policy, we urge the United States Congress to act favorably on the Kennedy proposal.

We are confident that our fellow Americans, directly and through their elected representatives, will support this view.

ROGER BALDWIN.
DONALD HARRINGTON.
GEORGE M. HOUSER.
REINHOLD NIEBUHR.
NORMAN THOMAS.

NEW YORK, *August 1, 1957.*

[From the Washington Post and Times Herald of August 1, 1957]

NO PANACEA FOR ALGERIA

Adlai Stevenson's doubts about the benefits of immediate independence for Algeria are interesting by contrast with the recent forceful advocacy of Senator KENNEDY. The devotion of both men to libertarian principles is unquestioned. But Mr. Stevenson, who has been on a 10-week trip to Africa (excluding Algeria) thinks that independence at this time would be an "invitation to chaos." He adds his belief that the French government, although it probably has not fully faced the realities in the past, will come forward shortly with a practical program for self-government. So intricate a situation, says Mr. Stevenson, "cannot be solved either by terror within or pressure without."

This is perhaps a more hopeful view than is warranted by French actions, as compared with French intentions. Edmond Taylor reported in his article from Algiers published in this newspaper on Sunday that although the cities are prosperous and terrorism has been checked there, the nationalist military campaign has spread to all parts of Algeria and the independence movement has exerted great political appeal among Moslem intellectuals. There is no firm evidence yet that the French Government has altered its policy of putting down the resistance by force of arms before taking other steps.

Moreover, the course of the Bourges-Maunoury government invites some grave misgivings on other grounds. The other day the French National Assembly approved sweeping authority for the government to exercise in France proper some of the security powers it exercises in Algeria. Among other things, it may intern indefinitely persons

convicted of certain offenses even after they have served sentences. The brunt of the attack is being felt, however, by newspapers and newspapermen critical of the government's policies in Algeria. A number of Algerian papers have been suppressed. Now the government is concentrating its fire on Le Monde, the most respected independent daily in Paris.

These misgivings offset at least some of Mr. Stevenson's optimism. Yet his central point is certainly true: independence is not automatically a boon in and of itself; and at a time when the compartmentalization of the world is responsible for at least some of its troubles, interdependence with equality ought to be the goal. But this can hardly come about in the case of Algeria without positive measures by the French Government beyond mere armed repression. A cantonal system of self-government, equal representation in the French Assembly and the good offices of Algeria's neighbors, particularly Tunisia, for actual negotiations—these are still within the realm of possibility. The great fear which all friends of France must share is that the moderate solutions that might be possible today will be impossible tomorrow.

[From the New York Herald Tribune of July 31, 1957]

HOPE ON ALGERIA?

(By Joseph Alsop)

PARIS.—The French Government is now rather unhappily re-examining its own policy in Algeria. The final result will only be known in September, but the two possible outcomes are already quite easily foreseeable.

Either the present re-examination will be transformed into the beginning of a serious attempt to find an agreed solution of the agonizing Algerian problem, or the meeting of the United Nations Assembly in September will produce a blow-up inside the Western Alliance almost on the scale of the Suez crisis. The reasons for these alternatives are simple indeed.

In brief, in anticipation of the U. N. Assembly session, where Algeria will be the major item on the agenda, the French have been sounding out the American and British Governments on the possibilities of securing their support. The chief sounding-out expedition was the trip to Washington of the able Permanent Under Secretary of the French Foreign Office, Louis Joxe.

In a series of long, frank and friendly conversations, Secretary of State John Foster Dulles in effect told Joxe that the United States very much wanted to support France once again in the U. N. but Dulles added firmly that France would have to propose some kind of Algerian solution that the United States could in all honesty support.

The best solution, Dulles insisted, would be one that Tunis and Morocco would also agree to indorse. This would mean recognizing the aspirations of the native Algerians, tying an at least semi-independent reorganized Algeria to Tunis and Morocco, and finally tying all three countries to France.

Secretary Dulles did not insist, however, that the new French proposals for Algeria should have Tunisian and Moroccan backing. He only insisted that the proposals must be serious, in the sense of offering some hope of producing eventual peace.

Last year, he pointed out, the United States had backed the plan of former Premier Guy Mollet for a cease-fire followed by free elections; but this had proved delusive. Now another plan must be put forward, with better chances of success than the Mollet plan. And this was all the more urgent, he added, because the Algerian fighting was one of the major obstacles to the rather desperate, post-Suez American effort to bring reasonable stability to the troubled Middle East.

Thus far the British Government has taken a line parallel to the Dulles line. On this matter, London and Washington seem to be acting in concert, for once in a way. Thus it seems likely that if France does not put forward new Algerian proposals of a sufficiently hopeful and constructive character, France will not have the support of either of the other major western allies at the U. N. meeting.

If France goes into the U. N. Assembly with the whole Afro-Asian and Communist blocs against her, and with no support from the other great western allies, the result must be a truly appalling defeat.

The consequences are really incalculable. For how will France, for instance, respond to a ringing U. N. condemnation? Only one consequence, indeed, can be calculated with real assurance. The ensuing recriminations inside the western alliance will be heard around the world.

Such being the future prospect if France does not put forward constructive Algerian proposals, the reexamination of the Algerian problem that is being conducted here assumes the widest possible significance. But as yet, it must be said, the reexamination has not produced the kind of new proposals Washington and London are devoutly praying for.

Premier Bourges-Maunoury is seeking to draft a law giving the broad framework of a new organization of Algeria. Thus far, however, the framework law does not comprise the minimum recognition of Algeria as a national entity that could conceivably satisfy the Tunisians, the Moroccans, or the Algerian dissidents. Instead, the most favored proposal at present is to divide Algeria into three provinces; to give each province a measure of autonomy and an elected provincial assembly; but to keep in French hands effective control of Algeria as a whole.

The American and British Governments have already let it be known that this plan will not command their active support. Strong forces are certainly at work within the French Government to secure much bolder proposals. Foreign Minister Christian Pineau has even sponsored discreet negotiations with the Algerian rebel leaders.

If former Premier Guy Mollet (the real maker of the Bourges-Maunoury government) swings over to the side of bold action, this really may prove the beginning of a serious search for an agreed solution, but at present the betting is still against.

[From the London Economist of July 27, 1957]

THE ART OF THE IMPOSSIBLE

(From our Paris correspondent)

"We have come to such a pass that we can bear neither our vices, nor the remedies for them." Livy's desperate verdict would fit the French Nation as the summer holidays begin. The deputies leave the assembly this weekend depressed by the record of this session, distrustful of a weak government they do not respect, and profoundly disturbed by a future which seems to offer no end to crisis.

They have good reason. True, Parliament has one major achievement behind it: With the Senators' vote this week, both houses have ratified the European treaties by majorities that would not have been thought possible 6 weeks ago. This reflects the learning of the lesson that France can no longer go it alone—which, in the end, may be the most potent antidote to the nationalist and authoritarian toxins secreted by Algeria. But just now, this inevitably weighs little against the failure to advance the Algerian conflict 1 inch toward a solution. During the spring the deputies began to realize that pacification was leading nowhere. This summer they have learned what an upheaval, more than the toppling of a ministry, will be needed to change it.

M. Lacoste's rabble-rousing, far from heralding a change, only identifies him more closely than ever with the settlers. M. Bourgès-Maunoury, himself, has displayed little authority, particularly in handling Parliament. The disorderly debate on special powers to repress terrorist activity in France last week was symptomatic. The critics dominated it; yet in the vote nearly half of them abstained. They knew that there is no present prospect of obtaining a fresh shade of government.

Distrust of the government reached a head in this debate. The government protested, almost certainly with truth, that it wants special powers for its stated, limited purpose: Two Algerians a day are being murdered by rebels in France. But the government is so much readier with police than with policy that its critics have every excuse for fearing that it will drift into compensating for its lack of power over situations by abuse of power over citizens.

The fact is, Algeria has brought out all the latent authoritarianism of French administration. Supercentralized, it is in spirit absolute government—restrained, resisted, and even defied, but not transformed by the revolutionary tradition. This authoritarianism was encouraged by M. Mollet. (In Arras, the home of Robespierre, of which he is mayor, he is known as Robespierrot.) It was he who began the harrying of the French press, which is financially shaky and therefore vulnerable. Lack of official interest in maintaining strict safeguards against abuses is equally reflected in the abeyance of the Commission for the Safeguard of Human Liberties, set up at the time of the controversy over the torturing of Algerian prisoners. All through, the government has made use of chauvinistic appeals and the shield of the army's honor against political opponents. France has had no Hitler, but it has had its Napoleon III and Boulanger and Pétain; and the government's constant affronts to recognized freedoms have cast serious doubts on its capacity to use special powers properly—particularly as it shows little sign of digging at the roots of the Algerian problem.

M. Bourgès-Maunoury has made play with the outline law which he proposes to present in the autumn, but this seems merely M. Mollet's decentralization policy writ large. Its principle is to reduce central Algerian government to the minimum, to vest local powers in local authorities and federal ones in Paris. It is unacceptable to the rebels, whose minimum seems to be independence by stages on the British dominion model. If this is the government's final choice it is unlikely to convince the United Nations Assembly in October, when France must again go through the hoops it cleared by a miracle last spring. The French fear an unfavorable verdict could be the first step to internationalizing the North African problem. Neither they nor the North Africans, who feel that it may prove easier to handle the French than to cope with Americans, Russians, or Arab extremists, seem to want this. The government has been discreetly, but perceptibly, improving its relations with Tunisia and Morocco. But on Algeria it seems unable to step out of the ring of official refusal to acknowledge the need for negotiation. When it does make an effort at diplomacy, it is shot down by masterly police work at airports, with which M. Lacoste usually seems mysteriously connected.

In private, most Frenchmen are more realistic than official attitudes suggest. The average man senses when a policy leads nowhere, even if he cannot appraise it in detail. Politicians and officials are increasingly prepared to admit that negotiation may be necessary. Unfortunately there still seems to be no way of translating this mood into effective terms. Many who would like a

change nevertheless fear that civil war would follow in Algeria, with the army backing the settlers. In France itself, the humiliations of 20 years are festering. This is why General de Gaulle's name reappears so often, as the one man whose reputation is proof against the humiliation of compromise. The potential opposition looks over its shoulder, fearful of identification with the Communists. Thus, M. Deffere, the author of Reform in Tropical Africa, committed the mistake at the Socialist congress of proposing all-out war if his proposed negotiations fail. M. Mollet used this against him with effective self-righteousness.

Above all, there is M. Mollet himself. If he swung the Socialists' hundred votes toward negotiation, he would take enough of the Assembly with him to force the issue. But he is the author of the pacification policy. Having fixed his line, liberal in intent and repressive in deed, at a time of shock after the settler assault upon him of February 6, 1956, he has stuck to it with all the rigor of a puritan character. Until he changes his mind, individual deputies and leaders of smaller groups will not stick out their necks prematurely.

Writing on the third anniversary of the winding up of the Indochina War by M. Mendès-France, Le Monde recently drew the parallel with the atmosphere that preceded the Indochina and Morocco settlements. In France politics is the art of the impossible. Situations always seem inextricable until suddenly they shake loose. The Fourth Republic has astonishing power to survive. The Communists, General de Gaulle, and M. Mendès-France have all had their try and failed. Where change has come, it has come anonymously, almost in the background, as in the case of increasing prosperity or of the European idea. The threat of nationalist autocracy, even now, is not immediate. The real danger is of slow rot. In the last year government has shown itself incapable of changing policy; Parliament, incapable of changing the shade of government. Even M. Bourgès-Maunoury, leading the weakest cabinet France has had since the war, may be shielded in the autumn by the fear that no really different team can be formed. With Parliament immobilised by the balance of electoral power, with leaders afraid to affront public opinion with unpleasant facts, and with prosperity held up to pay for war, the Fourth Republic is courting ruin. France in a united Europe may well have a bright future ahead of it, but until the Algerian crisis has been overcome one can only see it as through the wrong end of a telescope.

Municipal Utility Benefits

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I wish to submit a table and an editorial from the August 5, 1957, copy of the Madison, (Wis.) Capital Times. The table shows the vital statistics on 89 municipally owned electric and water utilities in Wisconsin which had net profits of $3,187,410 in 1956. The good folks in these communities would take immediate offense if they were singled out and labeled as Socialists. They read the balance sheet at the end of the year, note the profits, the increased value of the plant, the amount of money their plant has paid in taxes, and in many cases the amount of profits which have gone into municipal funds, and compare their rates with those paid by residents of neighboring communities to private power companies. Unlike the private power companies, they do not use funds derived from their ratepayers to purchase full-page advertisements in slick magazines in an effort to pin alien labels on their competition.

In the face of the mounting barrage of propaganda against this type of utility ownership, the residents of these communities who think they have a right to keep the profits of their business in their hometowns should pay serious attention to keeping their fellow townsmen properly informed on the true worth and value of their utilities to the home community.

The table and editorial follow:

89 publicly owned electric and water utilities in State show $3,187,410 net profits in 1956

Electricity and water utilities	Total assets	Operating revenues	Operating expenses	Depreciation	Taxes paid	Profits	Contributed to municipal funds
Algoma	$701,840	$275,810	$225,212	$14,173	$7,833	$28,742	None
Arcadia	783,153	151,699	94,910	18,211	7,553	28,439	None
Argyle	231,629	48,759	31,557	6,495	4,927	5,080	$2,000
Bangor	465,825	126,960	82,787	11,839	7,878	24,223	None

FIGURES SHOW BENEFITS OF PUBLIC OWNERSHIP

Each year the Capital Times publishes the annual reports made by municipally owned utilities of Wisconsin to the State public service commission.

We do this because we believe that the hard, cold facts of the results of public ownership are the best answer to the propaganda of the private utilities. In these reports we find the simple, irrefutable story of the benefits almost 100 communities in Wisconsin receive because they own and operate their own utility systems.

The reports show that in 1956 these systems made profits of $3,187,410. That is money that will stay in the communities to be used to lower rates or to ease the tax burden for community services. It does not go out of the community to the absentee owners of the private utilities that operate in so many communities in this State.

The utilities call this socialism. But we can well imagine that the good Republican people of New Richmond and Richland Center don't mind being called socialistic when it pays off as well as it is paying for them.

In addition to the profits of over $3 million, these utilities contributed $237,580 to municipal funds during the year, saving the taxpayers from having to dig down in their pockets to pay for whatever these funds are used for.

It is often said by the utilities that public ownership can provide benefits because no taxes are paid by public-owned utilities. Here again the facts tell the story.

In 1956 these utilities paid $1,248,296 in taxes.

Meanwhile, the communities that are practicing this form of socialism are building up tremendously valuable community assets. The figures show that in 1956 they built up these assets to $85,184,041, at the same time that they were taking profits, taxes, and contributions from the system.

If this is socialism, there must be an awful lot of satisfied Socialists in this State.

Views of a Returning Traveler

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. HIESTAND. Mr. Speaker, Holmes Alexander's column in the Los Angeles Times of August 6, 1957, should, in my judgment, be very thought-provoking to all Members. I recommend it:

"Whatever happened to the United States of America?" asked the returning traveler as he leafed through the pages of history. "Did some foreign nation cross the ocean and stamp out the American sovereignty with troops?"

That wasn't necessary, he was told. By 1957 the United States of America had 40 percent of its Army, much of its Air Force, and most of its Navy stationed abroad. The United States of America was also training 200 divisions of foreigners in 72 alien nations. You might suppose from this form of armed occupation that other nations were surrendering their sovereignty to the United States of America, but this is not so. During the decades at the midcentury, our Presidents were busy turning over American sovereignty to the Old World of Europe and Asia.

It must have required a lot of ingenuity," and the returning traveler. "How did it all happen?"

Oh, in various ways, he was told. The status-of-forces treaties, along with executive agreements, surrendered the sovereign right to try our own nationals accused of crime while on duty with the Armed Forces. But these erosions were only part of the draft determination of certain midcentury Presidents to undo the work of the Founding Fathers.

"Our Presidents?" echoed the returning traveler. "Our Commanders in Chief? Our heads of state? They were part of the share America movement?"

They were its prime movers, he was told. They abandoned our moral position on world affairs in favor of entangling alliances. They promoted giveaway programs. They deserted our prisoners of war in enemy camps as well as abandoning our peacetime soldiers to alien courts. Congress fought every one of the programs and for a while succeeded in some degree. But the power of the executive department increased with the complexity of government and the extension of propaganda media. Congress fought a losing battle. Moreover, a deadly disease had laid hold of our American Republic. The stronger the presidency became, the weaker became the Presidents.

"Like the Roman emperors who followed the early Caesars?" asked the returning traveler.

The history books will probably show you, he was told, that the destructive process set in with President Andrew Jackson. Old Hickory brought in real democracy, the spoils system, the glorification of the common man and the vilification of capitalism. It's noticeable that Jackson was followed by eight of the weakest Presidents we ever had. During that time the country refused to elect its leaders from Congress—Clay, Webster, Calhoun, Benton, and the rest. This had the effect of weakening the prestige of Congress.

The Returning Traveler nodded.

"The history books also say that the two great 20th-century Senators, Bob Taft and Bob La Follette, were rejected for the presidency. So were Oscar W. Underwood and John N. Garner. And later, the main handicap of WILLIAM KNOWLAND and LYNDON JOHNSON was that they came from the Senate where circumstances had forced them to make their position known on important issues of the time."

The Returning Traveler was closing in on the truth by this time. The genius of the American system is that it is responsive to public opinion. A Congressman can hardly win if he is hostile to the popular sentiments and business interests of his district.

This is why the House of Representatives is very unwilling to give away the American sovereignty.

"These pages," said the Returning Traveler as he turned the leaves in the book of history, "might have carried a different story if the country had put more faith in Congress than in the Supreme Court and the White House. If 1 of the 3 branches must dominate, let is always be Congress. Indeed, as I read close to the pages, I seem to see that."

The eye of the Returning Traveler brightened with hope. Down in the emerging text of unfolding events he seemed to see that Congress was getting tired of playing second fiddle to the White House and the Supreme Court.

Pay Raises for Federal Employees

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I first wish to thank you for the privilege of expressing myself in favor of immediate and meaningful pay raises for Federal employees.

The 11th Congressional District, which I represent in California, has a great many Federal employees including postal workers and persons employed at Sharpe General Depot, the Stockton Naval Supply Annex and other Federal offices and installations.

The salary question is a very real and pressing problem which calls for a forthright approach. For the employees concerned, it is a matter of simple justice; for the Government, it is a matter of attracting and retaining qualified personnel in the interest of efficiency and economy. In my opinion, an adequate pay schedule for Federal employees is long overdue, at least to the extent of keeping up with the fast-rising cost of living.

Federal employees are in the unique position of having to accept what is given to them without being able to fight for their rights by the conventional methods available to other employees who negotiate wage matters with their employers. It would be highly improper, in my opinion, for the Federal Government, as an employer, to take advantage of this unique authority and to expect Government employees to pay the cost of any governmental budget difficulties. Certainly, any threats of a presidential veto should not deter the Congress from taking the only just and equitable course.

As you know, the House by an overwhelming majority has voted for a $546

annual pay increase for postal workers. The House Civil Service Committee has recommended a flat 11 percent increase for classified employees, which percentage-wise would approximately equal the postal pay raise.

In my files are scores of letters bearing convincing evidence of the injustice of the present scales and the pressing need for remedial action now, not some time in the distant future. It has long been my belief that one of the greatest wastes in Government is the loss of trained personnel through heavy turnover and the loss of potential public workers who are forced to enter more remunerative fields.

Following are the names of some of the persons who have written to me concerning the inadequacies of the present Federal pay:

Mrs. Elvira Lopez; Dick Remington; J. E. Willey; C. B. Rose; Reid Hollingsworth; Joseph Groves; H. Clemens; Gene Hopper; Mrs. Martha Davela; Mrs. Pearl Jones; Mrs. Estelle Simpson; Mrs. Marjorie Sheridan; Nell Heil; Mrs. A. F. Harrison; Mrs. M. F. Blackshear; Bill Halstead; Mrs. J. H. Smalley; Mr. and Mrs. Forrest Cooper; Mr. J. T. Sloan; Burton Davis; Wendell Hall; Ray Berry; Melvin Leno; E. R. Thomspson; F. E. Rinehart; Bonnie Gelderman; Mrs. Everett Spitler; Mrs. Everett Ross; Mr. and Mrs. W. M. Elzner; Mr. Frank D. Uomini, Jr.; Mrs. O. L. Rich, Sr.; Mrs. Geo. Graziano; Sybil Sticht; and Richard Suess.

Esler Field, La.

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, the purpose of this bill is to authorize the Secretary of the Army to convey to the Parish of Rapides, La., title to Esler Field, La., on condition that it be used as a public airport.

Esler Field is a part of a military complex comprised of Camp Livingston and Camp Beauregard, La. The field was constructed during World War II and for the past 13 years has remained idle as an airbase.

The Department of the Army has agreed that the field can be released to Rapides Parish, La., for use as an airport so long as it can again be used in time of war or national emergency, and particularly that is can be used during maneuvers in Louisiana.

The committee, therefore, amended the bill so as to provide that the Federal Government in the future could use the airport without charge for transient military aircraft during periods of maneuvers in Louisiana and for the use of the Louisiana National Guard. Further, a reverter to the United States is provided in case the parish of Rapides fails to use Esler Field as a public airport.

The conveyance authorized by the bill would also be made subject to the reservation by the United States of all mineral rights, including oil and gas, and such other reservations, restrictions, terms, and conditions that the Secretary of the Army determines to be necessary to properly protect the interests of the United States.

Mr. Speaker, this is a very worthwhile bill. At the beginning of World War II the city of Alexandria, Rapides Parish, La., owned a public airport. However, this airport was donated to the United States Government so that the Alexandria Army Air Corps base could be established on that site. Today this is known as England Air Force Base, and it is now necessary for all civilian air service in this locality to use the military base. Gradually, the use of this facility by private planes is becoming more detrimental because of the need for its use by the military. Safety hazards have therefore been increased. England Air Force Base is crowded with jet aircraft and with commercial planes landing on the base the time has come when some other facility must be provided for this locality's private aviation. Furthermore, additional commercial lines serving central Louisiana are reluctant to come into this area because of unsatisfactory operating conditions.

Mr. Speaker, as I have said, the Department of the Army has approved this bill, and there is no objection from the Bureau of the Budget. The enactment of the bill will have no effect on the budgetary requirements of the Department of Defense, and I feel that the Federal Government will, by enacting this bill, be repaying the city of Alexandria, La., for its patriotic donation of its public airport at the beginning of World War II.

Air Force Secretary Asked To Investigate CAP Military Setup

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. RUTHERFORD. Mr. Speaker, on July 16 I remarked for the RECORD on the outstanding job turned in by the Big Bend Squadron of the Civil Air Patrol in connection with rescue operations in the Big Bend National Park of Texas. Now I find it my sad duty to report to the Members of this House that the fine work accomplished by this group of Texas flyers has not been met with the appreciation one would expect, but with the blundering persecution of the leader of those fliers by high Civil Air Patrol and Air Force officials.

For some 3 or 4 days now I have been in conversation, via the telephone, with Maj. Gen. Walter Agee., General Agee is a member of the United States Air Force, and his full-time duty assignment is to act as National Commanding Officer of the Civil Air Patrol. I regret to say his actions in this case have not given me any confidence in his ability to carry out a major assignment on the part of our Armed Forces.

It will be recalled that the Big Bend fliers rescued a Houston woman from the park after a search of 6 days and nights. Failing to get response from the CAP office in Fort Worth when asking for permission to conduct an official CAP mission, the flyers elected to carry out a mission of mercy as individuals and their efforts ended successfully.

Persons in Alpine, Tex., having no connection with the Big Bend CAP unit, informed me of the work of the flyers and suggested I attempt to collect for them the actual funds they had spent from their own pockets in conducting the search. The National Parks Service agreed to pay it, and I so notified the flyers. Later, however, the Parks Service informed me the fliers had voted not to accept the money as they had carried out the search as individuals, not with the thought of collecting reimbursement but with the thought of

saving a life. This, I thought, was a most admirable attitude.

Apparently, however, General Agee and others within the ivory towers of high CAP circles did not agree. The next thing I knew, the CAP ordered an investigation into the conduct of Maj. "Bob" Crawford, the Big Bend CAP commanding officer. It is interesting to note that the CAP officials did not ask Major Crawford one single thing about the successful search he conducted, nor did they comment on his saving the life of the lost woman. The only questions posed to Major Crawford were these:

How did the newspapers get the publicity relating to the search, and how did Congressman J. T. RUTHERFORD become involved in the matter of attempting to collect the money spent by the flyers?

The answer to the first question is obvious: the search was of nationwide importance, and was covered by reporters and correspondents from the El Paso Herald-Post, another El Paso daily in addition to the Herald-Post, the San Angelo Standard-Times, the Forth Worth Press, the Fort Worth Star-Telegram, the Alpine Avalanche and the major wire services in the news-gathering field. I can assure you that Major Crawford and his flyers were too busy saving a life to be issuing press releases. The answer to the second question has already been given, by saying that interested persons in Alpine, having no connection with the flyers, called the matter to my attention and felt the boys should be reimbursed for their expenses.

At no time—and I repeat—at no time, did Maj. "Bob" Crawford or any other member of the Big Bend CAP unit contact me about the money, or for any other reason.

Yet last Sunday, August 4, CAP bigwigs met in star-chamber proceedings in Fort Worth, Tex., and decided to relieve Major Crawford of his command for what they termed "his handling of the case." I talked yesterday for almost 40 minutes with General Agee, asking him time and time again to explain what was meant by Major Crawford's "handling of the case." He did not once give me a satisfactory answer, referring only to the "adverse publicity" the CAP did not like. So the sum total of the situation is this: Major Crawford is being relieved of his command because he did not censor the many representatives of the press, who reported only the facts and what was common knowledge to the citizens of the Big Bend area, and because I entered into the case at the request of Alpine citizens. I say again that I have not heard from Major Crawford, I do not personally know him and I doubt if I would recognize him if he walked into this House, but this apparently makes no difference to General Agee and his censorship-conscious commandos.

I point out that Major Crawford was not notified of the Fort Worth meeting deciding his CAP fate, he had no chance to explain his side of the story, to be informed of the charges against him or to face his accusers. I submit to the House that things are in a sorry state when an organization chartered by Congress, and commanded by a major general in the United States Air Force, can conduct such purge proceedings that would be more in keeping with the operation of the Kremlin than with the operation of the Pentagon.

Even more amazing is this drastic action when we consider the statements of CAP officials that the Big Bend unit was not an official CAP organization at the time of the search. Col. Sidney Perryman of Olney, Tex., wing commander of the CAP for this area, told newsmen shortly after the woman had been rescued from the park that he could not officially commend members of the Big Bend flying posse, "because officially they are not yet members of the CAP." I do not know Colonel Perryman, either, but I wonder what kind of a man he can be to make that statement and then, a few weeks later, bring charges against the man designated as the commanding officer of the same organization.

When I read Colonel Perryman's statement in the newspapers, I checked to see why the Big Bend squadron had not been recognized. I found that although the members paid for their I. D. cards and for their charter last March, they had received nothing more. After numerous letters to General Agee, all answered by someone else in his absence, I received a letter from his office saying that as of 2 weeks ago the charter application had not even been received by CAP Headquarters. Thus far General Agee has not explained what happened to that application during the past 5 months. Yet, Colonel Perryman only recently wrote Major Crawford that the unit was "being placed on probation until October 1," and then followed with the secret closed-door hearing in Fort Worth last Sunday at which the character of a man not invited to the session was roundly attacked.

General Agee has given every indication of being the original "rubber stamp" commander. He told me on the telephone yesterday that he has not yet received the official transcript of the star-chamber proceedings firing Major Crawford, but that he "fully intends to back Colonel Perryman up." In other words, he is refusing to review the case with an open mind and has denied Major Crawford the right of appeal. This is a culmination of the biggest railroad job since the railsplitters headed west.

I have only admiration for the Big Bend flyers and for Major Crawford based on their activities of their search in the Big Bend National Park. Likewise, I have only admiration for the CAP members all over the United States who give of their time and efforts to belong to an organization that has done so much good in the past, and that has the opportunity to do so much good in the future. I fear for them, however, because if the actions condoned by General Agee are allowed to go unchallenged, who knows who will next be purged from the ranks of the CAP in the future?

I am calling these remarks to the attention of the Secretary of the Air Force, and am asking him to conduct an investigation into this matter, and into the entire operations of General Agee's office.

In America, we cannot allow a handful of men to establish themselves as paragons of virtue, as censors of our press, as overlords of our right of free speech and petition. I urge each Member of the House to join me in asking the Secretary of the Air Force to look into the situation.

From "Hand to Mouth" with H. R. 8002

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. CANNON. Mr. Speaker, this morning's Washington Post editorial Hand to Mouth? effectively corroborates and supports the much publicized statement of the Secretary of Defense—who administers over half the entire Federal budget—in which he unequivocally condemned as expensive and unsound the partial financing of Government programs and projects. Partial financing is the heart of H. R. 8002, the so-called accrued expenditure bill about which Members have been bombarded with misleading and false information by proponents of the bill.

Conflicting statements from the White House, the Pentagon, and the propagandizing Citizens Committee for the Hoover Report to the contrary notwithstanding, Secretary Wilson used the plainest and simplest language possible in his statement of July 1. His position—and incidentally the Director of the Budget concurs—against partial financing is so clear as to admit of no possible misunderstanding by anyone who wants to understand.

Under leave to extend, I include the editorial:

HAND TO MOUTH?

We hope the House will not enact the ill-advised bill passed by the Senate to put all Federal appropriations on a year-to-year basis, despite Secretary Wilson's last-minute explanation that he favors this so-called reform. If he does, there was nothing in his testimony before the House Appropriations Committee to indicate it—there was, on the contrary, every reason to believe that he was most fearful, and rightly so, of what this proposal would do to important defense procurement programs that necessarily extend over more than 1 year.

It is difficult to understand why the President has reemphasized his support of this deceptively innocent but loaded proposition. The idea behind it, as explained by the Hoover Commission, which also favors the change, is that Congress would retain better control of annual spending rates if all appropriations lapsed at the end of each year and had to be renewed. This might make the budget somewhat easier to talk about—but the simplification would be an illusion.

Under the plan, Congress would still grant contract authority for spending programs covering more than 1 year. Either that authority would be meaningful, or it would not. If it were meaningful, the appropriations to back up the contracts would be mandatory—and nothing would be gained over the present system under which funds may be appropriated to cover the entire contract, however long it takes to execute. But if the contract authority were only a gesture (as legislative authorizations for

appropriations often are), no Federal department would ever know whether it was safe in entering into a long-term procurement contract. "Partial financing," which Secretary Wilson rightly deplores, would become the usual thing rather than the exception, and the resulting extra cost and confusion of canceled and rewritten contracts would play hob with vitally important Federal activities.

If Congress wants authority to cancel programs that get out of hand, it has that authority now. If it wants a budget balance sheet figured on an annual cash basis, it has that now, or can readily obtain it. If Congress wants to make a show of "reform" to help answer the widespread demands for economy, it can do better by eliminating the postal deficit and rivers and harbors pork barreling and in other substantive ways. If Congress wishes to be in position to play politics to the hilt every year with critical long-range defense and other programs, or if it wishes to usurp what are properly administrative responsibilities of the executive branch, the annual appropriation scheme is well suited to the purpose. But the plan would serve no other end and ought to be shelved.

Senator Walter F. George

SPEECH
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. DAVIS of Georgia. Mr. Speaker, it was with much sadness that I learned Sunday of the passing of Senator George. The news brought a flood of memories of this beloved Georgian during a lifetime of public service, and treasured recollections of my association with him personally.

I knew and appreciated Senator George before he came to Washington, while he served as an appellate judge in the Georgia courts. He built for himself there a deserved reputation for ability, learning, and integrity. When a vacancy in the Senate was created by the death of another great Georgian, Senator Thomas E. Watson, it was logical that Judge George should be chosen to represent Georgia in this office of such great responsibility. The diligence and fidelity with which he served in the Senate have written his laudable record there far better than I could ever recount it. His life was a living example of the fact that in America a citizen has the opportunity to rise as fast and as high as his ability and energy qualify him to go.

I came to know Senator George better and more intimately than ever before when I came to Congress in 1947. I had occasion many times during my service here to confer with him regarding legislative matters, and regarding personal problems of constitutents. I found him always the soul of kindness, generosity, and helpfulness. I never called upon him for assistance of any kind that he did not respond promptly and helpfully. The weighty matters of Government with which he was always concerned never caused him to be abrupt, and never interferred with his genial and friendly manner.

It was indeed a high privilege to know Senator George and count myself as one of his friends.

In Senator George's passing the free world has sustained a tremendous loss. His life and his activities have ended, but his public service will for many years to come influence the destiny of America and the world.

I extend deepest sympathy to Mrs. George and the members of the family.

Paper Mills and Pollution Abatement

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. POFF. Mr. Speaker, the pulp and paper industry is to be commended for the outstanding program it is making in its war on water pollution. It is a source of considerable pride to me that my constitutents are in the vanguard of this battle. At Covington, Va., the West Virginia Pulp & Paper Co., one of the most important members of the industry, has completed a $2 million waste-treatment plant capable of removing up to 90 percent of harmful solid and organic matter from the company's waste water. But the battle is universal, and under leave to extend my remarks in the RECORD, I include herewith an article written by Mr. John J. Abele which appeared in the August 6, 1957, issue of the New York Times:

PAPER MILLS GAIN ON POLLUTION; CONTAMINATION IN RIVERS CUT 50 PERCENT

(By John J. Abele)

The pulp and paper industry is making progress in its battle against water pollution. The fight is an expensive one, averaging about $10 million a year. Within the last two decades the industry has doubled its production but cut the pollution load from its waste materials in half.

It has also made each gallon of water go further in the production process.

Water is the lifeblood of the pulp and paper industry, which uses about 4 billion gallons a day, almost 4 times the daily requirements of New York City.

Russell L. Winget, executive secretary of the National Council for Stream Improvement, which is sponsored by manufacturers of pulp, paper, and paperboard, estimates that the industry has spent about $100 million in the last 10 years for waste-treatment facilities.

An additional $1 million or more is spent each year for industry-sponsored research. The NCSI, for example, is conducting projects at 14 research centers. The projects range from the effect of oxygen content on fish eggs to better ways of getting excess water out of sludge wastes. The council represents companies producing 95 percent of the industry's output.

There are several reasons behind pulp and paper's search for more and better ways to combat pollution.

One is that the Nation's waterways have won increased recognition as a major national resource that is not without limits. Concern for wildlife in the streams and rivers has also contributed to public demand for more careful use of water resources. These demands reflect the fact that 44 States now have legislation providing for some control of stream use.

WATER NEEDS RECOGNIZED

Further, the industry's position as a major user of water for industrial purposes gives it an essential interest in conserving water supplies.

Finally, the fight against pollution can lead to the recovery of byproducts that can be reused in production operations or marketed on their own.

Pollution is a complicated problem, one that is made more complex by the varying definitions of pollution applied by public agencies. In pulp and paper, differences in product, method of manufacture, and stream conditions allow for few generalizations on how to solve the problem from one plant to the next.

Basically, the purity of a stream rests upon its oxygen supply. This supply, only a few parts of oxygen to millions of parts of water, is reduced by the injection of waste materials that unite with the oxygen.

In pulp and paper, the offending materials are divided into two broad classifications, solids and chemical solutions. The former—wood fibers, clays, and other solid residues—can be screened out by means of filtration, sedimentation and flotation. More than 90 percent of pulp plants now use equipment that can remove up to 97 percent of the solids. Some of these—fibers, for example—can be reused.

CHEMICAL RECOVERY 50 PERCENT

Chemical wastes are far more difficult and more costly to recover. Methods used include treatment with other chemicals, heat, and electricity and pools in which the wastes are concentrated and then aerated to increase their oxygen supply.

The recovery rate for chemical wastes from the kraft, or sulfate process, used for about 75 percent of all pulp production, is about 97 percent. The other major method of manufacture, the sulfate process, offers little recovery. Yields are being increased, however, through the development of new treatment systems, such as the Weyerhaeuser Timber Co.'s magnesia-base method and the Rosenblatt and Zimmerman processes.

Two of the principal byproducts recovered from chemical wastes are heat, produced by the incineration of organic wastes and chemicals. Some of the latter may be reused in production processes. Others can be used to produce such diverse items as adhesives, ceramic hardeners, fodder yeast, vanillin, cement, and oil drilling muds.

The pollution problems of the pulp and paper companies as well as steel, food processing, textiles, and other industries, have helped create a new industry—the manufacture of waste treatment facilities.

COST IS CONSIDERABLE

The cost of these facilities is a major item in the budgets of pulp and paper manufacturers. They range from 1 to 3 percent of total plant cost—and are going higher.

Among the many companies producing installations of various types for the pulp and paper field are Dorr-Oliver, Inc.; Link-Belt Co., Chain Belt Co., Engineers, Inc., Combustion Engineering Co., Babcock & Wilcox Co., Elmco Corp., Harding Co., Inc., American Well Works, Infilco, Inc., and the Worthington Corp.

A newcomer to the field is the Western Precipitation Co., which recently announced it was installing a sodium sulfide recovery unit in a plant being built by the Consolidated Water Power & Paper Co. in Wisconsin.

Communist Influence in the Caribbean and in Latin Americas

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks I include therein a letter I sent to the Honorable HOWARD SMITH, chairman of the Rules Committee, relative to my House Resolution 383, which I introduced August 1, 1957, and which I also include in my remarks.

The following letter was sent from Hon. GARDNER R. WITHROW to Hon. HOWARD SMITH, chairman, Committee on Rules, in support of the resolution regarding Communist influence in the Caribbean and the Latin Americas in view of happenings in the last week which strongly indicates a move of international communism. Mr. WITHROW introduced House Resolution 383 on August 1, 1957.

AUGUST 7, 1957.

Hon. HOWARD SMITH,
Chairman, Committee on Rules,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: I am seriously concerned with the increasingly apparent violence and Communist influence in the Caribbean and the Latin Americas. It is no longer possible for us to distinguish between quarreling among political groups and what we now know to be international Communist tactics.

On August 1, I introduced House Resolution 383, now before your committee, and which I trust you will act upon before the House adjourns. I do not believe the $25,000 to be exorbitant for a study of Communist efforts in the Western Hemisphere; however, in recognition of the economy efforts, I would not object to your reducing the amount, so long as we can begin some concrete effort to meet this problem, which is of concern to all of us.

I need not go into much detail on the need for favorable action by the Committee on Rules and the Committee on Foreign Affairs. We in Wisconsin have long been atuned to the dangers of communism. I need only to invite the committee's attention to the Washington Post on Sunday, August 4, wherein a special New York Herald Tribune dispatch asked: "Castillo Death Starts Check on Who's Next."

President Carlos Castillo Armas, of Guatemala, has just died of an assassin's bullet, fired by a palace guard who stood revealed as an acknowledged Communist. Just previouly, President Jose A. Remon, of Panama, was murdered, followed by President Anastasio Somozo, of Nicaragua. These three were not only devoted friends and allies of the United States, but each was bitterly anti-Communist.

The pattern is much too widespread to be purely localized political unrest. President Batista, of Cuba, is under pressure and one of the strongest opponents of communism in this hemisphere, the Dominican Republic, is under murderous assault from not only Latin American points, but right here in the United States as well. I know of no case in recent history where exiles have been able to stir up such venom in the United States, or where exiles are so vitriolic in their desires to produce punishment or revolution, as in the case of the Dominican Republic. This is, indeed, strange departure from the usual customs of where refugees, many of whom fled from conditions admittedly far worse than in the Western Hemisphere, who are glad to be here and away from those terrorized homelands to forget all and become good citizens. It would not surprise me to learn Communist forces supply much of the energy which makes up this strange program.

Strange, too, is the fact that President Figueres presides over Costa Rica, where about 9 years ago communism was outlawed by official act. Yet, the Communists continue to exist (perhaps in a relatively minor role) openly and without punitive action by the Government of Costa Rica.

One does not live with communism that way. It may well be that here will be No. 4, to answer the Herald Tribune. I understand Figueres recently unmasked two alleged assassins who had voluntarily confessed their mission was at the direction of the chief of state of another country. Perhaps they were correct but it is a story with a familiar Communist theme—murder and revolution stirred up in the international communism program, but tailored carefully for local purposes. The Communists which Figueres seems to tolerate may well be preparing him for No. 4 and laying the groundwork to place the responsibility on another, since Communists are sometimes less concerned with credit than their goals. If Figueres is No. 4, it would bring instant military action by Costa Rica, unless it could be charged to another outside source, which would relieve Costa Rica Communists from punitive action and give them time to organize a coup in their orderly fashions.

No. 5 may be Gen. R. Trujillo, in the Dominican Republic, since he seems to represent the strongest resistance to communism in the Latin Americas today. In the Dominican there is another equally powerful foe of communism, the Catholic Church of Rome, and it leaves little ground to feed a Communist growth. The Communists may need some strong help from within the United States, since we would resist outside foreign assistance at once, to break down this goal, and recent developments indicate they are getting it.

The Monroe Doctrine not only calls for the United States to protect the Western Hemisphere from without, but certainly from within from a foreign influence which would destroy us all. In recent weeks, I have heard colleagues speak of dictatorships as if they were something new. Latin America has always had its strong men, who in turn were replaced by strong men, and strong men will replace those now in power, with a continuing succession for years to come. The limited self-interest of any strong man offers more liberty than communism, which makes every person the abject slave to a strange ideology. In a police state there may be security personnel who will check on citizens, but communism offers the alternative of having a break in a long working day where you don't drink coffee or siesta but spend the time denouncing yourself or having a fellow worker do it.

House Resolution 383 will help in implementing the Monroe Doctrine. I warn the House that we owe it to Christian and anti-Communist governments to help search out and expose the Communists and their plans, as much a matter of our protection as theirs. In so doing we realize a stronger Western Hemisphere, and a more secure and safe United States.

Sincerely,

GARDNER R. WITHROW,
Member of Congress.

House Resolution 383

Whereas communism is on the march in the Latin Americas and Caribbean; and

Whereas the chief of state of a friendly ally was assassinated by a confessed Communist who held a position of trust; and

Whereas revolution is being fomented in the Caribbean and the Latin Americas on such a vast scale as to indicate an organized effort rather than localized feelings; and

Whereas the national security calls for Communist-free and settled governments in the Western Hemisphere; and

Whereas it would appear that Communist forces are crowding the United States in the Western Hemisphere to divert interest from other strategic areas: Therefore be it

Resolved, That the Committee on Foreign Affairs is authorized and directed to make a study of Communist efforts and influences being exerted in the Caribbean and Latin Americas and report to the Speaker of the House of Representatives not later than January 10, 1958.

SEC. 2. The committee is authorized to employ such investigators, and such clerical and professional assistance as may be necessary, and the committee is authorized to travel, and to authorize travel for employees, and to provide for whatever services may be necessary. For these purposes the committee is authorized to expend not to exceed $25,000 out of the contingent fund of the House of Representatives.

SEC. 3. The committee is authorized to hold hearings at such places in the United States or Caribbean or Latin Americas as may be desirable and shall have the power to issue subpenas for witnesses for purposes of testifying at any duly authorized hearing provided in this section.

SEC. 4. In the course of its study and report the committee shall pay special attention to any activities calculated to be Communist in purpose or nature tending to create antagonism between countries in the Western Hemisphere with a view to amicable settlement of these hemispheric disputes and trace the irritation to its source, and for the express purpose of bolstering friendly governments whose traditional alliance, anticommunism, Christianity, and strategic importance to the United States is demanding of the confidence and support of the United States.

Hon. Walter F. George

SPEECH
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. MILLS. Mr. Speaker, I join in tribute to Walter F. George. Senator George was the most outstanding Senator of his time. He devoted his entire life to service to his country. He was an authority in all legislative fields and particularly in the fields of taxes, social security, and foreign affairs. His monument will be his contributions to these many fields.

His advice was sought by Presidents and other high Government officials and all of those who were privileged to serve with him in the Congress of the United States. Even before his death he had already earned a place in history as one of the most respected and most beloved public officials of his time.

It was my extreme good fortune to have worked very closely with him in recent years in legislative matters. I often sought his counsel and advice and he very kindly gave it freely despite his busy life.

His loss is one which our Nation can ill afford in these troubled times. Our only consolation is to pattern our efforts after the example which he set for the highest in integrity, patriotism, devotion to duty, and country.

I extend my heartfelt sympathy to the members of his family.

Ferdinand G. Fraser

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include the following article from Who's Who in VA, which concerns the retirement on July 31, instant, of Mr. Ferdinand G. Fraser, Chief, Office Services Division, Office of Administration of the Veterans' Administration.

It has been my great good fortune to have known Mr. Fraser over the years, and he has been kind enough on numerous occasions to assist me in matters for the veterans in which I have been interested. Without exception he has been courteous, kind, and painstaking. With his fine ability he was very valuable. A badly disabled veteran himself, he had great sympathy and understanding for the veterans.

He will be missed in the Veterans' Administration, he will be missed in the Federal Government, and I, for one, as a Member of Congress shall miss him. I am happy to call him friend. His many friends wish him every happiness in his retirement, which he may enjoy with the full satisfaction of one who has worked long and hard in the performance of his duties.

The article referred to follows:

WHO'S WHO IN VA

Mr. Ferdinand G. Fraser, Chief, Office Services Division, Office of Administration, formulates and recommends plans, and procedures for the operation of the functional responsibilities of the Office Services Division including centralized general administrative records, receipt, distribution, and dispatch of mail for central office, VBO and insurance center, central master index, claims folder locator records, translation service, and telecommunications. The number and variety of records involved, approximately 133 million, and the number of unrelated functions constitute a complex and varied operation.

Mr. Fraser was born in Ashkum, Ill., March 3, 1891, and attended both high school and business college in that city. He served during World War I, from 1918 to 1919, in the United States Army and is currently a member of the American Legion, 40–8 Society and the Selective Service Association of the District of Columbia.

Mr. Fraser has served in the Veterans' Administration and its predecessor agencies continuously since February 6, 1919. During his employment he held such positions as supervising clerk, administrative assistant, senior administrative officer, executive officer, Director, Administrative Service, and Director, Administrative Operations Service (Washington). During the reorganization of the VA in 1953, his position was redesignated as Chief, Office Services Division under the newly created Office of Administration and was officially assigned to this position on May 23, 1954. In his more than 39 years of service Mr. Fraser has become a friend of all those with whom he has been associated. Mr. Fraser's many friends and associates extend to him their sincere wishes for good health and happiness in his forthcoming retirement, which he has announced will be effective July 31, 1957.

Facts Versus Propaganda

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. LANHAM. Mr. Speaker, in view of the highly misleading propaganda being used to discredit the jury-trial amendment in the Senate's version of the civil-rights bill, I am glad to include with my own remarks a very fine editorial which appeared in the Washington Evening Star for Wednesday, August 7, 1957, entitled "Facts Versus Propaganda":

FACTS VERSUS PROPAGANDA

In legislating on civil rights, Congress should be guided by the facts, not propaganda. Highly misleading propaganda is being used now to discredit the jury-trial amendment in the Senate civil-rights bill, and thus the bill itself. That propaganda takes the form of statements to the effect that the amendment kills, or weakens, or nullifies, or makes a ghost of, or, to borrow a White House phrase, "makes largely ineffective," the civil-rights bill. The other line is that it "weakens our whole judicial system."

Is this mere political panic? What else can it be? Whatever it is, Senators are gathering the facts to disprove such absurd generalizations.

For example, in fiscal 1956, there were only 48 cases of criminal contempt in all the Federal courts. Three were for contempt of Congress, in which there is trial by jury. In the same period, the Federal courts were trying 28,739 criminal cases by jury. Would trial by jury of the 45 other cases have weakened our whole judicial system?

In fiscal 1957, 26 of the 69 criminal contempt cases in all the Federal courts were for contempt of Congress, tried by jury.

There are 243 Federal judges sitting in 87 district courts. In only one of the past 10 years has the number of criminal contempt cases equalled the number of district courts. That was in 1951, when 64 of 124 criminal contempts were for contempt of Congress, and tried by jury. The House Un-American Activities Committee was busy that year. How ridiculous to say that had jury trial applied in all criminal contempt cases, our judicial system would have been weakened. We believe the statement will become even more absurd when Senators complete an analysis of circumstances in each criminal contempt case of recent years.

No one knows how many criminal contempt cases actually would result, and be tried by jury, under the civil-rights bill's provisions enforcing the right to vote. But under the jury-trial amendment, it is a Federal judge who decides whether to exercise his criminal or civil contempt powers, or both. His civil contempt powers to send a person to jail without a jury trial are not affected. If criminal contempt is involved, and punishment rather than compliance is the issue, there should be a jury.

As Dean Acheson points out in his article on this page today, the real danger to the Federal courts does not lie in jury trial. It would exist in a situation in which people would meekly accept punishment by a judge for violations of laws so strongly opposed that no jury could be found to enforce them. We agree with Mr. Acheson's statement: "To say that this requirement (for jury trial) nullifies the law is nonsense."

Furthermore, it is insidious nonsense. If believed, after repetition by men in high places, it could undermine the whole fine tradition of jury trial as an essential accompaniment of justice under law.

Report to Constituents

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. COAD. Mr. Speaker, consistent with my policy of keeping my constituents informed as to the activities of the Congress I mail each week a Report to the District. This week in this report I presented certain facts which may be of value to the Members of the Congress which appear as follows:

FARM INCOME

Department of Agriculture reports indicate that the farmers' total net income in the first half of 1957 was at an annual rate of $11.6 billion, exactly the same as for last year, and there are those who optimistically point to this singular fact to proclaim that farm prices are stablized and the downward trend is leveling off. To me, those who view this net income rate for this year with optimism are looking at the farm situation through one eye and if they were to open both eyes they would see by the record, first, that though income rate remains the same as last year, the purchasing power of the dollar has declined because of the rise in the cost of living. Therefore, the $11.6 billion is actually worth 4 percent less than last year. Second, the net income figures do not reflect the adjustment for the reduction of farm inventories necessary to maintain their income. According to reports, farmers sold more goods than they produced the first half of this year. This means they cut back livestock herds, grains, and other inventories since the first of the year at an alarming rate in order to have this net income. This practice is like borrowing money against your car, home, or business; if you want to stay in business you will have to pay back the money you borrowed out of future earnings. So it is with many farmers today who live on a borrowed prosperity which will have to be replaced out of future earnings if they are to continue farming tomorrow.

A CONCRETE SOIL BANK

It has been estimated that the Federal highway program of building 33,000 miles of interstate, limited-access highways plus 8,000 to 9,000 miles of other roads will require about 2 million acres of land for the right-of-way. Most of this needed land is now farm and ranch land which will be purchased for the new superhighways during the next 13 years.

AGRICULTURE SUBCOMMITTEE TO VISIT IOWA

The Honorable CLARK W. THOMPSON, chairman, Family Farms Subcommittee of

the House Agriculture Committee, has informed me of the tentative plans of his group to visit Iowa during the week of November 10 at the request of Governor Loveless. Mr. THOMPSON expressed to me the desire of the subcommittee to look into the family farm problems of Iowa and talk with the farmers themselves in an effort to get firsthand information which will enable the group to recommend to Congress possible corrective proposals for affirmative action.

Answer to Zhukov—II

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. McINTOSH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Clemens Daily Monitor-Leader of August 6, 1957:

ANSWER TO ZHUKOV—II

When Marshal Zhukov told President Eisenhower that communism appeals to the idealistic because it allows people to sacrifice themselves to the State, he spoke of a theory that has no link with the facts of life in the Soviet Union.

Despite decades of effort and concealment of the truth by the distortions of propaganda, the Russians have not been able to hide from the world how a Communist government works in real practice.

It is a dictatorship founded on ruthless coercion of the people. It is arbitrary rule. Decisions are handed down from the top and must be obeyed without question. The people neither debate nor take part in these choices. Their criticisms never touch policy fundamentals but are limited to details of policy execution.

After nearly 30 years of Communist rule in Russia, we have no measurable evidence that Soviet citizen's selflessly sacrifice themselves to the State, and glory in this sacrifice. They yield to the all-powerful government because it monopolizes the means of coercion—and applies them with brutal disdain for human concerns.

In original theory, Communists argued that dictatorship would be a temporary phase, that a gradually reeducated people would develop habits of selfless cooperation which in time would end the need for arbitrary rule.

Early in the game, however, Lenin and other top Russian Reds saw the folly of trying to remake human nature. They thereafter accepted dictatorship as a permanent condition under communism.

Clearly, then, they accepted coercion as a necessary device. All thought that people could be brought to selfless sacrifice for the State, that they could find deep satisfaction in such yielding, was forgotten.

Thus when Zhukov told Mr. Eisenhower communism lured the idealistic because it gave them outlet for sacrifice, he spouted theory which his own civilian leaders long since had given up.

Possibly, being a soldier, he did not understand all that had transpired in the civilian realm. Too, a soldier is trained to accept subservience to firm authority as a good and necessary thing. The military is built upon a system of order maintained from the top.

On the other hand, the Russian military customarily gets far more political indoctrination than do soldiers in free lands. Zhukov in the mid-1940's may very well have understood thoroughly the facts of Soviet life.

The truth is that Russian leaders in all walks have sought continuously to perpetuate the idea of selfless cooperation in the programs and policies of the Communist state. But what was genuine theory at the outside has become gigantic fraud.

Nothing so sharply symbolizes the fraud as does the constant use of the phrase "people's government" to describe Red regimes which have nothing whatsoever to do with the people except to grind them in the dust.

By their nature Communist governments do not serve people but enslave them. The "state" is not an agency rooted in popular consent and sustained by popular cooperation. It exists as a mechanism to prolong and enlarge the power of Communist dictators.

Communism, not democracy, is materialistic. It is a system perfectly conceived to serve the materialistic needs of the seekers of great power.

The man at the top in the Kremlin—or his counterpart in other Red regimes—is truly the only kind of man on earth who can do as he pleases. And very little of what he does ought in fact to appeal to the idealistic.

Honors to a Des Moines Woman

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, Mrs. Bernice Setzer, who is art education director of the Des Moines public schools, was recently honored by being invited to appear on the program of the International Art Convention at the Hague, Netherlands, as well as send an exhibit of the work of the Des Moines school children.

This invitation indirectly came about as a result of a trip she took as a private citizen to Central and South America where she visited art schools, exhibits and became acquainted with people interested in the cultural aspects of their own country and ours. In order to expand her discussion with them that we in the United States were also interested in the arts and culture she assembled an exhibit, from work done by students and others connected with the Des Moines schools, and sent it to several Central and South American countries: to name a few, Guatemala, San Salvador, Costa Rica, Peru.

Mrs. Setzer is past president of the Professional Women's League and Altrusa Club and an active member in several other clubs not concerned with the arts alone. Naturally the women in Des Moines are very proud of this fine woman and the contribution she is making to the cause of other countries understanding the United States.

The following letter, written by Mr. Paul F. Glynn, Cultural Affairs Officer of the American Embassy, Guatemala, Guatemala, May 29, 1957, to Miss Bernice Setzer, and the letter referred to therein written to Mr. Paul F. Glynn, by Prof. Ruben Villagrán Paul, Subsecretary of Public Education, Guatemala, Ministry of Public Education, Guatemala, C. A., under date of April 22, 1957, speak eloquently of the exhibit of children's art that Bernice Setzer sent to Guatemala.

THE FOREIGN SERVICE OF THE
UNITED STATES OF AMERICA,
AMERICAN EMBASSY,
Guatemala, Guatemala, May 29, 1957.

Miss BERNICE SETZER,
Art Supervisor, Director of Art for Public Schools, Des Moines, Iowa.

DEAR MISS SETZER: I wish to express my thanks to you and to the public schools of Des Moines for letting us have the opportunity to display the excellent exhibit of children's art that you recently sent to Guatemala. The show was exhibited last month in the art gallery of the National Palace in a joint show with a similar exhibit which was sent by the French Embassy. The French Ambassador, the French Cultural Attaché and myself, as well as the Director General of Fine Arts and a representative of the Minister of Education all gave a brief talk at the opening of this joint show. The actual organization of the exhibit was handled by Miss Maria Cristina Barrios who is in charge of school arts for the Ministry of Education. I have no accurate count of the atendance but I would estimate that it was attended by between 12 and 15 thousand school children and adults.

The Ministry of Education was most appreciative of having the chance to sponsor this exhibit and has written me a very nice letter to that effect, a copy of which I have enclosed.

The exhibit will be again displayed in the Instituto-Guatemalteco-Americano in late June and then later on in the new United States Information Center in Quezaltenango, the second city of Guatemala, sometime in July or August. I would appreciate knowing what I should do with the exhibit after its final showing here. Would you want it sent on to the Cultural Affairs Officer in San Salvador for display in that country?

Hoping to hear from you in the near future, I remain,

Sincerely yours,

PAUL F. GLYNN,
Cultural Affairs Officer.

GUATEMALAN NATIONAL PALACE,
MINISTRY OF PUBLIC EDUCATION,
Guatemala, April 22, 1957.

Mr. PAUL F. GLYNN,
Cultural Affairs Officer, American Embassy, Guatemala, C. A.

DEAR SIR: I have the honor of sending you this letter to expres to you, on behalf of the Ministry of Public Education and in my own name, our most sincere thanks for giving this country the opportunity to appreciate the art works—drawings and paintings—done by the youth of the nation represented by your honorable Embassy in Guatemala.

I wish to tell you that the works included in the recent exhibit in the ground floor exhibit room of the National Palace were admired by a great number of people and that such an exhibit deserved the warmest praises on the part of all visitors. We see it as a valuable contribution to the culture of our country.

Let me express again to you, on this occasion, the testimony of my most distinguished consideration,

Prof. RUBEN VILLAGRÁN PAUL,
Subsecretary of Public Education.

As the Representative in Congress for the city of Des Moines, Iowa, I am happy to make available to those who read the CONGRESSIONAL RECORD this evidence of the honor that has been bestowed upon

Mrs. Bernice Setzer as a result of her work and the cooperation she has received from the children of Des Moines with whom she works and the women of Des Moines who have assisted her in her splendid accomplishments.

The Philadelphia Inquirer Has Some Advice for Postmaster General Summerfield

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mrs. GRANAHAN. Mr. Speaker, the Philadelphia Inquirer, which has supported this administration very vigorously in 1952 and 1956, has not let its support for the Republican administration in those campaigns blind it to the shocking inadequacies of our postal service under Mr. Eisenhower's Postmaster General.

As a member of the Committee on Post Office and Civil Service, I have sat for long hours in committee hearings listening to officials of the Post Office Department from the Postmaster General on down talk about all of the remarkable innovations they have instituted presumbaly to speed up or improve service. Now we all know the service has never been this bad. We are getting many frills, such as painting the trucks and the mail boxes red, white, and blue, such as printing new stamps, such as buying huge machines to sort mail at a slower pace than the individual clerks can do it—but the service keeps getting worse.

The Philadelphia Inquirer recently commented editorially on all the publicity-minded activities of the Postmaster General in the previous week, issuing new stamps, increasing special-delivery charges, transporting mail by rocket for 1 mile, and putting in a statement telling of all the fine things he is supposed to have done in his job since 1953.

"In all, a great big, wonderful week," commented the Philadelphia Inquirer.

The paper added:

Now, if Mr. Summerfield can only get our ordinary mail from here to there in as reasonable time as postal services do in other countries, with a minimum of those common marks: "Missent to ———" then the average postal user will have something to cheer about, too.

Mr. Speaker, under unanimous consent, I submit the full editorial from the Philadelphia Inquirer of July 11, as follows:

BUSY WEEK IN THE POST OFFICE

The Fourth of July holiday did not keep Postmaster General Summerfield from making last week busy for his Department.

On Monday he issued a special stamp in honor of the Nation's schoolteachers. That same day he boosted rates on registered letters; upped certified mail from 15 cents to 20 cents; special delivery to 30 cents, and business reply cards from 3 to 4 cents.

On Thursday, the Post Office issued one of its most beautiful stamps, depicting the American flag in full color, stamps produced on the Department's new Swiss-made presses. Also on Thursday a rocket was used to transport mail from western Nevada to a point a mile away in California. (The rocket, privately launched, stayed in the air 7 seconds.)

On Tuesday, the Postmaster General himself, to mark the 110th anniversary of the first United States postage stamp, released a statement telling of all the fine things his Department has done besides boosting rates since he took charge of it.

In all, a great big, wonderful week.

Now if Mr. Summerfield can only get our ordinary mail from here to there in as reasonable time as postal services do in other countries, with a minimum of those common marks: "Missent to ———" then the average postal user will have something to cheer about, too.

Humane Slaughter Legislation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. NEUBERGER. Mr. President, on August 6, 1957, the Northern Virginia Sun, of Arlington, Va., published an effective and gripping editorial entitled "Humanity in Animal Slaughter." This editorial urges Congress to enact S. 1497, the bill for the ending of cruelty and barbarism in meatpacking plants—the bill of which the Senator from Minnesota [Mr. HUMPHREY], the Senator from Connecticut [Mr. PURTELL], and I are cosponsors. It seems to me that any person with compassion, who reads the editorial from the Northern Virginia Sun, must come to the conclusion that our proposed legislation is not only justified but, Mr. President, many years overdue.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HUMANITY IN ANIMAL SLAUGHTER

From time to time legislation comes before Congress which seems so obviously desirable that one is baffled by the existence of opposition. This is the case with bills now pending in both the Senate and the House which would require the employment of humane methods in slaughtering food animals. The Senate bill, S. 1497, will probably come before the full Senate Agricultural Committee for consideration tomorrow, having already received the approval of the subcommittee. The House bill, H. R. 8308, has been reported favorably by the House Committee on Agriculture and should reach the floor of the House next week.

These bills would compel meat packers to eliminate slaughter practices that are wholly out of place in our modern industrial society.

Most Americans would be surprised to learn that in most of our largest packing houses hogs are still slaughtered in much the same manner as in medieval times. A hog's leg is shackled by a chain. The animal is dragged over a 14-foot wheel to the sticking area. There a man with a knife cuts its jugular vein and leaves the animal to bleed to death.

Frequently, a hog's bones are broken while it is being dragged aloft. Sometimes improperly stuck hogs go into the scalding tank while still alive and conscious.

The practice in slaughtering cattle is quite as crude and brutal.

In most American packinghouses cattle are driven into stunning pens 2 to 4 at a time. A man standing on a platform then tries to hit each animal's forehead with a long-handled hammer in such a manner as to render it unconscious without doing too much damage to its pate and brains. Very often he does not succeed in felling the animal at the first blow; in some cases as many as 9 to 13 blows are necessary.

What makes all this particularly hard to understand is that packers can substitute modern, humane methods for these barbaric practices with little expense. In the long run they should realize substantial savings by avoiding the losses now suffered from bruised meat and by reducing the high industrial accident rate on the killing floor. (The accident rate for the packing industry is double that for all other industries combined.) At the same time the elimination of working conditions that are brutalizing and degrading to human beings should serve to improve the general tone and efficiency of the whole industrial operation.

Some of our leading packers have acknowledged these facts. The Oscar Mayer Co., the George A. Hormel Co., and Kingan & Co. some time ago adopted modern slaughter methods. But the majority of the industry still clings obstinately to outmoded practices and gives no promise of changing unless Congress makes it mandatory to do so.

For a Nation with pride in its humanity, we should be ashamed of our record in this legislative area. Most Western European nations have had compulsory humane slaughter laws for years. Switzerland enacted such a law as early as 1874. If Congress proves unwilling to outlaw present animal slaughter methods, it might well consider legalizing bullfighting and bearbaiting, and thus elevate the torture of animals to the status of sport.

A Critical Situation in the Lead and Zinc Industry

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. ASPINALL. Mr. Speaker, I realize that the days of this session are numbered and that we will soon come to an end of this year's work.

However, we cannot lose sight of essential legislation which must be considered this year if it is to have any value. I refer to the import excise fee legislation for lead and zinc now being considered by the Ways and Means Committee.

Our mines, indeed our lead and zinc industry, is currently closing down. Next year will find the workers dispersed, the mines beginning to flood and cave, and the opportunity to save this critical domestic industry gone.

I would like to include with my remarks, a letter which I have received from a group in Leadville, Colo., one of our most noted mining towns. This let-

ter tells the critical situation in which these men find themselves, and is a demonstration of their own effort to do what they can to save this industry.

The letter follows:

Congressman WAYNE N. ASPINALL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ASPINALL: During World War II, it was necessary to patrol the South American ports to prevent German submarines from refueling, and picking up other supplies.

As veterans, we feel that we should not now worry about hurting the feelings of the South American Republic. It is our contention that an excise tax should be passed to help alleviate a very serious depression in the zinc industries.

We veterans in Leadville feel very strongly on this subject—our jobs, livelihood, and businesses are threatened.

Thomas E. Schnaed, Wilfred Brink, Charles J. Hauser, L. E. Ossman, George Cassidy, Paul Robinsen, Andrew Cassidy, John Ladage, Jr., Harry M. Applegate, Thomas C. Epson, R. E. Ossman, M. F. Powers, Maynard Morlan, Frank Kendrick, Edward L. Left.

Government Loans for Desert Land

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. COAD. Mr. Speaker, recently I took active part in opposing H. R. 3753 which was a bill to make loans to desert entrymen for the purpose of irrigating their lands obtained under patent rights.

Appearing in the Humboldt, Iowa, Independent, Mr. Lawrence Jaqua, editor, is an editorial titled "For Once We Agree With Coad," under the date of August 6, 1957, which is as follows:

FOR ONCE WE AGREE WITH COAD

MERWIN COAD, Congressman from this district, is against the Government loans for desert land. For once, we find ourselves in agreement with COAD. There are so many things we disagree with him about that it comes as a surprise to us that we should find ourselves in agreement on this one issue.

Congressman COAD says that he opposed the bill to authorize loans for development of desert land because he felt it would only add more farmland when the Government was already taking farmland out of production by the soil-bank plan.

COAD says:

"I led the opposition to this bill because it is my opinion that the Government has already expressed its intention to take good Midwest land out of production by the soil-bank program, and yet, here is a ridiculous situation of the Government offering assistance in the form of loans to open up new lands through irrigation of our arid western desert areas. With irrigation these areas can be made to be productive and add to our present problem. But, because of our rapidly increasing population, we will need the production of this land in future years. For the present, I maintain that this idle arid land is the best soil bank we could have for the simple reason that it does not cost a penny of tax money. Water for irrigation is the key to the development of desert land, and today it is in short supply in those areas. Thus, it is my feeling that if we are to provide for future generations and increasing populations, it would be far better to concentrate on provisions for a long range water supply, which would be adequate for development of these areas, such as the measure which would provide for the construction of the San Angelo Federal Reclamation project, recently passed. In the San Angelo project bill, there is a specific provision keeping waters stored in this project from being used for irrigation for a period of 10 years."

Testimonial to Hon. Donald W. Nicholson

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. MARTIN. Mr. Speaker, on last Sunday, August 4, the people of the Ninth Congressional District of Massachusetts turned out in large numbers to pay tribute to the great public service of our beloved colleague, Hon. DONALD W. NICHOLSON, who has announced his retirement at the end of this Congress. I am sure I speak for his colleagues on both sides of the aisle when I say we are all going to miss him very much. At the testimonial last Sunday, Sheriff Adnah H. Harlow, of Plymouth County, spoke for DON NICHOLSON'S constituents in a glowing public tribute. Under leave to extend my remarks, I am happy to insert it in the RECORD.

REMARKS OF SHERIFF ADNAH H. HARLOW AT CARVER, MASS., ON AUGUST 4, 1957, AT TESTIMONIAL TO DONALD W. NICHOLSON

For more than three centuries wherever there have been men and women seeking freedom and opportunity, their eyes have been turned toward these shores. To those of us who for generations have enjoyed these blessings, too many times unconsciously I suspect, these coveted bulwarks of freedom have become commonplace. Until we learn of the privations of liberty endured by other people in other parts of this world, people who live and breathe as we do, have similar physical characteristics, and had they been born amongst us would have not been unlike us, do we become sensitive in a small way at least to the blessings that our people enjoy.

Not the least of the opportunities which come to every American is the right to participate actively and directly in the affairs of his Government. Here there is no ruling class. The divine right of kings has never been a part of the American political philosophy. In our Republic, where those who govern do so only for the time being by the consent of the governed, the only qualification for those who serve in our public affairs has been that they be chosen according to law from among the citizens whom they are to serve. America's greatness among the nations of history can be largely attributed to the fact that it has called into public service, from its earliest beginnings as a free country, men and women from many and varied walks of life; regardless of wealth or lack of it, regardless of social position, regardless of religious differences and political creeds, and regardless of the lack of specialized training for public service, which even in other democracies has seemed so essential. Americans have throughout our generations sought for their servants in Government those who above all else have demonstrated a love of country, and a desire to give of their best to its service. Thus serving according to the dictates of duty, as they saw it, we have had Washington, the Adamses, Jefferson, Jackson, Lincoln, the Roosevelts and our own Calvin Coolidge; all with different backgrounds and philosophies but each adding his contribution to our country and its public service. As with the presidency so has it been in the Halls of Congress. Throughout our history men and women from every walk of American life from the universities, from the back streets of our cities, from the towns and villages have all by their service moulded and strengthened the greatest Nation that the planet has ever known.

Typical of those who have made their contribution to America through its public service is he whom we honor today. Born in our own historic county of Plymouth, in the town of Wareham, a community with a history of which its people are justly proud, the son of a blacksmith in whose strong and sinewy arms flowed the blood of Scotland, our distinguished guest began life with the heritage that was bound to be a strong influence for good throughout his days. Like most of us, he received his education in his hometown, and although he was by no means among the larger boys, he held up his own in athletic prowess in school and in the community. Following his formal education, he set himself to earning a living at the tasks that were available; night telephone operator, grocery clerk, and streetcar conductor. Like many another young man of his time, he answered his country's call and served in our Army in World War I, 18 months of his service being overseas.

How typical of the life of many of our countrymen was that of our honored guest. What better training for the public service that was ahead could a young man have? He knew his people among whom he had lived and grown to manhood. They knew him. It was small wonder that in 1921 the citizens of Wareham called him to their service by choosing him to the offices of selectman, assessor, and overseer of the poor. That he served them well, and that the knowledge of his service had spread beyond the limits of his native town is evidenced by the fact that in 1924 he was elected to the house of representatives in the great and general court. With courage and integrity he commenced in a new field of service, and it was not long before his colleagues in Boston became aware of the fact that from the lower end of Plymouth County there had come a man who was to be reckoned with in the shaping of the legislative program of that day. In 2 short years this freshman representative was ready for advancement, and the electorate of the Cape and Plymouth senatorial district sent him to the State senate. Never a rubberstamp for anyone, zealous in representing the views of his constituency, always motivated by a principle best expressed in his own words, "You've got to think of your neighbor as well as yourself when you pass a law. I've been interested in what the people wanted me to do and what was best for my State and district. Whatever is best for them I'm going to work for." For 21 years, it can be said without fear of contradiction, our distinguished guest left his mark on the legislative history of our Commonwealth. Independent to a point that few in public life have dared to approach, he nevertheless gained the respect and admiration of those with whom he served, and in 1946 we find him unanimously elected as president of the Massachusetts Senate, a lofty office in our government and one that has always been held by men of great distinction.

with such a record of public service, it as no surprise, that upon the passing of r late beloved Congressman Charles L. ilford, the people of the ninth district aced the already distinguished Senator om the Cape and Plymouth in a seat in e National Capitol at Washington. This e the year 1947, and in 1948, and each 2 ars thereafter he has been continued at e task that he has done so well. His service as erected for himself many monuments which we all can be proud; the improved rport at New Bedford, our Maritime ademy, his support and promotion of our shing industry, his firmness in standing r tariff protection for our fading textile dustry, his efforts in behalf of our cran- rry industry, his interests in the safety of ose who go down to the sea in ships, and e retention and expansion of national fense installations in our area, which have ant so much to our local economy, are t a few of the results of his labors in r behalf. Above all he has been a true presentative of his people. While there ve been times in his career that his posi- ons have not always been reconciled with ose of his partisan colleagues, I would uchsafe that they have been views that nuinely represented not only his views but general those of his constituency. Never s he ever used his exalted office for the omotion of personal ideologies and cure- ls.

The announcement from this most dis- guished son of the Old Colony, a few nths ago, that it was his intention to lay ide the burdens of public office at the con- sion of his present term, came as a shock not only his close personal friends and sociates, but to the people of his district d the Commonwealth as well. No single oup has, over the years, benefited more m his support and counsel than the lymouth County Republican Club. The cision to make this occasion a testimony our esteem met with a ready and enthu- astic response. I deem it a great honor and rsonal privilege to have been selected by y colleagues to present in your behalf, this ken of our appreciation for service to our mmunity, State and Nation. Donald Wil- m Nicholson, you have brought great nor by your deeds to yourself, and also flected glory to those whom you have rved. We are proud to salute you; and you and your charming and devoted help- ate we pray for the best that life has to fer in the years that lie ahead. The results your labors we shall cherish, and it will be ur hope that those who will follow you in ur service may be equally dedicated and voted to the welfare of our country. In ehalf of your legions of friends, both gath- red here and elsewhere I say well done, good nd faithful servant.

ombating Inflation by Aiding Low- and Middle-Income-Bracket Investors

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. RABAUT. Mr. Speaker, poten- ial Government-bond purchasers in wer and middle income tax brackets ould benefit substantially from legisla- ion which I introduced last week.

The bill, designed as an anti-inflation- ry measure through the stimulation of overnment-savings-bond investments, would exclude for income-tax purposes dividends received from series E, United States savings bonds. Purchasers of the tax-free bonds would be limited to $5,000, maturity value, a year to any one buyer.

Certainly if investments in Government bonds were to be made more attractive, a double-barreled contribution to the Nation's economy would result. That is, low- and middle-income citizens, such as the young prospective investor and home buyer, would surely benefit from being relieved of taxpayments on Government-bond dividends, and the tax-free status of the bonds would undoubtedly attract additional purchasers, thus drawing off possibly inflationary investor cash reserves.

During the fiscal years 1956 and 1957 the Federal Government had outstanding approximately $38 billion worth of series E bonds, indicating no appreciable increase in their sale. These 3¼-percent bonds would be held principally by persons in the 18- to 30-percent-tax brackets. Assuming the bonds had been tax exempt, the revenue loss for the fiscal year 1956 would have amounted to only some $300 million. That loss would have constituted about four-tenths of 1 percent of our total 1956 revenue, and therefore represent a negligible loss as compared to the possible economic advantages to be derived.

M. Sgt. Chester E. Lee, of San Antonio, Tex., Outstanding Airman, Air Force Headquarters Command

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. KILDAY. Mr. Speaker, it was my privilege and honor last week to officially greet and speak with M. Sgt. Chester E. Lee, a resident of San Antonio, Tex. Sergeant Lee was in Washington as an honored guest of the Air Force Association at their recent convention commemorating the golden anniversary of this Nation's air arm.

He was selected as the outstanding airman from Air Force Headquarters Command and as such was one of 21 airmen justly honored with a week-long visit to the convention.

Sergeant Lee is a veteran of 35 air transport missions over the "hump" in World War II, and a former line chief at the Flight Test Center, Edwards Air Force Base, Calif. He is currently performing duties as line chief for the Inspector General Group, Norton Air Force Base, California. Supervising approximately 120 maintenance personnel, Sergeant Lee has been responsible for the operation of both conventional and jet aircraft including T-33's, C-54's, C-45's, C-47's, and B-25's. During 1956 these aircraft logged over 17,000 flying hours, and the organization has had a high in-commission rate and accident-free flying safety record since January 1956, all reflections on the outstanding leadership and technical ability of Sergeant Lee.

Sergeant Lee first enlisted in the Army Air Corps in 1939, and served as a tower operator at Kelly Field, Tex. He was awarded the Air Medal and promoted to the grade of master sergeant at the age of 22, while flying in the China-Burma-India Theater in 1943. Returning to the States in 1945, he participated in the delivery of Air Corps planes to various Latin American Republics. Later he served at Cali, Colombia, in South America, as an instructor in establishing maintenance procedures.

In 1948, Sergeant Lee became active in the maintenance field at Edwards Air Force Base, working as crew chief, inspector, flight chief, and line chief. He worked in the test programs on F-80, F-94C, T-28, and F-84 aircraft. He specialized on the XB-43, the first jet bomber, and was chief of the bomber section. In this capacity, he worked with the Air Force testing of the B-45, XB-51, B-57, B-47, and B-52. He also participated in the early development of the air-to-air refueling systems.

It is entirely proper that Sergeant Lee and the other outstanding airmen should be honored for their distinguished service. By so rewarding these men, the Air Force Association is by this token paying tribute to the contributions made by all airmen to the Air Force and this Nation's defense.

Address by Hon. Robert C. Byrd Before the Youth Temperance Council, Cowen, W. Va.

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. BAILEY. Mr. Speaker, on last Sunday, August 4, my colleague, the Honorable ROBERT C. BYRD, made a speech at Cowen, W. Va., before the Youth Temperance Council. Cowen is in my congressional district, and I have in the past watched the activities of this group of young people with a great deal of interest. Mr. BYRD has always been glad to assist the youth of our country in the development of noble ideals, and I am confident that his speech to the boys and girls at Cowen was received as a challenging one. His address, The Lights of Decency, Faith, and Temperance, is one which is not only appropriate for young people of our day, but it is also one which contains facts of vital importance to the adult generation. I am glad, Mr. Speaker, to call it to the attention of my colleagues.

Congressman BYRD's speech follows:

THE LIGHTS OF DECENCY, FAITH, AND TEMPERANCE

Young people possess certain traits and abilities which are envied by the older generation. And so, it is no mere formality

when I tell you that I am glad you asked me to be with you today. You have made me feel very much at home on this occasion.

You have told me that your theme for the year is Erect Towers of Outreach and your text is verse 3 of the 43d Psalm—"O send out Thy light and Thy truth." The light referred to, of course, is that which comes from the divine source. On many occasions while Jesus was on earth He referred to the light. After His triumphant entry into Jerusalem and just prior to partaking the Last Supper with His disciples, Jesus advised the crowd to "Walk while you have the light, lest the darkness overtake you." He vividly explained that those who walk in darkness do not know where they go. He was simply trying to teach the value of the Christian way of life and He used the word "light" as a most significant symbol. Those who disbelieved on that tragic occasion did not know the extent and power of the light that God had brought into their lives through the teaching and example of Jesus.

In her book, The Sea Around Us, Rachel Carson has a chapter on wind and water, and she describes the effects of coastal storms. Along a rocky coast, for example, the waves of a severe storm are likely to be armed with stones and rock fragments. Once a rock weighing 135 pounds was thrown higher than the lightkeeper's house on Tillamook Rock, 100 feet above sea level. As it fell, it tore a 20-foot hole through the roof. She mentions a lighthouse, which stood on the summit of a cliff, 300 feet high, in which windows and lights were repeatedly broken by stones from the cliff and tossed like confetti by the waves.

In reading her description of the perils of lighthouse keeping, it occurred to me that here was a job even more hazardous than being a Congressman.

What a tremendous responsibility to tend light against the elements. Light always seems to lead a very precarious existence in our world. Like the wall, in Robert Frost's poem, there is something that doesn't like it, something that wants it out. Any man who tries to keep a light shining finds himself from time to time facing great odds.

What was it Jesus said to His disciples? "Therefore, be careful lest the light in you become darkness." In these days when the light in our world seems to be so feeble, we need to hear His words again. The light that He brought into the world needs tending. We never dare to take it for granted, for darkness is always waiting to blot it out at the first sign of weakness. "Therefore, be careful lest the light in you become darkness."

Let me say first of all that we need to be concerned with tending the light of human decency.

One of the sad truths about human life that we have learned in our own generation is that there is no automatic guaranty on decency. One might think that as wealth and standards of living tend to rise, decency would be assured. And yet the family living in a wealthy home with all of its conveniences shows no more natural inclination to goodness than the less fortunate neighbors. Character does not fluctuate with wealth or material resources.

One would suppose that a high standard of culture and intellectual life would carry with it the guaranty of decency. It must be true as one of our Protestant bishops has said, that civilization is always like a little clearing on the edge of the jungle—and that at night, if you are quiet, you can hear the howling of the beasts—and the jungle is always waiting, ready to take over the minute man relaxes his vigilance.

The Christian and the church must always be concerned with tending the light of human decency. There are so many ways in which life is degraded. There are so many circumstances in which darkness prevails. Decency is never guaranteed by wealth, or by education, or by social standing. It is guaranteed only by the moral courage and determination of individuals like you and me.

Now the second thing I want to say is that we need to be concerned with tending the light of faith.

I don't know of anyone who makes me more uncomfortable than the man who knows everything. In religion especially, there are so many people who have apparently never had a moment's doubt about anything pertaining to their faith. Do you remember how much closer Jesus was to a man like Thomas, famous for his skeptical mind—than to the Pharisees who knew everything about everything? Honest doubt seems to me a better foundation for a spiritual structure than a closed dogmatic creed.

Having said that, I want to go on and qualify it by saying that there comes a time when a man has to guard the tiny flame of faith within, for, if he does not, it can be quickly extinguished. It is more important to fight for what you believe than to settle down to a life of indifferent cynicism. And the unhappiest people I have ever met are those who have lived their whole lives without coming to the place where they could say: "This I believe, and hold to be true."

Horace Bushnell is a name that illustrates what I am trying to say. Early in the last century he became a tutor at Yale, and at the same time a student of law. He called himself an agnostic, one who does not pretend to believe anything, one way or another. Two years later a powerful Christian movement began to develop on the Yale campus, and the students watched Bushnell to see how he would react. He was a very popular teacher. He recognized that he was influencing many students, and so one night he decided to face the issue as to where he stood in respect to religion.

He made two columns on a piece of paper, one negative and the other positive. He put three entries into the negative column. "First: I believe that the Bible is a collection of Jewish folklore and Chaldean fables. Second: I believe that Jesus was nothing more than a Galilean peasant. Third, I see no valid reason why I should believe in a God at all." In the positive column he was able to make only one entry: "I believe that there is an eternal distinction between right and wrong."

But this is the important point. He decided that he could not give up what he did believe because of what he did not believe. So he committed his life to it, and little by little the truth broke upon him. Before the year was out, he entered the theological department at Yale, and 2 years later was ordained a minister.

It is a great thing to keep an open mind, but at the same time it is fatal never to be able to object to anything at all. A Christian is someone who has a certain faith; his experience verifies the thing he believes. But any man's faith is at best a tiny, flickering candle in a sea of darkness, so much remains unknown. The light of faith is the light that needs tending.

There is a third thing I want to say: we need to tend the light of temperance. And once again, here is a light that none dares take for granted. Alcohol poses an urgent problem to the youth of today. Every parent faces the disturbing fact that a child of high school age must be prepared to meet the threat of liquor. No parent can say—no young person can say, "This problem does not concern me."

About seventy million Americans drink alcoholic beverages. These are very recent figures—figures quoted in a Washington newspaper on July 20. Medical science know, as a statistical fact, that about 7 percent of all drinkers wil wind up as alcoholics. But I cannot now predict, with any degree of accuracy, who will be included in that percent.

Young people who abstain do a great service to the Nation, to other young people and to themselves. A college student said: "Not drinking is a sign of strength and people respect you for it." Another said: "When I am at a party and the host brings in some drinks, I know that some ought not to drink because they will be driving others home. Some ought to keep away from the stuff for their own good. My example counts for something and as a Christian I feel responsible." These young people are carefully tending the light of temperance.

Our youth can make a mighty contribution to the cause of sobriety. The opinions and the actions of young people attract much attention. It is unlikely that the alcohol problem will ever be solved until young people in vast numbers become voluntary abstainers and become leaders in the battle against the drinking of alcoholic beverages.

Here are some things that young people can do to keep the light of temperance burning bright:

Young people can learn the truth about alcohol. No one can afford to be ignorant about alcoholic beverages. The welfare of family life, the stability of society, safety on the highways, and the health of the Nation depend upon sobriety. Ignorance of the facts about alcohol can cause young people to stumble. I urge you to read and learn.

Young people can patronize social events which do not serve alcoholic drinks. Christian young people have an obligation to make popular the serving of nonalcoholic drinks at social functions. This is being done in many communities and it can be done in many others when Christian young people act courageously and with conviction.

Dr. Hornell Hart, professor sociology at Duke University, has eloquently spoken to youth in the following words: "Because I want to live as richly, keenly, and fully as possible, I am an abstainer from alcoholic drinks. The joy of life depends, for me, vitally upon being in full command of myself. Alcohol deprives those who use it of the possession of themselves. It dulls the keen edge of intellectual power. Personally I feel the need of the utmost abilities I can possess in order to achieve the final 5 or 10 percent of quality in my work which often makes the difference between failure and success. Keenness of living depends in large measure upon health. Alcohol is an enemy of health. Much of richness of experience depends upon looking back to vivid joyful memories. I find that the recollections which people seem to retain of alcoholic sprees are muggy and repulsive to them. The love of my family is one of the most precious of my possessions. Sociological studies show that drinking is a prime cause of grief, of conflict, and of disaster in family life. Many drinkers defend alcohol as a means of obtaining thrilling excitement. But I shall find my thrills by keeping my mind keen, my body vigorous, my memories delightful, my friendships sound, and myself free from enslavement to habit-forming drugs like alcohol."

If you accept the creed I have just repeated, the light of temperance will burn brightly and will not go out.

I wish to express to the members of the Women's Christian Temperance Union my congratulations on the success with which this conference has been planned and executed. They are keeping the light of temperance burning in our land.

In closing I want to leave with you a few lines from the contemporary English poem, From the Gate of the Year, by M. Louise Haskins:

And I said to the man who stood at the gate of the year:
'Give me a light, that I may tread safely into the unknown!'
And he replied:
'Go out into the darkness and put your hand into the hand of God.
That shall be to you better than light and safer than a known way.' "

Setback for Civil Rights

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. MICHEL. Mr. Speaker, I should like to insert in the RECORD today, an editorial that appeared in the Peoria Journal Star, Peoria, Ill., Monday, August 5, 1957:

SETBACK FOR CIVIL RIGHTS

The Eisenhower administration's civil-rights bill still is before the Senate but it is now a vastly different bill from what it was when the Senate received it from the House of Representatives.

Principal change came last week when the Senate, by a 51 to 42 vote, wrote a jury-trial amendment into the section of the bill providing for criminal prosecution against election officials charged with refusing to permit Negroes the right to vote.

Adoption of the bill still would represent an advance in the field of civil rights, but Senator KNOWLAND, the Republican leader who has directed the fight for the bill, is pessimistic about the House of Representatives agreeing to the changes made in the bill by the Senate. The result may be that no civil-rights legislation will come out of this session of Congress.

What happened is that concern of some Senators over two separate constitutional rights came into conflict. The civil-rights bill sought to provide increased assurance of the right to vote to all citizens. A sufficient number of Senators to achieve rewriting of the bill, however, felt that in doing so it would encroach on the right to a trial by jury, which also is assured by the Constitution, and they saw the jury-trial right as more important. Included in this group were the so-called moderates from both parties. They joined the southerners who are determined to do anything in their power to wreck the bill and their combined vote was more than the Republicans supporting the administration and the liberal Democrats could match.

The watering down of the civil-rights bill is a major defeat for the Eisenhower administration. It also may be a setback for the Republican Party throughout the North. The Republicans showed their greatest leadership of this session in the civil-rights fight. Despite the fact they are in the minority, they definitely were in charge as civil rights was debated. That advantage now has been dissipated by the failure to hold the line against the jury-trial amendment and Republican claims of support for civil rights and concern for the Negro will be more difficult to maintain as a result.

President Eisenhower probably will be accused of failure to back up the civil-rights bill, as he has been on Federal aid to education and other administration measures. Whether some personal telephone calls from him might have rallied more votes against the amendment is problematical but it is evident by now that that isn't the way the President works. He apparently doesn't believe in putting on personal pressure for any legislation. It might be that he would have a better legislative record if he did so once in a while.

Southern Juries Will Ignore Negro Rights

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. FORRESTER. Mr. Speaker, the Washington Daily News, Wednesday, August 7, 1957, page 44, carried an article by Mrs. Eleanor Roosevelt entitled "Southern Juries Will Ignore Negro Rights."

Mrs. Roosevelt says in that article:

Yet the whole point of the southerners' fight for the jury trial amendment is that they know a white jury will not give Negroes the right to vote. This is just a way of escaping from having to face the quite different problem of coming out against that right of Negroes to vote, which is the right of every American citizen.

I wonder where Mrs. Roosevelt obtained the information that white jurors will violate their oaths? I wonder why Mrs. Roosevelt holds southerners in such contempt? Not many years ago, when her husband was seeking the Presidency, they were both fond of pointing out that Georgia was their second home. If I recall correctly, it was in the State of Georgia that her husband regained his health. As a matter of fact, it was to that distinguished doctor, Dr. Michael Hoke, of Georgia, that they came for treatment, because Dr. Hoke happened to be the greatest doctor in all this world in the field in which her husband so sorely needed treatment.

There is not one southerner that believes that southern jurors would fail to convict where there was sufficient evidence to warrant a verdict of guilty. Our jury system has a much better record for upholding the law than does the section from which Mrs. Roosevelt comes. The southerners are insisting upon the right of trial by jury because it happens to be existing law and because we believe in trial by jury. Jury trials are one of our ancient landmarks and one of the finest systems that civilization has produced. The southerners certainly do not believe that they should be denied the right of trial by jury, when apparently we cannot sustain convictions of Communists, although convicted by juries.

There is one thing that the South is quite proud of. That is that not one southerner signed the petition that Mrs. Roosevelt signed, asking President Eisenhower to grant a "Christmas amnesty" to Communist Party leaders jailed under the Smith Act. These Communist Party leaders were convicted for teaching or advocating the forcible overthrow of the Government, the same Government that has been kinder to Mrs. Roosevelt and her family than to any other family in the history of our country.

Indeed, philosophies change. When Mrs. Roosevelt's husband was claiming Georgia as his second home he executed a deed to certain real estate in Georgia, incorporating in that deed that the lands conveyed should never be sold to persons of African descent. That deed is a matter of public record down in Georgia.

Vox Populi

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD at this point the results of the second annual survey conducted by myself in the Second Congressional District of the State of Washington.

This poll represents the thinking of more than 14,000 residents of the district, from many walks of life, many occupations, and varying viewpoints on international and domestic issues.

I am pleased with the response to this questionnaire. It has proven to be of value to me in my work in Congress. Many persons who answered the questions also submitted comments on other issues and suggestions for solutions to some of the problems of the day.

In evaluating the importance of various issues to themselves, residents of my home district emphatically pointed up Government spending as being of most concern to them. They then were most interested in defense and preparedness, foreign policy, taxation, farm prices and policies, civil rights, social security, power policies, and immigration.

Questions asked in the poll, the answers given by the pollees, and action taken by Congress this session, if any, are listed below:

1. In the event of a budget surplus this year, should this surplus be used to (a) reduce the national debt (56 percent); (b) cut personal income taxes (27 percent); (c) cut business taxes (2 percent). Administration has applied surplus to reduction of debt.

2. Should the McCarran-Walter Act, our basic immigration law, be (a) repealed (7 percent); (b) left as is (38 percent); (c) amended as recommended by President Eisenhower (55 percent). No action on administration requests.

3. Do you favor inviting heads of governments of nations with whom we do not agree to this country for conferences? Yes, 73 percent; No, 27 percent. President has invited King Saud and other heads of nations for peace talks.

4. Do you favor economic aid to Eastern European and Middle Eastern countries to help them break away from or escape Soviet domination? Yes, 66 percent; no, 34 percent. Congress has approved special programs and President is carrying them out.

5. Do you favor Federal regulation of union welfare funds? Yes, 85 percent; no,

15 percent. Administration recommendations have been pigeonholed for 3 years.

6. Do you favor extending the present $1-an-hour minimum wage to groups not presently covered—mainly retail and service employment? Yes, 87 percent; no, 13 percent. No action taken during this session.

7. Do you favor a cooperative program between the Federal Government and private power companies for the development of atomic power? Yes, 80 percent; no, 20 percent. Development by both Federal and private firms now underway.

8. Do you favor an increase of all classes of postal rates to make the Post Office Department self-supporting? Yes, 70 percent; no, 30 percent. Bill before Rules Committee.

9. Do you favor Federal controls of rents, wages, and prices in peacetime to curb inflation? Yes, 42 percent; no, 58 percent. No congressional or administrative action taken.

The Way to Economy

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Peoria Journal Star, Peoria, Ill., Tuesday, August 6, 1957:

THE WAY TO ECONOMY

Congress gave up control of the public purse in the early years of the New Deal. It has never regained that control, nor is it likely to. Americans should be convinced by now that the only way to Federal economy is to elect a President who believes in it and is strong enough to put his belief into vigorous practice.

The 85th Congress, yielding to public opinion, has done more talking about economy than any Congress in the last 25 years. In spite of all the talk, however, it has not accomplished much.

Some Members of the House, notably those of our own area, have voted consistently for economy measures. But the general pattern of Federal spending has been little changed by the "economy drive" of 1957.

One reason for this is that there is almost no party responsibility for economy in Congress. Both parties are committed to Federal projects that are expensive. Votes on budgets and appropriations are always cutting across party lines. And the executive branch is Republican while the legislative is Democratic.

Another reason why the congressional economy drive has fizzled is that spending has become an executive function. Economy requires rebellion in Congress. And the prestige of the White House is so great that there are definite limits to the ability of Congress to say "No" to the President.

The Senate has unanimously approved a measure (suggested by the Hoover Commission) to restore control of the public purse to Congress. It has yet to come before the House, although has been approved by two House committees. The President has reaffirmed his support of the measure.

This measure would limit appropriations to 1 year, thus requiring congressional approval every year of the spending to be done in that year. Theoretically it would save some $3 billion a year.

But we doubt that it would accomplish much more than the present system is able to do in cutting Government spending.

The way to economy and to reduction of the national debt and to lower Federal taxes is through executive leadership. Congress alone cannot do it.

Foreign Building Program a Proper Use of Foreign Currency

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. BOW. Mr. Speaker, recently my distinguished colleague from Tennessee [Mr. EVINS] made reference on the floor to the overseas buildings program being conducted by the Department of State. He pointed out in considerable detail the projects which are now under construction by the Department, and the additional ones which were being planned as a part of the Department's program to house our employees abroad.

I should like to observe that 4 years ago as a Member of a small group from this House, a searching field study was made of this program. During the course of that study, it became evident that in many of the very difficult places in the world, there was sore need to improve the physical facilities of our office buildings as well as the housing for our personnel. In many of these places, the standards for office buildings and living quarters are so inadequate the Department of State has no alternative but to construct adequate physical facilities to house our representatives who are stationed there to conduct the diplomatic and consular functions of this Government.

As a member of the Appropriations Committee, I have been gratified to review each year the Department's annual request and to observe that this orderly and systematic buildings program is aimed at solving the needs which exist in those parts of the world where climate, housing, and other conditions make life and duty most difficult. I therefore believe this program which the Department is carrying out is meeting a need for physical facilities abroad which cannot be ignored or postponed if we are to maintain our employees decently and adequately in many of these localities.

I should like to observe also that in carrying out this program a wholly constructive use is made of foreign currencies and credits which are already owned by the United States Government. During the past fiscal year, the Department carried out this program to the extent of $19 million of which $14 million represented foreign currency utilization. For 1958 the Department will carry out essentially the same level of program but will utilize $15 million of foreign currency.

Let me note that during the past 4 years, this program has required $50 million to construct, acquire, maintain, and operate our civilian Government-owned properties abroad. Significant is the fact that of this amount $39,500,000 is foreign currency utilization and only $10,500,000 is new cash dollar appropriations.

I must state that this utilization of foreign currencies for acquisition of needed physical assets abroad is a sound operating program for this Government. I believe also that anyone who has traveled extensively abroad will agree that our Government should be represented in its establishments overseas with dignified, appropriate, and adequate quarters for our people.

Press Buildup of Cuban Unrest Seen as Prelude to United States Intervention

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an editorial by the distinguished Thomas R. Waring, editor of the Charleston News and Courier, dated August 3, 1957, entitled "Press Buildup of Cuban Unrest Seen as Prelude to United State Intervention."

PRESS BUILDUP OF CUBAN UNREST SEEN AS PRELUDE TO UNITED STATES INTERVENTION

Disturbing news of unrest continues to come out of Cuba. What is even more disturbing than threats of revolution against President Batista is the hint of United States intervention.

Cuban Government supporters already are charging that the new American ambassador, Earl T. Smith, is interfering in Cuban affairs. We are in no position to judge the truth of this charge. Mr. Smith lent color to it, however, when he visited Oriente Province, the center of armed revolt, and later commented on "political uneasiness" and bloodshed.

This circumstance, perhaps innocent, seems ill timed. It lends weight also to a prediction attributed to a New York Times correspondent in an interview with the Cuban magazine Bohemia. The correspondent, Herbert L. Matthews, was quoted by Bohemia as saying that the American State Department's attitude toward Cuban affairs had changed. We gather he meant a swing against Batista.

Mr. Matthew's dispatches to the Times have been building up the reputation of Fidel Castro, leader of the revolt. Times editorials have stepped up criticism of the Batista regime.

The News and Courier is no defender of dictators and holds no particular brief for Batista. Nevertheless, as dictators go he has a fairly good record in Cuba. In addition he is a friend of the United States.

Cuba now enjoys prosperity. We would like to see our neighboring Republic, so close in ties to our country that sometimes it has been called "the 49th State," continue to enjoy peace as well.

Herbert Matthews is a specialist in affairs of Spain and Latin America. Recently he published a book about Spain called "The Yoke and the Arrows," containing many comments on the Spanish civil war. He sought to discredit the famous incident of 1936 in the siege of the Alcazar at Toledo, when the red militia killed the commander's hostage son.

A pamphlet we have just received from Spain documents the facts about the incident. It says "Matthews is a bitter foe of the Spanish Government. In July, 1936, he declared war on us and he has been fighting us ever since."

Why did Herbert Matthews deny the Alcazar story, long accepted as true? It appears that he wants to hurt Franco in Spain, as he is hurting Batista in Cuba.

As a writer he has a right to say what he pleases. But our Government is on friendly terms with Franco as well as with Batista. We do not approve a campaign by the Times or any other newspaper to prepare public opinion for intervention in the affairs of foreign countries. That is what we fear is now happening.

The Times and other northern newspapers for years have been preparing public opinion for Federal intervention in the Southern States. Bayonet rule may be averted, but the South is feeling the harsh hand of Washington.

We do not like this kind of Yankee rule. We do not expect foreigners to like it.

Intervention in Cuba need not take the form of landing marines or anything so crude. It might be extension of help in the form of money or arms to the rebels. Of course opposition parties in Cuba and other countries welcome United States help in upsetting their governments and substituting themselves. Communist agitators also are eager to cause turmoil.

The News and Courier believes the United States Government has plenty to do without meddling in the internal affairs of foreign countries. Some dictatorships are worse than others, but the United States is not obliged to play nursemaid to the world.

We see no guaranty that a new regime in Cuba will be better than Batista's. Revolts are painful for the people of a country. Even if we thought revolution would bring improvement, we would leave the decision to the Cubans. The News and Courier favors this slogan: "Yankee, stay home."

The Annual Mason-Dixon Industrial Management Conference, Held at York, Pa., for the Purpose of Promoting Personal Growth Through the Exchange of Ideas, Continues Its Mission of Providing Inspiration and Knowledge to Industrial Leaders in the York Area

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. VAN ZANDT. Mr. Speaker, it was a pleasure to accompany Representative S. WALTER STAUFFER of the 19th Congressional District of Pennsylvania to his home city of York, Pa., August 7, 1957, where I delivered the principal address at the Mason-Dixon Industrial Management Conference sponsored by the Foremen's Club of York, Pa., and held at the York Fair Grounds.

For several years the Mason-Dixon Conference has been held for the purpose of enabling leaders of industry in the York area to assemble annually to exchange ideas and opinions on subjects of mutual interest. The prime purpose of the annual conference is to encourage and promote personal growth through exchange of ideas, and in pursuit of this objective the program schedule, from 4 to 9 p. m., featured 2 afternoon speakers preceding the dinner hour, followed by the principal address at 7:45 p. m.

The theme of the 1957 Mason-Dixon Conference was Industry Tomorrow, and in keeping with the theme, I was invited to speak on the subject, Peacetime Uses of Atomic Energy. A copy of my address follows:

THE PEACETIME USES OF ATOMIC ENERGY

(Address delivered by Representative JAMES E. VAN ZANDT, Member of Congress, 20th District of Pennsylvania, at the Mason-Dixon Industrial Management Conference, Wednesday, August 7, 1957, at 7:30 p. m., York Fairgrounds, York, Pa.)

Mr. Chairman, you honor me by your invitation to participate in the 1957 Mason-Dixon Industrial Management Conference, which has as its theme "Industry Tomorrow." This idea of bringing together representatives of industry in York County and surrounding areas is highly commendable because it permits personal growth through an exchange of opinions and ideas. The Foremen's Club of York, Pa., sponsor of this industrial management conference, is to be congratulated for such a worthwhile contribution to the industrial life of this area.

In keeping with the spirit of the times, and in recognition of the theme of this conference, Industry Tomorrow, I have selected as the subject of my discourse The Peacetime Uses of Atomic Energy. In discussing this important subject, in my capacity as a member of the Joint Congressional Committee on Atomic Energy, you have my assurance that there is a definite feeling of adventure in exploring the nuclear field.

On the one hand, we are exploring the unknown in sciences—physics, chemistry, metallurgy, biology, etc.—as well as unknown fields in engineering and construction and the knowledge as to how they are managed. On the other hand, there must be applied sound scientific engineering and business principles to solve unprecedented problems arising from unique and sometimes impossible situations.

To date the American people have spent nearly $15 billion in the field of atomic energy, and the surface has barely been scratched. The great bulk of this money has been spent on military application of nuclear energy. Several years ago, however, the rate of spending on peacetime uses of the atom started to climb considerably. The result has been that today we are faced with a vast new science that affects the lives of all of us and which is having a marked influence on the industrial life of the Nation.

Since this Mason-Dixon conference represents a true cross-section of the business and industrial leaders of this area, I wish to tell you the story of atomic energy in down-to-earth language. It is my hope that when this conference terminates you will have a clearer concept of the atomic revolution that is enveloping mankind.

Atomic energy (or nuclear energy, as the scientist calls it) is everywhere around us, with the sun pouring out great quantities of atomic energy which come to the earth in the form of heat, light, and other kinds of radiation. Atomic energy as we know it today results from splitting atoms of heavy element uranium and its byproduct plutonium. Uranium, which is sometimes called a critical or operational mass, is radioactive material and is used to produce a chain reaction. The splitting of the atom, or fission, as it is called, releases great amounts of energy, thus permitting man to tap the almost inexhaustible source of nature's energy which can then be used as a curse or a blessing to mankind.

In any serious consideration or review of the peaceful uses of atomic energy, one significant starting point suggests itself in the form of a question: What do we expect to get out of atomic energy? From a military standpoint, there is no question that the development of nuclear weapons has served as a deterrent to war and a great contributing factor to our national defense. But even the military applications of atomic energy are very obviously bound to intersect, affect, and concern the peaceful uses. This appraisal is principally concerned with, and directs its attention to, these intersections and peaceful applications of the atom.

Returning to our question: What do we expect to get out of atomic energy in its peaceful uses? Let me tell you what we very definitely are not going to get out of it. To begin with, Thomas Edison points out that a better idea may be had of what a thing is if first you know what the thing is not.

There are some who expect atomic energy to be the cure-all, a sort of universal panacea, for both the economic and physical ailments of the world. Some others—who may be called plungers, with their eyes on the making of a fast dollar, view the atom as an easy road to fame and fortune. Well, let me make it perfectly clear; atomic energy is not yet any of these things.

On the other hand, there is room for a good deal of optimism, for in my opinion we have made a great deal of progress since the Atomic Energy Act was first passed in 1946. Considerably more progress has been made since the act was amended in 1954.

This progress is mainly due to:

1. A civilian Atomic Energy Commission responsible for the program and carrying out its activities through industrial and university contractors with administration in the field.

2. The more recent policy of encouraging greater private ownership and participation in the development of an atomic-energy industry free of Government monopoly.

3. Greater declassification of technical information.

4. The basis for the international atoms-for-peace program.

5. And the role of the Joint Committee on Atomic Energy which serves as watchdog for the entire atomic program, providing encouragement and sometimes the spur for the executive branch to develop basic technology and to provide both the necessary supplies and the services contributing to the sound growth of the atomic-energy industry.

The time and scope of this presentation forbid a detailed exploration of the atom's steadily mounting peaceful use, or of its impact on:

1. Agriculture.
2. Radiation preservation of foods.
3. Medicine and public health.
4. Power generation.
5. The insurance industry.
6. The coal and mining industries.
7. Commercial shipping and airlines.
8. And many other segments of our economy.

Peaceful uses of the atom in these various fields were recently considered by the McKinney panel. The findings led to the more or less general conclusion that the United States maintains world leadership in the development of nuclear energy for defense and for peaceful progress. The detailed record of the McKinney panel not only led to this last realization but furnished an impressive record of the joint contribution made by our scientists, engineers, and American industry.

One aspect which is deserving of a little more specific treatment is the matter of radioactive isotopes, the miracle tool of the atomic age—the so-called byproducts of our atomic reactors. In the past several years, there has been a dramatic upsurge in the number and variety of things for which isotopes are being used. For an illustration,

existing applications include everything from clinical examination to oil drilling, from agricultural experiments to spot welding. Yet the surface has barely been scratched.

Then, too, the annual savings to American industry from the many different isotopes are estimated at one-third of a billion dollars annually. By 1960, it has been estimated that isotope savings will amount to $5 billion, at an annual cost to the Government of $20 million. Therefore, it is possible, over the long run, that benefits from isotopes will more than repay the huge investment we have made in our atomic energy program. This, by way of anticipation, could prove a very reassuring and comforting answer to our original question: What do we expect to get out of atomic energy?

The role of isotopes in the peacetime uses of atomic energy is revealed in the following authoritative words of Atomcic Energy Commissioner Dr. Willard F. Libby:

"In the field of the atoms-for-peace program, isotopes will play a very great role, for they can be put to work immediately without extensive training and heavy investment, and can serve for years to reconvince the people the world over of the atom's great promise for peaceful uses when they become impatient waiting for the other great peaceful use—atomic power—to arrive."

Recognizing the important part agriculture plays in the economy of this area, let me mention a few examples of the impact of the isotope in the field of agriculture: First, improvement in the fertility of the soil, and second, to kill plant disases and improve strains of farm animals. From the standpoint of handling and processing food, atomic energy plays an important part. It is also effective in purifying salt water for irrigation purposes.

In the field of medicine and pharmacy, the radioactive isotope of iodine is being used to find out more about the distribution of the body's metabolism and its special characteristics. Interesting and rewarding results have been attained in arresting excessive thyroid activity and heart conditions. In addition to the synthetic production of drugs, progress is being made with TB drugs, radioactive-labeled tranquilizer pills, and in alleviation of the dread disease, leukemia. Meanwhile, other interesting techniques are being carried on with regard to the aging process, or what makes people grow old.

Of equal interest to industry are the costs and industrial uses to which the radioactive isotope is capable of being employed. To begin with, it might be noted that the known applications of radioisotope techniques have by no means saturated the market. For example, it is estimated that the market for radioisotope thickness gauges is less than 10 percent saturated. Such installations, on the average, have been found to pay off the initial investment in less than a year. Savings in the measuring, recording, and controlling of the thickness of various materials such as plastic, rubber, aluminum, and cigarettes have returned to American manufacturers approximately $110 million per year. This sum is expected to rise to $1 billion per year in 2 or 3 years, according to Atomic Energy Commission figures.

Another comparatively new use of radioisotopes is to facilitate oil well stimulation. This newly born use for radioactive tracers, already represents a large potential source of profit to the oil industry in terms of getting more oil out of the same piece of ground and doing it more cheaply.

To give you some idea of the great potential from placing short-lived isotopes in the intermediate product itself and using the radiation from these isotopes to control the manufacturing process, let me go into a little detail for you. First, it is possible to make use of radioactive carbon or hydrogen on the part of every organic chemical industry, thus controlling production operations by judicious labeling of the material being processed at safe, low radiation levels. For example, you can label a certain ingredient of crude oil—such as octane—before it goes to an oil refinery.

Secondly, it is possible to use a small amount of radioactive iodine by adding it to the rosin core in a rosin-core solder. Then by means of a continuous Geiger counter monitoring on the production line any poorly soldered joints in radio, TV sets, and similar electronic assemblies will be detected. Thirdly, a small quantity of radioactive iodine can be added to the glue in making a plywood. With a Geiger counter, you can establish uniformity of application of the glue and thus develop quality control and improvement in the strength of the plywood. Fourth, by adding radioisotope to dyes, you can detect "color-bleeding" in the manufacture of textile fabrics. Finally, through the use of isotopes, methods of controlling the uniform mixing of materials such as paint or lubricating grease are possible.

In citing these industrial applications, it is proper to conclude that the application of radioisotopes to industry, medicine, and agriculture continues to be one of the bright spots in the atomic energy program. In addition, their rate of growth is rapid and to such an extent that it may well be that the savings to industry alone will in a few years repay the Nation handsomely for its entire investment in atomic energy development.

In the field of atomic power, there is no need for our Federal Government to undertake a "crash" program. We have ample coal resources here in Pennsylvania and in other parts of the country. The Government's efforts should be restricted to research and development, and construction of small advanced prototypes in the field of atomic power, and construction of large-scale atomic powerplants should be left primarily to private industry, with limited Government research and development assistance.

In connection with the development of atomic power, there is the erroneous belief of many persons not familiar with reactor development that a reactor is a device shrouded in mystery and concocted by long-haired scientists. They believe that new rules of operation must be used on it and that it uses only exotic materials under strange and secretive conditions. All of this is an exaggeration—including the mystery angle.

In plain words, a reactor is a machine for producing energy in the form of heat. It differs from the conventional steam plant mainly in the kind of fuel it uses. The following points should be constantly kept in mind: First, a nuclear reactor is a furnace from which heat must be removed at a rapid, controlled rate. Second, the production of highly energetic waves and particles in a reactor by the splitting of atoms has peculiar effects on the properties of materials. Third, the neutrons, the small bullets produced when atoms split, through fission, must be used as efficiently as possible, to cause other atoms to split. These neutrons are likely to be absorbed by unsplit atoms; therefore, it is necessary to use in reactors materials that resist the neutrons.

The building of a reactor poses three questions:

1. Why are the requirements so unusual or so difficult to meet?

2. Why is so much study and development necessary before each nuclear reactor is built?

3. How do the problems differ from those of a conventional boiler plant?

The answer to these questions is that we have jumped headfirst into an operation for producing heat by means of a novel reaction—the release of energy by splitting atoms. Then, too, we must be mindful of the fact that conventional steam power has had 150 years of development behind it. On the other hand, nuclear reactors are approximately 15 years old, since the first reactor, built by Dr. Enrico Fermi, went into operation on December 2, 1942, in Chicago.

As of June 30, 1957, in the United States, 267 reactors had been built or were in the various stages of planning or construction. It is interesting to observe that while the reactor industry has progressed more rapidly in its 15 years than the steam power industry did in its first hundred years, we are still a long way from developing atomic power to the point where it can take its place in the competitive market. This is due to the fact that there are costly and exacting requirements in the construction of a reactor far in excess of what is required in ordinary steam boilers.

The main problem in designing and constructing reactors is the failure of standard equipment in an operating reactor system. For example, failures in piping, valves, heat exchangers, plates, and flanges have caused more lost time and money than have the unconventional portions of reactors.

Another problem is a real need for alloys of a higher yield strength than we now have developed. In addition, much research and development is necessary to develop materials suitable for the exacting requirements of atomic reactors. We also need to learn how to use the low alloys in reactors and how to utilize them in every spot possible, so that plant costs can be reduced. To obtain these suitable materials, intense investigations are necessary of existing alloys together with experimental development of combinations new to industry. Meanwhile, it remains for industry to give us the know-how which will permit us to use efficiently these steels, alloys, and structures in the atomic machines of tomorrow.

In concluding this discussion on peacetime uses of atomic energy, let me repeat again that even though we have spent $15 billion to date, we have barely scratched the surface in developing the ultimate benefits to be derived by mankind. Fifty years from now, barring an atomic war, atomic energy will be as common as electricity and coal are today. Atomic planes, atomic rocket ships, automobiles, locomotives, farm tractors, etc., will be in everyday use and an accustomed sight on the world scene. Homes will be heated and cooled by the atom. Food, clothing, medicines, and crops will be improved, and in general our way of living will be completely revolutionized.

Regardless of what the future holds in this great atomic age, the businessman and industrialist will surely miss the boat if they fail to keep abreast of rapid developments in the field of atomic energy.

As one of the original members of the Joint Congressional Committee on Atomic Energy, and in the best interest of the American people, it was necessary in the beginning to do the research and development on a socialistic basis by giving the Government a complete monopoly in the field of atomic energy. Such a monopoly is no longer necessary, and as an ardent disciple of the American system of free enterprise, I played a part in amending the law to give industry the right to participate in our Government's effort to harness the atom for the benefit of all mankind.

The theme of this Mason-Dixon conference, "Industry Tomorrow," as it relates to this atomic age, will tax your ability, ingenuity, energy, and imagination if you—as businessmen and leaders of industry—seize the opportunity to play an important role in the peacetime development of the atom.

In accepting this challenge, you and your firm will not only derive mutual benefits, but you will likewise aid in strengthening our Nation's effort to enjoy the blessings of this atomic era.

Ninth in a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. MICHEL. Mr. Speaker, since July 29, I have been inserting daily in the CONGRESSIONAL RECORD a series of editorial letters written by my very good friend, Mr. F. F. McNaughton, editor of the Pekin Daily Times, describing his recent visit to Russia.

Mr. McNaughton, who was accompanied on the trip by his wife, stated in his first column:

We are about to write columns to you from Russia. Chances are that when you read some of them, you will say, "That McNaughton is a Red."

But I tell you now that I am going to write it as I see it. Too often, America sticks its head in the sand and won't see the truth. America is big enough that it does not have to kid itself.

I'm not going to kid you.

These editorial letters, Mr. Speaker, are beginning to provoke some comment. Just today I received a letter from an attorney in New York asking me to "stop cluttering up the CONGRESSIONAL RECORD with F. F. McNaughton's pro-Soviet propaganda."

It is unfortunate, Mr. Speaker, that the gentleman who wrote me from New York has so little faith in his fellow Americans. Are we so small and unsure of ourselves that we are afraid to get the straight story from as eminent a reporter of the truth as Mr. McNaughton? He is writing only what he and Mrs. McNaughton have personally witnessed and seen. I believe my colleagues will agree that the letters have been most informative for those of us who have not been privileged to travel so extensively as the McNaughtons during their lifetime.

No one who knows Mr. McNaughton as I do would ever charge him with being a "pro-Soviet" propagandizer.

Mr. Speaker, I might remind my correspondent from New York, who is so concerned about the insertion of these articles, that before being elected to Congress, I served as the assistant to my predecessor who served with such distinction as a member and chairman of the House Committee on Un-American Activities for 8 years. I am quite well aware of what the Communist conspiracy is and what its aims and purposes are. Far be it from me to ever aid and abet the furtherance of their goal. I do not believe, however, that I should "bury my head in the sand" and refuse to inform myself of how the other half lives.

In conclusion, I would much prefer to learn of present day activities in Russia via the objective reporting of a man of Mr. McNaughton's caliber rather than rely upon the left wing columnists and fellow-travelers who have an utter disregard for the truth and whose sinister machinations are well known.

In today's editorial letter, Mr. McNaughton describes his visit to Lenin's and Stalin's tomb.

[From the Pekin (Ill.) Daily Times of July 31, 1957]

THE EDITOR'S LETTER

(By McNaughton)

We saw Stalin's body today.
He is beside Lenin.
Both are in the black marble tomb in Red Square.
We had seen Lenin's body.
Lenin died at only 54.
Has been dead 33 years.
Stalin died at about 75.

It has been a day of torrential rains; but people have stood steadfastly in a long queue despite the drenching they are taking. Few have umbrellas or raincoats.

Ceil and I had raincoats, rubbers, umbrella, and I wore an old cap while she had a rubber cover for her beret. Since we had "Intourist" buttons, we were put in near the head of the line behind some visiting children.

All is very solemn and formal as one nears the tomb, with soldiers keeping an alert eye on everybody.

From the time we entered the street level door until we emerged again was 6 minutes. All must walk 2 abreast. You go downstairs into the cold vault; then walk around three sides of the large enclosure in which the 2 bodies rest on couches, some 8 feet apart.

There are floodlights on both faces.
Lenin is a slight man.
Stalin is bigger.
Lenin is in plain black.

Stalin is in the olive green of an Army Marshal and has several decorations on his coat. I think Lenin had no decorations.

We moved slowly about, then up the other stairway. There is ample time for a good view.

Having come out, one walks by the tombs of other heroes of the revolution. Some are buried in the ground at your left; others are buried in the thick Kremlin wall at your immediate right. Among those buried in the Kremlin's brick wall is William (Big Bill) Hayward of America. Wasn't he a leader of the Industrial Workers of the World in America about the time 1917 when important revolutionary efforts were being made in Russia? I may be wrong about this.

Let me add that although Stalin may be dead and downgraded, his statues and pictures are everywhere. You'd have to deface the nation to remove them.

Community Effort in Ashtabula, Ohio, Wins Praise

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. DENNISON. Mr. Speaker, it is with the greatest pride that I call attention to the accomplishments of Ashtabula, Ohio, one of the forward-looking cities in northeastern Ohio, the district I have the privilege to represent in Congress. Ashtabula is located on Lake Erie and is the home of one of the busiest ports on the Great Lakes. The citizens of Ashtabula, like all of us in the areas served by the Great Lakes, are looking forward to the opening of the St. Lawrence seaway which will bring new commerce, new industry, and new activity to all lake States and communities.

The unique characteristic about Ashtabula is that the people there are not waiting for someone else to prepare the city to meet the great new demands which the seaway will impose upon it. They have tackled the job themselves. Local city officials, individual citizens, and private industry have cooperated in the tremendous waterfront development, and dock improvement, and they have been zealous missionaries in bringing new industries into the area. This community effort has performed an actual miracle in development of the area, the story of which is contained in the following article from the Painesville Telegraph, one of the fine newspapers of the 11th Ohio District:

[From the Painesville (Ohio) Telegraph of August 6, 1957]

SHIPPING LANES—ASHTABULA WINS HIGH PRAISE FOR SEAWAY EFFORTS

ASHTABULA.—Ashtabula is credited with accomplishing an "almost phenomenal feat on a penny-sized civic budget that doesn't even provide for a port director," in a trade publication on St. Lawrence seaway preparedness.

Stanley Mantrop is the author of an account of that city's activities in Journal of Commerce. The trade publication is printed in New York and on the west coast. The special report stems from a survey of Great Lakes ports and preseaway activity.

Mantrop reports that "civic enthusiasm and private capital are helping this thriving Ohio city, 55 miles east of Cleveland, to live up to its slogan of Seaway City of Progress."

He says the Ashtabula port is not only progressing in a seaway sense but "virtually bursting at the seams with waterfront and industrial developments."

The writer gives much credit to Ned Collander, city manager, for having "virtually worked miracles with what little he had in the way of money." He relates that the tremendous flow of private capital into the port has more than made up for the lack of city funds for waterfront seaway developments.

Ashtabula is given further credit as follows in the account:

"Ashtabula has progressed so rapidly seawaywise, two of its waterway piers, built with the express purpose of handling the anticipated heavy flow of iron ore from Labrador, are already in use.

"One of the 2,000-foot piers is already completed, while the second, of the same size, is in use but still is a long way from being finished.

"Some time ago the officials conducted a survey of the package freight cargo potential, but the port advanced cargowise so quickly the potential has already been surpassed 1 year after the survey was made."

Mr. Mantrop further explains:

"From 1945 to 1955, industrial firms spent roughly $300 million on new plants and developments in the Ashtabula area.

"City officials believe the completion of the seaway will make Ashtabula the ideal port not only for iron ore, but for goods and products coming from and going to every part of the world."

"These include manganese ore, raw rubber, copra, chemicals, automobiles, machine tools, ceramics, and many other items used by and made by the growing industries in the Ashtabula harbor area.

"To meet this challenge from the seaway, Ashtabula is preparing for an even greater development of its harbor area.

"This will be accomplished through a privately financed investment of $3.4 million. The Federal Government has approved a $4.9 million program for harbor deepening, so that vessels coming into the Great Lakes through the St. Lawrence seaway can berth at Ashtabula.

"Ashtabula officials expect a total of $100 million worth of new construction in the city by 1960, to create 9,000 new jobs to support 7,000 additional families by creating an extra spendable income of $32 million per year.

"The chemical industry which had a big stake in Ashtabula's future is expected to invest another $120 million in new chemical construction projects within Ohio during the next 2 years with the lion's share of this work coming here. Most of this new development has come as a result of the seaway project and the possibility it presents for easy access to the sea via the Lake Erie ports.

"Ashtabula's seaway cargo potential is so great surveys haven't been able to tell the full story. However, based on the port's annual total of some 15 million tons of cargo, the seaway can be expected to more than double this already impressive figure."

The report credits Nelson Pinney, head of the Pinney Dock and Transfer Co., as being "the man behind Ashtabula's phenomenal waterfront development.

"Mr. Pinney has invested heavily in Ashtabula's future by planning and carrying out the work on the two new piers without a cent of taxpayers' money," the writer reports.

"Ashtabula lacks the facilities at the present time that would permit the port to openly compete with some of the larger centers for a piece of the general cargo business that will come with the seaway. Instead, the port has geared its deepwater cargo handling to bulk cargoes, the majority of which is expected to come from the ore-rich fields of Labrador.

"At present, Ashtabula handles 12 percent of the Great Lakes iron-ore traffic plus limestone, sand, salt, gravel, coal, iron, steel, and newsprint.

"Iron-ore traffic through the port is expected to mount substantially following completion of the seaway and the steel mill expansion programs in the Ashtabula harbor area."

Address by Hon. Thomas S. Gates, Jr., Secretary of the Navy, at Dinner Meeting of Institute of Aeronautical Sciences, San Diego, Calif., Monday, August 5, 1957

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a talk given by the Honorable Thomas S. Gates, Jr., Secretary of the Navy, at a dinner meeting of the Institute of Aeronautical Sciences at the U. S. Grant Hotel in San Diego, Calif., on August 5, 1957.

I feel that it was an excellent presentation of the problems which confront the United States Navy in its extended position throughout the world in preserving peace and the security of the Nation. He stresses the fact that military power without a strong economy back of it would be disastrous.

The Secretary explains that we have conquered the sound barrier, the heat barrier, the energy barrier, and that now we must conquer the cost barrier, and urges industry to meet this challenge by reducing their costs so that the defense dollar can produce more armaments.

ADDRESS BY HON. THOMAS S. GATES, JR., SECRETARY OF THE NAVY, AT DINNER MEETING OF INSTITUTE OF AERONAUTICAL SCIENCES, SAN DIEGO, CALIF., MONDAY, AUGUST 5, 1957

1. This is a time of decision. Decisions have been taken in recent weeks, are being taken today, and will be taken in the next year that will affect our country for many years to come. These are difficult decisions. Some groups would resolve them with deceptively simple changes in the defense organization. This is no answer. There are no easy obvious answers. They must evolve with knowledge. The decisions will have profound effect on us all: on the prospect of peace with security, on the future of our Armed Forces, on the industry which supports them, and on our continued prosperity and way of life. Not all these decisions will be made in Washington. What happens as a result of decisions made in Washington is a matter for the aviation industry and its technology. This naval aviation meeting of the Institute of Aeronautical Sciences represents the technical and operational brains of the American aviation industry. The excellent program has been carefully planned to bring common understanding. Therefore, I think it right and necessary to speak before this audience to the future of the Navy and naval aviation.

2. We have had for some years an expanding and prosperous economy. It will continue to prosper and expand. But there is a limit to the permissible amount of military spending, and we have already just about come to that limit. Our task is to see that within that limit we generate the military force to keep the peace and to preserve freedom in the world.

The United States needs sufficient nuclear striking power—well dispersed and well diversified—but we need a clear-headed rational appraisal of how much nuclear striking power.

The United States needs to maintain the best strategic warning against attack—but not so much defense that we will pass the point of diminishing returns.

Versatile forces that contribute to offensive requirements across the board and defensive requirements as well, give us significant gains in economy and efficiency.

Under this administration we have described the limit in a level military budget. We have avoided feast or famine financing, and have sought instead to establish steady long-range programs—programs on which the armed services and industry could base steady and orderly progress. In the main, and until recently, we have been successful.

3. However, now we are faced with an inflation of costs—almost without precedent. In military procurement, it is three inflations combined:

The inflation of dollars, which results in less for our money;

The inflation of size and complexity; and

The inflation of ideas.

These three inflations will work together to rob us of the forces we know we need for national security, if we do not understand them, and deal with them effectively.

And the first step in understanding is to recognize the "object of the ball game" in the design of our military forces. The object is simply this: to provide military force sufficient to insure, working with our allies, the peace and security of the free world. For this we need forces sufficient to support our policy in cold war, sufficient to win decisively in hot but limited war, and sufficient to make it unthinkable to any aggressor to resort to thermo nuclear war. This much we need—no more, no less.

Our national position on disarmament has been made clear. We have consistently taken the lead in seeking a safeguarded agreement. We have made proposals that would bring under control the nuclear threat, control conventional armaments—and outer space objects, and create safeguards against armed attack. We are seeking today agreements on a safeguarded first stage. But until such agreements have been made, it is vital to the security of the free world that we maintain our military posture.

4. What then are the roles of the Navy? We feel they are these:

To provide military, economic, and political links across the seas for the nations of the free world, and to deny corresponding linkage to the nations of the Communist bloc; and second

To use the ocean areas as a springboard for offensive operations, and as a vast maneuver area for the defense in depth of ourselves and our allies.

In cold war what is needed may be a show of force, as in the Jordan troubles. Ships may come and go on the international waters of the world without treaty or passport; without question of sovereignty or jurisdiction. Our Navy and its ships are our finest ambassadors. They are the strong arm of restraint—guarding our nationals in the Suez crisis or our friends in the Tachens—hoisting the flag of warning over Formosa—a big brother bolstering a faltering ally or a policeman on the beat subduing an irresponsible international brigand.

Our Navy is often able to suppress trouble before it starts merely by being present and available. Herein, the advantage of being on the scene, as our present Sixth Fleet and Seventh Fleet are in the Mediterranean and Far East. Being present or being able to quickly reach an area of tension gives us an immense oportunity for preserving peace, for discouraging aggression, and for forestalling trouble.

Our naval task forces are tailored to classic military principles of mobility, concentration of power and economy of force. Precisely because of our ability to develop and use the new weapons systems the Navy is a force of economy—which makes its future certain.

Naval power gives us the power of choice. Naval power has the capability of precision delivery of measured force. Our Government needs a choice of action—it needs alternatives—when confronted with a dangerous international situation.

In unlimited war, we would have important special capabilities:

Carrier-based air attack against objectives which threaten our control of the seas;

Seaplanes based on mobile supporting ships; and

Surface and submarine launched guided missiles.

And because these attack systems are based on the sea, they can concentrate on the greatest threat, or disperse to the farthest oceans. They are relatively free from the threat of missile counter attack. They are secure from the political tangles of foreign bases. They do not threaten, they are not provocative, but they are available. Most important of all, they can force the enemy to divert his fire away from our homeland.

One of the most obvious features of our national policy today is our emphasis on collective security. The basic strategicy of the Communists is to divide and conquer, to isolate North America and the United States. The mainstay of our collective security system is our mutual love of freedom and our respect for the dignity of man. Its cement is sea power.

It may turn out that World War II marked the high water mark of all outness in warfare. What we are moving toward, if peace cannot be found, is a continuation of wars of limited means, scope and objective, such as Korea, Indochina, and Greece. These were limited by both adversaries because it was to the advantage of both to do so. This is the kind of warfare that has charcaterized classic statesmanship throughout modern military history. In a sense, Korea, Indochina, and Greece were 20th century Crimean Wars against Soviet expansion.

Korea is an excellent example of the value of sea power in limited war. Nearly one-third of all the United States air missions flown in Korea were flown by naval aviation. At Inchon the First Marine Division changed the complexion of the entire campaign almost overnight. In reality, no one of our allies can be supported without sea power.

5. This audience is entitled to ask, "What is the future of naval aviation?" We answer, "It is bright." At the Nation's need, we see naval aircraft hunting submarines—striking the sources of enemy naval power—guarding our ships and our sea flanks against air attack. We see Marine landing forces employing helicopters in vertical envelopment objectives, and Marine and naval aircraft supporting the Marine divisions ashore. We see sea-based air controlling the seas as it has since the airplane came of age.

6. To realize all this, we must reduce—drastically—the costs of hardware and of operations. Dollars, of course, are not everything. But in peacetime and in wartime, they are the best measure of manpower, material, and effort that we have ever been able to devise. So clearly what we want is military worth—the most military value for the money. Where the military worth is high, we will buy. Where it is not, we won't. It's as simple as that.

And what is military value in weapons? It is that combination of careful, ingenious design, advanced technology, and down-to-earth commonsense that yields the simplest, lightest, most reliable weapon to do the job, and not one thing more.

Many people ask our view nowadays on the relationship of missiles and unarmed aircraft. Will the missile supplant the aircraft in military applications? I think the answer is simple—it will supplant the aircraft where it can do the job better, and it will never replace it where it cannot.

In air defense and in nuclear attack it probably will, some day. In reconnaissance, logistics, and in the numberless applications of sea-air power to limited conventional war and politico-military operations it probably will not. So here again we need a well-balanced team in which each component does that for which it is best fitted.

7. The American aircraft industry has done well for naval aviation. It has produced—consistently—aircraft that have held—and that now hold—world's records in speed and range for military aircraft. They yield nothing in effectiveness to aircraft of any service of any power. We have many dramatic and recent examples. With the steam catapults, angle decks, mirror landing systems, and other improvements of modern carriers, we have broken the shackles of carrier aircraft design. With the new hydrodynamics we will break the shackles of seaplane design. By taking advantage of the capabilities of sea bases, we will develop offensive and defensive missiles of higher military worth than can be developed in any other way. It has been a job well done.

But now industry must do all this and much more; it must do it at absolute rock-bottom cost. Let me speak very plainly: The producer who reduces his costs is the one who will survive. To the sound barrier, the heat barriers, the energy barrier, we add one more—the cost barrier. I have the utmost confidence that the energy and creative imagination which overcame the others will overcome this one too.

Diversion of Highway Trust Fund

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BOGGS. Mr. Speaker, I feel very strongly that the present session of Congress should not be allowed to close until it has corrected a serious defect that has been revealed in connection with the handling of the highway trust fund.

Last year, Congress enacted two laws of incalculable importance to the people of the United States—the Federal Aid Highway Act and the Highway Revenue Act of 1956. In this legislation Congress and the country dedicated itself to the job of providing a network of top-ranking highways to serve the vital needs of commerce and defense. The highway program is, and will continue to be, a pay-as-you-go construction program, financed by revenue from highway user taxes paid into a special trust fund. Implicit in this arrangement is a promise to the highway user that Congress will see to it that a full dollar's worth of road is constructed with every highway user tax dollar that is placed in this trust fund.

I know that I need not remind this House of this obligation. However, I am concerned that this House has not fully performed this obligation in the enactment of appropriation bills this year. As a result, taxes which should be used to build roads are being diverted to pay the administrative expenses of the Department of Labor in matters which are beyond the historic scope of Federal-aid highway appropriations, and which constitute a dangerous precedent for further diversion of the trust fund as the national-highway program continues.

Bills to correct this situation and bring the administration of the highway trust fund into line with what I firmly believe was the intention of Congress when it enacted the Federal-aid Highway Act and the Highway Revenue Act of 1956, have been introduced.

On May 6, 1957, I introduced H. R. 7223, and urged the House to recognize the importance of early action. On July 11, 1957, the distinguished chairman of the Subcommittee on Public Roads of the Committee on Public Works, Representative FALLON, introduced a similar bill H. R. 8648. In the other body, similar legislation, S. 2436 has been introduced by Senator POTTER, of Michigan.

This is a matter which we should not allow to remain on our conscience. The urgency of action to correct this matter was recently expressed by the executive committee of the American Automobile Association in a statement issued July 31, 1957.

Their statement is as follows:

STATEMENT OF THE EXECUTIVE COMMITTEE OF THE AMERICAN AUTOMOBILE ASSOCIATION RELATING TO THE HIGHWAY TRUST FUND, ADOPTED JULY 31, 1957

The American Automobile Association deplores the action of Congress in authorizing the use of the highway trust fund to supplement the regular budget of the Department of Labor for carrying out the Department's activities in the administration of the Davis-Bacon Act.

A basic principle is involved in this action. Historically it has been recognized that in Federal-aid highway legislation, administrative costs incidental to the Federal supervision of the program should be absorbed by the executive agencies in their regular budgets. The costs of the Bureau of Public Roads have been the only exception to this rule. The legislative history of the Federal-aid Highway Act and Highway Revenue Act show that Congress intended that this same arrangement should continue.

Almost 15 years of unprecedented road-building activity lie ahead before the present national highway program is completed. During this period, the financing program must keep pace with construction costs. In view of this necessity, highway user taxes deposited in the trust fund must not be subject to diversion into administrative activities of various Federal agencies based on a claim that some portion of the work of that agency is attributable to the highway program.

The American Automobile Association urges in the strongest terms that Congress immediately take steps to protect the highway trust fund against use for administrative expenses of any department or agency of the Federal Government except the Bureau of Public Roads.

Prime Interest Rates in Various Countries

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following item on interest rates. Much criticism has been directed at the tight-money policy of the Republican administration. This has continued in spite of the generally acknowledged economic fact that whereas a loose-money policy tends toward inflation, a tight policy help to brake it. In this connection, it is interesting to note that the United States interest rate is the lowest in the world, as shown by the following article:

By way of illustration, the following table represents an assembly of the cheapest rates at which business firms of the highest credit standing can borrow on an unsecured basis in 54 countries. It must be borne in mind that money is scarce at these minimum rates; that most borrowers able to obtain funds pay higher rates; and that, in many countries abroad, borrowers have to pay, besides interest, loan commissions and/or other extra charges.

Current prime loan rates in various countries

Country:	Rate
Bolivia	[1] 16
Korea	12–15
Chile	12–14
Greece	12
Brazil	12
Israel	11
Peru	11
Ecuador	10
Austria	9½
Mexico	9½
Germany	9
Japan	9
Finland	8–8½
Argentina	8
Uruguay	8
Iran	7½–8½
Italy	7½
Turkey	7–9
Denmark	7–8
Syria	7–8
Costa Rica	7
France	7
Honduras	7
Lebanon	7
Nicaragua	7
Sweden	6½–7
Ireland	6¼
Iraq	6–7
Singapore	6–7
Spain	6–6½
Colombia	6
Dominican Republic	6
El Salvador	6
Guatemala	6
Liberia	6
South Africa	6
Venezuela	6
India	5½–6½
Egypt	5½–6
Hong Kong	5½–6
Australia	[2] 5½
Canada	5½
Netherlands	5½
Great Britain	5¼–5½
Philippines	5–7
Belgium	5–5½
Portugal	5–5½
Cuba	5
New Zealand	[2] 5
Panama	5
Norway	4¾
Switzerland	4½
Puerto Rico	4¼
United States	4

The Civil-Rights Bill

EXTENSION OF REMARKS

OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD an editorial which appeared in the August 6, 1957, issue of the Daily Highlander, of Lake Wales, Fla. The editorial relates to the so-called civil-rights bill.

The editorial points up the fact that where you have free and unlimited debate you can develop and bring forth to the attention of the American people the real issues which are involved in any legislation. Unfortunately, we in the House of Representatives are sometime so limited in time for debate that we cannot develop all of the issues involved in a bill or call the attention of the American public to the real purposes of the legislation. Therefore, we cannot too strongly plead the cause of free and unlimited debate in the other body so that the American people can be fully informed on all phases of any legislative issue.

The editorial follows:

HIGHLANDERING ABOUT TOWN

(By Bob Lodmell)

It appears the United States Senate has effectively done away with a section of the so-called civil rights bill which would be a step toward dictatorship.

In section 3 of the bill, which the Senate disposed of before adding on the jury trial amendment, there was a provision which would give a civil rights commission the power to conduct meetings. The release or publication of any testimony given without the Commission's consent would be punishable by a fine up to $1,000 or imprisonment for not more than 1 year.

Secrecy in government and restrictions on the free press are tools of the dictator. They have no place in America.

The frightening thing about this entire situation is that the bill was promoted and fought for by two men who are among the leading contenders to be the next President of the United States—NIXON and KNOWLAND. And even more frightening is that the bill, with this provision intact, was passed by the House of Representatives.

Thank goodness there are more statesmen than selfish politicians in the United States Senate.

Statement by the Chairman of the Board of the United States Steel Corp. Before Antitrust and Monopoly Subcommittee

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, August 8, 1957

Mr. DIRKSEN. Mr. President, one of the most impressive statements I have ever heard on our industrial system was presented before the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary by Mr. Roger M. Blough, chairman of the board of the United States Steel Corp. It is of such importance that it richly deserves to be placed in the CONGRESSIONAL RECORD for wider distribution. I therefore ask unanimous consent that Mr. Blough's statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OPENING STATEMENT

(By Roger M. Blough)

I have read with deep interest, and with understandable perplexity, the conflicting testimony of the distinguished economists who have appeared before you at these hearings. I have studied their differing definitions of the term "administered prices"; I have sought to comprehend that stillborn economic concept called the "zone of relative price indifference"; I have struggled with that impossible paradox known as monopolistic competition; and pursuing my research even further into the semantic stratosphere of economic literature, I have encountered "atomistic heteropoly" and "differentiated polypoly."

Clearly this is no place for simple iron puddlers; so with your permission, I'll just try to keep it simple by avoiding the pitfalls of economic theory and by sticking to the practical economic facts of life which every businessman must face if he is to survive the rising tide of costs, meet his competition, and keep his plant intact in the absence of adequate depreciation allowances.

Now as I understand it, the main purpose of this investigation is to inquire into the warmed-over theory that "administered prices in the so-called concentrated industries are responsible for inflation. Freely translated, I suppose that means: "Is big business to blame for it all?"

The learned economists who have appeared before you have discussed that theory thoroughly, and have—I think—successfully disposed of it; but because of the subterranean implications inherent in the question itself, I should like to be sure that we are all speaking the same language and that we have the same understanding as to the precise meaning of this economic jargon.

For example, I confess that I have no idea just what an "administered price" is—and judging from the wide divergence of opinion among the witnesses who have testified here on that point, I am not alone. Perhaps it is merely the opposite of a "haphazard price." But whatever it is, I gather that the one who should have some understanding of the meaning of the term is Dr. Gardiner C. Means who invented it.

So I would like to note, in passing, some of the statements he has made to the committee about "administered prices"—about what they are and what they are not.

Are administered prices monopolistic? Do they exist only in the absence of competition? In short, are they bad?

To the contrary. According to Dr. Means, they lead "to greater efficiency and higher standards of living. * * * They are an essential part of our modern economy. * * * Without them, big, efficient industry would find it almost impossible to operate."

"ADMINISTERED PRICES" EVERYWHERE, INCLUDING MACY'S BASEMENT

Well, then, are administered prices a phenomenon which is peculiar to big businesses and to "highly concentrated" industries?

Why, not at all, explains Dr. Means. An administered price is merely an established price at which something is offered for sale. In other words, it is the price that you and I pay for virtually everything we buy, wherever we buy it—at the corner drugstore, the neighborhood newsstand, or in Macy's basement. Dr. Means says: "We could not have our big, efficient department stores and mail-order houses if prices were not administered."

Then perhaps administered prices are something new—some modern development in our economy?

Wrong again. Dr. Means says: "Even in Adam Smith's day, administered prices were known." His main idea seems to be that administered prices are something which should be studied further in order that their economic effects can be more fully understood. In no event does he regard them as something that can or should be done away with.

So since Dr. Means' prices prevail generally throughout the business world, and since they are neither bad nor something new, perhaps we should just forget this confusing word "administered" and talk for a while about prices, period. And the question before us then is: Are prices in concentrated industries responsible for inflation?

IS STEEL A CONCENTRATED INDUSTRY?

But what are concentrated industries and how concentrated do they have to be to qualify as potential villains in this cycle of inflation? Throughout the testimony before this committee, I note the almost universal presumption that steel is a classic example of a highly concentrated industry. And frankly, this puzzles me.

The Department of Commerce has prepared for this committee a list of 447 American industries as classified by the Census Bureau, and has shown what percentage of the sales in each of these industries was accounted for by the four largest producers.

Thumbing through that list, I find that 112 of these industries—and remember, I am talking about industries, not just companies—112 of these industries are more concentrated than "steelworks and rolling mills." In fact, one-quarter of all of the industries in America—as shown on this Census Bureau tabulation—are more highly concentrated than steel.

So perhaps—in order to avoid confusion—we'd better forget this term "concentrated industries" for a moment and just ask ourselves if industrial prices are responsible for inflation.

RISING PRICES ARE THE RESULT, NOT THE CAUSE OF INFLATION

And the answer to that—as all of us must recognize—is that rising prices do not cause inflation; they are the result of inflation. As a knowing friend of mine put it: "Price increases cause inflation like wet streets cause rain."

In this connection, all of the economists who have appeared here have emphasized the fact that wages and other costs are inextricably linked with prices; and Prof. Richard Ruggles of Yale University, in the course of this testimony, has come forward with some factual evidence that can hardly be ignored.

Addressing himself to the theory that administered prices have enabled producers to take advantage of wage increases by raising prices even more, he says: "For industrial producers as a whole, this form of the argument is easily shown to be not true."

He then turns to official United States Government figures to show that since 1951 wage costs have risen about twice as much as prices for manufacturing in total; and that wages have also risen faster than productivity.

Coming next to the Government's cost of living index, he shows, through careful analysis, that the rising price of the products—or commodities—that people buy have had relatively little effect upon the consumer's pocketbook in recent years; and that most of the increase in the cost of living index has resulted from the rising price of services—or non-commodities, if you will. Thus since 1951, he says, the price of services—as recorded in the index—has risen 21 percent; while the price of commodities has gone up only 2 percent. And he concludes with this simple statement, which I should like to quote with emphasis:

"It is not possible to maintain, in view of the statistical evidence, that administered prices have been primarily responsible for the inflationary spiral."

That is Dr. Ruggles' statement; and that is what the evidence clearly shows. Yet in the face of the indisputable facts, which are readily available to anyone who cares to look them up, the belief still seems to persist that there is something special and different about steel—that a rise in the price of steel can somehow touch off a new round of inflation; and that it will quickly affect the sensitive pocketbook nerve of every man, woman, and child in America.

PRESENTING THE FACTS TO DISPEL AN ECONOMIC SUPERSTITION

Mr. Chairman, that is sheer economic superstition; and it behooves us, I think, to expose it as such, for if this committee is to contribute—as I hope it will—to a broader public understanding of the real causes of inflation, it must deal in facts, and not in unsupported assumptions, however long those assumptions may have been an established part of our national folklore.

Now what are the facts?

Well, the New York Times, on March 10 of this year, published a front-page story in which it analyzed the changes in the cost-of-living index since 1952, and showed what has happened to the price of all of the major items which are covered by that index. This story, written by Edwin L. Dale, Jr., the Times' economic correspondent, showed—just as Professor Ruggles has shown here—that the price of the things which people bought during this period had remained relatively stable; but that the price of services—or nonthings, such as transportation, medical care, laundry, haircuts, rent, and so on—had risen substantially. And to illustrate the minor role that industrial prices have played in this picture, the Times made this significant statement:

"Though it may seem surprising," said the Times, "the price of steel could practically double and the cost of living would hardly show it. Between 1951 and 1955, the price of steel rose 14 percent; but the price of household appliances—washing machines and the like—actually declined by .13 percent."

How can this be? Well, the most authoritative explanation undoubtedly comes from Dr. Evan Clague, who as United States Commissioner of Labor Statistics for many years, must be regarded as our leading expert on matters pertaining to the cost-of-living index—or the Consumer Price Index, as it is now called.

In August of last year, Dr. Clague said that a rise in steel prices has only a negligible effect upon the cost-of-living index because the amount of steel in the consumer dollar is so tiny. And that, of course, is the crux of the matter. All the money that the American people spend for steel in a year is so small in comparison to their total expenditures for all of the other things they buy, that any change in the price of steel is overwhelmed by the price movement of other goods and services which make up the average family's budget.

In fact, the recent steel price increase would affect that budget by about four one-hundredths of 1 percent. That is considerably less than 1 cent a day for a $5,000-a-year budget—or not even enough to buy 1 cigarette.

But perhaps the most conclusive evidence on this question is to be found in the records of United States Steel itself. Possibly some of you gentlemen may recall that several years ago—on May 1, 1948, to be exact—United States Steel tried to lend what weight it could toward slowing down the inflation that was then running riot. And possibly you recall, too, the result of that experiment. If not, let me refresh your memory.

In the previous year, 1947, the cost of living index had jumped 14½ percent above the level of the year before. That was the largest annual increase ever recorded since the First World War period; and it is interesting to note, in passing, that this 14½ percent rise in that 1 year was more than 3½ times as great as the total increase that has occurred in the past 3 years put together. We were deeply concerned about inflation—as we still are—for among the industrial population of America, the steel industry has been one of the principal victims of inflation. It was a major problem for our company and we decided to do something about it if we could.

Fortunately, we had a unique opportunity to do so, for under the terms of our contract with the union that year, our workers could seek a wage increase; but they could not strike to obtain it.

So instead of granting the union's demand for higher wages, we determined to reduce the price of our products by $25 million—or an average of about $1.25 per ton. Reductions on individual products ranged from $1 to $5 per ton and applied particularly to those steel products which we hoped would bear most directly upon the cost of living—the kinds of steel, in short, that go into automobiles, household appliances, tin cans, roofing and siding for buildings and various wire products such as nails, wire netting and fencing.

Now remember, please, that at this time steel prices were already lagging far behind other prices generally. From 1940 to May of 1948, they had advanced only 40 percent; while the price index of all commodities had gone up 2½ times as much; food products, 3½ times as much, and farm products more than 4 times as much as steel.

But still, we cut our prices, and in announcing this price reduction, Benjamin Fairless—then president of the corporation—made a statement which sounded very much like some of those we hear today. He said:

"We in United States Steel believe that costs and prices in general are too high today for the good of the Nation. We are firmly of the conviction that American industry and labor should cooperatively do everything in their power to avoid further increases in costs, which—if permitted to occur—must result in higher prices for almost everything we buy. Certainly the best interests of all of our people will not be served by a further lowering in the purchasing power of the dollar."

Mr. Fairless went on to express the hope that our action would have a "beneficial effect throughout the Nation," and that it might help to bring "an early stabilization or reduction in the cost of living." But he also made it clear that if costs and wages continued to move forward elsewhere on a broad front, we would have to rescind our price cut and grant wage increases in fairness to our employees.

LEARNING THREE IMPORTANT TRUTHS FROM A "NOBLE EXPERIMENT"

I'm sure you all know what happened. Other unions demanded another big round of wage increases—and got them. Other companies had to raise prices to pay for them. Our costs kept soaring skyward. We might as well have tried to stop an express train with a peashooter. So 3 months later, we had to rescind our price action, increase the pay of our workers, and try to catch up with the parade that we had fallen so far behind.

This "noble experiment," however, was not a total loss for it taught us three important truths that I hope may someday be widely understood: First, that no one company, no one industry, and no one union can alone stop the march of inflation. Second, that neither the steel industry or any other industry ever sets the wage pattern in America; for the postwar wage pattern has been a never-ending spiral in which each industry, in its turn, is called on to pay a little more than the preceding industry did, and the next industry must then pay a little more than that. And third, we learned from the stark statistical evidence, that a cut in steel prices produces no discernible or identifiable effect upon the cost of living. The actual mathematical facts may interest you:

Our price reduction took effect on May 1 of 1948. From January through April of that year, the cost of living had risen only three-tenths of 1 percentage point; but no sooner had our price been lowered than the cost of living began to rise sharply. In the next 8 months it rose 2 whole percentage points.

Toward the end of this time, we had to give up and raise wages and prices substantially. And what happened to the cost

of living? It went up one-half of 1 percentage point in the following month and then began to drop steadily—not only throughout the balance of the year, but throughout all of the following year, until it reached the lowest point it had seen in 22 months.

And so, Mr. Chairman, if we are going to investigate steel prices at this hearing, by all means let us investigate steel prices; but in so doing let us not delude ourselves or anyone else into the notion that we are thereby striking at the roots of inflation.

MODERN INDUSTRIAL MIRACLE: SEVEN AND THREE-FOURTHS-CENT STEEL

On the contrary, let us try, at least, to bring a litle helpful perspective into this whole steel price picture. It is popularly supposed that the price of steel is too high; but I wonder whether 1 person out of 10, in this country, has the remotest idea what the price of steel actually is.

Today steel is selling for about 7¾ cents per pound. That is the average price that United States Steel is getting for all of the carbon and alloy steel that it ships. Yet to produce this steel it must use billions of dollars worth of equipment, the labor and skills of hundreds of thousands of men, and mountains of raw materials gathered from many parts of the world.

It seems to me that in comparison with almost everything else we buy 7¾-cent steel must be regarded as something of a modern industrial miracle.

And how much has the price of steel gone up since this broad cycle of inflation began back in 1940? What is the sum total of all of the price increases that have occurred in steel in all of the past 17 years put together? Why, about 4¾ cents per pound.

During this same period, other basic necessities of life have also risen in price. Bread, for example, has gone up 11 cents per pound; butter 39 cents, and round steak 59 cents; and all of us recognize that this is the inevitable effect of inflation. But when the price of steel moves up just three-tenths of 1 cent per pound—as it did on the first of July—it is declared to be a matter of grave national concern.

The truth is, of course, that during these 17 years, the value of the dollar has shrunk to slightly less than 50 cents. That means that each penny spent for steel today is really one-half a penny. So the price of steel has really gone up very little in terms of an unshrunken dollar. It is mainly that the value of money has gone down.

"T-1" STEEL SAVES $800,000 IN A NEW BRIDGE

And then there is the matter of quality—the change in the intrinsic value and usefulness of that pound of steel—which is so often overlooked in these discussions of steel prices. To compare the price of our 1957 model steel with that of our 1940 model is a good deal like trying to compare the price of a 1940 radio set with a 1957 color television. In many cases the kind of steel we sell today could not have been purchased at any price in 1940, because it simply didn't exist. And while the price of these new steels, such as high-strength and alloy steels, is necessarily higher than that of the older type carbon steels, it may actually represent a lower cost to the purchaser.

A case in point is the new bridge that is being built across the Carquinez Straits in California. Instead of using the old-fashioned steels, the engineers of the State of California are using our new, high-strength, "T-1" steel for many of the principal members of this bridge. And by using this higher priced steel, they estimate that they will save $800,000 on the overall cost of the structure.

So statisticians who ignore this all-important factor of value will conclude that the average price of the pound of steel we sell has gone up. But in the light of the new types and usefulness of these higher cost products, has it really, gentlemen? Or perhaps has the price of steel gone down as an actual matter of value per pound?

I'll leave it to you; but one thing seems crystal clear to me; that when viewed in its true perspective, the price of steel is amazingly low; for steel is not only the cheapest, by far, of all the common metals; but with surprisingly few exceptions, it is also cheaper—pound for pound—than almost anything else you can buy.

To put it in the politest possible terms, therefore, let me just say that the so-called high price of steel is, in my opinion, another myth, pure and simple. Conceivably this myth has been born of a natural desire to find some convenient scapegoat upon which to blame our inflationary troubles. If so, however, it is my purpose to see that United States Steel does not become that scapegoat.

MERE ASSUMPTIONS CLUTTER UP LANDSCAPE OF UNDERSTANDING

In these hearings, Mr. Chairman, we are prepared to present the whole financial story of United States Steel, as it stands today after 17 years of inflation—the facts about our costs, our prices, and our profits. But in my statement here this morning, I am impelled to discuss a couple of other free-wheeling assumptions that have been standing unchallenged in the record, and that seem to me to be considerably cluttering up the landscape of proper understanding.

One of the most persistent of these unfounded assumptions is that a big corporation, like United States Steel, has no real competition; that it thus enjoys monopoly power or concentration of power which enables it to boost its prices to what have been described here, I believe, as unendurable levels; and that in this way it reaps fabulous profits, the public interest to the contrary notwithstanding.

But that is the assumption. What are the facts? Does United States Steel really possess that kind of power? Does it actually get these fabulous profits? Let's look at the record:

When United States Steel was created, 56 years ago, it was the biggest corporation America had ever seen up to that time. It produced twice as much steel as all of its competitors put together.

Now self-preservation, of course, is one of the most basic of all instincts; so if United States Steel did possess, in those days, the monopoly power frequently attributed to it, then presumably it would have expanded its production at the expense of its competitors; or certainly—at the very least—it would have held its own ground against them. In which event, we would expect to find that United States Steel today still produces no less than 66 percent of the total domestic output, as it did back in 1902.

The fact is, however, it does not. Today it produces less than 30 percent of the steel that is made in America; and where once it turned out twice as much as all of its competitors put together, its competitors now turn out more than twice as much as it does.

It is true that United States Steel has grown during this period and that, last year, it produced about 3 times as much steel as it did in 1902; but its competitors have grown far more lustily. They produced 15 times as much steel as they did in 1902.

Yes, over the years, United States Steel's share of total domestic production has declined continuously, right down to the present day, while its competitors have taken an ever-increasing share of the market away from it. For every ton of steelmaking capacity that we have added during these years, our competitors have added almost 3 tons to their capacity; and this year—for the first time—our share of the total capacity of the industry dropped to 29.7 percent.

These are the facts, Mr. Chairman. Here on the record itself is the most conclusive possible evidence of the vigorous competition that exists within the steel industry. To persist in the discredited assumption that there is an absence of competition in steel, is to renounce reality and to cling to delusion. And to argue that concentration in this industry is on the rise, is merely to say that concentration among the smaller companies is increasing at the expense of United States Steel. This, then, is a new concept of concentration—a kind of concentration in reverse.

STEEL MUST COMPETE WITH MATERIALS OF ALL KINDS

Let us not forget, moreover, that vigorous and successful as United States Steel's competitors have been, they are by no means the only competition which we must meet in selling steel. With American wage rates three times as high as those which are paid to steelworkers abroad, we face increasing competition from foreign imports; and in certain product lines, this competition has cut heavily into our market.

Beyond that, too, is the intense competition that steel faces from other industries producing a host of products that can be used as substitutes for steel. Thus aluminum is striving mightily to replace steel in the automotive market, in the building industry, and in containers. Plastics are contending against steel in the manufacture of pipe, and for hundreds of other uses. Detroit has been experimenting with the use of fiber-glass for automobile bodies. The steel we produce for the manufacture of tin cans competes against glass, paper and other substances. In the construction field, steel must vie with prestressed concrete, wood, masonry, slate, asbestos and other materials too numerous to mention. And always it must compete against other metals such as copper, bronze, lead, magnesium and so on.

So let no one suppose that the customers of any steel company are unresourceful in protecting their own interests. They will buy their needs from the company best able to compete for their patronage in terms of price, quality, service, dependability, and availability. And in the end, they alone will decide—as the American customer always does—which companies shall grow, which shall wither, which shall survive, and which shall die. Theirs is the power to regulate and to control.

But still it is assumed that big companies, like United States Steel, have some mysterious and undiscovered power to reap fabulous profits at the customer's expense. And that, too is a myth—a carefully cultivated and widely exploited myth which is perpetuated very simply by those who decry the total dollar profits of big companies, without relating those profits to volume of sales, increased investment, or anything else that would give them meaning.

So we hear that Mr. X made a profit of only $3,000 on his little business last year, while corporation Y gouged a billion dollars in profits out of its customers. And that, of course, is sinful, and unconscionable, and un-American.

But who bothers to point out that Mr. X is the sole owner of his business and has invested a total of $10,000 in it; while corporation Y is owned by a million shareowners, each of whom invested $10,000 in it. So the "greedy" owners of this "giant" corporation had a profit of $1,000 apiece and a 10 percent return on their money; while "poor" Mr. X got 3 times as much profit and a return of 30 percent on his investment. Which of them, then, made the fabulous profit?

Now I know, of course, Mr. Chairman, that no member of this committee, nor of its staff, has any intention whatever of distorting the profits of United States Steel or any other company; but in view of the widespread misrepresentation that has occurred in other quarters, I have used this illustra-

tion to emphasize the necessity of measuring profits always in meaningful terms.

And with that thought in mind, let us see how the profits of United States Steel compare with those of other corporations.

Last month, Fortune magazine published a list of the 500 largest manufacturing companies in America; and it ranked them according to size on the basis of the dollar value of their sales last year.

Now, if you look at this list, you will find United States Steel in fourth place in size of sales. It stood third in assets and invested capital. It also stood third in the total number of jobs it provides; and fifth in the number of stockholders whose savings have been invested in the enterprise. Now these are the measures of the service which United States Steel has performed for the total economy and for the Nation.

SHATTERING A POPULAR ILLUSION ABOUT EXCESSIVE PROFITS

But how about the rewards it has received for these services? Does United States Steel rank fourth in profits as a percentage of sales? Not at all. It ranks in 123d place on that basis. Well, then, how about profits as a return on invested capital, however limited the usefulness of the measure may be? Was it No. 4 on this hit parade? No, I'm afraid not. It ranked 243d on that basis. And among the companies which stood far above it on both of these counts was the smallest company in the entire list—No. 500.

Mr. Chairman, a little study of the facts as they are reported in this Fortune magazine article will completely shatter the popular illusion that big companies have been fattening their profits. Taken as a group the 500 largest companies of this year increased their profits by 2½ percent over the levels of last year's top 500; but all the other industrial corporations—all the littler ones which did not rank among the first 500—increased their profits, as a group, by 20 percent.

In the light of these facts, therefore, it is pointless to argue that big, profit-hungry business has been responsible for the recent inflation. In fact—in the light of the Government's own figures—it is impossible to argue that profits have contributed to inflation at all.

These figures show that the total profits of all corporations, after taxes, were $22.1 billions in 1950 and that they have never been as large as that since then without even considering the declining value of those dollars of profits. And whereas profits represented 9 percent of the total national income in 1950, they had shrunk to only 6 percent of the national income by last year.

So it is a little difficult for me to understand how shrinking profit levels can cause inflation. Compensation of employees, of course, has risen by $87 billions during this same period; and as a share of the total national income it has increased from 64 percent to 70 percent. So if it is the belief of this committee that concentration of power may have something to do with rising prices, I would merely suggest that perhaps you gentlemen are looking on the wrong side of the bargaining tables.

I am aware, of course, that United States Steel is often blamed for wage inflation. It is said that we do not really fight against uneconomic wage increases, because we can easily pass them along to our customers. And it has been suggested to this committee that we be barred by law from raising prices following a wage increase—the supposition being, presumably, that we will thus be forced to resist the union more strongly.

Well, let's look at that one for a moment.

In the first place, a mere glance at our profit rate since 1940 will show that neither United States Steel nor the steel industry as a whole has been able to pass these rising costs along in their entirety. We have had to absorb a part of them. But that, perhaps, is beside the point.

FIVE COSTLY STRIKES IN LAST 11 YEARS

The real point is this: To enforce what we regard as inflationary wage demands, the union has struck our plants 5 times in the past 11 years; and we have taken these costly strikes in an effort to hold the line against inflation. But hardly has one of these strikes begun before there is a nationwide demand that we settle it. Our customers must have steel or close their plants. Their employees face layoffs and loss of pay. The Government, too, must have steel; and daily the pressures upon us keep building up. And ultimately, if we do not settle, we may face the threat of Government intervention, as happened 5 years ago when the then President of the United States seized our plants illegally and sought to grant the union demands in full.

In our most recent negotiation last year, after a 5-week strike, we signed a labor agreement. It was that labor agreement which foreordained our recent price increase.

Under that 3-year labor agreement, we hoped to narrow at least slightly the inflationary gap between our rapidly mounting wage costs and our slowly rising output per man-hour. Only time can tell if what we did represented progress.

On July 1 of this year we faced what our recent total wage-cost history demonstrates was about a 6½ percent increase in our total costs per man-hour; and to cover these costs in part, we raised our steel prices by an average of 4 percent.

This action of ours was promptly denounced on the floors of Congress and elsewhere as being irresponsible and contrary to the public interest. It signaled the launching of a concerted attack which brought down upon our heads all of the unfounded assumptions, the myths, and the economic superstitions that I have already discussed here; and from these convenient assumptions it was no effort at all for a number of people to jump to the conclusion that Congress should subject our basic industries and larger enterprises to price and profit controls—by the force of persuasion, or by the force of law.

In the midst of the attack, nobody stopped to think that inflation has thus far been much less serious in America, under freedom of enterprise, than it has in many other countries of the world where the deadening hand of government controls has long been present. No one bothered to explain just what it is that is wrong with an American industrial system that is the envy of the rest of the world; nor did anyone ask what kind of a system is to be set up in its place—or by whom.

Mr. Chairman, the impulse of governments to extend their powers ever further over the lives and activities of the citizenry has persisted throughout history; and it still persists today among a number of sincere, patriotic and well-meaning Members of Congress. But that doesn't make it a good thing to do nor prove that abandoning freedom in enterprise is in the interest of the people. It also occurs to me that you conscientious and overworked gentlemen who are running this country have troubles enough of your own as it is, without taking on all of ours. So perhaps we ought to look into this question of irresponsibility and the public interest for a moment, before we throw the baby out with the washwater.

Now if the popular thing to do were always the responsible thing to do, a businessman's lot would be a much happier one, and so, I suspect, would a Senator's. There is no doubt that the popular thing for United States Steel to have done would have been to permit its mounting costs to rise, uncompensated, and thus to endanger not only the financial strength of the company, but also the jobs of its employees, and even, perhaps, the security of the Nation. But would that have been the responsible thing to do; and would it have been in the public interest?

MEETING RESPONSIBILITIES DEPENDS UPON EXTENT OF PROFITS

You see, United States Steel, like any other enterprise, has many responsibilities which must be weighed not only in the light of present day pressures, but also in the light of long-range necessities. One of these is our obligation to our shareowners, who are widely assumed to be people of great wealth, people who do not really need their dividends anyway.

But a survey which we took among them 4 years ago showed that more than half of these stockholders had incomes of less than $4,500 a year, and many of them had less than $2,000. That was not just what they got from United States Steel, you understand. That was their total income from all taxable sources. So, the incomes of more than half of our stockholders were less than the average wage we were then paying to the men in our mills.

What, then, is our responsibility to these people? Are we fulfilling our responsibility to them if we subtract from their incomes in order to add to the incomes of our workers and to meet our other costs? Should we, in short, rob Peter to pay Paul?

But entirely apart from its obligations to its owners, United States Steel has grave, long-range, responsibilities to the Nation as a whole—responsibilities which are continuously taxing its financial resources—and the extent of United States Steel's ability to meet these responsibilities is directly dependent on the extent of its profits.

In the face of inadequate depreciation allowances, it is reinvesting a substantial part of its profits in the replacement of obsolete and wornout equipment in order to remain efficient and productive, and to hold costs and prices down. No one will doubt that that is a part of our responsibility.

The potential supply of iron ore availabel within this Nation's borders will undoubtedly last beyond the lifetime of any of the present officers of our company. But that is not enough. For the future security of the company, of the industry, and of the Nation, huge new reserves are constantly being discovered, evaluated, and developed as our work in Venezuela, Canada, Wyoming, and the Lake Superior district illustrates. That, too, is surely a part of our responsibility—a responsibility we share with others in our industry.

Beyond that we are, today, building costly new facilities to treat and upgrade raw materials which are dwindling in quality. We must have multi-million-dollar plants for the washing of metallurgical coal; beneficiating plants to process iron ore, and sintering plants to increase the productivity of our blast furnaces.

OUT OF RESEARCH WILL COME SUPERIOR METALS OF THE FUTURE

As an important industrial unit, research, regardless of how costly it is, is also a part of our responsibility. And we believe our new research center at Monroeville, Pa., is further evidence of our efforts to carry out that responsibility. In our laboratories there, we are seeking to develop new steels that will withstand—as no other metal can—the terrific heats that will be generated by atmospheric friction in the supersonic planes of the future. There, too, we are engaged in a program of fundamental research designed to extend man's knowledge of the iron atom, and to discover—as scientists believe they may—a metal twice as strong as any now existing in the world.

Beyond all that there is the ever-present need for new steelmaking capacity so that the economic growth and security of this

Nation may never be jeopardized by the lack of steel. To play our full part in maintaining an adequate steel supply is, we believe, a compelling responsibility. That is our business, and there is no better reason for our existence.

But no one of these responsibilities is possible of fulfillment by a profit-starved industry or by a company suffering from financial malnutrition.

TOO MUCH OR TOO LITTLE STEEL?

Gentlemen, popularity is a fickle thing. Shortly before World War II we were critically examined in these very halls for having too much steelmaking capacity in what was then termed by some economists a mature economy. With those economists we definitely were not popular, yet within a matter of months Pearl Harbor was upon us; and you will recall how important that supposedly excessive steel capacity was to all of us and how the plants of United States Steel were called upon to outproduce all the steel plants in all the Axis nations put together. I assure you that was a very popular thing to do at the time.

Only 5 years later, however—when we were summoned before another investigating committee of the Congress—we were denounced on the grounds that we looked too big to some of the investigators. And counsel for the committee made a great point of the fact that no nation on earth—outside the United States—could produce so much steel as our company could. That, he said, was not good—and we were then unpopular with him.

Today that charge can no longer be made against us—for there is one country on this earth which now produces much more steel than does our company. That country is the Union of Soviet Socialist Republics—a thought-provoking fact which no one in our industry or our corporation can overlook.

Mr. Chairman, if steel companies become unpopular because they are too big, they may manage to survive it somehow; but if they ever become unpopular because they are too small, it is quite possible that none of us may survive it.

So in the light of these facts and all of these responsibilities, I commend to the thoughtful consideration of this committee the question of whether or not our price action was responsible and in the public interest.

The Congressional Quarterly

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. UTT. Mr. Speaker, for many years, the Congressional Quarterly has been considered a veritable "bible" of election statistics and related data upon which many Members of this body have depended.

Unfortunately, the position this publication has enjoyed in the esteem of some Members of this body has been made insecure by its continued inaccuracies and distortions.

I feel it is my duty, both to my constituents, to my colleagues in the House, and the press, to cite here a recent example of errors arrived at by the Congressional Quarterly.

In the supplement to the May 10 edition are listed a number of statistics concerning a State-by-State breakdown of votes cast during the 1956 election.

I was particularly interested in the figures given for Orange and San Diego Counties, which comprise the 28th and 30th Congressional Districts of California.

The Quarterly figures show 299,286 votes cast in these 2 districts for President Eisenhower and 158,228 ballots for Adlai Stevenson. Thus, the magazine concludes, there were 457,514 votes cast in Orange and San Diego Counties for the 2 principal presidential candidates.

The office of the California secretary of state, official source for all such data, has reported an entirely different set of figures. They are: Votes cast for President Eisenhower, 309,252; for Adlai Stevenson, 161,611. The official returns show a total of 470,863 ballots were cast for the 2 principal presidential candidates.

The Congressional Quarterly figures fall more than 13,000 ballots short of the official tabulation compiled by the office of the California secretary of state.

I shall be most interested in the explanation Congressional Quarterly has to offer in connection with the figures for these two districts.

I understand that studies have been made in other districts in which the figures differ from those of Congressional Quarterly. I also am reliably informed that there is considerable difference in published figures for 7 of the 8 congressional districts of Kentucky. May I suggest to my colleagues and the press that they check the figures used by Congressional Quarterly? It would be most interesting to know whether the statistician who prepared those figures is the same one who prepares those for use in evaluating Members' support of the President's program.

The differences between Congressional Quarterly and other studies in most cases would not be important because of their minor nature if it were not for the fact that the editor and publisher of Congressional Quarterly have assumed the attitude that they are always exactly right.

The Trial by Jury Amendment

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to place in the CONGRESSIONAL RECORD a very timely editorial which appeared in the Polk County Democrat, of Bartow, Fla., under date of August 6, 1957. The editorial, entitled "Rambling Thoughts," deals specifically with the trial by jury amendment to the civil-rights legislation. It reflects the thinking of the many Americans who stand with this editor in the belief that "a trial by jury is the right of every citizen irrespective of race, creed, or condition."

I commend this pertinent editorial to the attention of all of my colleagues in the Congress.

The editorial follows:

RAMBLING THOUGHTS BY THE PUBLISHER

This "trial by jury" amendment which is charged with emasculating the civil rights bill, and which was passed by the United States Senate last week, appeals to us as action which—if the Bill of Rights is to be abrogated—should have been done a long, long time ago. Admittedly the action taken by the Senate was inspired by the present integration battle, but irrespective of the inspiration behind the legislation, we believe that in a country which was designed to be a government "of, by, and for the people" a trial by jury is the right of every citizen irrespective of race, creed, or condition.

Both proponents and opponents of the measure realized that in the present situation the quarrel had to do with judicial contempt charges. Under the present method of procedure any judicial officer is empowered, we understand, to issue charges of contempt against anyone connected with any case being heard in his court, in the fulfillment of the designed purpose of our Government. Still, as we see it, anyone so charged is still entitled to trial by jury to refute such charges. Probably such rulings are more often than not entirely justifiable, but the fact remains that no one should be granted the power to prevent a jury hearing judging his case, regardless of the charge which may be levied against him.

Even the President of the United States, who is able to wield more power than any other one individual in the Nation is subject to the will of the people who stand in effect as a jury empowered by their right to exercise their franchise at the polls to judge of his actions and conduct, or should any President's conduct become too reprehensible the Senate has the right to institute impeachment hearings against the President, and going a bit farther down the ladder, several State governors have lost their jobs as a result of such hearings, while impeachment or recall of city officials is a quite common thing over the Nation, and in each case the government bodies represented by the various senatorial groups or the people themselves in dealing with lesser officials serve as juries for such trials.

The fear of opponents to the jury trial amendment must find it difficult to justify their premise that fair trials cannot be held under the new law can hardly be justified by the trial of certain agitators who stirred up such a commotion in Clinton, S. C., in integration efforts. This southern jury found the defendants guilty, which rather weakens the claim that ordinary citizens will not be governed by evidence, but would rather let their prejudices control any verdict they might render irrespective of the evidence.

Strategic Air Command Has the Weapons, but "Slowly Bleeding to Death" From Loss of Trained Men: Kalberer

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include herein flashes from a speech by Brig. Gen. Alfred F. Kalberer, deputy commander of the 15th Air Force, as published in the Commonwealth, the official journal

of the Commonwealth Club of California:

[From The Commonwealth (San Francisco, Calif.) of August 5, 1957]

STRATEGIC AIR COMMAND HAS THE WEAPONS, BUT "SLOWLY BLEEDING TO DEATH" FROM LOSS OF TRAINED MEN: KALBERER

(From address by Brig. Gen. Alfred F. Kalberer, deputy commander, 15th Air Force)

At the end of World War II, air power had established itself as a primary military force.

With Russia already showing signs of noncooperation, something had to be quickly developed out of the ruins of our magnificent wartime military machine. Therefor, a handful of highly skilled crews and a few battered B–29's were hammered into an organiaztion.

High priority was given to the Strategic Air Command and it became today's smooth-running fighting force, with over 40 bases, thousands of aircraft, and approximately 200,000 personnel.

The first real global-fighting force ever developed, it operates all over the world and has now been on alert 24 hours a day for over 10 years, with only one mission—to give us security by keeping the peace.

Those of us in SAC sincerely believe that the security of the world is in our hands. We control potential destructive power so far beyond anything ever known in history, that although we are trained to a higher peak than any other organization has ever been, the last thing we want to do is use our training and capability.

It is relatively simple for a SAC B–52 or B–36 or the smaller B–47 to destroy either a city block in San Francisco, or the entire bay area, depending upon military necessity. I am talking about one airplane and one bomb, not about the entire potential of SAC or even the B–36 wing at Travis, or the B–52's at Castle.

MORE DESTRUCTIVE THAN ALL PAST WARS

The capability of this one bomber is greater than the results achieved by all the bullets, shells, bombs, and hand grenades used during the Second World War, plus Korea—and if you desire, all the spears, sword strokes, cross-bow bolts, and arrows used since the days of Alexander can be included for good measure.

This tremendous capability is completely dependent upon skilled people, operating highly technical equipment, maintained in perfect condition.

In spite of the almost unbelievable potential of each SAC unit and the tremendous amount of security it gives to you and the world, its capability can be quickly nullified by lack of proper personnel.

SLOWLY BLEEDING TO DEATH

This is where we are hurting. We are slowly bleeding to death from a wound we cannot heal by our own efforts. We need your help.

If the major points of a careful study made by a committee headed by Ralph Cordiner, president of General Electric, and now incorporated in bills before the Senate and Congress, would be implemented we could increase the effectiveness of national defense and simultaneously reduce military costs. We could stop our tremendous turnover of manpower and gain the following advantages:

A definite increase in the combat capability of the Armed Forces.

Savings up to $5 billion a year in the cost of national defense when this program is stabilized.

Sharply reduce training accidents due to the stability of personnel and the higher level of training—and reduce the number of military personnel required to give us a safe level of national security.

Better pay scales recommended in the report will automatically retain and motivate our personnel to such an extent that we will have a long-term solution to the basic manpower problems of the entire Armed Forces.

The Air Force as a whole has, except for a small hard core of a few thousand people, completely changed its personnel several times since the end of World War II.

TRAINED MEN REPLACED BY FARM BOYS

SAC, while enjoying a certain amount of priority, has also had to accept its share of personnel losses. For years, we have released officers and men, trained at fantastic expense, to civilian concerns and gained in their place, unskilled boys fresh out of school or off the farm.

These young men cost us between twenty and thirty thousand taxpaying dollars to train for 3 years to get 1 year of productive work. Between 60 and 80 percent of all these men go back to civil life and use their free education to earn an income well above what they can expect in the Air Force.

We have had numerous cases where a sergeant became well qualified as an electronics technician and then was hired as a field service engineer by the company manufacturing the equipment he was particularly well qualified to maintain.

SERGEANT BECOMES CIVILIAN; PAY LEAPS

In several instances, the sergeant took off his uniform on Friday and returned to the same job in civilian clothes on Monday as a civilian employee, with his starting pay $400 a month instead of $165.

Due to the high cost of training technical personnel, whether officer, noncommissioned officer, or airman, we are losing vast sums and what is still more important, combat capability, or if you desire, security.

Jet aircraft cost so much—$8 million for the B–52 for example—and use such enormous amounts of fuel that training costs are unbelievably high.

To replace and train the people we lost during the calendar year May 1 last year through April 30 of this year, cost each SAC base over $10 million and your own west-coast Air Force, the 15th, $203 million.

COST AIR FORCE $4½ BILLION

SAC, as a whole, lost nearly $800 million, while it cost the Air Force about $4½ billion.

I am sure you do not begrudge the excellent income enjoyed by the well-trained airline pilot to whose skill you trust your own safety and that of your family. Yet nothing is thought of paying the commander of a B–47 or B–52 half as much and demanding from him at least twice as much.

The commander of a B–52 combat crew is required to have a fair knowledge of electrical, mechanical, and electronic engineering, plus considerable nuclear physics. This is on top of flying a very high performance aircraft under bad weather and overload conditions.

One factor alone, unnecessary to the airline pilot, is vital to the bomber commander—complete knowledge of nuclear weapons. Not only does he have to know how they work, but even more important, how to prevent them from working at the wrong time.

Airliners are just going into the jet age while SAC has flown hundreds of thousands of hours in multiengine jet bombers. There is a great difference between high altitude, multiengine jet operation and propeller-type low-altitude aircraft.

At 50,000 feet, clouds are only a dim haze under you as a rule, and the great winds in the stratosphere sometimes sweep you sideways at nearly 200 miles an hour. This greatly complicates navigation, because everything must be done at top speed since you are traveling at nearly the speed of a bullet fired from a .45 caliber automatic.

DEATH 30 SECONDS AWAY

In addition, just outside the thin ice-cold shell of the fuselage, is death from oxygen deficiency within 30 seconds if a shell or rocket rips a hole in your pressurized cabin.

Without your extremely uncomfortable pressure suit, your eyes would pop from their sockets and every square inch of your body bleed from ruptured blood vessels.

You cannot delegate any work, no matter what goes wrong, at 80 degrees below zero and 50,000 feet above the earth—it is all yours, or belongs to the few specialists making up your crew.

The hours are also very long whether they are spent racing through the midnight sky over the pole and back to a sunny base here in California from dusk to dawn—or a 38-hour mission in the slower—but longer range—B–36.

I can personally vouch for how tired you get because I have been commanding B–36 units for the past few years and have made numerous nonstop flights as far as French Morocco—in some cases taking off early one day and landing after dark the next.

We are not lacking in security because of second-best equipment. I have spoken about the B–36 with its 10 engines and 10,000-mile range. However, we now have a better heavy bomber in the B–52. It has only 8 engines, but they are jets of tremendous horsepower and this big aircraft will go almost as fast as a bullet out of the .45 caliber automatic many of you carried during the First and Second World Wars.

Our smaller swept-wing bomber is the B–47, of which we have many hundreds. It is called a medium bomber although it weighs over 200,000 pounds—much more than the B–29. The B–47 has shorter legs than the heavier bombers but with the new Boeing KC–135 tanker, also a jet, its range is easily extended enough for us to attack any potential aggressor's military installations from the North American Continent without landing en route.

B–58 LIKE A PAPER DART

The Convair B–58 bomber looks much like an arrowhead and reminds you of the paper darts most of us made in school. Time magazine states that it will fly at Mach 2, which is twice the speed of sound and approaches the velocity of a rifle bullet.

It is the highest, fastest, most powerful means of carrying unlimited destruction that has ever been conceived by the mind of man, and it is almost certain that it is well ahead of the rest of the world.

At present, you are getting security from SAC only because a very small percentage, less than 20 percent, are hard-core dedicated men like General LeMay, who built SAC, and General Power, now commanding it. Without these people, you would long ago have lost the tremendous security SAC gives to you, the country, and the world.

Now, however, even this hard core is beginning to ravel out at the seams since many are getting older, their families bigger, their children requiring more, and the cost of living rising like a guided missile.

Something must be done and soon, or we will not have enough of even the hard-core men to train the vast flow of replacements, and our combat potential will decline very rapidly.

It will do this at the same time Russia is bending every energy toward developing a strategic air command of their own, not to mention a vast submarine fleet and still more powerful thermonuclear weapons.

TO WRITTEN QUESTIONS FROM THE FLOOR

Question. (G. K. Roberts) Refueling with new jet tanker, how long would it take for around-the-world flight of B–52's compared with propeller tankers?

Answer. It took some 44 hours for B–52's to circle globe using propeller tankers. Jet tankers will cut 6 to 8 hours from this.

Question. Doesn't frequent change of personnel give you better reserve?

Answer. I am not so sure—skills needed today are so high that if you leave the service you are soon far behind.

Question. Won't intercontinental missiles supplant SAC bombers and the defensive missile obsolete the bomber further?

Answer. Every time you throw a spear, up comes a shield. There will probably be things worked out that will keep the situation fluid.

Question. (J. A. Halliday) In East Bay cities during many evenings there is a loud noise like many jet planes—explain?

Answer. So many flights routinely fly above the speed of sound that you will get more and more. Everything is being done to avoid disturbance above cities.

Question. Are the latest type bombers in use by SAC?

Answer. Everything that's had the bugs worked out is used. The B–52's are the latest.

Question. Can Russia spot and destroy SAC bases?

Answer. They probably know where our bases are but we are on constant alert and feel that under the most adverse circumstances, they can't prevent our completely clobbering them.

Question. (Milton Chaban) Why do armed services permit such laxness in security around strategic centers?

Answer. Try to get on the line at SAC bases. The Armed Forces have always believed they should show the taxpayer what he has bought. But no one will get near enough to see the things that are really important.

Question. (Paul E. Anderson) Who can throw the switch? Is it possible that the order to attack might be given in error?

Answer. I don't think so.

Brother Fritz Zeller, O. F. M.

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. GOLDWATER. Mr. President, I should like to bring to the attention of the Senate, an article, which appeared recently in the Arizona Register, on August 2, 1957, concerning the passing of Brother Fritz Zeller, O. F. M. Brother Fritz died at the age of 96 at St. John's Indian School and Mission, in Phoenix. For over 50 years Brother Fritz rang the bells at St. Mary's Church, in Phoenix. He was one of the pioneers of my city. Brother Fritz came to Phoenix in 1893, after having become a brother in the Franciscan Order. For many years he rode a bicycle between St. Mary's Church and St. Francis Cemetery, to water the flowers and grass. In 1896, Brother Fritz drove a horse and buggy with the late Father Novatus Benzing, O. F. M., the pioneer pastor of St. Mary's, when the first Mass was said at Komatke, preliminary to the establishment of St. John's Mission. Brother Fritz was born in Germany, and lived in Phoenix from 1893 until 1950. Brother Fritz was truly a pioneer of Arizona, and the many thousands who remember him either personally or by reputation are grateful to him for his many contributions to our present-day Arizona.

Therefore, Mr. President, I ask unanimous censent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VETERAN FRANCISCAN BROTHER DIES AT 95

Brother Fritz Zeller, O. F. M., aged 95, died here last week, bringing to a conclusion the longest Franciscan career of any man in Arizona. A solemn pontifical Mass of requiem was celebrated by the Most Reverend Daniel J. Gercke July 25 in St. Mary's Church. The venerable servant of St. Francis saw the development of the church here and throughout the State for almost all of his life. He had worked in these environs ever since his arrival from Germany when he was still a boy.

A worker all his life, he was forced by ill health to retire in his declining years. This he spent at St. John's Mission, Laveen.

Born in 1862 at Baden, Germany, Brother entered the Franciscan Order at St. Louis in 1891. He has been in Phoenix since October 1, 1897, shortly after the first friars came to St. Mary's. Known for his retentative memory, Brother Fritz would often recall the colorful details of early days and early personalities in Arizona.

In 1947, he celebrated his golden jubilee of service to the Franciscan Order.

The following from the archives of the Arizona Register, originally written by Esther Clark for the Phoenix Gazette in the October 18, 1947, edition, tells the life story of this amiable Franciscan.

The bells of St. Mary's pealed joyfully the Sunday morning of the Franciscan golden jubilee, October 19, but Brother Fritz Zeller, O. F. M., was not the bell ringer, as he, too, noted his 50th year of service at the downtown church.

An attack of arthritis a short time ago put an end to nearly a half century of belfry duty, but the 85-year-old religious leader compensates in good humor and spirits for his physical disability.

Brother Fritz does not take readily to retirement. Always active before his arms and legs began to stiffen, he rebels at times against the coming of old age.

With a shake of his closely cropped white head, he will offer his opinion on this modern age by saying in clipped accents, which reveals his German origin, that the "Good old days are gone forever."

Apple-red cheeks become rosier as he recalls the day shortly after the turn of the century when he accidentally rammed his speeding bicycle into that of the Reverend Novatus Benzing, O. F. M., causing a clerical spill which put the pastoral arm in a sling.

Brother Fritz was a regular bicycle commuter to St. Francis' Cemetery, where he irrigated lawns and flowers of the newly plotted graveyard. Gopher holes, he said, were his main problem on the 6-mile jaunt.

A shoemaker by trade, the brown-robed Franciscan told of repairing many a pair of shoes in his workship, also the center of his adventures in tailoring for the monastery personnel.

He described his early-day sacristan duties in the basement and upper churches as "an up-and-down affair." Holy-week activities for the English- and Spanish-speaking congregations kept him "on the jump."

Brother Fritz also likes to talk about the days when he rode one of the parish horses, which were stabled with one cow in an adobe building that stood on the spot where Old Glory flies above the grammar-school grounds.

He made it plain, however, that he stayed clear of Charlie Boy, a spirited cayuse whose rodeo-like antics inflicted multiple bruises on another Franciscan brother.

The aged ex-shoemaker and threshing-machine-factory worker, which was his last occupation before joining the brotherhood at Teutopolis, Ill., can still roll out Spanish phrases as well as he did when there were only 10 English-speaking families in the parish.

After he left his native Baden, Germany, in 1880, Brother Fritz spent the earlier part of his life in Ohio. His entrance into the Franciscan order came about after hearing a stirring series of Lenten sermons by another brown-robed friar.

Supplemental Appropriations for 1956

SPEECH
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9131) making supplemental appropriations for the fiscal year ending June 30, 1958, and for other purposes.

Mr. CANNON. Mr. Chairman, I have been greatly complimented; signaled out for special mention. Within the week, I have been designated by name and number by another committee in another report, a legislative committee in a legislative report, and although the reference is in not too complimentary terms I deeply appreciate the unusual and extraordinary and exceptional honor.

When Tom Reed, the great Speaker was presiding over the House, monarch of all he surveyed, a newly elected Member said to him, "Mr. Speaker, I have been elected to the Congress for the first time."

I do not want to be a one-term Member. I would like to stay at least two terms.

Will you advise me, out of your long and successful political experience, what course I should take, what I should do or should not do, to insure my reelection for at least one more term?

The Speaker, with his usual disconcerting frown, said: "My boy, get your name in the RECORD, get it in the newspapers." And then he added: "Get it in favorably if you can, but get it in."

So, while I may not be getting my name in favorably, I am at least getting it in the minority views of House Report No. 978, issued by the Joint Committee on Atomic Energy, August 2, 1957.

I am certain that none of the four Members whose names are appended, all of whom are my personal friends of long standing, wrote this report. They have too many times heard me on this floor state my position on the subjects discussed, and take the position directly contrary to that indicated in the report.

It came from another source, willing as heretofore to totally misrepresent in order to support an untenable position in a much more important matter than the opinion of any Member or group of Members here in the House.

So, at the risk of being tedious, I must say again, as I have said here many times before, that I favor, and have

favored, and have supported, at all times the free and untrammeled exercise and promotion of free enterprise under any and all conditions; and that I am unalterably opposed to Government monopoly; that I believe the private utilities should generate and distribute the bulk of electric power consumed by the Nation; that I believe private enterprise should manufacture and distribute fertilizer, machinery, synthetic rubber and all reagents and supplies.

The report says "there was disagreement with every point of law raised by Mr. CANNON." On the contrary every point of law raised was sustained as is evidenced by the reenactment of the law with amendments in compliance with every point of order raised.

The report concludes:

"Mr. CANNON'S main objective, however, was not limited to more technicalities of authorization or appropriation law. His main position was in opposition to privately owned reactor facilities and in favor of publicly owned reactors. Mr. CANNON'S closing remarks were:

"'It is my firm conviction that the Federal Government should immediately initiate construction at existing atomic energy sites of full-scale atomic electric powerplants.'

"The modifications now made by the majority of the committee to the authorization bill start the Commission down this path."

My firm conviction was not due to opposition to privately owned reactor facilities but, as was well known, to the fact, first, that private corporations could not and would not risk the funds of their stockholders in an enterprise which promised a long period of research and experiment and gave no assurance of profits or of return of capital invested.

Second, to the fact that the risk of devestation and loss of life and property which would result from any untoward escape of power in explosions or melting down of plants or escaping fallout was of such potential magnitude that no insurance company would contract unlimited immunity.

Third, to the fact that although many projects and contracts were claimed, only one major reactor is really under construction, the Yankee atomic plant in Massachusetts and it is of the same type as the Michigan Government plant.

Fourth, the Atomic Energy Commission has been in complete charge of the program with unlimited funds since 1954 and the program is now at a standstill. Foreign nations are making progress while we are marking time with little to show for the vast appropriations and the 3 years of desperately vital time.

We are engaged in a tragic race. Every major nation in the world is trying to outdistance us to it, trying to beat us to a solution of the problem by which they will produce electricity and atomic weapons through atomic energy in competition with the old traditional method. That is the issue before the House in this report.

England has made great progress. Japan is buying from Calder Hall. Russia, as we know, is turning out more atomic engineers than America. Our national existence—not merely our national prosperity—depends upon the prompt and rapid development of a feasible method of producing electric power and atomic armament through atomic energy.

You will recall that in the Second World War we were engaged in a race with Germany as to which country would first produce the atomic bomb. We were told in the committee when we were providing funds for that purpose that if Germany first solved that problem Germany would win the war regardless of anything we could do. On the other hand, if America first solved that problem, America would win the war in spite of anything that Germany could do. Under that incentive in the race with the Central Powers of Europe we first solved the problem. We produced the first atomic bomb through the agency of TVA. We saved, so the military authorities tell us, 1 million young men and untold amounts of treasure because we first solved the problem.

Mr. Chairman, we must first solve this problem. We are running a neck-and-neck race with England, with the plant they have over there at Calder Hall and the improved versions of the Calder Hall plant. Russia is even a greater menace. The nation which first solves the problem will have such an advantage in industry and in war as may mean survival.

Mr. Strauss has dominated the Atomic Energy Commission. His administration has been without results. He accepted the method proposed by the joint committee, and a few days later publicly repudiated his acceptance to the press. He has been in complete charge of this industry—atomic-electric power program since 1954, he has had charge of all of the projects that have been advanced, of all of the proposals which have been offered. But only two types are proceeding with assurance in large-scale plants in these 3 years—the pressurized water reactor and the boiling water reactor. Construction of EBR–II, the prototype for the fast-breeder large-scale plant has not even been started. The experimental model, EBR–I, melted down. Yet the Commission is defiantly attempting to go ahead with construction of the full-scale fast breeder near Detroit without knowing whether it can be made to work safely, or even made to work at all.

The Commission has stalled completely on the aqueous-homogeneous and the organic-moderated reactors, and has ignored completely natural uranium reactors with which the British have had such great success.

Time is of essence and when we are being outdistanced by competitive nations. We have only that one large-scale plant near completion—the pressurized water reactor which has been under construction during the past 4 years at Shippingport, Pa. This is the method that was long since developed and proven in the Nautilus. We in 3 years have made practically no progress at all.

Mr. Chairman, we are on the threshold of an era in which atomic energy will revolutionize the economy of the world. We are being bypassed. There is too much at stake to permit political or economic jealousies to interfere. We must again assume the lead. The majority report offers the only feasible plan, the only practical hope of regaining lost time and lost prestige and lost opportunity.

Tribute to Michael Benedum

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. FULTON. Mr. Speaker, when Michael Benedum reached his 88th birthday on July 16, 1957, his whole hometown, and many friends from all over the country, stopped to take a whole day to celebrate the event at Bridgeport, W. Va. Outstanding businessmen, public officials, and his many friends by the hundreds gathered for luncheon in honor of Mike Benedum and for a day of friendship, gratitude, and remembrance. The many good works of Michael Benedum for his community, the people of West Virginia, Pennsylvania, and Ohio, and the whole United States, were recalled.

It was a pleasant occasion long to be remembered with heart warming ceremonies at the time of the dedication of Michael Benedum's latest contribution, the new community center, to his original hometown community, Bridgeport, W. Va.

I am glad to insert in the CONGRESSIONAL RECORD the following birthday telegram of President Eisenhower to Michael Benedum, extending his hearty congratulations:

JULY 16, 1957.

MICHAEL L. BENEDUM,
Benedum Trees Building, Pittsburgh, Pa.:

Through Congressman Fulton I have learned of your 88th birthday and the splendid celebration of it in Bridgeport. In your gift to the citizens of your hometown, you demonstrate again the standards of public service which have guided your life. Congratulations to you and best wishes to all who enter into the use of your new community center.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *Washington, D. C.*

My research shows the following about this remarkable man:

The great wildcatter, Michael Late Benedum, of Pittsburgh, who passed his 88th birthday on July 16, 1957, is still actively carrying on vast exploratory oil projects. Reputed to have discovered more oil than any other man in history, Uncle Mike, as he is known by oilmen throughout the United States, has recently commenced large-scale undertakings in South America, in Central America, and in Africa on leases covering more than 3 million acres.

Besides being familiar with each petroleum venture in which he has an interest, Mr. Benedum finds time to direct personally the charitable and civic distribution of a large portion of his fortune. There are more than 700 students in 26 colleges in the Pennsylvania and

West Virginia area who benefit from Benedum scholarships and student loan funds. In addition to this, there are dozens of churches, hospitals, and similar institutions in the same area of the country that receive substantial financial support from him.

One of the largest deserving beneficiaries of Mr. Benedum's philanthropic effort has been the small West Virginia community of Bridgeport, where the great wildcatter was born and reared. He has given this town a $2 million church; and also a community center, complete with auditorium, dining room, library, club rooms, swimming pool, ice skating rink, and playgrounds at approximately the same cost of $2 million. In addition to these contributions, Mr. Benedum has spent a half million dollars restoring and beautifying the town's old cemeteries and burying grounds. The population and wealth of Bridgeport has quadrupled in the last 10 years, largely because of what Mr. Benedum has done for the town, in cooperation with the local citizens, in making it a fine place in which to live.

Mr. Benedum does not fit the popular conception of daring oil wildcatter, but is friendly and rather quiet, shy, and soft spoken. Business associates and his many friends are frequent dinner guests at his 8-acre estate in the heart of Pittsburgh's residential East End, where he lives a quiet, hard-working life to this day. We in Pittsburgh, as well as all of Pennsylvania and West Virginia, are proud of the accomplishments and contributions to the American people of such fine citizens as Michael Benedum.

Welcome to Montana for Your Vacation

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. ANDERSON of Montana. Mr. Speaker, now that the 85th Congress is nearing the close of its first session, I would like to extend a warm welcome to everyone to spend a part of their vacation in Montana, the Treasury State, where many of the tourist glories of America and Europe, too, can be found.

From border to border, you will find our Montanans a cordial people, and from border to border you will discover exciting new vistas of scenic grandeur.

An idea of our interest in your vacation plans is well expressed in the following editorial which appeared in the Billings (Mont.) Gazette:

WELCOME TO MONTANA

"Howdy, stranger. Welcome to Montana." This is the friendly greeting thousands of travelers from all over the world receive each summer when they enter our Treasure State, says Frank Bertino in a feature article that appeared in July 16 issue of the Christian Science Monitor. Bertino is one of the 27 courtesy station attendants, all college or high school students, who are manning the 13 Montana courtesy stations, located at convenient points on highways leading into this State this summer. The author of the story is at Culbertson, in Northeastern Montana on Highway 2, a few miles inland from the Montana-North Dakota border.

The young men at these stations can perform many useful services for the incoming tourists other than extending them a hearty and sincere welcome. Before taking on their jobs, these employes were given detailed instructions concerning their work. This included information on the size, general characteristics, road conditions, including construction projects of the State, the best way to reach the sections where the visitor may wish to go, scenic attractions, location of the most favorable streams and lakes for fishing and other information which may be of value to the travelers.

These establishments unquestionably pay big dividends and could be largely responsible for the great increase in tourist business during recent years. That business occupies third position in importance in the State. It is expected to leave upward of one hundred million outside dollars in Montana this year. And the people, or a great majority of them, we may well believe, will end their visit to the State and return to their homes feeling that the money they left here was well spent.

There are few sections of the globe of comparable size that offers so much of interest to vacationists as Montana. This State can claim at least a portion of Yellowstone National Park although there is no disposition to deprive our neighboring State of Wyoming of the credit that goes with the location of most of that internationally known wonderland. Glacier National Park is all Montana's and is attracting hundreds of thousands of visitors every season with the number constantly increasing. While these two national parks are the best publicized scenic attractions offered by the State, there are hundreds of other places in Montana where the vacationists can find beautiful places in which to spend periods of healthful, undisturbed relaxation. There are a number of dude ranches elaborately equipped to provide large parties with comfortable living quarters, fine food and opportunities to enjoy horseback riding, mountain climbing and other forms of exercise to suit their fancy.

There are also great numbers of camping places in our forested areas, beside beautiful mountain streams and lakes where facilities have been provided for the campers-out. The State is also well provided with good hotel and motel accommodations on all of the main and secondary highways. Most people who plan on spending some time in the State travel by car, and they are never very far from a service station.

Except for occasional stretches where construction or maintenance is in progress, all the main and most of the secondary highways of Montana are in good condition during the spring, summer, and autumn months when most of the visitors from the outside come into the State to spend their vacations or merely travel through to other States, east and west. The Red Lodge highway that leads up over the mountains into Yellowstone, some of the highways in Glacier Park and a number of others that have been built through high mountain passes are not well constructed and easily and safely negotiated, but present spectacular, soul-filling scenic effects to the gaze of the traveler.

One experience which hundreds of thousands of visitors to Montana will not forget will be, not only the cheery welcome of the young fellows at the courtesy stations, but also the truly western spirit of sincere cordiality and helpfulness exhibited by all the Montanans with whom they may happen to come in contact.

There still exists in Montana, often referred to as the last of America's physical frontiers, much of that same spirit of genuine friendliness and innate courtesy with which the early settlers greeted strangers who came to their doors. They are proud of their State and cannot resist expressing that pride when talking with folks from the outside. To discover how deeply embedded is that pride in the average resident of the Treasure State, one only has to come across present or former residents of our State while traveling in other parts of the country or in foreign lands. The writer has met up with Montanans in such far-off lands as Britain and France and seldom failed to hear expressions or observe other evidence of homesickness as those people asked how things were back home.

Grants-in-Aid: The Positive Side

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. UDALL. Mr. Speaker, it is probably accurate to say that there are two schools of thought in the Congress on the soundness of Federal grant-in-aid programs.

Recently the Bureau of Business Research at the University of Arizona published a study of the grants-in-aid as a technique of public finance. And subsequently, an excellent newspaper in my congressional district, the Yuma Daily Sun, commented editorially on this report. I present for the consideration of our colleagues this thoughtful editorial which follows:

THERE ARE GOOD ARGUMENTS IN FAVOR OF FEDERAL AID

President Eisenhower has proposed to turn back to the States certain responsibilities—and tax sources—of the Federal Government. A special committee of governors and Presidential aids meets next week to consider how it can be done.

But, although everyone nods pious agreement, no one really expects anything to come of it. This raises a timely question. How can all be in outward agreement on the virtues of the proposal, and yet expect so few results?

The answer lies in the paradox of Federal grants-in-aid. Political opportunists have succeeded in painting all Federal aid as an insidious scheme to undermine men's characters and rob them of their independence. In public, many profess these sentiments. But in private, they scramble for their share of help along with the others.

Yuma County has not held back. In the 5 years from 1951–55, public schools of Yuma County asked for, and received, well over $1 million. Can such grants-in-aid be logically defended? Or are they universally bad?

An answer may be found in a publication of the Bureau of Business Research at the University of Arizona. It points out that the Federal Government is not the only source of grants-in-aid. States also aid counties and cities, as for example in the distribution of the State sales tax. The State also gives aid to schools, as do the counties.

"The location of the boundaries of the States, counties, and lesser governmental units has been determined largely by his-

torical accident or chance," the UA report reminds us. "Each political unit, of course, has jurisdiction only within its boundaries. Thus it happens that taxable wealth and income frequently are located outside the boundaries * * * where the need * * * occurs. In general, the larger the jurisdiction of the political unit, the better is its power to tax. On the other hand, local autonomy in the expenditure of public funds for certain purposes is believed to have much merit."

This is the situation which has given rise to grants-in-aid. The case for them can be summarized:

1. Grants-in-aid tend to adjust unfair relations in the finances of governmental units caused by political boundaries.

2. The political unit best adapted for collecting taxes may not be the best to administer certain expenditures.

3. Certain functions definitely for the common good, such as education and highways, can be maintained with greater uniformity and at least at some minimum acceptable standard of efficiency.

The report warns, "Some dangers must be avoided in establishing grants-in-aid. Unless suitable limits are imposed, extravagance in local spending may be fostered, because the grants may create the illusion of gifts to the local taxpayers. After all, Arizonians must pay their share of Federal taxes and taxpayers in each school district must pay their share of State and county taxes.

"Another pitfall may take the form of indefensible standards imposed by the central governmental unit as a condition for receiving aid. Although such standards are imposed presumably to attain desirable uniformity, they may prove to be ridiculously costly and inapplicable locally.

"Such standards also may be viewed as an attempt by the Central Government to usurp local autonomy."

But on balance, the report realistically concludes: "Properly administered, grants-in-aid have a definite place in American public finance; their future is assured."

Oil Cartel Subservient to Arab Pressures

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD, the following statement:

OIL CARTEL SUBSERVIENT TO ARAB PRESSURE

Threatened withdrawal of Royal Dutch Shell-British Petroleum from marketing operations in Israel demonstrates the oil cartel's subservience to Arab pressure. Not only does this underscore the urgent need for prompt and effective prosecution of the oil cartel by this Government but emphasizes the political dangers inherent in the lack of independent operators in international petroleum activities. It is significant that Arab pressure has succeeded in restricting supplies of crude oil to Israel by the large international petroleum operators which make up the oil cartel. By dint of its perseverance born out of the direst necessity, Israel has been able to procure stocks of crude oil to supplement the supplies from the cartel. These supplemental sources were entirely separate from the cartel operations of the international petroleum companies.

Now, marketing in Israel is being threatened. No member of the oil cartel is willing or able to act independently. This amounts to a virtual veto of American foreign policy and delivers American business to Arab governments neither stable nor friendly. A cartel lives by the agreement of its members and all its members must therefore work in concert without the freedom of action which independence would assure. As the oil cartel submits as a body to political blackmail, so it becomes a major concern of the United States. It is time that the Congress of the United States took a long, hard look at our antitrust enforcement in the international arena.

Time for a Change

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. DINGELL. Mr. Speaker, the other day the subcommittee of the Ways and Means Committee approved unanimously the bill H. R. 7315, introduced by my colleague, the gentleman from California, the Honorable CECIL R. KING, seeking the removal of the 3-cent excise tax on coconut oil. The bill is identical in purpose to the legislation which my late father consistently sponsored in the past. It is similar to the bill H. R. 5818, which I introduced on March 11. I am, therefore, happy that progress is being made toward the elimination of this tax, which is no longer necessary.

The New York Journal of Commerce of August 7 commented editorially on the pending legislation under the heading "Time for a Change." I fully agree with the Journal of Commerce that there should be no reason for further delays in passing this measure "for action would benefit the American user in the form of lower prices, and by opening the door to increased use would help strengthen the Philippines economically in their role as an important free-world bastion in the Far East."

Gen. Carlos P. Romulo, Philippine Ambassador to the United States, who is highly regarded in this country, has been indefatigably working for the repeal of this tax, not only because it affects, as he says, 8 million of his countrymen who depend on the coconut industry, but also because he knows this will strengthen the ties of friendship that bind our two peoples together, and no one is a more sincere advocate of Philippine-American friendship than he is.

Mr. Speaker, I ask unanimous consent that the following editorial be printed in the RECORD:

TIME FOR A CHANGE

Despite repeated efforts to get rid of the 3-cent excise tax on the processing of coconut oil, this relic of the depression era still is on the statute books.

Congress should try to find time to legislate this antiquated excise tax, or, if you prefer, import duty out of existence before it goes home this summer.

The latest bill to accomplish this was introduced by Representative CECIL R. KING, Democrat, of California. Its unanimous approval by the Excise Tax Subcommittee of the House Ways and Means Committee has gotten the King bill off to a good start. The full House Ways and Means Committee is scheduled to take it up today.

Since everybody seemingly is now agreed that there is no longer any justification for this burden on Philippine farmers, Congress should realize that, as a demonstration of United States-Philippine friendship, such action would be doubly effective before the upcoming Philippine election.

The 3-cent excise tax on the processing of coconut oil imported from the Philippines was first imposed on May 10, 1934. That made it a typical depression baby, designed to protect domestic producers of fats and oils.

As such, it should have been eliminated as soon as a drastic change in the fats and oils situation occurred. As so often is the case with emergency legislation, however, the law continued in force long after the emergency was over.

Today, final elimination of this impost would have no adverse impact on domestic producers and would not cost the United States Treasury more than a pittance. The same amount, however, would significantly strengthen the Philippine economy because coconut products constitute one of the Republic's chief farm products and also its No. 1 dollar export earner.

When the levy was first imposed, the Philippines was still under the sovereignty of the United States.

Then, as now, United States imports of coconut oil were obtained almost entirely from the Philippines, largely because as early as 1922 an import duty of 2 cents per pound had been levied against coconut-oil imports from non-United States sources. Imports of copra from non-Philippine sources were substantial, however, in the thirties.

It was recognized right from the start (in 1934) that the 3-cent tax would bear heavily on the Philippine suppliers. Congress, therefore, provided that the taxes collected on the first processing of coconut oil from the Philippines be held as separate funds and paid to the Philippine treasury as assistance in adjusting the Philippine economy to a position independent of trade preferences in the United States and in preparing the Philippines for the assumption of the responsibilities of an independent state.

Thus, up to July 3, 1946, when the Philippines became an independent republic, some $140 million had been transferred to the Philippine treasury in remission of the 3-cent tax. Philippine officials have always stressed that these funds were most helpful in sustaining the economy of the islands.

The Philippine Trade Act of 1946 left the 3-cent impost unchanged but terminated the remission of the tax collections to the Philippine treasury. This arrangement, it seems to us, never made much sense. It was hardly made more palatable by the establishment of a duty-free quota of 200,000 long tons of coconut oil, the quota being subject to successive reductions.

Philippine officials have maintained all along that once independence came to their country, providing as it did for preferential entry of the products of each of the two countries into the other, the United States should have continued to refund the tax or the processing tax on coconut oil should have been repealed.

They still feel strongly that such funds, which were urgently needed for the rehabilitation of the war-devasted islands are now necessary in the financing of further economic growth in the Philippines.

Thus far, the Congress of the United States has not seen fit to recognize its claim. As far as can be ascertained, the Department of Agriculture, for some highly technical reasons, likewise opposed any change in the existing setup as late as 1952.

Latest reports from Washington indicate, however, that the Department of Agriculture has changed its view on this regulation and is now ready to go along with an experimental suspension of the processing tax.

That makes the opposition to the current setup virtually unanimous. This newspaper can see no reason for further delays. Action would benefit the American user in the form of lower prices and, by opening the door to increased use, would help strengthen the Philippines economically in their role as an important free world bastion in the Far East.

Ridiculous Censorship of Stephen Foster Songs by Radio and Television Networks

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to place in the CONGRESSIONAL RECORD an editorial which appeared in the July 19, 1957, issue of the Daily Highlander, of Lake Wales, Fla., which points out the ridiculousness of the censorship the major radio and television networks have placed on certain folk songs, including the works of the immortal Stephen Foster.

The editorial follows:

HIGHLANDERING ABOUT TOWN

(By Bob Lodmell)

The height of ridiculousness has been reached with television and radio networks banning Stephen Foster songs because they contain such words as "darkies," "mammy," and "black."

But radio and television have long had a reputation of cowardly bowing to the whims of minority groups, with the possible exception of southern whites.

As long as the networks have started this, we suggest they go still further and clean up this song business.

They ought to ban Chinatown, My Chinatown, because it might offend Mao, the Red ruler of China and about 400 million people of that race.

The St. Louis Blues ought to be banned because it gives the impression the ladies of St. Louis are hussies.

Unless they take the Japanese Sandman off the air, we might find ourselves in a hassle that will make the Girard case mild by comparison.

We might eventually have to arm the border between the United States and Canada if the networks continue to use Canadian Capers, which makes a sly reference that Canada is Eskimo land.

An investigation of the use of these nationalities in American songs might reveal there's a Russian in the woodpile.

It goes without saying that Sweet Georgia Brown and the Sentimental Gentleman From Georgia should be banned pronto because of such words as "colored" and "a Mason-Dixon valentine."

We would like to see that the officials responsible for the silly ban get all shook up again and again and again.

The Economic Power of Possible Union Combinations

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, August 8, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Who Says It Can't Happen Here?" which was published in the Los Angeles Times of August 6, 1957. The editorial is a recognition by one more great American newspaper of the inherent dangers in having too much power vested in the union bosses.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO SAYS IT CAN'T HAPPEN HERE?

Here is a quotation to remember:

"There's one thing I know: If the teamsters and the two dock unions got together they'd represent more economic power than the combined AFL–CIO.

"They are so concentrated. An economic squeeze and pressure can be exerted that puts any employer in a very tough spot—and furthermore puts the United States Government on a tough spot."

That is Harry Bridges speaking.

On the same day James R. Hoffa, president-apparent of the teamsters, says:

"We cannot have a sucessful one-city strike any more."

CALL AND RAISE

Hoffa calls Bridges and raises him. Not only truckdrivers and dockworkers, says Hoffa in his vision of empire, but employees of railroads, steamship companies, airlines, and so forth must be enlisted for the holy war against the people of the United States.

Some citizens may have passed these remarks with the old it-can't-happen-here writeoff, thinking here are two labor bosses so pumped up with their delusions that they are blowing off pressure through their hats. But most citizens, we guess, didn't pay any attention whatever to Bridges and Hoffa. Even in Congress, where this talk ought to alarm the Nation's concentrated wisdom, only two Senators—MCCLELLAN and GOLDWATER—seemed to realize that Hoffa and Bridges mean what they say and can do what they intend.

THE LAW AS WRITTEN

There is no law to prevent Bridges and Hoffa from getting a stranglehold on national transportation. On the contrary, the law as written—or as interpreted by the United States Supreme Court—makes their way easier. The conflict of their own ambitions is the only possible obstacle to a transportation monopoly.

It would be too much to analyze all the laws which encourage the Bridges-Hoffa enterprise. It is better to take a look at one law which would stand in their way if it hadn't been nullified by the Court. This is the Sherman Antitrust Act. Sylvester Petro summarizes this act and how it became a dead letter in labor cases in the following paragraph from the Labor Policy of the Free Society:

"The first national statute applicable to concerted labor activities was the Sherman Antitrust Act. This law was addressed not to labor activities specifically but to all monopolistic interference with the market, whether by businessmen or labor unions, which affected interstate commerce. During the period of its applicability to labor action—roughly 1890 to 1930—the Sherman Act was held to prohibit, by and large, only various types of secondary union action, or combinations betwen unions and employers designed to eliminate business competition in interstate markets. In one famous case there was an implication to the effect that even a primary strike might be held unlawful where it affected an entire field of production, an entire industry, and was intended to affect the market price of the product of that industry. But this implication, as significant as it is in terms of present problems of industrywide strikes, never became a fixed part of the law of the Sherman Act and was, in fact, expressly abandoned by the Supreme Court at a later date."

DELAYING DEVICE

It should be added that the authors of the Taft-Hartley Act intended to forestall the nationwide strike and such power as Bridges and Hoffa have in mind. They sought to do it by forbidding the closed shop, but the intent of that clause has been evaded, often with the connivance of employers. All that remains in the T–H law is a delaying device; if in the opinion of the President any strike affects the public health and safety through the Nation, he may enjoin it for 80 days. That is all.

Nobody needs much imagination to visualize the results of a nationwide transportation strike. It would hold the people, especially the urban dwellers, in the vise of a military siege or blockade. The union combine could threaten, or starve, the country to terms. As Bridges said, it could put "the United States Government on a tough spot."

It could do this if it were not forestalled. Congress could and should amend the laws now. The probability is that if the monopoly were suffered to take shape and to act, the time for reasonable law would have gone by. Harsher forces would come into play, everybody would suffer under the repression, the Federal Government's ascendancy in industrial affairs would become complete. Civil war injures all.

The Bridges-Hoffa threat might set the McClellan committee on a more fruitful course of investigation. It is useful to uncover the union thieves and racketeers, but this is a kind of police work. The committee, which has been urged to assess the political power of Walter Reuther and his UAW, should be looking into all the means by which big labor is preparing for war against the whole American people.

Uniform Code of Military Justice and the Status-of-Forces Agreement

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BOW. Mr. Speaker, the Veterans of Foreign Wars has prepared an excellent statement on the relationship between the Uniform Code of Military Jus-

tice and the Status of Forces agreements, a relationship that has been slighted in much of the earlier discussion on this subject. So that Members may have the statement without waiting for printed hearings on H. R. 8704, I include it herewith:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D. C., August 2, 1957.

Hon. CARL VINSON,
Chairman, House Armed Services Committee, House Office Building, Washington, D. C.

DEAR MR. VINSON: Attached is a statement by Cooper T. Holt, commander in chief of the Veterans of Foreign Wars, with respect to certain aspects of the NATO Status of Forces Treaty, and similar executive agreements which provide that under certain circumstances American servicemen on duty in certain foreign countries may be tried by foreign courts instead of an American court-martial.

This statement is in support of legislation to amend the Uniform Code of Military Justice to provide certain constitutional safeguards for American servicemen who are on duty in foreign lands and who are now subject, under certain circumstances, to trial by foreign courts. We requested permission via telephone to appear before the House Armed Services Committee and present Commander Holt's statement in person. We were advised that there was no available time for this purpose and that we would be permitted to submit a statement for the RECORD.

In view of the fact that the membership of the Veterans of Foreign Wars is composed of approximately 1½ million veterans who have served on foreign soil or in hostile waters in the Armed Forces of the United States during some war, campaign or expedition it was a sharp disappointment that we were not permitted to make a personal appearance on this subject which we believe to be of vital concern to our particular group. A survey of the resolutions adopted at the various State encampments of our organization reveals deep resentment and concern over the fact that American servicemen are being made subject to trial by foreign courts.

Under the circumstances may we request the attached statement by Commander in Chief Cooper T. Holt be included in the hearing records on bills which propose to amend the Uniform Code of Military Justice to provide safeguards for American servicemen now subject, or who may become subject, to trial by foreign courts.

Respectfully yours,
OMAR B. KETCHUM,
Director.

UNIFORM CODE OF MILITARY JUSTICE AS IT APPLIES TO THE NATO STATUS OF FORCES TREATY

(Statement of Cooper T. Holt, commander in chief, Veterans of Foreign Wars of the United States, Before the House Armed Services Committee, Washington, D. C., August 1, 1957)

The Veterans of Foreign Wars appreciates the opportunity to present to this committee its views on certain aspects of the NATO status-of-forces treaties and related executive agreements in connection with certain bills now being considered by the committee which would amend the Uniform Code of Military Justice and affect certain provisions of the Status of Forces Treaty and related executive agreements.

Our organization has urged the revocation of the status-of-forces treaties and executive agreements since they became effective in 1953. A resolution adopted at our last national encampment in August 1956 again placed the VFW on record as opposing them.

H. R. 8704, introduced by Representative KILDAY, provides that no member of our Armed Forces will be surrendered to the jurisdiction of foreign courts unless the secretary of the armed services concerned determines that, under an existing treaty, the country requesting jurisdiction has primary jurisdiction over the accused.

This proposed bill is good as far as it goes. It at least places in the hands of a responsible United States authority the final determination of jurisdiction in cases where there may be a dispute. If this bill had been law at the beginning of this year, Army Sp3c. William Girard would—at least we hope—have already been tried by a United States court-martial, instead of being surrendered to Japanese jurisdiction.

The weakness of this bill, however, is that it does not go far enough. The issue here is the fundamental right of every American serviceman to due process and a fair trial before being convicted of any crime. Under the present treaties and agreements this fundamental right is not adequately protected—and H. R. 8704 does not fully correct this situation. While it provides some relief, it falls short of what is needed.

H. R. 8820, introduced by Representative Bow, is a more desirable bill. It has five main provisions. The first states that no person subject to the Uniform Code of Military Justice will be surrendered to the jurisdiction of any foreign court for an alleged offense arising out of any act or omission taking place while he is on duty.

This is a sorely needed revision of the present agreements which say that the United States will have primary jurisdiction in alleged offenses arising out of any act or omission done in the performance of official duty. The American people have believed that the phrase in the performance of official duty meant on duty. They learned in the Girard case, however, that it does not, and that our servicemen can be tried by foreign courts even for on-duty offenses. This shocked many Americans and, we believe, is something that should not be further tolerated.

The second provision of H. R. 8820 provides that no member of our Armed Forces accused of an off-duty offense shall be surrendered to foreign jurisdiction unless the Department concerned has first determined taht he will have, under the criminal laws of the nation concerned, procedural safeguards substantially the same as those he would have in a general court-martial. Nine specific safeguards which must be guaranteed the accused are then quoted.

We cannot see how this committee or the Congress can reject this section of the Bow bill unless they are willing to proclaim publicly, if indirectly, that servicemen are second-class citizens, that they are to be deprived not only of the full protection of the Bill of Rights but even denied the minimum protection of the Uniform Code of Military Justice which is the only constitutionally authorized body of law applicable to members of our Armed Forces who are accused of crimes.

This is a basic issue. If Congress does not insist that every serviceman to be tried by a foreign court will be granted due process and these minimum safeguards, it will be guilty of trading away the basic rights of all members of our Armed Forces. This is not a pleasant thing to say, but if our Constitution, history, and traditions mean anything, it is true and it is also a face we must all face squarely.

Under the Constitution only Congress has the power to govern and regulate the Armed Forces. It is obvious from the spirit of the Constitution and American traditions that, in exercising this power, Congress has a solemn duty to see that our servicemen are guaranteed every possible right consistent with effective military discipline and operation. Only absolutely essential and minimum departures from the full protection of the Bill of Rights should be made by the Congress in governing and regulating our Armed Forces.

For the Congress to reject a simple demand that due process and the basic elements of a fair trial be provided for all members of our Armed Forces, even in foreign courts, would be to make a travesty of American justice. If it rejects this, it will reject, in effect, the whole spirit of the United States and its Constitution, the very things that have made this country the land of the free.

It is true that some of the safeguards enumerated in this section of the bill are also spelled out in the agreed official minutes of the status-of-forces treaties and related executive agreements between this country and 54 other nations. The fact is, however, that despite this, American servicemen, when tried in foreign courts, have sometimes not been provided with these safeguards. Some method of strengthening the hand of high military officials in seeing that they are provided is therefore absolutely essential.

The third provison of the Bow bill provides that there will be no surrender of any servicemen to a foreign court until the accused has been notified of the decision to surrender him and 10 days have elapsed following such notification. If, within those 10 days, the accused appeals the decision to surrender him to a foreign court to the court of military appeals, he will not be surrendered until that court has decided his appeal.

According to the fourth provision, the court will then determine whether or not the accused commited the alleged offense while on duty or off duty. If it determines that it was an off-duty offense, it must then determine whether or not the accused will have the procedural safeguards enumerated in section 2 before he can be surrendered.

This is certainly a reasonable, or more accurately perhaps, a necessary provision. A man subject to the military code of this country can be surrendered by the military to the nonmilitary courts of this land. When this happens, the accused is actually granted more rights and protections than he would have had if tried by a military court. He is given the full protection of our Bill of Rights by the United States courts. It is certainly reasonable to insist that, if American military personnel are to be surrendered to foreign nonmilitary courts where they do not have the full protection of the Bill of Rights, they should, as a minimum, be guaranteed the procedural safeguards enumerated in section 2 of H. R. 8820.

There is an obvious inconsistency in the present treaties and executive agreements. Either it is wrong—from the viewpoint of justice—for the Congress to give an accused serviceman greater rights than those provided in the Uniform Code of Military Justice by permitting his surrender to a nonmilitary court of this country, or else it is wrong to give him fewer rights (than those in the Uniform Code) by surrendering him to the nonmilitary courts of a foreign country. Reason and common sense rebel at this contradictory arrangement. It is obviously one that demands correction.

In considering this section, we must remember, too, that in any capital offense a serviceman surrendered by the military to a nonmilitary court in this country would have the protection of indictment by a grand jury before he could be tried. But even under H. R. 8820, American servicemen will not get this protection of the Bill of Rights. Few of the 54 nations that now have jurisdiction over American military personnel provide anything in the nature of such protection.

The fifth provision of the Bow bill states that if the court finds the offense was committed while the accused was on duty, or that the accused will not have the procedural safeguards guaranteed in section 2 in the case of an off-duty offense, the court shall so

notify the Secretary of the Department concerned. The Secretary shall then refuse to surrender the accused to the jurisdiction of a foreign court.

If the Court of Military Appeals finds that the alleged offense was an off-duty one and that the accused will have the procedural safeguards previously mentioned if prosecuted by the courts of the foreign nation involved, the Secretary of the Department concerned may then surrender the accused to that nation for prosecution.

This section, too, is reasonable and desirable. We believe it a proposition that needs no argument, that our Armed Forces personnel should never be surrendered to a foreign court that does not provide them with the minimum elements of a fair trial.

The VFW therefore urges this committee that, if it is going to act on any of the measures now before it, it support H. R. 8820 because it is a measure which makes a realistic attempt to see that the members of our Armed Forces will really be assured of what might be called a fair trial in foreign courts.

There are some other vital points that should be made at this time.

Under the military code of this country those convicted under it have the ultimate right of appeal to the President of the United States. They also have the right to review by the Court of Military Appeals and even by the Supreme Court.

Even under H. R. 8820, as laudable as its provisions are, however, there is no provision at all for such appeal or review based on the standards of the Bill of Rights and the Uniform Code of Military Justice. It is most important to stress this fact because never before in the history of this Nation have citizens, including our servicemen, been denied this protection.

It is quite likely that foreign governments would flatly refuse to let any United States court review its courts' decisions. It would be understandable, in a way, for them to take this position. But, if they do so it will emphasize the impossibility of giving our Armed Forces full basic protections under any system of status-of-forces treaties. It will demonstrate the need for revocation of all such agreements.

Today, the more than 1 million men who are serving overseas in our Armed Forces are without this vital protection of the right of appeal to a court of last resort which will judge their case according to the principles of the Constitution and Bill of Rights. A portion of the lifeblood of inherent constitutional right in the body of liberty is being allowed to ebb away. This right and many others have been taken away from our Armed Forces by the President through executive agreements, and by the Senate and President acting together through ratification of the status-of-forces treaties.

Inasmuch as the Constitution does not give the President, or the President and the Senate acting together, the power to govern and regulate the Armed Forces, it is the contention of the Veterans of Foreign Wars that this stripping of servicemen of their rights has been done unconstitutionally—for the simple reason that placing them under foreign courts which may punish them, even for crimes committed while on duty, is obviously a part of the process of governing and regulating the Armed Forces.

As recently as June 10 of this year the United States Supreme Court, in the case of *Reid* v. *Covert*, stated: "When the Government reaches out to punish a citizen who is abroad, the shield which the Bill of Rights and other parts of the Constitution provide to protect his life and property should not be stripped away just because he happens to be in another land.

"This is not a novel concept. To the contrary it is as old as government. It was recognized long before Paul successfully invoked his right as a Roman citizen to be tried in strict accordance with Roman law."

The Court also pointed out that "No agreement with a foreign nation can confer power on the Congress, or on any other branch of Government, which is free from the restraints of the Constitution * * *. Treaties and laws enacted pursuant to them have to comply with the provisions of the Constitution * * *. The prohibitions of the Constitution were designed to apply to all branches of the National Government and they cannot be nullified by the Executive or by the Executive and the Senate combined."

This statement by the Court makes incomprehensible its decision in the Girard case because all servicemen, through the NATO status-of-forces treaties and related executive agreements, have been denied in foreign courts specific basic rights bestowed upon them by the Congress in the Uniform Code of Military Justice.

This condition cries out for correction and we look to the Congress for the remedy. H. R. 8820 has many excellent provisions and is superior to any other bill before this committee. Its passage would do much to protect the rights of our Armed Forces serving overseas. For this reason the VFW would like to see it enacted into law.

The VFW still feels, however, that the only true and complete correction that can be made is the rejection of the NATO status-of-forces treaties and all executive agreements patterned on them.

We say this with full realization of the need for having our troops stationed abroad to strengthen our security and with full appreciation of the problems the Government encounters in trying to arrange this with other nations. Concessions must be made, benefits must be granted, etc., on a quid pro quo basis. That is in the very nature of the conduct of international relations and our foreign affairs.

Ultimately, however, every action taken by our Government must be evaluated by the yardstick of the basic law of our land, the Constitution. We need alliances to protect freedom—our own and that of our allies. But there must be a limitation even on the means used to achieve this end, as vital and noble as it is.

There are some things that cannot be done, some concessions that cannot be made, simply because they cannot be commensurately returned. Among them are asking—or compelling—any citizen to surrender his constitutional rights, liberties and protections or agreeing to violations of the principles, provisions, restraints and processes prescribed by the Constitution.

In the final analysis, except when this Nation is in dire peril, the Constitution and the rights it confers on our citizens should not be sacrificed for anything. Nothing is worth violation of the Constitution except the preservation of this Nation from destruction—and no one has shown that the status-of-forces treaties are essential to this purpose.

This, again, is a matter of principle. It does not matter whether it affects only 1, 2, 10—or thousands of people. This concept of fundamental individual rights has been the basis for this country's sacrificing the lives of hundreds of thousands of its men in war and for its expenditure of billions of dollars of its assets for defense purposes. It would indeed be tragic if, after working to preserve it at such cost, we should trade it away unnecessarily.

One inroad into the Constitution begets another. We cannot sacrifice the rights of American servicemen through status of forces arrangements or any other process without weakening and endangering the rights of all citizens.

This is why the VFW stands for the revocation of the status-of-forces treaty and all executive agreements based on its provisions.

Status-of-Forces Arrangements

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. BOW. Mr. Speaker, an Army liaison plane, unable to gain altitude on takeoff, is reported to have crashed and killed a Japanese woman who happened to be near the runway of one of our Japanese bases.

I am waiting with interest and apprehension to learn whether the Department of Defense will surrender the pilot to the Japanese for a murder trial.

According to the new definition of duty, enunciated by the General Counsel of the Defense Department, such an unhappy eventuality is entirely possible, even probable.

You will recall that in the Girard case, the General Counsel asserted that the accidental shooting of a Japanese woman who was trespassing on a range Girard had been assigned to guard was "such a complete departure from his duty that he could not have been considered on duty."

Obviously the Army pilot in the recent unfortunate accident was not instructed to crash. Certainly he was not ordered to use his light aircraft as an instrument of death and injury to a Japanese couple. Will the Defense Department consider that his failure to keep the plane aloft was "such a complete departure from his duty that he could not have been considered on duty."

It seems to me that this is very likely to occur if the Japanese authorities suggest it. It appears that this suggestion, together with the assertion that the Japanese people are inflamed, is required to make the new definition of duty applicable to the incident.

Girard's commanding officer and our representatives on the Joint Commission both insisted that Girard was on duty. But, according to the General Counsel of the Defense Department, there was "still further inflammation of the situation in Japan," the "Japanese situation was becoming more and more inflamed," and "this matter was still inflaming the public" as time progressed.

Accordingly, it was decided that the commanding officer was acting in an archaic military manner, unsuited to this era of international good feeling, and that he had been wrong all the time. Inflammation of the Japanese public proved that Girard was not on duty after all.

For a time in late June it appeared that inflammation of the American public might reverse Girard's duty status again. Unfortunately, the American public doesn't seem to sustain an inflammation. The antibiotics of internationalism soothe and quiet the eruption. Emotionalism that can cause flipflops in American policy whenever it seized a Japanese, Italian or Turk is considered unbecoming to an American. Those who exhibit it are narrow-minded,

old-fashioned, isolationist patriots. Few can stand those terms of opprobrium.

If my apprehension concerning the unfortunate Army pilot should prove well founded, I think we may at last find an occasion when Americans will breed a boil big enough to bust the complacency of the General Counsel of the Defense Department, an inflammation on this side of the water that will bring some changes in the status-of-forces arrangements.

A Postal Employee Views the Service Rendered by the Post Office Department and Commends Postmaster General Arthur S. Summerfield for His Courageous and Determined Efforts To Breathe Life Into the Service.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. VAN ZANDT. Mr. Speaker, living as we do in the midst of one legislative debate after another, many times Members of Congress, as well as the beneficiaries of legislation, become embroiled in the issues at stake to the extent that we are prone to overlook the administrative problems of officials of Government and their efforts to solve them.

Recently when reading the August 1957 issue of the Pen, the monthly publication of the Federal Postal Employees Association, Denver, Colo., I was impressed by the tribute paid to Postmaster General Arthur S. Summerfield in the following article titled, "A Postal Employee Views the Service," by Mr. Frank J. Spillane, a postal employee of Casper, Wyo.:

A POSTAL EMPLOYEE VIEWS THE SERVICE

(By Frank J. Spillane)

Much has been spoken and written of late about our United States postal service. Most of those who write of postal problems are laymen. Their grasp of postal problems is second hand, or the result of inaccurate observation. The problems that beset the postal service are the problems of the American public. We feel that it is time for them to hear of the postal service from a postal employee. For him, there are no political axes to grind, and no other interest except a vital and progressive service. There is no area in the Government service that offers more challenge to the civil employee than the postal service, nor is there anywhere in Government a finer working force. That the full potentiality of this work force has not been fully realized is indicative of the many problems that beset the service.

Historically, the postal service in this Nation predates the Nation itself. In the pre-Revolutionary era King William of England, in 1691, gave to Thomas Neale the postal monopoly in the American Colonies. This venture was undertaken for profitmaking, and came to naught and bankruptcy. In 1710, with the passage of Queen Anne's Act, the postal service came under the British postal system. The primary aim was to operate the postal service for a profit. Service to the people was secondary. So it went, and for the next score and ten the postal service stagnated and showed a deficit in the balance sheets sent to London.

July 26, 1775, is the birthday of the United States postal service. On that day, the Continental Congress named Benjamin Franklin as the first Postmaster General. In those days, when the mail was virtually the only means of communication, the leaders of the infant Government realized the value of the postal service. Thirteen discordant Colonies had been united by the great emotional drive to secure liberty. Emotional drive, however, dies, and it was then that the postal service made its great contribution. It supplied the mediums of communication that cemented the minds of the Colonists with the pride of nationalism.

This thumbnail sketch of postal history reveals why we in the postal service have a rich heritage of tradition and of service. We like to feel that we are also rich in the respect and goodwill of the American people. Despite our proud heritage, the postal service at all times seems to have been beset with great problems. In turning the pages of postal history, we find that from the beginning there has been a difference of opinion between Congress and the various early Postmasters General as to postal policy. Briefly stated, the question has always been: Is the Postal Establishment meant to be a service to the American people, to be operated with deficit financing by congressionally voted funds, or should it pay its own way by sufficient revenues raised from postage?

The battle has raged back and forth to this day. This session of Congress may be the stormiest in history over this question that haunts the Postal Establishment. Undeniably, the Postal Establishment is a service to the American people. Its contributions to the people of the United States cannot be measured in the tax dollars it has used. Yet, this system has operated to the detriment of a dynamic and up-to-date postal establishment. The Post Office in an unrealistic procedure must make estimates for funds it needs for operations 2 years in advance. In times when the Nation is undergoing great expansion, as at present, the rate of growth is easily miscalculated, and insufficient funds for operations are forthcoming from Congress. Congress, which tries to do a good job of watching people's money, then is asked for deficiency appropriations. At this point many laymen, journalists, and perhaps a few Congressmen out for a headline howl over what they feel to be apparent waste by postal officials.

The hapless Postmaster General of the time is brought under fire, and his ability questioned. To avoid these unpleasant circumstances, no doubt, many a Postmaster General has spent, for postal operations, money intended for new equipment, and research, before taking hat in hand in the role of poor relation, to trek to Congress for additional funds. Congress, too, conscious of the unfavorable publicity given the so-called postal deficit, has been slow to recognize the needs of research, new buildings, and modern equipment. In the opinion of many qualified postal officials, there is a solution to the very confused picture of postal appropriations. They argue that the Post Office Department should be given authority, within limits, to set postal rates, and to adjust certain costs with the approval of an agency such as the Interstate Commerce Commission. Then, in the manner of sound business, they would proceed to operate the Post Office Department with their own revenues and within the scope of those revenues. Congress would no longer have to appropriate money to postal operations. It could keep a sharp eye on the Department to see that it functioned in a lawful and efficient manner. Gone would be much of the politics that now block the way to a modern postal service.

Despite the many problems that still beset the United States Postal Service, a new era began with the arrival of Postmaster General Summerfield, in Washington in 1953. We do not intend to eulogize General Summerfield, but to present the facts as we see them. He has a record as a successful businessman, and was reputed to be the Nation's biggest Chevrolet dealer. General Summerfield found the Post Office Department suffering from years of nonprogressive operation; also, from the vast expansion this Nation has been experiencing. Determined to apply sound business principles in the operations of the Department, he sought men experienced in transportation, personnel, and related fields to fill the top-level posts. He began a decentralization of the Department. Fifteen regional offices were set up in principal cities. The regions were further subdivided into districts, with a district manager responsible to the regional operations manager. Into these regional and district posts went qualified and energetic men from within the service itself. Decentralization has wrought wonders in the management of postal operations. No one could be more aware of this than a postal employee such as myself. Our office at Casper, Wyo., is in a community of about 35,000. Prior to decentralization, I never saw a top-level postal official at our office. Since decentralization, the policymaking level of postal management has a personal knowledge of the operation of our office via the periodic visits of our district and regional officers. We feel, at times all too keenly if we goof, that we are part of an organization which knows that we exist. In short, decentralization has brought policymaking management closer to the operations of each office big and small. Manpower expenditure, mail volume, and costs have been closely scrutinized. Modernization of equipment and methods are underway despite short funds. Parenthetically, some citizens might desire to dedicate a memorial to the man who took the scratchy pens from the post office and replaced them with ballpoint pens.

Much, of a positive nature, has resulted from the aforementioned changes. The personnel of the Post Office Department stood at 523,757, in 1952. The year 1956 saw the number reduced to 508,587, or a reduction of 15,170 employees. During this same period, the number of pieces of mail handled by the Department increased from 49 billion pieces to 56 billion pieces. Over 300,000 new homes had mail delivery, and 250,000 businesses were serviced. These great accomplishments, I am sure, the Postmaster General would share with all the hard-working postal employees. It is partly their increased productivity as individuals that has made many of these accomplishments possible.

How do the rank and file of the postal employees feel about General Summerfield? There was a great dispute between employee organizations and General Summerfield over reclassification and wages in 1955. Some of the bitterness engendered at this time remains, but few of the employee fears have materialized. At the present time, the employees from top to bottom feel they are underpaid, and that their wages have not kept up with the inflationary increases in private industry. They feel General Summerfield should go to bat for them for wage increases. By and far, however, it is my observation that most employees of the Department have come to respect General Summerfield for his courageous and determined efforts to breathe life into the service.

There is new life stirring among employees in this old and honorable Department of Government. While it has stagnated in technological advancement, it has kept a fine tradition of individual efficiency among its

employees. Now, far down in the well-disciplined ranks, men such as myself have begun to take heart. We have seen the wonders of a massive organization, long dormant, start to move. It is also a time of crisis. Besides the American public, no one has more at stake in the postal service than we employees. We hold our breath lest this complex organization, now on the move, lapse back into a coma. The sheer weight of the problems at hand could bring this about. Battlelines are drawn in Congress over increasing postal rates. Special interest groups want no increase. It is perhaps an issue that only an aroused American public can resolve. Do they want their postal service modernized? Do they want to stop having the ambiguous issue of a postal deficit brought forth each year? If so, they must tell their Congressmen and Senators how they feel. They must tell the Congress that they want a progressive and modern postal service—one which given the autonomy of operating on its own revenues can ask an impartial board, such as the Interstate Commerce Commission for the increase in revenue it needs, provided such increases can be justified. The public must further insist that much more money be spent for research.

The postal service, in years past, has spent virtually nothing on this vital field. This year, under a new program, the Department is asking for $4 million. The telephone industry spends 18 times that much each year. If it did not, it would die before an avalanche of business it could not service. There is no reason why automation cannot, to a great degree, be applied to the handling of mail. It is going to cost money, a great deal of it. However, in an enterprise which spends 80 percent of its budget for salaries, automation can only save money in the long run. Nor will automation cause mass layoffs or employee hardship. The project will take years to complete and the normal attrition to personnel by deaths, retirement, and resignations will gradually reduce the force. An organization of fewer employees on an automated basis should make for better salaries, morale, and quality of personnel, besides a better postal service.

Which way will the ball bounce? There are rumors that General Summerfield will retire after this year. This would be a severe loss to a postal service which is taking its first tottering steps after a long illness. Despite the progress that has been made, a great deal more must be accomplished before the patient is out of the woods. A change at the helm of the Department could bring the walls tumbling down.

Thus run the thoughts of men whose dedicated profession is the Postal Service. Only you, the American people, can decide, and help us give you a modern postal organization. The ghost of the postal deficit must be laid to rest. If you see fit, postal rates must be raised. Money must be spent for research and modernization. Without these things, we, your postal employees, are lost. The service which we have seen so wonderously come to life will again slumber, and we must go on serving you with dragging steps, when we would fly, and could.

Sanitary Drinking Water Facilities in Railroad Cabooses

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. GRAY. Mr. Speaker, the Chicago Sun-Times for July 6 includes a list of bills enacted into law in the State of Illinois. One of those bills would require the installation of sanitary drinking water facilities in railroad cabooses.

I know that persons performing services on railroads have a continuing problem with this type of condition. Some time ago I had the opportunity to ride in the Chicago and Carbondale Railway Post Office. I know that although the Post Office Department and railroad companies both claim that the water facilities in railway post office cars are sanitary and clean, the people performing duty in those cars frequently complain of the water running brown. I am constantly amazed at the work performed by these public servants. They handle incredible amounts of mail in unbelievably restricted space. They have a devotion to duty which is little short of being phenomenal.

The Post Office Department has steadily been reducing service in railway post office cars, and yet these people devote themselves to their tasks with a devotion reminiscent of Beau Geste. The significant difference is that in this case the sniping is done by postal officials, rather than by Arabs.

It is good to know that railroads operating in the State of Illinois will now be required to furnish sanitary drinking water supplies to their employees in railroad cabooses. I hope that this legislation will also relieve in some way to the plight of the railway mail clerks in their own little cabooses at the front of the train.

William H. Francis, Jr., Receives Suggestions From American Federation of Government Employees Leaders at the Pentagon

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. BROYHILL. Mr. Speaker, recently the Honorable William H. Francis, Jr., Assistant Secretary of Defense, received at a conference 15 presidents of the American Federation of Government Employees lodges in this Washington area. I would like to congratulate the personnel leaders at the Department of Defense who, under the leadership of Mr. Carter L. Burgess, former Assistant Secretary and now under his successor, Hon. William H. Francis, Jr., are encouraging intelligent employee discussion and participation in problems of career development and better civilian-military relations.

Mr. Speaker, under leave to extend my remarks I am inserting in the RECORD at this point the statements made at the conference by Mr. Ardoin E. Casgrain, president of the AFGE defense council representing the Army, Navy, and the Air Force union lodges, and also the statement of Mr. James P. Campbell, the national president of the AFGE. Both these statements contain information on personnel problems that I consider significant to better personnel practices and economy in administration in the defense establishment.

Mr. Casgrain's statement:

As a result of conferences with former Assistant Secretary Carter L. Burgess and his highly intelligent staff, the council members have been kept effectively informed of the progress made to develop better personnel policy in the Department of Defense. We feel that these conferences have helped us to do our part in suggesting ways to improve career development for civilians in the Department. We are deeply grateful for Hon. Carter Burgess' aggressive leadership under which we believe more progress toward good civilian personnel direction was made than at any other period in Department of Defense history. Strong directives on policy were issued:

Civilian Career Development, Defense Department Directive Nos. 1430.1 and 1430.2 and Military-Civilian Staffing, Defense Department Directive No. 1100.92.

Purpose of the meeting is to further establish effective relations with the Department of Defense through you as the new Assistant Secretary to continue progress in personnel policies and to point out what we feel are the areas that need further development. Here are some of the common problems that you in the Department of Defense and we as the AFGE union leaders need to consider with mutual concern:

1. Better pay standards are needed within the Department of Defense. We realize that congressional action is needed for solving pay and salary standards, nevertheless, we believe Defense Department leadership and influence with the administration can help along the solution. The Cordiner report is a step in the right direction. Such measures should be pushed until our Federal employee pay structure is changed to meet the competitions of American industry.

2. The classification of jobs within the Defense Establishment could be greatly improved so that more nearly equal pay for equal responsibility could prevail within Army, Navy, and Air Force. We believe the Assistant Secretary and the Chairman of the Civil Service Commission could develop a working agreement to improve a system much out of date.

3. Better supervision and the development of more people centered administrators are greatly needed. We believe the Department should place greater emphasis on human relations qualities and real leadership ability through selection and training of supervisors and administrators.

4. The designation of management positions as military or civilian in support activities has been directed. We would like to see such a program effectively and promptly implemented by the three services. The heart of our civilian career program rests in the honest solution of this problem. Without knowing what are and what will remain civilian jobs, we can have no career ladder or career development. We can give many examples of civilian careers in the Pentagon being ruined because civilian jobs became military jobs for no good reason.

5. A far better referral and personnel counseling job needs to be done, if displaced employees are to be fully utilized and career development is to become effective. Manpower is the most valuable asset in business or defense. Effective utilization of skilled and trained personnel should get fuller consideration.

6. Older employees need a new and different type of consideration. To stop promoting at 45, or even at 60, which is common practice today in Defense, is not only ineffective utilization but damaging to employee morale.

7. Meat ax or percentage cuts are unintelligent and lead to deception and ineffec-

tive utilization of staff. Management studies and consideration of what are essential activities should determine cuts—not some percent or across-the-board system.

8. Installations and employees should be publicly notified well in advance of necessary cuts. Mr. Campbell will discuss this problem in more detail.

9. A will to work and a sense of pride in belonging should be created among employees within the Department of Defense. It seems to us that this great Government establishment could follow the lead of industry in this respect. By incentive awards, recognition of service, promotion of recreational and special service activities we could create a new spirit of pride in being a part of the Department of Defense.

Mr. Campbell's statement:

The decision to close down a defense installation or curtail an activity is one which hits hard at career civilian employees. In many cases, experienced, long-term employees suddenly find themselves jobless.

It is essential that these employees be given the maximum possible advance notice of the intentions of the Defense Department or the military services. The reasons for closing a facility should be frankly explained to employees and to their organizations at the local level. There should be discussion and consultation with employees and their organizations in an effort to avoid the abrupt dismissal of employees and the loss to the Government of their training and experience. Moreover, special referral and placement service should be promptly established among military installations by the Department of Defense well in advance of the closing date.

Mr. Casgrain's statement concluded:

Mr. Francis, the members of this representation include:

Two of our national officers, Mr. James R. Campbell, national president, AFGE, AFL-CIO, and Mr. Floyd P. Swiggett, national vice president of the AFGE.

Of the 21 Defense Department lodges in the District of Columbia area, the following are represented here today:

Ardoin E. Casgrain, president of council, also representing Army Lodge 2; Albertus A. Bagley, AGO Lodge 1409; Charles Bell, QMG Lodge 1490; Byron E. Dunn, Army Lodge 692; Claude Evans, Engineer Lodge 333; Robert Galentine, Fort Myer Lodge 1654; Harry C. Goff, Army Map Service 1202; Jack Graves, Fort Myer Lodge 1126; Hubert E. Potter, Surgeon General Lodge 1191; William F. Burn, Navy Gun Factory Lodge 93; Nicolo Catucci, Navy Recruiting Station Lodge 1464; Carroll Schuler, Navy Research Center Lodge 1125; Theodore Ward, Navy Department Lodge 1; John Mann, Air Force HQ Lodge 1092; Wilmer P. Roland, Bolling AFB Lodge 967.

We wish to extend to you our best wishes for a very successful term as Assistant Secretary. We thank you for your consideration and again we wish to suggest that many of our problems are mutual. Your able staff, we know, will keep us informed and we will plan to offer suggestions. Please do not hesitate to call on us for the help or the reactions we may be able to give.

Our Indian Citizens

SPEECH

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. METCALF. Mr. Speaker, the new Republican speech kit and campaign primer declares that the Republican Party takes pride in certain of its alleged achievements in the administration of the Department of the Interior. One of the claims advanced is that the Eisenhower administration "has carried forward a wide variety of programs beneficial to the Nation, such as * * * assistance to our Indian citizens to assume their rightful place in society * * *."

While I do not agree with the Republican administration in consigning the first Americans to the very bottom of the economic and social ladder as their rightful place in society, the officials in charge of the Indian Bureau are entitled to their opinion as to where the Indian's place should be, I regret that the administration officials take pride in their achievements in relegating the Indians to this low level.

For the Indian standard of living is low, and getting lower, as the population increases on reservations inadequate to provide a living for a fraction of the people already there. Tribal assets, such as they are, are under the trusteeship of white bankers. Indian resources are undeveloped or are being exploited by non-Indian groups, while the Eisenhower administration pays lip service to proposals to develop these resources.

The emphasis of this administration has been on relocation—on moving the Indian from a rural slum to an urban slum.

The only accomplishments in the field of Indian affairs to which this Republican administration can point is that it has given the Indian the right to buy a drink, and to be arrested by a State or local policeman instead of only by a United States marshal.

These facts are only partially obscurred by a smokescreen laid down by a barrage of misleading press releases telling what a good job this administration has done. Previously, I have called this to the attention of the House under the heading "Today's Powwows Aren't Just Talk," on page A804 of the CONGRESSIONAL RECORD of February 6, 1957.

Here is another example. On May 7, 1957, the Bureau of Indian Affairs issued the following press release:

DEPARTMENT OF THE INTERIOR,
BUREAU OF INDIAN AFFAIRS,
May 7, 1957.

OVER 1,000,000 ACRES ADDED TO INDIAN TRIBAL LANDHOLDINGS IN LAST 3 YEARS

Over a million acres has been added to the landholdings of Indian tribes throughout the country in the past 3 years as a result of congressional enactments and administrative action by the Department of the Interior, Commissioner of Indian Affairs Glenn L. Emmons announced today.

During the same period, he added, 927,926 acres of land owned by individual Indians has been sold by the Bureau of Indian Affairs in response to written requests by the Indian owners, 392,488 acres has been turned over to Indians who applied for fee patents and satisfied the Bureau of their competency to manage their own affairs, and 122,414 acres of mixed tribal and individual Indian land has been taken by the Government for flood-control purposes with full compensation to the Indian owners.

"In considering the additions which have been made to the estate of Indian tribes over the past 3 years," Mr. Emmons pointed out, "it is important to bear in mind that neither the Department of the Interior nor the Bureau of Indian Affairs has any authority to dispose of tribal lands held in trust unless such action is specifically approved in each case by the Congress. In the case of individual Indian lands in trust status, we have disposal authority but it is exercised only when the Indian owners request a sale and such action is considered to be in their best interests. Each individual case of this kind is carefully examined and considered."

Of the 1,024,349 acres added to tribal holdings in the 3-year period, 818,277 acres was restored to ownership of the Colville Tribe of Washington under legislation enacted last year. The restored land was ceded to the Government by the tribe as a kind of surplus many years ago when the reservation was allotted to individual tribal members. Although the original intention was to sell the ceded land, this was never accomplished and the tribe subsequently requested the restoration which was consummated by the 1956 legislation. Under this law (Public Law 772) the 818,277 acres is now held in trust by the United States for the tribe on the same basis as other reservation lands.

The second largest addition to tribal holdings was the Navajo tribe's purchase of the 98,000-acre Brown and Best Ranch near Sanders, Ariz., in 1956. Although this land is held directly by the tribe in fee simple title, is not in Federal trusteeship and is located apart from the main reservation, it represents a substantial increase in acreage available for use by Navajo tribal members. Since it was paid for by tribal funds in trust status, the action was subject to secretarial approval.

In addition to the Colville Restoration Act, similar legislation in 1955 and 1956 added 41,216 acres to the Pueblo of Zia and 36,352 to the Pueblo of Jemez, both in New Mexico; 27,086 acres to the Seminole Reservations in Florida; 1,320 acres to the Yavapai Tribe of Arizona; and 600 acres to the Kanosh Band of Utah. Administrative actions by the Department of the Interior during the same period added nearly 400 acres to the estate of the Blackfeet Tribe in Montana, 253 acres to tribal holdings on Montana's Flathead Reservation, and 89,192 acres on the Wind River Reservation in Wyoming.

Purchases made by the Bureau of Indian Affairs in trust for individual Indians during the period accounted for nearly 20,000 additional acres.

As of last June 30, the latest date for which full reports are available, the United States was holding in trust for Indian tribal groups approximately 39,500,000 acres and for individual Indians about 13,300,000 acres.

Note that the title and opening paragraph of the press release concentrate on the fact that over 1 million acres—1,024,349 acres, to be exact—were added to the land holdings of Indian tribes throughout the country in the past 3 years. Somewhat less emphasis is given to the fact that, according to the Bureau's own figures, 1,342,826 acres passed out of Indian ownership, or a net loss of 318,479 acres.

A second significant fact obscured by the press release is that of the 1,342,828 acres which passed out of Indian ownership in 3 years, 1,220,414 acres were released from trust administratively through the issuance of patents-in-fee or by supervised sales. The remaining 122,414 acres were taken by the Government for flood-control purposes.

The land added to tribal holdings, on the other hand, was in large measure not the result of action by the Department but rather the result of legislation. Of the 1,024,349 acres added to tribal holdings, for example, 818,277 acres were restored to ownership of the Colville Tribe under legislation enacted last year (Public Law 772 of the 84th Cong.).

This land had been ceded to the Government by the tribe many years ago when the reservation was allotted, but never had been taken up by others; the land has been held for the Colville Indians for a number of years and the legislation merely restored title to the tribe.

According to the Indian Bureau press release, the "second largest addition to tribal holdings was the Navaho Tribe's purchase of the 98,000-acre Brown and Best Ranch." This tract, of course, was paid for out of tribal funds and the only role the Department had to play was to authorize such action.

In addition to the Colville Restoration Act, in 1955 and 1956 Congress passed legislation to turn over approximately 106,000 additional acres of land to Indian groups, mainly Pueblos in New Mexico and the Seminoles in Florida. According to the Indian Bureau press release, administrative actions by the Department of the Interior during the 3-year period added nearly 400 acres to the estate of the Blackfeet Tribe, 253 acres to tribal holdings on the Flathead Reservation, and 89,192 acres on the Wind River Reservation in Wyoming.

It is true that the Bureau restored approximately 400 acres to the Blackfeet Tribe during the past 3 years. The land restored consists of townsite lots which have never been taken up and are all within the boundaries of the Blackfeet Reservation.

The statement in the press release with regard to the Wind River Reservation, however, is wholly erroneous and I can produce a letter signed by Commissioner Emmons, dated July 10, 1957, which concedes that fact. The truth is that the bulk of the 89,192 acres referred to in the press release was restored to the tribe by section 4 of the act of August 15, 1953 (67 Stat. 592–613). To be precise, 88,712.43 acres were restored under the 1953 act; the minerals in 480 acres were restored under authority of a 1939 statute. The significance of this, I think, is that either the Interior Department is trying to take credit for action by Congress or the Bureau of Indian Affairs just does not know of the authority under which it is operating.

If my addition is correct I find that a total of 653 acres out of a possible 1,024,349 acres was turned over to Indian tribes by the administration, while the remainder either was turned over by Congress or was purchased by the Indians themselves. I find it difficult to see how this is a record to which the administration can point with pride.

One of the last statements in the press release, incidentally, is that purchases made by the Bureau of Indian Affairs in trust for individual Indians during the period accounted for nearly 20,000 additional acres. The next sentence, which does not appear in the press release, should be that this land was bought with the Indians' own money.

It is a matter of record before the Senate Banking and Currency Committee that the administration, which is on record as favoring additional economic development on Indian reservations, opposes legislation to do just that.

The administration bill, S. 1433, which Mr. Emmons supports, makes no mention of Indians. Since the aid or loans would be confined to industrial areas, no loans could be made to help finance new plants. The only thing that could be given would be advice—and the Lord knows—the Indians get plenty of that now.

In sharp contrast to this bill is S. 964. In grants for public facilities, it provides that the Administrator "may receive proposals from any State, or political subdivision thereof, Indian tribe, or private or public organization."

The loan section includes these words:

> Upon the application of any State, or political subdivision thereof, Indian tribe, or private or public organization or association representing any redevelopment area or part thereof, the Administrator is authorized to make loans to assist in financing the purchase or development of land for public facility usage, and the construction, rehabilitation, alteration, expansion, or improvement of public facilities within any redevelopment area.

As you can see, the bill which the Eisenhower administration supports would do nothing for the development of Indian reservations. The bill which would do the job is opposed by the administration which has, in the words of the campaign kit, "carried forward a wide variety of programs of assistance to our Indian citizens to assume their rightful place in society."

When I appeared last year before the Senate Labor and Public Welfare Committee, I went into some detail on economic conditions on Montana Indian reservations—areas where unemployment ranges from 40 to 90 percent, where the average income per family ranges from $450 to $2,639 per year, and where these conditions have existed for a generation, or longer. And some of our tribes are considered among the most prosperous of the tribes in this country.

Indian dwelling units are poor and crowded. More than half the Indian dwelling units in Montana have 1.5 or more occupants per room, as compared with 8 percent of the total.

The most recent report I have on school attendance of Montana's Indian population shows that of a total of 6,610 individuals, 25 years of age and over, 9 percent had not attended school at all, 41 percent had less than 8 years of school attendance, and less than 1 percent were college graduates. The median years of school completed was less than 8 years. These figures compare with all races in Montana as follows: 1.3 percent had not attended school, 17 percent had less than 8 years of school attendance, and more than 6 percent were college graduates.

This poverty, lack of education, inadequate housing, combined with isolation from community facilities and services in Montana, as in other States, have adversely influenced health conditions among our Indians.

For example, the rate of tuberculosis per 100,000 population among Montana Indians was 606.9 in 1954, the latest year for which I have the figures. This compares with a rate of 559.9 on Indian reservations throughout the United States and 61.5 among non-Indians in the country as a whole.

The rate of pneumonia among Montana Indians in 1954 was 1,543.4 cases per 100,000 population, as compared with 1,225.2 on Indian reservations throughout the country and 11.4 among non-Indians.

The trachoma rate was 433.5 among Montana Indians, 241.1 on Indian reservations throughout the country, and .3 among non-Indians.

If this is the Indian's rightful place in society, then I want none of it. And the Republican speaker who uses this phrase from his speech kit is climbing out onto the limb of a tall tree with a power saw in his hand.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Cotton Marches On

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. JOHNSON of Texas. Mr. President, a challenging and important address on the problems and progress of the American cotton industry is to be delivered on next Monday in Lubbock, Tex., at the 18th annual American Cotton Congress.

This address is the work of a man who thoroughly knows his subject—Mr. Burris C. Jackson of Hillsboro, Tex., chairman of the American Cotton Congress, and chairman of the Statewide Cotton Committee of Texas.

I ask unanimous consent that the text of Mr. Jackson's talk be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COTTON MARCHES ON

(Address to be delivered at Lubbock, Tex., Monday, August 12, 1957, at the Lubbock session of the 18th annual American Cotton Congress by Burris C. Jackson, Hillsboro, Tex., general chairman of the congress and chairman of the Statewide Cotton Committee of Texas)

It is good to be in Lubbock again, hub of one of the great cotton-producing areas of the world.

In the first chapter of the Book of Esther we find the description of a royal feast, mentioning white, green, and blue hangings of the palace wherein a king showed the riches of his glorious kingdom.

Historians say it's highly probable that those canopies were exactly the same as the hangings of blue and white striped cotton which may be seen in India today.

Nearly 5,000 years ago crude Hindu gins were separating cotton fiber from seed; Hindu wheels were spinning lint into yarns; and fragile looms were weaving these yarns into cotton textiles.

The threads of this wonderful fiber of ours thus are woven into the destinies of man over a span of at least 50 centuries, stimulating commerce and industry, opening up new lands, and generating economic, political, and social upheaval.

Kings and principalities, monarchs and commoners come and go, but cotton marches on—a fiber which Marco Polo described as the source of the finest and most beautiful fabrics and one which is acclaimed today as the most versatile in existence.

This march for cotton has not always been a rapid or a steady one. From antiquity until modern times, the business of producing, processing, and manufacturing this fiber has been associated with back-breaking and poorly rewarded labor. From the early days of civilization when weaving was discovered until 1738 when John Kay invented his flying shuttle, textile manufacture was entirely a hand operation. And it was some 50 years later before this and the inventions of Hargreaves, Crompton, Arkwright, and others were combined and powered with Watt's steam engine to manufacture lint which had been separated from the seed by a marvelous new invention—the cotton gin. Here was a span of some 30 or 40 centuries in which relatively little progress was made toward relieving man of tedious work and increasing his output of cotton textiles.

Is it any wonder, as we scan the time-stained pages of history, that we marvel at what has happened within our cotton industry within our lifetime—even within the short period of the last 20 or 25 years.

From some several hundred unstable varieties of cotton, susceptible to the ravages of weather, diseases, and insects, have evolved about a dozen major types—disease resistant, early maturing, more productive, with greater strength and length, and adapted to various conditions of production and harvesting.

In our generation we have seen the tractor come to the cotton field so that nearly 90 percent of the land preparation, planting, and cultivation in cotton production today is accomplished with tractor-powered equipment. Since World War II we have seen the advent of precision planting, flame cultivation, and chemicals for control of diseases, weeds, insects, and defoliation. Anhydrous ammonia and other improvements in fertilizers and their application, wide adaptation of irrigation and other practices are enabling us to make more cotton on less land and with greater profits.

This same period has brought a truly modern miracle—the mechanical picker—which can harvest as much cotton in a day as from 40 to 50 men handpicking. It has brought refinements in the stripper. Now about 27 percent of the crop is harvested by machines.

Back in the thirties we thought we were doing pretty well if we equalled the average yield which was about a half bale per acre. Last year the beltwide average was more than 400 pounds, and the average for the past 5 years has been better than 350 pounds. Machines and more efficient practices have enabled us to reduce the labor requirements for producing a bale of cotton by more than half.

The combined improvement in fiber length and strength, compared to that of the late thirties, is up at least 15 percent and, even with the rough harvesting practices of today, our gins can turn out a high-grade sample. With modern testing methods, it is possible to better evaluate the cotton fiber in order to help cut mill costs and control product quality. Manufacturing efficiency at the textile mill has been greatly increased with new machines and techniques, while new fabric constructions and finishes have boosted cotton to the top position in high fashion.

These fabrics are wrinkle resistant. They're wash-and-wear—made possible through chemical finishing which now is being applied to more than a billion yards of cotton textiles annually. Cotton today is a favorite for year-round, round-the-clock wear. It's made up in dark tweeds, velveteens, flannels, suitings, print cloths, and in an endless variety of textiles that glamorize and extend its uses more than ever before.

Yes, cotton has been marching ahead in the technology of production, processing, and manufacturing. And this progress is truly remarkable and inspiring. It could be a cause for elation to us all were it not for one indisputable and shattering fact—we're being outdistanced by our competition at an alarming rate. While cotton has been marching ahead, its competition has been jet propelled.

This is a fact that none of us can deny. Last year cotton's share of the 6½-billion-pound United States fiber market was 67 percent. In 1950 the slice was about 68½ percent. In 1940 cotton held more than 80 percent, and in 1920 it held nearly 90 percent of the fiber market. Synthetics took over the markets cotton lost. Synthetics accounted for 26 percent of the total fiber market last year—up from only 10 percent in 1940. With the exception of war years, per capita consumption of cotton in the United States hasn't increased significantly in 35 years. With population and living standards rising in this country and all over the world, our percentage of the market is declining.

It is disheartening. Here we are with the best fiber in the world, equipped to produce, process, and manufacture it more efficiently than ever before, yet we find ourselves losing markets to our competition and crying out for relief.

All of us are desperately seeking some solution. We want to find a way to move cotton into the channels of trade instead of into Government warehouses, and to keep it moving. We want permanently expanding markets geared to the pattern of efficiency which we have so fast been achieving. We want the kind of market that will keep cotton competitive at home and abroad and provide a decent livelihood for those who grow, process, market, manufacture, and sell it and its products. We want the kind of market that will encourage investment of capital, expansion and growth of facilities, and one in which we all will have a faith in its future.

I think that each and every one of us here recognizes that achieving this kind of market for cotton isn't going to be easy—that it calls for statesmanship, vision, sacrifice, and hard work. It calls for realistic recognition that competition is eating at the heart of our industry and that unless we face this challenge headon and fight with all the weapons at our command we could lose this battle.

It calls for recognition of the fact that cotton has been priced out of some of its most important markets at home and overseas and that, unless this price disadvantage is overcome in a sound, continuing, and convincing manner that will establish confidence with our customers, they will turn to other sources for their fiber.

Achieving this kind of market, furthermore, demands our facing up to the fact that our competitors are outreaching us. They are forging ahead in techniques which have enabled them to lower their costs so as to underprice us and in improving their products to overcome the traditional quality advantages which cotton so long has enjoyed.

Realizing this kind of market, finally, means acknowledging we are being outpromoted—that our competitors have capitalized, far out of proportion, on the gains they are making in developing new fibers, fabrics, and products to tempt the desires of consumers at home and abroad.

Certainly the idea that cotton is going to have to be offered to its customers at a competitive price and quality and effectively promoted isn't a new one. It has been reiterated, in fact, at each meeting of this Congress. However, when we look at the

inroads of our competitors, and assess our own situation where our acreage is sharply curtailed and our output restricted to the point where we are unable to capitalize fully on our efficiency, I think these needs stand out more starkly than ever before.

When we view the rich prize that awaits us—the vast markets in this country and all over the world as population increases and living standards rise—we are inspired to rededicate ourselves in this effort to expand consumption of cotton and its products. There is no better place for such a rededication than here in the high plains of Texas.

If this Congress imbues each of us with a new determination to make cotton truly competitive in price, in quality, and in promotion, it will have achieved its purpose. Cotton will march on.

Five Problems Facing Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. WILEY. Mr. President, it was my privilege to discuss over a Wisconsin radio station the subject of five problems facing Wisconsin. I ask unanimous consent that the text of my remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FIVE PROBLEMS FACING WISCONSIN

I would like to mention to you some of the problems facing Wisconsin. I will mention these problems, because it will be most helpful to me to get your reactions—your suggestions on how to meet these problems.

Let me list now the questions. As I mention them, you might turn over the answers in your mind. Here they are—five of our problems:

1. First, how best can Wisconsin keep step in the competitive race for new industries in this atomic age?

In other words, how can we make sure that our State gets its fair share of new factories, new business, new contracts, so as to increase the income of our 1½ million workers—and our 3¼ million population, as a whole?

2. Second, here is a related question: How can we increase the tourist income for our State?

I mean the $400 million which Wisconsin collects each year out of the tourist industry.

Remember, almost all the States in the Union are competing with us for the tourist dollar. What can we do, therefore, to strengthen our hand in that competition to attract more vacationers to wonderful Wisconsin?

3. Now, here's a third question. Again, it is a matter of competition.

What should we do, so as to make certain that Wisconsin gets its fair share of business out of the Great Lakes-St. Lawrence seaway which opens in 1959? What should we do to attract the maximum amount of passenger and freight traffic through our own Wisconsin port cities?

Remember, ports in other States all along the Great Lakes are modernizing, in order to attract seaway business.

4. Here is a fourth question: It is the water problem in our State. Specifically, what further steps can we take to insure the availability and the cleanliness of the waters of Wisconsin?

This gets at the heart of the problem of pollution. As you know, we have made great progress in the fight against stream pollution. But I know that my listeners will agree that still more should be done. And not only do we need cleaner water, but we need more water for the use of new homes and new industries. So, what do you think, my friends, should be done so as to assure enough well water, as well as enough stream and lake and river water—clean for recreation—in our State?

5. Here is a fifth problem: What should be done to improve the income position of Wisconsin's farmers?

I needn't remind you that farm income in our State is unfortunately down. When the farmer can't buy goods, the businessman in the village and the town and the city soon feels the impact of that lag in the farmer's purchasing power. So, what do you think should be done to strengthen the economic position of Wisconsin's farmers.

These are some of the basic questions facing our State. There are no simple answers to any one of these five questions.

Naturally, it is my job in Washington to work on all of these problems. I'd like, however, to get the benefit of your reactions to them. Tell me what you think Wisconsin can do in the competition for new industry, for seaway traffic, for the tourist dollar, in the drive for more water and cleaner water, in the effort to improve farm income. Your own suggestions will be most welcome.

This, after all, is your State and mine. It is your job and mine to make sure that it is prosperous and healthy and sound.

Pampering Accorded Labor Unions

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial column written by a columnist for whom I have great admiration, Mr. George Todt, which appeared in the San Fernando Valley Times, entitled "Pampering Accorded Labor Unions."

There being no objection, the column was ordered to be printed in the RECORD, as follows:

PAMPERING ACCORDED LABOR UNIONS

(By George Todt)

"Bad laws are the worst sort of tyranny" (Burke).

"Immunities, relieving particular persons or special classes or groups from the duties and liabilities appointed by law for their fellow men, have been regarded from of old as odious." Yet, organized labor enjoys special privileges today which the king and government and landowners and charity and husband and father had years ago, but lost.

This is the theme of the eminent Roscoe Pound, author, former dean and professor emeritus of the Harvard University Law School, who has just written a most informative booklet entitled "The Legal Immunities of Labor Unions." It is worth looking at for those thoughtful persons who wish to know the background of Dean Pound's interesting subject. Copies of this outstanding work may be obtained through the American Enterprise Association, Inc., 1012 14th Street NW., Washington 5, D. C.

In part I, Dean Pound shows in detail how legal immunities once granted to sovereigns—"the royal prerogative of dishonesty"—government officials, diplomats, clergymen, persons of rank, landowners, hospitals, husbands and parents have disappeared through the years.

In part II, however, the author indicates that a new species of immunities has sprung up: "The substantially general privileges and immunities of labor unions and their members and officials to commit wrongs to person and property, to interfere with the use of highways, to break contracts, to deprive individuals of the means of earning a livelihood, to control the activities of the individual workers and their local organizations by national organizations centrally and arbitrarily administered beyond the reach of State laws, and to misuse trust funds—things which no one else can do with impunity."

Seven succeeding sections—covering torts, contracts, restraint of trade, duties of public service, the right to work, racketeering, centralized power, and irresponsibility—document this thesis.

For example, favoring the application of anti-trust laws to labor unions, Dean Pound quotes with approval the late Justice Jackson's dissent in the case of Hunt vs. Crumboch: "This Court now sustains the claim of a union to the right to deny participation in the economic world to an employer simply because the union dislikes him. This court permits to employes the same arbitrary dominance over the economic sphere which they control that labor so long, so bittery and so rightly asserted should belong to no man."

Hunt vs. Crumboch is the case which established the complete immunity of unions to antitrust laws.

Summarizing the immunities of labor unions in part III, the author states that they rest on four established features of American labor law as it has developed through legislation within the last generation:

"(1) Substantial elimination, as against labor organization, of what in practical effect is the insured method of enforcing the law applicable to everyone else.

"(2) Refusal of labor organizations to be treated as legally responsible organizations by becoming incorporated and so legally tangible entities.

"(3) Not distinguishing unlawful actions by labor organizations, their leaders and their members, done outside of the employer-employee relation, from practices in that relation.

"(4) Committing all matters affecting labor organizations to an administrative agency instead of confining its jurisdiction to matters involved in the employer-employee relation."

Dean Pound notes that the usual regulatory agencies, such as the Federal Trade Commission, the Interstate Commerce Commission and the Securities and Exchange Commission, were created and designed to protect the public from possible abuses by the groups involved. By contrast, the National Labor Relations Board has acquired a function of upholding the immunities of labor organizations and labor leaders at the expense of the public.

Dean Pound further points out that at the end of the formative period of American law, which had developed primarily in line with the needs of rural agricultural society, "the grievances of the workingman had become numerous and very real." The reaction to this set of conditions was inevitable. "It was not unnatural," states Dr. Pound, that as the law broke away from this, in view of the political power acquired by labor organizations, overzealous securing of new

recognized and newly delimited interests should develop immunities quite out of line with modern law."

He concludes, however, by proclaiming: "A general policy against concentration of unchecked power has always been regarded as at the foundation of our policy." He leaves no doubt that this new species of immunities—those which surround labor unions and labor leaders—should be eliminated.

Actually, this is something we can all afford to ponder upon, and Dean Pound's booklet is recommended reading for a starter. Doesn't it really boil down to whether we mean it when we say "all men are created equal"? How can we have partiality, favoritism and immunities under the law for one class of citizens in America—those in labor unions—and not have the same for the rest of us Joe Doakeses in our Nation? You tell me. I'm just asking.

Scouting Is Antidote for Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. KEFAUVER. Mr. President, I know that about 2 weeks ago, when the Boy Scouts were here, en route to the jubilee at Valley Forge, all Members of the Senate were impressed with their orderly conduct and the fine manhood displayed by these young men. I saw an editorial from the Florida Times-Union entitled "Scouting Is Antidote for Juvenile Delinquency," which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SCOUTING IS ANTIDOTE FOR JUVENILE DELINQUENCY

The crusaders against juvenile delinquency could do no better than setting out to increase the scope of the Boy Scouts movement. How many youthful offenders would you expect to find among the 50,000 Scouts attending the National Boy Scout Jamboree now going on at Valley Forge, Pa.? These youngsters represent the cream of the crop of American youth. What is scouting made of that prompts one to make a sweeping statement that in it lies a solution to the problem of crime among young people?

The organization does an outstanding job in character building by mixing it with a generous proportion of discipline, physical exercise, and mental challenge. These are ingredients that appeal to most youngsters, and oftentimes those who go astray do so because they have not been exposed to such a wise program.

Take the regime of discipline. Most offenders are ones who have never learned the value of respect for authority or for anything. Obedience is a theme that runs constantly through a Scout's training; weekly he repeats the 12 laws he will obey. God and country are his two principal objects of respect. This establishes a standard of conduct that is not easily shaken off.

Scouts are the original do-it-yourselfers in our society, for "learning by doing" is a byword of the organization. This gives a boy self-confidence and implies the active life. The great outdoors is the playing field for Scouters, and it is here than many a boy becomes first acquainted with the wonders of nature and learns how to take care of himself on his own. The tests for merit badges and Scout ranks provide a mental spur and a test of one's native ability.

Instead of appointing endless commissions to investigate the needs of our youth, why not a national campaign to enlist more youngsters in the ranks of scouting?

Budget Reform Squarely Up to the House

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Budget Reform Squarely Up to the House," which was published in the Salt Lake Tribune of Sunday, July 21, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUDGET REFORM SQUARELY UP TO THE HOUSE

The hour of decision is approaching for H. R. 8002.

This is the bill which would set up annual accrued expenditures budgeting for the Federal Government. It has cleared the House Rules Committee and may come to the House floor for a vote within a few days.

Under present Federal budgeting practices, funds appropriated in 1 year may be carried over itno the next, or even longer. As of July 1, Comptroller General Campbell estimates carryover funds totaled more than $70 billion, almost as much as the highly controversial $71.8 billion budget.

Under annual accrued expenditures budgeting, Congress would review all spending projects annually and stockpiling of unexpended funds would be eliminated.

Here are two examples, compiled by the Citizens Committee for the Hoover report, of the kind of thing H. R. 8002 would prevent:

1. For fiscal 1953 Congress appropriated $12½ billion for guns, tanks, and other military hardware in Korea. The war ended within a month of the new budget year. But in May 1957 the Army was still spending the remainder of the $12½ billion without any further congressional review.

2. In 1951 the Navy contracted to buy 528 fighter planes. By 1955 only 52 planes had been delivered, the design was declared unsatisfactory and the contract was canceled. By then, however, $173 million had been spent—to little effect. Much of this money might have been saved by annual review.

The case for H. R. 8002 is a strong one. It is one of the key economy recommendations of the Hoover Commission. It has been endorsed by the President, the Secretary of the Treasury, the Comptroller General, the Budget Director, the Amreican Institute of Accountants and the Controllers Institute.

Yet it is being strongly opposed by certain advocates of the status quo in Federal agencies.

There are, of course, always those who resist change.

Obviously it would be to the advantage of Federal agencies with large carryover funds to continue the practice.

Once Congress has approved an appropriation, then the expenditure of the appropriation passes out of Congress' control.

Congress ordinarily does not check back to determine if circumstances have changed or whether the expenditure is being carried out properly or efficiently. Moreover, even when Congress does become curious, it usually amounts to locking the barn door after the horse has been stolen.

Adoption of annual accrued expenditures budgeting, with its provision for systematic, periodic review, would change this situation—and for the better.

Macneil and Metz, in their authoritative book, The Hoover Report: 1953–55, state the argument for H. R. 8002 this way: "One of the fundamental requirements of a constitutional republic is that Congress have control over money. Such control is vital because Congress is thereby able to exercise a veto over what the executive branch does. This control has been impaired for years, and improvements in appropriations are necessary to restore it."

We consider H. R. 8002 sound legislation.

We urge the House to give its approval, as the Senate has already done.

If economy in government is ever to be achieved, Congress must first regain the power of the purse. That is exactly what H. R. 8002 will do.

Who Said Airborne Isn't Hazardous?

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. WAINWRIGHT. Mr. Speaker, during World War II I served on the First Army General Staff. That, to me, constituted the best team I'd ever seen. However, last year after serving with the 82d Airborne for a 3-week period, I changed my mind. The spirit of Airborne cannot be put in words.

The Airborne has long tried to obtain a much deserved increase in hazard-incentive pay. The Airborne Quarterly for July-August carriers the following editorial. All who are interested in their country's welfare should read this story. These men are the first and last line of defense. They are the best; they should be considered the best; they deserve the best:

WHO SAID AIRBORNE ISN'T HAZARDOUS?

The Cordiner committee report is a dramatic confession that the armed services of our great Nation are hard put to develop and maintain a balanced force capable of exploiting the full capabilities of available weapons—or of the more complex weapons of the future.

To correct this deplorable situation, the committee proposed that men already in service should be given incentives to make them want to stay in service long enough to learn how to operate our unwieldy military machines in the modern era "of radical, accelerating technological change."

The committee have proposed, among other incentives, a new basic pay structure which would eliminate inversions. And for hazardous duty, they have proposed a step-in-grade system of compensation.

So far so good. Having enunciated a sound principle for determining monetary incentives, the committee about-faced on hazard-incentive pay for parachutists with this conclusion: "* * * action to revise the fixed-rate dollar amounts was considered

premature." Why this discrimination against parachutists?

The committee's recommended pay for nonairborne hazardous duty rises in steps from $50 for E–1 to $105 for E–7; and from $100 for O–1 to $245 for O–6.

Fixed-rate pay for paratroopers is an antiquated emergency measure adopted at the beginning of World War II to induce men to volunteers for what was then considered the most hazardous of military duties. During hostilities, patriotism outweighed the inadequacy of the monetary incentive. When the fighting ended, $50 a month for enlisted men and $100 for officers no longer proved adequate incentive to noncommissioned officers, or to commissioned officers in the higher grades.

For 10 years, the airborne has been plagued constantly with inability to keep enough trained personnel beyond initial obligated service to meet minimum requirements for top skills at a reasonable cost. We have trained many tens of thousands of short-term draftees as parachutists and lost them as soon as their obligated tours of service were performed. Had the airborne been attractive to career soldiers, turnover in personnel would have been one-fourth and efficiency would have zoomed .

Most of the time during the past 10 years, airborne regiments have been unable to field a full-strength unit with every MOS slot filled with qualified troopers. In fact, many regiments have been hard put at times to field even a single composite battalion at T/O strength with every trooper fully qualified to perform his rated duties.

Why did the Cordiner committee discriminate thusly against the airborne in providing better incentives? One reason, we think, is that its members were over-sold on the truly amazing peacetime safety record of the airborne in millions of jumps since 1945. Because of this record, they undoubtedly considered parachute duty as less hazardous than duty as a crew man in an aircraft.

Nothing is farther from the truth. The fact is that peacetime safety in the airborne is achieved by enforcing rules that could not and would not be observed in actual combat.

The airborne of the future is a pentomic airborne—its hazards in combat will be infinitely greater than in past operations. For example, in recent field exercises, despite extreme dispersal of units, a single simulated enemy atomic blast was assessed by umpires as inflicting 50 percent casualties on a battle group.

Of course, conventional ground troops might suffer comparable atomic casualties, but these can be evacuated immediately to a well-organized rear area for treatment. Parachutists in combat have no rear area. To survive they must be victorious—or be annihilated.

Every level-headed military thinker today realizes that this Nation must—in the face of nuclear stalemate—rely more and more on airborne for the immediate action that alone can prevent small wars from mushrooming into global conflict.

There will be no time to prepare after fighting starts. We cannot count on the Navy to convoy troops overseas within hours after the need arises. Germany started World War II in 1939 with fifty-odd submarines and was winning the battle of the Atlantic until the United States produced a phenomenal 19 million deadweight tons of shipping in 1943.

Russia could start world war III with 10 times that number of submarines.

In World War II, we had from September of 1939 until December of 1941—27 months—to get ourselves organized to fight overseas. To prevent another global war we must be prepared to deliver fighting men in 27 hours—not 27 months.

If we cannot do that, Russia might field 300 divisions plus those of her satellites and seize all of Europe, the Near East, and North Africa. She has the arms, equipment, and supplies underground to do just that—and do it in less than 27 months.

Time and distance favor Russia in all her nefarious schemes to liquidate the free world, unless we implement our finest strategical and tactical weapon to discount time and distance.

That weapon is the airborne. Strategically, a potent airborne army with adequate airlift might deter Russia from attacking our NATO and SEATO friends. Tactically, should she do so, such an army could be at the right spot, at the right time, prepared to nip the attack in the bud before the Russian manpower steamroller gets into full speed.

Such an airborne army must be 100-percent volunteers—an army of men willing and ready to risk every hazard of modern war with pride in their ability to win all the time.

To get such an army, the airborne must be attractive in peacetime. In the net, monetary incentives for airborne duty must appeal to master sergeants as well as privates—to colonels as well as second lieutenants.

If step-in-grade hazard-incentive pay is sound business for Air Force crews, it is just as valid for airborne paratroopers.

Let's go modern with the airborne, too.

Rules for Stamping Out Delinquency

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. KEFAUVER. Mr. President, I was very much impressed by an interview with Billy Graham in which he gave six splendid rules for stamping out juvenile delinquency. They are contained in a United Press news story as printed in the Paris, Tenn., Post-Intelligencer of August 5, 1957, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILLY GRAHAM GIVES RULES FOR STAMPING OUT DELINQUENCY

NEW YORK, August 5.—Evangelist Billy Graham, convinced that juvenile delinquency can be stamped out, revealed Sunday night the great percentage who have come forward to make decisions at his crusades are between the ages of 18 and 21.

Speaking before 19,200 persons in Madison Square Garden, Graham offered parents six suggestions on how to curb juvenile delinquency:

1. "Take time with your children."
2. "Set your children a good example."
3. "Give your children ideals for living."
4. "Have a lot of activities planned for your children."
5. "Discipline your children."
6. "Teach them about God."

Graham, whose crusade to save New York has been extended through August 31, said he would devote the week of August 11 to teen-agers.

"If the Communist can fill a stadium with young folks, I don't see why we can't fill the garden for a week with young people," he said.

Blaming parents, churches, movies, television, and lewd literature for the unprecedented outbreak of teen-age violence in New York at the moment, the North Carolina revivalist said, "it seems that some of our teen-agers have gone wild."

He added that many teen-agers in America are troubled by the sex urge.

"Many movies have featured sex, sin, and alcohol," he declared. "Millions of teen-agers see hundreds of acts of violence on their TV screens weekly. They can buy lurid, lewd sex literature on almost any newsstand, and their minds have become saturated with the seamy side of life."

Before the service, Graham spoke to approximately 1,500 persons who were unable to get seats in the packed Garden. His wife, Ruth, spoke briefly and then the evangelist explained he met her about 14 or 15 or 16 years ago on the campus.

Graham said he was bitten by the "love bug" then but that he loves his wife a million times more now.

Attendance brought the crusade total to 1,395,300. A total of 485 new decisions for Christ raised the number for the crusade to 42,367.

Heartbeat at American Fork

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. BENNETT. Mr. President, it is always heartwarming to see a group of citizens working voluntarily to provide assistance to those who are unable to help themselves.

One such example, which I believe will interest the Members of this body, is at the Utah State Training School at American Fork, Utah. Here, for the benefit of mentally retarded youngsters, workers at the Geneva Steel plant, with the cooperation of other members of the community, are erecting a truly remarkable playground—the only one of its kind in the world.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by Moana B. Bennett, from the June issue of Steelways magazine, concerning this unique project.

There being no objection, the article was ordered to be printed in the RECORD, as follows.:

HEARTBEAT AT AMERICAN FORK

(By Moana B. Bennett)

(A trained reporter from Bountiful, Utah, tells how grown men found a new way to help eternal children.)

A broad grin spread over Joey's face as he heard the truck and turned to see his friends climbing out; tools in hand, ready to work on his park.

"Hi," he called as he ran toward them.

"What are you doing with that broom, Joey?" one man asked.

"Oh, I been sweeping off some cement so it'd be real clean for you to work on," the boy answered with pride.

The man smiled a little and the boy proceeded eagerly, "Can I help today, huh?" It was a child's question asked by a boy whose body had long since passed the age of six.

The two—the man and the boy—looked out on the flat 6½ acres at the entrance to

the Utah State Training School at American Fork, 25 miles from Salt Lake City. Behind them rose the sharp rugged profile of Mount Timpanogos, 12,000 feet tall. To the west they could see the stacks of the steel mill.

On that acreage 30 men from the mill are donating time and talent to the construction of the only playground and park of its kind in the world. The facilities are for those who can never grow up—mentally.

So far the State has allocated $20,000 to buy materials. Another two or three thousand dollars have been contributed largely by parents and civic groups. Last Christmas the workers in various steel plant departments collected over $800 for the cause. It was their Christmas card money.

The park first took shape in the mind of a retired smalltown physician and surgeon who became superintendent of the school a little more than 5 years ago, Dr. Vernon F. Houston. A small, energetic person with balding head and ruddy complexion, Dr. Houston believed that "his kids" had a "right to happiness" even though they may be an economic loss to society."

One day he happened upon a picture post card of the Oakland, Calif., community park dotted with nursery book characters. He showed this to a friend from the steel plant who visits the school at least once a week because his little girl is there. A blood clot had formed on her brain when she was only 4 months old.

The steel man said he would like to help build a park, something like that, and he knew others would, too.

The doctor obtained permission from the State. A committee was selected from among the volunteers to go to Oakland. A landscape artist from nearby Provo agreed to lay out the park. A well-known Utah artist and floatmaker was engaged to fashion the heads and figures. The steel company let the men borrow plant equipment they needed.

About a year ago the ground for the future playground was leveled off. Last July construction began. Steel men worked voluntarily full time when they could and on Saturdays and off hours. Already they have totaled more than 20,000 hours, work that at present labor-market rates would have cost over $50,000. All of the important underground construction is completed. About 8,000 feet of various-sized steel pipe, 4,000 feet of electric underground conduit, and 15,000 feet of underground electric cable have been installed and 150 yards of concrete poured. Above the ground about 12,000 feet of pipe and 12,000 feet of reinforcing rod have been employed.

The steelmen have adopted the playground and park as something almost their own. Pride and a desire to give are manifest on every hand.

In the words of the bricklayer working on the little red schoolhouse of nursery fame: "This is the hardest work I've ever had to do, because here I have to lay bricks crooked."

In the words of a young open-hearth worker: "Here's $3 for the playground. I wanted to give it before Christmas but I just couldn't make it. And I'd like to help build this, too."

The park will be ready for full-scale use this summer. A real train on 2,500 feet of track will transport the youngsters from one play point to another.

Dr. Houston and his construction crew of steelmakers cherish a hope that others will come to see the park, let their children use it and thus grasp more fully the problems of the mentally retarded, only part of whom carry the burden of faulty heredity.

As the man climbed back in the truck, work over for the day, Joey was still there, the same broad grin on his face.

"Look," he said, pointing to the truck. "I cleaned it for you."

It was all the thanks anybody could want.

The Retirement of George Humphrey

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. McGREGOR. Mr. Speaker, in the rush of important legislation we sometimes do not give proper recognition to those who have played and are playing a very important part in keeping the ship of state on an even keel. Today I, and I am sure I speak for a large percentage of the membership of this House, want to pay my respects to a great American, a great citizen of the State of Ohio. One who has recently left Government service with a splendid record of accomplishments.

I refer, Mr. Speaker, to the Honorable George M. Humphrey, who has recently retired as Secretary of the Treasury. Secretary Humphrey sacrificed, along with his lovely and gracious wife, a lot, both financially and physically, when he performed his duties as Secretary of the Treasury. Although Secretary Humphrey wanted to resign many months ago his loyalty as an American citizen, his loyalty to the principles that he believed in, caused him to continue on until such time as it was possible for him to retire.

Mr. Speaker, Ohio is very proud of Secretary and Mrs. Humphrey and it is certainly our wish and our prayer that they will have many years to enjoy possibly a little relaxation to which they are so justly entitled.

Mr. Speaker, I would like to include in these remarks several articles which have appeared in some of our Ohio newspapers. These newspapers represent both political parties and they clearly demonstrate that Ohioans are very proud of Secretary and Mrs. George Humphrey:

[From the Mansfield (Ohio) News]

HUMPHREY MAKES FINE RECORD IN WASHINGTON

(By Raymond Moley)

When the rumored retirement of Secretary of the Treasury George Humphrey becomes official, a fine chapter will have been written in the history of public service. A lawyer by training and an industrial manager by choice, Humphrey brought extraordinary qualifications to the Treasury. Before that, he was a man who had not shirked his civic and political responsibilities in Ohio. He made no secret of his active support of political figures like the late Senator Taft, nor of his many contributions in time and energy to the service of his political party.

As a public official in Washington he handled his public relations so well that in general he has had the best "press" of any member of the Eisenhower Cabinet. Moreover, his great influence with his colleagues and with the President has been used in critical situations in the interest of moderation and stability.

When, in 1954, there was a minor lag in business, some members of the official family, especially Harold Stassen, were pressing for a crash program of spending. It was Humphrey, with Economic Adviser Arthur Burns, who held the line against hysterical action, and the revival of business proved they were right.

The sacrifice that a businessman must make when he takes public office is not, as some would claim, a monetary loss. It is the renunciation of his right to privacy and of the freedom that goes with a job in management. In public office a man must be patient with bores and nuisances, and, above all, restrain himself in expressing opinions on public questions. What is most difficult, he must learn to ignore vicious, partisan attacks from the opposition in Congress.

Humphrey has wisely disdained to comment upon a nasty attack in the present session by Senators KEFAUVER and MORSE. They conducted an oratorical lynching bee over the fact that the Secretary of the Treasury was the owner of stock in the company of which he had been head. There was nothing specific proved or even alleged about the use of influence. It was just a general viewing with alarm.

MORSE ran through his tirade, progressing helter-skelter from Humphrey to foreign policy, to the Middle East, and the oil companies. It was a bewildering profusion of implied villainy, which he embellished by saying that the problem is "one that smells to high heaven."

The Morse nose was never offended by businessmen who in his first race for the Senate supported him generously. Nor has MORSE smelled anything wrong in the support he has more recently had from Beck and his teamsters union in Oregon. He has, in fact, recently announced that he is proud of that support.

What businessmen must realize, if their reluctance to enter public life is to be overcome, is that these demagogs are attacking them not because they really believe them to be untrustworthy or that the public approves such attacks.

Demagogs make these attacks because they want businessmen to stay out of public life. They want businessmen to believe they make poor politicians and are unsuited to public office. The tragedy is that the demagogs have succeeded to a degree in their effort because many businessmen believe that nonsense.

The consequent loss to political life and public service is very great, because with the size and cost of government mounting, and with its problems more and more closely entwined with economic affairs, there is dire need for more business in politics and government." If ever business experience were needed in public affairs, it is now.

GEORGE HUMPHREY RESIGNS AS SECRETARY OF THE TREASURY

Ohioan George M. Humphrey will leave his cabinet office of Secretary of the Treasury "no later than the close of the current congressional session." President Eisenhower has accepted "with profound regret" the resignation of the Cleveland man.

Humphrey's letter to the President said his resignation had become an absolute necessity because of the illness and retirement of one of the Secretary's former partners. The President prevailed on Humphrey to allow him, the President, to designate the date when the resignation would become effective because "there are a number of critical problems to be considered during this session."

In Eisenhower's letter of acceptance he wrote:

"It would be idle to attempt expression of my feelings of gratitude for the extraordinary talents that, more than 4 years ago, you brought to the Treasury Department and for the loyal and tireless way in which you have, ever since, applied them to problems of the greatest import."

Ohio Senator JOHN W. BRICKER, in commenting on Humphrey's resignation, said:

"He has been one of the truly great men of this administration. I am sorry to see him leave public service. The public had complete confidence in him, and his departure will be a great loss."

Humphrey became Secretary of the Treasury in January 1953. He termed his years in government the most "wonderful experience in my life."

Replacing him will be Robert B. Anderson who formerly held two high posts in the Defense Department.

NEWSPAPERS APPLAUD HUMPHREY'S PUBLIC SERVICE

Cleveland Press: "Integrity and wisdom are perhaps the words which best sum up Clevelander George Humphrey's distinguished years of service as Secretary of the Treasury.

"Humphrey generated confidence—in the administration, in the Congress, and among the great masses of the American people.

"He dealt in a fantastic world of figures and finance which most people can't comprehend.

"And yet somehow folks just assumed Humphrey knew what he was doing, and was doing the right things.

"Among those who trusted him completely, and leaned heavily on him for advice and counsel, was the President of the United States."

Toledo Times: "It has been a great many years since we have read so many expressions of regret as over Mr. Humphrey's resignation. Indeed, we can recall no such outpouring * * * over the departure of a public official.

"Throughout his tenure of the office, Mr. Humphrey has been the symbol of everything the Nation needs in the Treasury: a sound, conservative, courageous, honest man who stood for sanity in Government finances because he knows what it means to the Nation's economy, the welfare of the public."

Cleveland News: "President Eisenhower and leaders of Congress praise Mr. Humphrey's services in the most glowing terms.

"The Secretary deserves such tribute * * *.

"Mr. Humphrey leaves the Cabinet firm in the knowledge that he has contributed much to the financial welfare and integrity of this country. Our whole national economy has benefited immeasurably from his conservative-commonsense fiscal policies."

Columbus Dispatch: "In the 4 years of his tenure, Mr. Humphrey served both the administration and the country in an outstanding way, one which by all odds should leave its impress upon our history at a most critical time in its development.

"He has more than earned the many high assessments being made of his services, and as he retires to private life and back to participation in business affairs he can enjoy the deep satisfaction which comes to a man when he knows he has done a difficult job well."

Macmillan Asks War on Inflation

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, August 9, 1957

Mr. BENNETT. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a news article entitled "Macmillan Asks War on Inflation," which was published in the New York Times of Sunday, July 21, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MACMILLAN ASKS WAR ON INFLATION—URGES BRITONS TO PRODUCE AND SAVE MORE—CONCERN AT RISING PRICES MOUNTS

LONDON, July 20.—Prime Minister Harold Macmillan appealed tonight to his fellow Britons to aid in the fight against inflation by increasing production and by saving.

In a speech to a Conservative Party meeting at Bedford, the Prime Minister reflected the growing concern of the Government over the effects of rising prices in Britain. He said:

"Our constant concern today is: Can prices be steadied while at the same time we maintain full employment in an expanding economy? Can we control inflation? This is the problem of our time."

Mr. Macmillan warned that inflation could price Britain out of the world market and bring back "the old nightmare of unemployment." The Government, he said, would continue to employ credit restrictions and other adjustments of monetary policy, and would retard or accelerate investment programs as long as necessary to combat rising prices.

The Prime Minister denied that there was a sudden crisis in Britain, saying: "This is a constant problem, a long-term problem." He asserted that the United States and Canada also were troubled by inflation as a result of their economic expansion.

While urging Britons to "go on saving" as a means of curbing inflation, Mr. Macmillan declared that "in the long run there is only one answer to the $64,000 question—to increase production."

The Prime Minister cautioned that the Government could not fight inflation alone. "This is a combined operation," he said. "We are all in it: Government, industry, the general public. What we need is restraint and commonsense—restraint in the demands we make and commonsense on how we spend our income."

Mr. Macmillan described Britain's general economic prospects as good. Balance of payments prospects, he said, are favorable for the year. In the first half of 1957, he reported, Britain's gold and dollar reserves rose by £88,000,000 ($246,400,000).

Mr. Macmillan said Britain's exports were up 6 percent in the first 6 months of this year and invisible earnings from shipping and oil were doing well. These, and increased earnings from main industries, such as steel, coal, and automobiles, have made it possible to leave untouched a loan from the United States Export-Import Bank or standby credit negotiated with the International Monetary Fund, he added.

The Prime Minister scoffed at Labor Party policy which, he said, was "nationalization in one form or another still its theme, going back to controls and restrictions."

The Conservatives, he said, stand for "the Government maintaining a general guidance of the economy with the minimum of interference."

Rural Development

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, August 9, 1957

Mr. HOLLAND. Mr. President, the whole House and Senate delegation from Florida are very much pleased to hear that rural development farm programs for two counties in our State, Suwannee and Washington, have been established and will shortly be moving forward actively.

In that connection, I note in the current issue of Time magazine, of August 12, 1957, an article entitled "Rural Development," subtitled "One Farm Program That Works."

I ask unanimous consent that the article from Time magazine be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RURAL DEVELOPMENT—ONE FARM PROGRAM THAT WORKS

In campaigning for billions in price supports, Washington politicos often give the impression that the subsidies benefit all of America's 5,400,000 farm families. Actually, only a minority gets them, since only five crops (wheat, corn, cotton, rice, and tobacco) are supported, and they are produced by the Nation's most prosperous farmers. Left out almost completely are some 2,500,000 marginal farmers. These underfed and ill-housed families are a farm problem that few Congressmen talk about. Last week Congress grudgingly voted $2,500,000 for their benefit, a cut of $1,500,000 below the amount President Eisenhower urgently requested this year for rural development, the Nation's newest farm program.

Rural development is one of the few farm programs that really work. Yet it gets a cold reception from politicians, because it is prompted by an unpleasant fact that they prefer to ignore. The fact: too many farmers are trying to scratch out a living on farms that are too small to be profitable. From 1930 to 1954, the average United States farm jumped from 157 to 242 acres. But with the cost of mechanization, even that is not enough to support a single family in many areas. And in hundreds of scrubby farming counties, the cultivated area per farm averages as little as 8½ acres.

To make the first broad-scale assault ever attempted on this problem, the Agriculture, Interior, Commerce, Labor, and Health, Education, and Welfare Departments, at President Eisenhower's orders, selected 54 counties and 3 multicounty areas in the Southeast, Southwest, New England, along the Ohio River Valley, and in the Great Lakes area as laboratories in which to test a new idea. The big idea—to encourage local farm leaders, businessmen, clergymen, and others to take over and work out their own farm-improvement plans, tailored to their own needs, with technical and loan assistance supplied by their State and the Federal Government.

In the test counties, farmers got a choice. If they wanted to keep on farming, they were shown how to farm better, got help in buying more land and equipment. Others were helped in getting jobs in town or industry. Rural development has also persuaded industries to locate plants in distressed rural areas, and has aided farmers in starting their own businesses.

In Price County, Wis., Gordon Johnson, who was a misfit at dairying, last week started work on his first glass-fiber boat in his new company. In Monroe County, Ohio, ministers sparked a countywide poll of the labor force, which help attract a new Olin Mathieson aluminum plant. In Espanola, N. Mex., fruitgrowers were helped to build a plant to grade and pack their apples and peaches. In Choctaw County, Okla., which was losing population in droves, a new cannery, a glove factory, and a feed mill were established.

With the help of rural development, many farmers are learning to be better farmers. In Lewis County, W. Va., rural development last year helped 12 farmers buy 146 western ewes. In one season they made enough from

their lambs and wool to pay back the loan, this year will pocket a sizable profit from their almost vertical hillside pastures.

In Tippah County, Miss., farmers were giving up their homesteads at the rate of nearly 100 a year, forced out of business by the cotton acreage cuts. The county was helped by rural development to launch a brandnew dairy industry. Merchants raffled off 27 prize Jersey cows as breeding stock, put up $25,000 to start a processing plant. The plant opened February 1, paid back the loan in full June 1. A similar shift is going on in Chesterfield County, S. C., hard hit by the cutbacks in tobacco acreage, where rural development is encouraging farmers to use tobacco barns no longer needed for curing tobacco to dry out and store sweet potatoes. For many families, rural development means the amenities of living, whose lack is incomprehensible to many other Americans. In tiny La Cañada de los Alamos, N. Mex., 13 Spanish-speaking families, thanks to rural development, now have a community well, ending generations of carrying water uphill.

Surveying such accomplishments, all brought about in little over a year with a Federal cash outlay of only $2,100,000 (the cost of storing Government price-supported crop surpluses for 2 days), some enthusiasts believe that if rural development were vastly expanded, it would be an answer for the whole farm problem. But most experts point out that the plan's success is due to the fact that it relies on local and State initiative rather than a vast new Federal bureaucracy to dictate to farmers. As Editor F. W. Heath, of the Price County, Wis., weekly Bee put it last week: "At least we are beginning to realize that 'we' are the 'they' we talk about when we want something done."

A Disservice to Negroes

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. SIKES. Mr. Speaker, freedom of the press in this great America of ours is, more than ever before, making it possible for the American people to be the best informed people in the world. Through news articles, and more particularly through outstanding editorials, the American public is given an opportunity to learn the facts that help them formulate opinions according to their individual beliefs. In the State of Florida, the land of sunshine, happy people, and outstanding progress, we are fortunate in having many newspapers that are dedicated to informing the public in the highest traditions of freedom of the press. As an example, I am submitting two editorials as published in the Lakeland Ledger, Lakeland, Fla., on Wednesday, August 7, 1957, with the hope that through recognition of editorials such as these, our newspaper editors will continue to be a voice of democracy.

The editorials follow:

PROTECTING STATE SOVEREIGNTY

Florida is taking a step to protect State sovereignty against Federal encroachmant. A commission created by the legislature for that specific purpose was formally organized this week. Former Gov. Millard F. Caldwell is its chairman, former Gov. Doyle E. Carlton is its vice chairman, and Cody Fowler, Tampa lawyer who is a former president of the American Bar Association, is one of the members.

If it were a commission of lesser men, it might turn out to be only a shotgun commission firing away at everything in general and hitting nothing in particular.

Chairman Caldwell is not a man to dawdle around over such an assignment. He is likely to put a great deal of vigor into it. In due time, therefore, a report getting down to cases may reasonably be expected.

The commission has a two-phases assignment. First, according to the language of the legislative measure, it is supposed to alert the people to the acts of the Federal Governmen which invade the fields of State sovereignty. Second, it is to work toward an amendment to the United States Constitution that would give clear delineation to State rights and underscore the limitations of power vested in the Federal Government.

The Supreme Court ruling calling for integration in public schools is, of course, one of the basic developments that prompted creation of the commission.

Such drawing of the line between Federal and State powers will serve the worthy purpose of keeping before the people one of the soundest features of our American system of government. The men who drew up and adoped the Constitution sought to establish a bulwark against concentration of great power in the Federal Government.

It was their conviction that our Republic could thrive best as a closely united federation of States whose people would be answerable to the Federal Government as well as to State government, but with the States preserving their individual identities and enjoying specific sovereignty.

State sovereignty gives the American people the localized government that is an integral part of American democracy. It is essential that this localized government be preserved and protected. This can be done by means of aggressive and constant articulation such as is expected of the Florida commission now going to work.

A DISSERVICE TO NEGROES

Censoring of Stephen Foster songs is a disservice to Negroes to the extent that the censoring implies quite broadly that there is something disgraceful about being a Negro.

There is nothing disgraceful about having black skin, yellow skin, white skin or any other color of skin. All people were made in the image of God and no individual has had an opportunity to choose a color for his skin. No man should take credit or blame for the color of his skin.

The best Negro citizens have strong racial pride. They know that if Booker T. Washington, George Washington Carver, Mary McLeod Bethune and others of their race have been able to achieve international fame against great odds, they have a chance to succeed in this day of much greater opportunity.

The Stephen Foster songs are primarily sentimental songs that express affection for the oldtime Negroes of plantation days.

True, those songs recall the period of slavery but in doing so they reflect upon white people, not Negroes, enslavement of humans being one of the most vicious violations of which mankind has been guilty.

We seriously doubt that the censoring of Stephen Foster songs was done at the behest of Negroes. We suspect that some starry-eyed do-gooders bogged down in sentimentality or warped by the crusading spirit applied the pressure to get the censoring done.

This portion of the world now called the United States was occupied by people with red skin until they were exploited and killed off by adventurers with white skin who staked out claims in the name of freedom. We are compelled to recognize this if we take an honest look at history.

Further, it was white exploiters who brought the first Negro slaves to the United States.

So, when the Stephen Foster songs take us back to the era of slavery, they do not take us back to a condition that reflects upon Negroes.

The Stephen Foster songs were written out of a warm heart and the white people who have sung them through the decades have sung them with warm hearts.

Address by Mr. Ralph H. Stone, Chief Benefits Director, United States Veterans' Administration, Washington, D. C., at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States, Held at Harrisburg, Pa., July 10 through July 14, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. VAN ZANDT. Mr. Speaker, at the 38th annual encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States held at Harrisburg, Pa., July 10 through July 14, there were several outstanding addresses delivered by prominent officials of the Federal Government in keeping with the theme of the encampment "Defense Means Freedom."

On July 12, 1957, the following address was delivered by Mr. Ralph H. Stone, Chief Benefits Director, United States Veterans' Administration, Washington, D. C.:

TEXT OF REMARKS BY MR. RALPH H. STONE, CHIEF BENEFITS DIRECTOR, UNITED STATES VETERANS' ADMINISTRATION, WASHINGTON, D. C., AT 38TH ANNUAL ENCAMPMENT, DEPARTMENT OF PENNSYLVANIA VETERANS OF FOREIGN WARS, HARRISBURG, PA.

It's a real privilege to join you today for your 38th annual encampment.

A real privilege, because I happen to enjoy the warm and friendly company of my good friends of the Veterans of Foreign Wars.

A real privilege, because you men who know war at firsthand, you men who have fought tyranny on battlefields all over the world, have gained a keener-than-average appreciation of freedom, of the fortitude and understanding it takes to maintain freedom, and to maintain a just and honorable peace in these times of trouble.

I am struck by the deep truth of the theme you have selected for your encampment, "Defense Means Freedom."

Yes, defense does mean freedom. And it also means peace. For the two go hand in hand.

We are living in a world where strength counts. A strong America, and America of adequate defense, an America that is listened to when it raises its voice in the cause of freedom, and in the cause of peace.

Defense means freedom. And there's something else that also means freedom, the American veteran, and his notable contri-

butions to our way of life, contributions that seem to grow with the passing years.

And that's the story I would like to talk about today, the contributions of our veterans to the cause of American freedom.

When I was much younger, there was a Scandinavian playwright who was all the rage, and rightly so, I believe, for he espoused some irrefutable truths. But the plays of Henrik Ibsen aren't read so much any more, and it's a pity.

Well, in one of his plays, he had some wise words to say about freedom, words I want you to hear because I feel they apply to our veterans of today. He said this:

"You should never wear your best trousers when you go out to fight for freedom and truth."

What he meant is that freedom never is handed to you on a silver platter. It must be fought for and defended and nurtured and encouraged, with all our strength and all our might and all our hearts.

As Ibsen would put it, you can't wear your Sunday trousers when it comes to freedom, for they're for sitting back and relaxing. You must wear your work trousers, the kind of a lot of you veterans put on when you paint the woodwork of your house or weed the vegetables growing in the backyard, or approach the Congress on needed veteran legislation.

You must work for freedom, and you must work hard. Now, in just which ways have our veterans been working in freedom's cause? Too many to describe them all, so let me dwell on two.

First, there's the battlefront of education.

Education, of any nature, serves as a strong bulwark of freedom. The entire history of mankind proves time and again that freedom is in jeopardy when ignorance pervades a nation, and that freedom is strengthened when knowledge and enlightenment are allowed to spread their light unfettered.

And second, there's the battlefront of stability.

Yes; stability, too, is a component of freedom, stability of individuals as well as nations. For stability protects against idle discontent that, like a feather, blows first this way and then that. As we have seen in our own lifetime, lack of stability can, and has opened the doors to dictatorship, to charlantanism, to demagoguery.

Education and stability. Two keystones of American freedom.

How have the veterans of America, an army in work pants more than 22,500,000 strong, contributed to our country's freedom, in terms of education and in terms of stability?

How have they, in time of peace, served to preserve the freedom for which they fought in time of war?

Let's first look into the matter of education.

Some day in the dim future, when historians sit down to write the history of the mid-20th century, they're going to give it two names: the age of the atom, of course; and also the age of education. And when they look into the background of the age of education, one fact will stand out clearly and unmistakably:

Veterans played a major part in bringing it to pass.

For in this country today, there are more than 10 million veterans who have furthered their education through 2 GI bills, 1 for those with World War II service, and the other for Korea veterans, and through 2 programs of vocational rehabilitation for the disabled.

Take 10 million veterans, provide them with an education, and you're bound to create a lasting impact upon the face of the Nation. And here's what has happened:

Because of GI training, veterans have raised their educational level to better than 4 years of high school, which means that the average veteran has been exposed to college and all the benefits wrought by college training. What of the average nonveteran male, same age? You'll find not a high-school graduate, not a college trainee, but a man who hasn't gone beyond the second year of high school.

Because of GI training, our colleges were forced to expand their facilities to accommodate the postwar flood of veterans. And it's well they did, for without expansion, our colleges simply could not accommodate all the hundreds of thousands of young people today seeking a higher education.

Because of GI training, the adults of this country have become a generation of learners, of seekers of knowledge. If adult veterans could go to school, why not adult nonveterans? And so today, adult education in America is at least double what it was before the war.

Because of GI training, America is better able to cope with its tremendous need for technologists, as it emerges in a world where technology is synonymous with progress. Where would our country be without the 400,000 engineers, 100,000 scientists, one-half million skilled craftsmen who acquired their learning under the GI bill?

And because of GI training, our veterans have learned to think. Education and training is far more than learning a set of skills. It is learning to think, to reason, to inquire. And good thinking, clear thinking, is a prerequisite to good citizenship.

Yes; good thinking, clear thinking, also is a means to the preservation of freedom. Freemen are thinking men.

Now, what about the other keystone of freedom, the corner post of stability?

Stability isn't an easy attribute to measure, but I believe it can be done if we examine the use veterans have made of another benefit: the GI loan program.

Five million veterans have become American homeowners with the assistance of GI loans. As all you homeowners know, running your home, keeping things on an even financial keel, involves a great deal of responsibility. Plus good judgment. Plus the ability to keep a level head.

Or, in a word—stability.

So the very fact of 5 million veteran homeowners connotes stability, and lots of it. But let's look a little deeper into GI home ownership. What do we find?

We find that already more than 1 million veterans have repaid their GI loan obligations in full. That's recognizing responsibility. That's stability.

And we find that veterans have achieved a record that's hard to match in meeting their GI loan payments. Better than 99 percent are paying regularly, every month, right on time, fully aware of the financial responsibilities they have assumed. And less than 1 percent have defaulted to the point where the Government has had to make good its guarantee to the lender.

Better than 99 percent meeting their payments on the nose. How's that for responsibility? For stability?

There's still more to the picture, as we delve even deeper.

The Veterans' Administration conducted a study recently, and found that the average veteran was paying out for total monthly housing costs only 20 percent of his monthly income. Which means he has had the good sense not to overextend himself.

The survey also found that after making his down payment and taking care of settlement fees, he still had a nest egg in the bank, equal to about 10 percent of the amount of his loan. Which means he's keeping a weather eye on the future; he's not living for today alone.

Those facts, too, add up to stability, unmatched stability.

Yes; that's the sort of stability which contributes to the freedom of America. When such a large segment of our population, our 5 million GI homeowners, demonstrate such a sound sense of responsibility, of stability, how could they ever become pawns of strange ideologies, of will-o'-the-wisp demagogs?

They couldn't, my friends. They couldn't.

Education and stability are just two elements of freedom. The veterans of America have excelled in these, and in many more as well. They are our bulwark of freedom. They are the standard bearers of our way of life.

Fighters for freedom, in work pants, as Ibsen would put it. That doesn't necessarily mean they're out on the front lines pamphleteering, as did Tom Paine of old, or manning the guns, as did the men who fought under George Washington.

No; our veterans are fighters for freedom in another sense. By their day-to-day actions they are furthering the cause of freedom, each in his own way. By getting an education, they are fostering freedom. By growing roots in their communities as homeowners, they are fostering freedom. By taking an active interest in the world about them, in their communities, in their States, in their Federal Government, they are fostering freedom. By raising their children to believe in the same ideals for which they fought in time of war, they are fostering freedom.

Yes; they are practitioners of freedom, in everyday workpants. For them, freedom isn't something to be taken off the top shelf and dusted off on the Fourth of July or on Veteran's Day, and then put back to molder for another year. Instead, freedom is a way of life, to be lived and cherished every day, and every week, and every month, and every year.

Defense means freedom. And so do our veterans mean freedom.

This building, in which we have gathered, is built on strong, firm foundations. We know this is so, and we don't give it a second thought. We don't look around apprehensively, every once in a while, to see whether any new cracks have developed.

It's something like that with our veterans, and with freedom. Our veterans are an element, an important element, in freedom's foundation. Only sometimes we are inclined to take them, and their contributions, for granted.

So it's good to remind ourselves, as we have done today, of their many and lasting contributions to America and to the principles for which America stands. It's good to remember that the freedom, which we enjoy as a way of life, we owe at least in part to them.

I salute them, the veterans of America, fighters for freedom in war, and fighters for freedom in peace.

Thank you.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include a copy of my column Keenotes, which was released today. The article follows:

KEENOTES

(By Representative ELIZABETH KEE)

Next to golf, circumventing the intent of Congress would seem to be a favorite pastime of the executive branch of the Government. A number of instances spring to mind,

such as when, several years ago, Congress appropriated more funds to build up the Air Force than the Department of Defense had requested. The Secretary of Defense bluntly stated that he would not make use of the money. This year, this same Secretary has sung quite a different tune as the economy-minded 85th Congress has made deep cuts in his budget requests for fiscal 1958.

Closer to home, there is the instance of the Trade Agreements Extension Act in which authority was granted the President to limit imports of crude and residual fuel oil when these imports exceed the 1954 levels. Although Members of Congress from West Virginia and other coal-and-oil-producing States have pleaded for the exercise of this authority, the administration vainly continues to hope for voluntary compliance on the part of the big oil importers while the tide of foreign oil rises higher and engulfs the eastern markets for domestic oil and West Virginia's coal.

Now a fresh instance of the administration's thwarting of congressional intent has occurred. When the 85th Congress passed the Housing Act of 1957, one of the important changes in our housing laws was the amendment lowering downpayments on homes built under the FHA home-building program. There was urgent purpose behind this legislative act.

With our rapidly growing population, millions of American families need and wish to purchase homes. The majority of these are, I venture to say, the families of veterans—young families who have not yet had the time to build up much in the way of cash reserves.

According to the law, of course, the veteran is supposed to be able to get a loan at 4½-percent interest. It is, however, a known fact that under the administration's tight-money policy such loans have been almost impossible to obtain for some little while. Consequently, the only course left open to the veteran has been to buy under FHA.

Then there is the great number of families in moderate circumstances and, like the veteran, without much ready cash. Would-be home purchasers too, many of these families have been unable to meet the downpayments required under the previous law.

This in turn has had a depressant effect upon the home-building industry which, last year, declined more than 20 percent and, so far this year, has fallen off another 16 percent. Permitted to continue, this decline could not only create a serious housing shortage throughout the Nation, but will have an adverse effect upon the entire economy, for not only is the home-building industry one of the Nation's largest industries, giving employment to tens of thousands, but it is also the principal market for the products of many other industries, glass, tile, aluminum, lumber, and electrical appliances, to name a few.

To meet this situation, this Congress therefore amended the Housing Act to provide lower downpayments under the FHA program, and to bring FHA schedules more in line with VA schedules. As written into the new law, Congress said the cash downpayment on a $10,000 home would be $300 instead of the $700 previously required; and $600 on a $12,000 home as against the previous $1,200.

Last week, after a considerable delay, the Federal Housing Administration announced that these lower downpayments on homes financed through Government-insured loans were in effect. But what has shocked Washington is the announcement by FHA that at the same time that it was lowering the cash downpayment requirements, it was increasing the interest rate on these loans from 5 to 5¼ percent.

Thus, while Congress has sought to make it easier for the average citizen to own his own home, the administration has found a way to saddle him with a heavier debt. The increase of one-fourth percent in the interest rate—the second, by the way, that has occurred in the past 8 months—has been roughly estimated to raise the cost of a $12,000 home by some $700 over the average 30-year life of the loan. Seven hundred dollars is a lot of money to people in modest circumstances.

The excuse given for this rise in interest rates is that it was necessary to keep FHA mortgage loans competitive with other demands in the present tight money market. The effect may well be to boost interest rates all along the line to meet other financing demands. And, of course, a very obvious effect is again to enrich the banker and broker at the expense of the average citizen.

Obvious, too, is the fact that higher interest rates add materially to the cost of doing business and hence to the cost of living. The inflationary spiral soars ever higher, and the vast majority of American families are plunging deeper and deeper into debt as they try to stretch fixed incomes or next month's pay envelope to meet today's high prices.

There would, I feel, be a stronger ring of sincerity to the administration's protestations of concern over inflation if the means which it elects to use to control the constantly rising cost of living did not invariably shift a still greater share of the burden upon the consumer, the worker, the salaried employee, the small-business man and retired individuals living on pensions and annuities.

Meanwhile, the Congress must find a way to see that the laws it enacts for the benefit of the general public are not circumvented or nullified by administrative interpretation and regulation.

Honesty in Unions

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. HOLLAND. Mr. Speaker, there are many wrong impressions regarding how the finances of a labor union are handled.

Mr. I. W. Abel, international secretary-treasurer of the United Steelworkers of America, AFL–CIO, has in a very concise story explained the controls and the workings of his office.

Unfortunately, the papers play up the dishonesty much more than they portray the honesty of the great number of good, clean unions.

Mr. Abel's statement, which appeared in the Pittsburgh Sun-Telegraph on Wednesday, August 7, 1957, follows:

"LABOR'S OWN VIEWS: HONESTY IN UNIONS

The Pittsburgh Sun-Telegraph invited several leaders of labor in the Pittsburgh region to present their point of view to its readers. The subjects on which they have written were of their own choosing. Today's contribution is by I. W. Abel, international secretary-treasurer, United Steelworkers of America, AFL–CIO. We probably could get into an interminable debate by raising the question of whether honesty can be legislated. I have always liked an old truism on honesty I read many years ago. It goes like this:

"Honesty is not the best policy. It isn't any kind of policy. It's a virtue practiced for its own self. The man who does not steal because he might be caught is not honest. He is merely discreet."

All this, of course, is pertinent in light of the so-called McClellan committee's findings about certain union officials. It is all too easy to attribute the evils of a few to the many.

Do all unions operate their financial affairs so loosely, so negligently as to permit such conduct by officials?

The answer obviously is "No."

As a financial officer of a rather large and well-known union, the United Steelworkers of America, I have been invited to write this column for the Pittsburgh Sun-Telegraph.

The subject was not specified, but I propose to write about our union's financial practices, with which I live daily.

In the United Steelworkers of America we believe our code of ethical practices does a most efficient and effective job. In fact, we have informed Senator MCCLELLAN that he will have our fullest cooperation if his committee cares to look us over.

I should like to note that this course of conduct is not the outgrowth of any present excitement in Washington. Our union has always lived by this code.

The first step we took almost 20 years ago was to employ an outside auditing firm. This firm is Main & Co., nationally prominent, certified public accountants, which audits many, many businesses, including many steel companies.

The firm audits our books twice a year. The published audit goes to every local union, to the homes of 1,250,000 members through Steel Labor, to the Nation's press, Senators, Congressmen, governors—in fact, to anyone interested.

Actually, anyone who cares to investigate the financial accounts of the United Steelworkers of America need go no farther than the nearest public library.

We operate in a goldfish bowl. We have nothing to hide.

Likewise, the financial affairs of our 3,000 local unions are audited by their own trustees and again by a trained staff of auditors from the international office.

Salaries of all elected officers and executive board members are set by international convention. Salaries or wage rates and expense allowances of all personnel are subject to approval and review by the 33-man international executive board, as required by the international constitution.

Investments are made only in the name of the union and such investments are held by a bank or trust company as agent.

All financial officers of the United Steelworkers are covered by fidelity bonds.

Financial records are safely maintained by the elected financial officers for a period not less than applicable statutes of limitations. At the International office such records are microfilmed.

All financial contracts or major expenditures are subject to prior authorization by the union's executive board.

All records of accounts are in accordance with generally accepted principles of accounting, as recommended by Main & Co.

To meet NLRB requirements we have regularly filed a complete financial report with the Bureau of Labor Standards and in addition, we have regularly filed similar financial reports with the Internal Revenue Department in order to maintain our tax exempt status. The reports to these two departments cover not only our international office but our local unions as well and total somewhere in the neighborhood of 55,000 notarized reports annually.

It has always been the policy of the United Steelworkers of America that the responsibility for administration of insurance and pension programs is that of the employers. The union's responsibility is that of negotiating such programs and seeing to it that they are properly funded.

Then, too, the USW code provides three definite prohibitions:

1. No loans to officers and employees.

2. No fees of any nature whatsoever may be accepted or paid by officers and employes where a financial transaction of the union is involved.

3. No major financial contracts can be let without securing competitive bids.

There are many, many more principles in our ethical code—all scrupulously observed.

But these highlights might help others to understand why our union is proud of the honest and democratic manner in which it now operates and has operated since its inception.

Fine Work in Conservation Performed by Former Gov. Oswald West

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. NEUBERGER. Mr. President, in 1958 the Nation will mark the 100th anniversary of the birth of a great American, President Theodore Roosevelt. I have been honored with an appointment on the National Committee of Sponsors of this historic event.

My own particular interest in the career of Theodore Roosevelt stems from his great and abiding championing of the protection of our natural resources. He was one of our first great conservationists.

In this connection, I ask unanimous consent to have printed in the Appendix of the RECORD a brief tribute written by Theodore Roosevelt himself, and published in Outlook magazine for September 1911, which heralds the fine work in conservation performed by Gov. Oswald West, of the State of Oregon.

Ex-Governor West is still a resident of my home city of Portland, and he continues to retain his zealous interest in such resources as timber, soil, water, wildlife, and minerals.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEOPLE OF THE PACIFIC COAST

(By Theodore Roosevelt)

In Oregon I had two small experiences which perhaps will illustrate what I mean when I speak of the development of the cultural life on the coast, of the development of the kind of citizenship that realizes the need of trying to make life more beautiful and satisfactory for the individual, at the same time that we try to make the individual stronger, and to do what we can toward bringing about the reign of righteousness and justice as between individuals.

In Governor West, of Oregon, I found a man more intelligently alive to the beauty of nature and of harmless wildlife, more eagerly desirous to avoid the wanton and brutal defacement and destruction of wild nature, and more keenly appreciative of how much this natural beauty should mean to civilized mankind, than almost any other man I have ever met holding high political position. * * * He desires to preserve for all time our natural resources, the woods, the water, the soil, which a selfish and short-sighted greed seeks to exploit in such fashion as to run them, and thereby to leave our children and our children's children heirs only to an exhausted and impoverished inheritance; he desires also to preserve, for sheer love of their beauty and interest, the wild creatures of woodland and mountain, of marsh and lake and seacoast; and while he puts the economic need first, the need of permanently bettering the material well-being of our people being the foundation purpose of the movement, he also puts in prominent position the desirability of adding to our stock of popular pleasure and interest the inexhaustible delight that comes from knowing and loving, in and for itself, the wealth of beauty in bird and tree and blossom. The lack of power to take joy in outdoor nature is as real a misfortune as the lack of power to take joy in books.

Disturbing Developments in Okinawa

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. KEARNS. Mr. Speaker, the House should take notice of two disturbing developments that threaten sovereignty over the island of Okinawa, America's most potent military fortress in the troubled Far East.

The first development concerns last Sunday's election for 30 council seats in the capital city, Naha. The outcome favored the anti-American and pro-Communist Mayor Kemejiro Senaga. The mayor was elected in a freak three-way race last Christmas Day. His pro-Red People's Party won 12 seats—not a majority as compared with the 17 seats and one neutral seat won by the anti-Senaga Conservatives, but enough seats to block a two-thirds majority vote for his ouster.

Senaga's election statement followed the usual Marxist pattern, "We hope America will revise its undemocratic policy toward Okinawa and meet the wishes of the people as expressed at the polls."

The fact is, as I personally observed on two visits to the island on my recent Far East trip, the people of Okinawa never had it so good, economically. Their economic level is much higher than under the Japanese. In 1939 the norm in Okinawa was 69 percent of the Japanese norm; today it is 115 percent of the Japanese norm. The island's per capita income has increased from $157 to $181 during fiscal 1956–57. I heard no serious talk in Okinawa about reverting to the days of paying tribute to the old Emperors of China and to the old overlords of Japan. I doubt that those who voted for Mayor Senaga really want to follow him into the slave labor camps and conditions of the Communist world.

The second disturbing development is the growth of the so-called Reversion Movement within Japan. Minority party politicians have been advocating the return of Okinawa to Japanese sovereignty. A segment of the Japanese press has been putting on a synthetic campaign to make this an issue. Before Premier Kishi's June visit to this country for talks with President Eisenhower, they tried to make it appear that his entire mission would fail unless he returned with Okinawa bulging in his briefcase. Of course, this was gross exaggeration, as was revealed when the terms of the communique were announced. The Kishi mission was a great success, without Okinawa. The premier obtained many concessions, talking with the President from the vantage point of equality.

During the discussions, the Japanese delegation did bring up the subject by suggesting that the Japanese flag be flown side-by-side with the Stars and Stripes over the island. Word of this proposal was not contained in the comminque, but it leaked out and reached the Far East, ironically, on July 4. I put it mildly when I say that American diplomats and military men who are stationed in that part of the world to defend the free world against Communist aggression did not like the idea. Asked to comment, I said that the flag suggestion was "premature to say the least." And as for returning Okinawa before it has served its purpose in the free-world struggle, I said we would be foolhardy if we did so. In short, we have been magnanimous victors in our postwar dealings with Japan; but we need not be magnanimous fools.

One American officer who had fought on the Hagushi beachhead on Easter Sunday, April 1, 1945, made this hard remark:

It would be like giving the White House back to the British, now that we've fixed it up.

Mr. Speaker, when the outcome of last Sunday's vote was announced one Japanese newspaper interpreted it as evidence that the people of Okinawa want to be returned to Japanese sovereignty. It is not only interesting but significant that Mayor Senaga and this segment of the Japanese press arrived at the same conclusion—a conclusion that is anti-American in most brazen and barefaced fashion. When it comes to Okinawa, our battle-won and blood-bought fortress of the Far East, the theme songs we hear from Moscow and a segment of Tokyo sound in perfect harmony and consonance.

Mr. Marvin L. Stone, Far East director of the International News Service, appeared on a panel discussion which I conducted in Tokyo to discuss the problems in the Orient. He predicted on that program that we can expect to hear more from the Reversion Movement in Japan within the next 2 years. He commented further, that while he believed that the Japanese Government understood the necessity of continued United States control and sovereignty, it had failed public relationswise in getting over the point to the Japanese people.

While I was in Japan, a demonstration was staged in front of the American Embassy protesting the extension of runways at a United States airbase. There were some Communists in the crowd. The signs read: "Yankee monkeys, get out of Japan and Okinawa." We are already withdrawing large con-

tingents of our Armed Forces from Japan. In fact, the withdrawal had been announced nearly 2 weeks before this July 9 demonstration. The significance of this slogan is that Okinawa was linked with Japan proper. We may expect more of this kind of agitation with reference to Okinawa, as time goes on.

It is therefore important, I believe, for us to make our position on this issue crystal clear before anybody, whether in Okinawa, Japan, Peking or Moscow, gets any delusive ideas. We should state bluntly that insofar as the United States is concerned, Okinawa is not a matter for barter or bickering at this time in the light of our obligations for our own defense and the defense of the free world.

This way my fifth stop at Okinawa; first, in 1952, during the Korean war when our B–29's based on Okinawa, were ranging all over the battle area up to the Yalu River, under the command of General Ralph Stirley; then in 1956 with the Air Force Symphonic Band and guest-conducted two concerts there. In my visit last month, I returned with a much stronger feeling than ever before that, unless there is an unexpected and radical shift in world affairs, we will have to maintain that strategic base at least for this generation and perhaps for the next and the next.

Okinawa is indipsensable today for our defenses in the Far East. Its planes can cover a 2,500-mile radius, fanning out from Borneo and Burma; to Tibet and beyond the Great Wall of China to Mongolia, and north to Vladivostok and Manchuria and beyond. Within that radius live the masses of Asia. Remember that from Okinawa, we can now exercise air control over one-third of the people of the world—both offensively and defensively.

Okinawa is much more strategically located than Taiwan, Japan, Korea, and the Philippines, where we also have bases, but on foreign soil. Taiwan is too close to the mainland to have sufficient warning of air attack if the Chinese Reds should unleash their jets from the complex of airfields across the Strait of Formosa. The alert time there is only 15 minutes as compared with the 45 minutes that Okinawa enjoys. The only other airbase located on soil under indisputable American sovereignty—aside from Okinawa—is Guam, and Guam is 1,400 miles farther away from the vital Asiatic target areas than is Okinawa.

At the end of the runway at Kadena airport where my planes landed on my various trips to Okinawa, several thousand Americans lost their lives coming ashore in the initial assault wave. Nor can I forget that 12,000 were killed and another 30,000 wounded or missing before that 67-mile-long strip of Pacific real estate was secured. Ernie Pyle, the GI's favorite war correspondent lost his life there in that last great battle of World War II. So did Lt. Gen. Simon Bolivar Buckner, commander of the 10th Army.

Ernie Pyle is buried today in Punch Bowl National Cemetery overlooking Pearl Harbor. This is another link in the minds of Americans between Okinawa and that infamous Sunday sneak attack upon American territory.

No matter how many slogans Japanese Communists and other extremists compose and wave aloft, I doubt that the American people will be inclined to yield Okinawa until Pearl Harbor has faded further back in their memories. And that will be considerable more time than has elapsed since December 7, 1941—that day of infamy.

Let us keep this mighty fortress in our arsenal in the Far East under the strong arm of Uncle Sam as long as we need it.

Lack of Veterans' Hospital Facilities in Florida

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. SIKES, Mr. Speaker, the population of the great Sunshine State of Florida is growing at the rate of over 3,000 people per week. Many of these new residents that are choosing the wonders of Florida as a homesite are veterans who have defended our country in the time of need. Florida's already overcrowded veterans' hospitals are becoming faced with an even greater shortage of space and facilities. I am of the sincere conviction that if a man or woman is willing to serve his or her country when the call to arms is sounded, it is the responsibility of the American Government to see that these men and women are afforded the best possible hospital facilities. In line with this, I would like to submit a letter and resolution from the Department of Florida Veterans of Foreign Wars of the United States that point out the very inadequate hospital facilities offered our veterans in Florida.

The letter and resolution follow:

DEPARTMENT OF FLORIDA,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
August 5, 1957.

Hon. ROBERT SIKES,
Member of Congress, House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN SIKES: There is enclosed herewith a resolution approved unanimously on July 28 by the council of administration of the Florida Department of the Veterans of Foreign Wars. It is my honest belief that this resolution will receive the unanimous approval of the national encampment of the Veterans of Foreign Wars to be held in Miami Beach this month.

Our department commander, Charles A. Whiteacre, of Hialeah, wishes me to assure you that our organization will give you every possible support in all your efforts to make the expression of this resolution a reality. May I personally urge you to bend every effort to the realization of this goal.

We all know the sad VA hospital situation in the State of Florida, and it is our hope and prayer that the powers that be, who have thus far successfully obstructed decent treatment and consideration of all veterans who might be in our State who need hospitalization, can be prevailed upon to see both the justice and the necessity for the additional hospital facilities requested in this resolution.

Sincerely yours,

M. D. WADE, Sr.,
Adjutant-Quartermaster.

RESOLUTION, DEPARTMENT OF FLORIDA, VETERANS OF FOREIGN WARS

Whereas the hospitalization of war veterans by the Veterans' Administration has been established by law as a matter of right for the service-connected disabled, and as a matter of availability of beds for those non-service-connected war veterans who are unable to defray the cost of hospitalization; and

Whereas the State of Florida is attracting disabled and elderly war veterans by the thousands every year, who are in need of VA hospital facilities, and that while all VA hospitals in Florida are full to capacity, there are constantly as many men waiting for a bed as there are beds already available, causing abnormally swollen waiting lists; and

Whereas it has been firmly established by testimony before the House Veterans' Affairs Committee in February of 1957 that the Florida VA hospital situation is the most acute in the Nation, and notwithstanding this acute need for more hospital beds, the record shows that the number of available beds in Florida is now less than it was 10 years ago: Now, therefore, be it

Resolved by the council of administration, Department of Florida, VFW, in meeting assembled at Ocala, Fla., this 28th day of July 1957, That we again urge our congressional delegation to leave no stone unturned in their united efforts to increase the bed-space allotments at VA, Bay Pines, Fla., and do hereby declare the expansion of Bay Pines of the foremost priority and necessity, and earnestly request the full endorsement of this position by the VFW national convention to convene at Miami Beach in August of 1957; and be it further

Resolved, That while additional GM and S beds are desperately at VAC Bay Pines, we declare that second priority and necessity in Florida is the immediate authorization and construction of the 1,000-bed neuropsychiatric hospital at Gainesville, and thirdly, the complete replacement and enlarging of the facility at Coral Gables, Fla.

Approved by the council of administration, Department of Florida, VFW, the 28th day of July 1957.

CHARLES A. WHITEACRE,
Department Commander.

Attest:

M. D. WADE, Sr.
Department Adjutant.

Tito

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. SAYLOR. Mr. Speaker, while there was nothing startling in the news of the Tito-Khrushchev meeting in Rumania, each headline of this kind gives added prominence to the questionable American policy toward Yugoslavia. Thanks to the announcement of the new bond of friendship that was welded at last week's meeting between the two Red gangsters, another wave of indignation

has arisen over the State Department's program of giving millions of dollars in vital materials, including jet aircraft, to the Butcher of Belgrade.

Actually, only the most naive could see in Tito's desired independence of Moscow any advantage to the free world. Tito has been a Red fanatic for at least four decades. As Josip Broz, he fought in the Red army in the Russian Civil War in 1918–20. He was presumed to be an agent of the Cominform when he returned to his native Croatia several years later. From 1929 to 1934 he served a jail sentence as a political agitator, and through Soviet backing he was able to rise to power during World War II.

Already a virtual dictator, Tito won a major electoral victory in November 1945 as head of the Communist-dominated National Labor Front, whose candidates were the only ones permitted to run in the election. Then came the execution of Draja Mikhailovich, the imprisonment of Archbishop Stepinac, and whatever other blood-letting was required to maintain Tito's position.

Except for his insistence that he has been independent of the Kremlin, Tito's attitude has always been consistent enough for the world to recognize that there is no place in civilized society for him. Even during conferences with representatives of this country, he made no attempt to don robes of respectability or to hide the bloodstains on his hands that came with his domestic purges and in the murder of United States airmen. Despite his arrogance, Tito continues as a beneficiary of American largesse.

Although there is no relief for American taxpayers, United States Treasury funds are made available to one of the most defiant of all the leaders of the Communist world, the bloc which the foreign-aid program was presumably set up to oppose. Now that he has again drunk a toast to world communism with Khrushchev, perhaps the State Department will finally be forced to reverse its policy of assisting him to carry out his program of brutality and terror. Otherwise it will be all the more difficult for us to convince the rest of the world that what Tito and Khrushchev sup is a dangerous potion.

A Flag for Members of the House of Representatives

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. ALLEN of California. Mr. Speaker, a little over a year ago I introduced House Resolution 536 which would provide for a flag for Members of the House of Representatives. The resolution was reported out of the Committee on House Administration late in the second session of the 84th Congress but was not acted upon. A similar resolution (H. Res. 386) was introduced several days ago.

In an extension of remarks in the CONGRESSIONAL RECORD for June 13, 1956, on page A4729, I gave an account of the manner in which the proposed flag had been designed.

Since the introduction of the original resolution a number of the flags have been produced and used by several Members of the House in anticipation that the flag might become official for Members of the House. It was flown at the yard on the steamship *Matsonia* on its trip from Newport News to New York when it was delivered by the shipyard to its owners and a number of Members of the House were on board. It has flown on the boats owned by several Members of the House. It may be seen in the offices of several Members.

Use of the flag to the limited extent indicated has probably preempted the design until such time as the House might desire to make it an official emblem of its Members. The design symbolizes some of the finest qualities of the House and its membership. I hope that action may be taken to adopt the resolution.

The Supreme Court

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. RIVERS. Mr. Speaker, the Supreme Court of the United States has come under criticism from many quarters—from the people, the press, and the Congress. Beyond a question of a doubt, this criticism is justified. The Supreme Court has prostituted the organic law of this land and arrogated unto itself the legislative functions of the Congress. It has interpreted law that is not and written laws that should not be written. It has given and comfort to the enemy and has turned loose upon helpless people of this Nation bloodthirsty criminals and insatiable sex maniacs. The Communist Daily Worker has proclaimed the Supreme Court of the United States.

Mr. Speaker, on the floor of this Congress I have said before and I say now I have no respect for the present membership of the Court. The disgrace in which they live is the handiwork of their own doing. Lawyers and scholars alike have no confidence in its deliberations. It composes the most motley makeup of political hitchhikers and pseudosocialists since the founding of this Republic. Under no stretch of the imagination could the confidence of the American people be restored to this body unless and until the majority take their black robes and disappear into the black oblivion which will inevitably be their ultimate resting places.

Despite all of these things, seldom does a Federal judge take his pen and write a bill of particulars against their acts of omission and of commission. However, when one does, it is time for us to take note. One such distinguished jurist is George Bell Timmerman, Federal district judge for South Carolina. He has indicted them for the most brazen neglect of duty and of breach of faith to law and precedent.

Mr. Speaker, each Member of Congress should read this masterpiece which I enclose herewith for future generations to read. Somewhere we must stop this Court. Judge Timmerman's remarks remind us of this responsibility. His remarks follow:

ADDRESS OF GEORGE BELL TIMMERMAN, SR.,
BEFORE THE ROTARY CLUB OF THOMSON, GA.

I shall talk briefly about our form of government, its background, its origin, and the efforts that have been made and are being made to change it. What I shall say will be the expression of my own personal views and is not to be considered an official statement.

Our America was settled by hardy, courageous, and venturesome Europeans, whose aspirations were to escape European despotisms and to gain a refuge for religious liberty.

The tyrannies from which they fled pursued them and, against them, they rebelled. The result was the Revolutionary War. On one side was the loosely organized colonies and on the other mighty England.

The war ended with the surrender of Cornwallis at Yorktown in 1781, a direct result of British defeats at Cowpens and Kings Mountain. When the war was over the people of the former colonies, then citizens of sovereign States, sought means of uniting the States for common defense and other mutual advantages. They did not intend to create another tyrannical government that would rob them and their posterity of the right of local self-government.

Following much thought and extended debate a compact among the sovereign States emerged. Upon its ratification, it became the Constitution of the United States.

However, before final ratification there was more debate respecting its merits and the implications of its various provisions. Many foresaw abuse of the powers granted the Supreme Court. Others took a more optimistic view. They thought that no Supreme Court would exceed its intended functions. Recently we have learned that such optimism was unjustified, regrettably so.

The established Government is a Republic, sometimes called a constitutional democracy. It is unique because of the dual sovereignty involved, but without which the Union would not have been formed at the time it was formed.

Almost from the beginning efforts were made to destroy the people's right of local self-government, otherwise sometimes spoken of as States rights, and to centralize total power in the Federal Government. That effort continues even to this day, and it is now better organized and better financed than ever before; and, whether or not they are willing to face up to it, the liberties of the people are now at stake.

The Supreme Court has been construing the Constitution so as to make of it a protective shield for the criminally disposed and disloyal elements in our population and it has been reading meanings into the Constitution and out of it that discriminate against white citizens, especially those of the so-called deep South. If continued, this discrimination will eventually adversely affect the white populations of all the States of the Union, North, East, South, and West.

As illustrative of what is going on, I direct attention to some fairly recent court opinions.

On December 30, 1947, the Fourth Circuit Court of Appeals held, and the Supreme Court sanctioned the holding, that acts of

the Democratic Party in South Carolina constituted State action. Here is the Court's own language. "The question presented for our decision is whether, by permitting a party to take over a part of its election machinery, a State can avoid the provisions of the Constitution forbidding racial discrimination in elections and can deny to a part of the electorate, because of race and color, any effective voice in the government of the State. It seems perfectly clear that this question must be answered in the negative."

To one familiar with the facts of that case, it is clearly apparent that the Court set up a straw man and then knocked it down. The assertion that the State permitted "a party to take over a part of its election machinery" was completly disproved by the evidence in the case. It is common knowledge that a State's election machinery is established by law and in no other way. It can be stated without fear of successful contradiction that there was nothing in the Constitution of South Carolina, or in any of its statutory laws, that in any way controlled primary elections or any other party action, or that delegated authority over any part of its election machinery to any political party. It is true the State did not by law prohibit the organization of political parties or the function of them, just as it did not affirmatively prohibit the exercise of the senses of sight and feeling, or the use of the tongue or the feet.

It would be ridiculous to say, because of such failure, that the seeing or walking, or feeling or talking of an individual is State action. So, too, it was ridiculous for the Court to say that the voluntary action of private citizens in organizing a party to give legitimate expression and effect to their private political views was State action. The Court attained its objective of discriminating against white citizens of South Carolina by the simple expedient of substituting fiction for fact.

The Supreme Court, on April 19, 1948, signified its approval of what the Court of Appeals had done by refusing to consider the case on appeal. The effect of that action was to deny to white citizens the right to organize and control their own political party, free of the domination of a politically minded court, a discrimination which, if practiced by a State would be plainly unconstitutional.

In an opinion filed May 3, 1948, in *Shelly v. Kraemer*, the Supreme Court, among other things, said: That "* * * the principle has become finally imbedded in our constitutional law that the action inhibited by the first section of the 14th amendment is only such action as may fairly be said to be that of States. That amendment erects no shield against merely private conduct, however discriminatory or wrongful." The court then went on to hold: First, that private agreements to exclude persons of a designated race or color from the use or occupancy of real estate for residential purposes do not violate the 14th amendment, and that such agreements are within the legal competency of individuals to make; and, second, that a State court would violate the equal protection clause of the 14th amendment by undertaking to consider litigation arising out of such a valid agreement.

The parties who asked and got the Supreme Court's aid in outlawing the long established jurisdiction of State courts were Negroes. However, they were not parties to the agreement being attacked in the litigation, nor were they the owners of the real estate about which the agreement was made, when it was made. On the other hand, the parties who entered into the agreement were white, and they owned the land with which the agreement was concerned. By the Court's edict there was engrafted on the jurisprudence of this country a new and strangely un-American doctrine. For the first time in the history of the United States, the Supreme Court usurped the authority to deny to State courts one of their time-honored jurisdictions.

The Supreme Court having held that the agreement in question did not violate any constitutional provision, and that it was a legal agreement, one the parties had a legal right to make, there was no constitutional basis for its attempt to outlaw a State court's legitimate jurisdiction. That case illustrates the extent to which the Supreme Court has gone and is going to discriminate against white citizens, for no apparent reason other than that they are white.

Attention is next directed to the Supreme Court's opinion in *Brown v. Board of Education* (in the so-called school cases), filed May 17, 1954. The Court correctly found as a fact that the Negro and white schools involved in the cases had been equalized, or were being equalized, with respect to buildings, curricula, qualifications, and salaries of teachers, and other tangible factors. The dictionary defines factors as "elements that contribute to produce a result"; and tangible as "capable of being realized by the mind; substantial; objective." So, according to the Court's holding, Negroes were being afforded equal educational advantages, such as could be realized by the mind, and which were substantial and objective. Had the Court's opinion stopped there, it would have been supported both by fact and reason; but—it did not.

The Court went on to say that separately afforded equality constituted discrimination, in and of itself, as against a minority group. As profoundly inaccurate as is that statement, it is not so startling as another that is implicit in the Court's opinion, viz: that in the Clarendon County School case, up from South Carolina, and then before the Court, Negroes constituted a minority group. The truth is that when that statement was made Negroes in that school district outnumbered the whites in a ratio of more than eight to one. This illustrates the distorted vision with which the Court has viewed and is continuing to view, racial controversies.

Another thing which the Court said is this: "In approaching this problem, we cannot turn the clock back to 1868 when the amendment was adopted, or even to 1896 when *Plessy v. Ferguson* was written." The Plessy case is the one in which the Supreme Court of 1896 sensibly, logically, and factually interpreted the 14th amendment, holding that usable, tangible, and objective equality of treatment, although separate, was the reasonable and practiccal course required by the 14th amendment.

If the statement, "we cannot turn the clock back" means anything, it means that the Court was unwilling to consider the truths of American history, American tradition, and American judicial precedents; that the Supreme Court—our United States of America Supreme Court—preferred recourse to the sociological and socialistic writings of one Myrdal, a Swedish Socialist, and to like writings by Myrdal's fellow travelers in Amerca, none of which was a part of the record in the case befofe the Court. It mattered little to the Court that it had ruled in divers other cases that it was highly improper to go outside the record in a case to find support for a desired result.

The crowning folly and the great danger in the opinion arises out of its inconsistent and illogical conclusions. While the Court held that the 14th amendment requires equality of treatment as between the races, as manifestly it does, it also held that equality of treatment as between the races, even if desirably separate, constitutes inequality in and of itself, and is therefore discriminatory. Thus, the Supreme Court changed the dictionary by holding, in effect, that equality equals inequality. According to it, a State may violate the 14th amendment both by failing to accord equality of treatment and by according it.

Here again is an illustration of the Supreme Court's bias against southern white people and of its disposition to discriminate against white citizens for no apparent reason other than that they are white.

On April 2, 1956, the Supreme Court filed an opinion by Chief Justice Warren in *Pennsylvania v. Nelson*, holding that the Federal statute (54 Stat. 670) prohibiting "the knowing advocacy of the overthrow of the Government of the United States by force and violence, supersedes the enforcibility of the Pennsylvania Sedition Act which proscribes the same conduct." The Court held that a State's sedition law is superseded by the Federal statute and is rendered ineffective by it, even if the State statute is intended to and does no more than supplement the Federal law against sedition. I find nothing in the Constitution that in terms denies to a sovereign State the right to use all reasonable means to protect its own sovereignty, and that of the United States; nor do I find in the Constitution any provision which, when legitimately interpreted, means that the Congress of the United States is granted the sole power to define, prohibit, and punish sedition.

In an opinion filed April 29, 1957, the Supreme Court denied to a testator the right to dispose of his property in accordance with his own wishes. A Mr. Girard, by will probated in 1831, left a trust fund for the erection, maintenance, and operation of a college, directing that "as many poor white male orphans, between the ages of 6 and 10 years, as the said income shall be adequate to maintain" should be admitted to the college, and naming the city of Philadelphia trustee to administer the trust. The Supreme Court held that because the city of Philadelphia was the named trustee of the trust fund the testator's wishes could not be carried out. That the trust fund would have to be used for the benefit of Negroes as well as for the benefit of whites. This is another example of the Supreme Court's attitude of discrimination against white citizens for no apparent reason other than that they are white.

As late as June 24, 1957, the Supreme Court set aside the verdict of a jury finding a Negro guilty of the crime of rape. His victim was a decent white woman. The assigned reason for the Court's action was that the arresting officers took too much time investigating the crime before carrying the defendant before a United States Commissioner. The crime was committed late one afternoon while the victim was alone and unprotected. The defendant was not arrested until the next afternoon. When first questioned he denied his guilt. Later he agreed to submit to a lie detector. The operator of the machine was not readily located. Hence a delay of 2 hours, during which time the defendant was given food and water. Later the defendant confessed his guilt. The officers then attempted to reach a United States Commissioner for the arraignment of the defendant the day of his arrest. Failing to locate one, the defendant consented to an examination by the deputy coroner. That official on examining the defendant saw no evidence that the defendant had been subjected to physical or psychological coercion. The defendant then repeated a prior confession; and the next morning he was carried before a Commissioner. The Supreme Court adjudged the investigating officers guilty of procrastination, citing rule 5 (a) of the Federal Rules of Criminal Procedure, which requires only that the arrested person be carried before the nearest available Commissioner without unnecessary delay. The Supreme Court thought the officers didn't get the defendant before the Commissioner fast enough. Therefore, the confessions were

ruled incompetent and the defendant's conviction was annulled. Thus the victim was remitted to another public airing of her sorrow, if indeed the Court left enough uninhibited evidence in the case to warrant a retrial of it. Here again is discrimination, and it is against the white victim of a ravisher.

Other cases could be cited to show an apparently fixed determination on the part of the members of the Supreme Court to recast our Government in a mold of their own design, but into which our constitutionally established form of government will not fit.

To my way of thinking, the great issue now before the American people is this: Shall we surrender our fortunes, our liberties and our futures, and those of our children, into the hands of a hierarchy of despotic judges that is bent on destroying the finest system of government ever designed by man and under which we as citizens have enjoyed the highest degree of political freedom and the finest standard of living ever enjoyed by any people, at any time, in any place, upon the face of the earth?

I do not know what decisions others may make, but, as for me, I hold that our form of government and our way of life are worth fighting for.

Two Hours To Die

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. THYE. Mr. President, there appeared in the news magazine of the United Lutheran Church in America, the Lutheran, an article headed Two Hours To Die. It concerns Hanns Lilje, who was to be hanged in 1945, but Americans set him free from a Nazi prison. This month he presides at the Lutheran World Assembly in Minneapolis.

Mr. President, the article is a most impressive one. It is one which bespeaks Christian courage. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO HOURS TO DIE

Bishop Hans Lilje is a short, stocky man of 58 whose mild appearance masks the strength of will and certainly of a man who has risked violent death for his faith.

As president of the Lutheran World Federation, Bishop Lilje is the chief official in the largest Protestant church on earth. He is also bishop of the Church of Hannover and president of the United Lutheran Church of Germany.

Today he's physically robust again. His round, full face, beneath a white-fringed bald head, is the picture of smiling health. His blue eyes reflect the peace and serenity of a man who has plumbed the depths of God's love.

It was different in April of 1945 when American soldiers entered Nuremberg and threw open the doors of the Nazi prison. There they found a gaunt and wan Hanns Lilje, chained in his solitary cell. Weak from hunger, black spots danced before his eyes when he tottered from his cot. His execution had been only a matter of hours away. But he was ready.

A fellow prisoner had whispered to him the procedure his Nazi captors would follow. He would be told to stand on a small stool and place his neck in a noose dangling from the ceiling. Then his guard would kick the stool away and leave. He would gasp his last strangling breath alone.

But Bishop Lilje, now in this country to take a leading part in the assembly of the Lutheran World Federation at Minneapolis, claims he never felt alone in the Nazi prisons where he spent 9 months during World War II.

The longer his imprisonment lasted, he says, the more evident it became that there was an unseen power present among him and the other churchmen imprisoned for defying the Hitler regime. One can pray, even with chained hands.

He spent hours every day in prayer and meditation. When execution of his death sentence seemed near, he spent another hour seeking courage. "I looked up to Christ in Gethsemane, and asked that my knees would not tremble," he says.

With the cheerful clarity of one who has ceased to cling to life, he could speak courteously to the jailer who clamped on his fetters, and even assist one particularly young SS guard who did not understand how to close a new type of handcuffs.

When the prison doors swung open to freedom, men shouted and wept for joy. Hanns Lilje stood silent. He tried to explain. The wall between the visible and the invisible had become very thin. Despite his relief and thankfulness, he was asking himself if his time of trial had done all that it should in cleansing, purifying, and giving him new strength.

"I realized," he says, "that the way back to life would be very long and difficult."

His first sermon after the liberation was not acceptable to his hearers. In the prison chapel itself he had tried to preach forgiveness, turning the other check. People were not ready for it.

His second sermon went better. This he preached in a packed church with the windows gone and the roof partly destroyed. Outside the gaping windows nearly a thousand more had gathered. After years under a dictator who told everyone where to go and what to do, people were floundering, dazed, lost. They listened to this man who had defied the Gestapo for the sake of the gospel.

"The only way out of darkness and misery," Hanns Lilje proclaimed, "is the road of obedience to God."

He returned to his administrative duties in the office of the Church of Hanover. He plunged into the welfare and relief work of the church. He felt the gospel message must be related to the problems with which people were living. Together with other church leaders, he disputed the view that in politics the church must be blindly loyal to the state. The church, these men said, has a responsibility in public affairs.

Speaking to 2,000 participants of a youth rally after his consecration in 1947 as bishop of the Church of Hanover, he gave a typical example of the postwar preaching. "The lingering grief and measureless need may seem to goad us to despair," he said. "For we know that we have also ourselves to blame. But there is divine forgiveness if we repent. This is God's way of helping us to make a new beginning, and to have confidence in the future. I am utterly persuaded that God through Christ is our unfailing help."

Bishop Lilje has been influential in formation of The Evangelical Academies, or discussion groups. To these, members of various professions—doctors, lawyers, teachers, students, housewives—are invited to talk over the problems of today's Germany.

Organizing a conference of journalists, he set the subject simply as "Hitler." Most of the best known newsmen in the country came—men who had fought Hitler and men who had sincerely supported him. They delved into the historical reasons for Hitler's rise, the shortcomings of both the conservatives and the socialists.

"We showed," says Bishop Lilje, "that many people who never took an active part in Nazi activities may have paved the way for the Nazis by neglecting the philosophical and religious issues involved."

The bishop is determined that the church must be a factor to be reckoned with in German life. It must stand in the forefront of public affairs and never again descend to live in a ghetto as was the case under the rule of Hitler.

He is determined, too, that in the heady new economic prosperity of Germany, moral consciousness shall not be usurped by creeping materialism. He labors constantly to keep the Christian spirit of love and sacrifice alive and to bring Christian principles into practical politics and everyday life.

Bishop Lilje speaks English, French and Italian as well as German (plus knowledge of Greek and Latin). But he insists on simple speech.

He not only knows English, but he knows American slang, too, and has entered into bull sessions with young GI's with the same success that he earns in councils with high-ranking officials.

The bishop's publications cover political, literary, philosophical, historical and religious themes. The Last Book of the Bible is an exegesis of the Apocalypse and was published when Hitler was at the height of his power. It will soon appear in the United States.

His Valley of the Shadow is a sober account of his 9 months' ordeal in Nazi prisons, with many penetrating observations on his jailers and his fellow prisoners. Luther Now, written mainly during the last years of the war, is an interpretation of Luther's significance for the world today.

He has been traveling almost constantly since his first trip to the Orient 30 years ago. His short, dark-haired wife, Frau Erna Lilje, quietly takes on many of his church administrative duties and keeps things moving in orderly fashion while he is away. Three children, two daughters and a son, are now grown.

The bishop has wit and adaptability that endear him to people wherever he goes on his travels. An audience that listened carefully to his serious address burst into unrestrained laughter when he cited the stock gibe against Christianity, "Although it has been here 2,000 years, the world is no better," and then capped it with: "There has been water on the earth for more than 2,000 years and yet one still sees plenty of dirty people."

Hanns Lilje was born on August 20, 1899, in Hannover, the Boston of Germany. During the First World War, he served as a private in the German army. Later he studied at the universities of Goettingen, Leipzig, Zurich, and at the Loccum Cloister.

Ordained in 1926, he returned to Hannover and served as a student pastor for a year. Then he became general secretary of the Student Christian Movement in Germany until 1935, traveling to India, Egypt, and the United States. In 1935 he became secretary of the Lutheran World Convention.

Visits to ecumenical conferences brought him to all continents. His linguistic gifts enabled him to act as interpreter of even the most difficult theological problems at big international church meetings.

Almost constant conflict with the rising power of Nazism marked these years of Dr. Lilje's life. By order of the political author-

ities, he was suspended for 6 months in 1933 as general secretary of the German Christian student movement. In 1938 he was barred from the province of Schleswig-Holstein. In 1944 he was forbidden to travel and to speak in public in the entire Reich.

Finally, on August 19, 1944, he was arrested by the Gestapo and imprisoned in Berlin. On January 18, 1945, he was sentenced by the People's Court on charges of high treason and returned to prison to await death. American troops liberated him on Hitler's birthday, April 20.

Two years after the Nazi regime collapsed, in the spring of 1947, he succeeded Marahrens as bishop of the church of Hannover.

Despite his informality when in America, Bishop Lilje preserves a dignified posture in Germany, wearing the most formal clerical garb and riding in a Mercedes Benz 300, manned by a very correct chauffeur. He expects always to be addressed as "Your Grace."

"You know this is not for me," he confides, "it is for the church."

Busy as he is with church affairs in his own country, Bishop Lilje works equally hard for world Lutheranism and for the whole Christian ecumenical movement. President since 1952 of the Lutheran World Federation, he is the highest-ranking representative of some 50 million Lutherans cooperating in the federation. The LWF unites more than two-thirds of the world's estimated 71 million Lutherans.

"We do not yet know," says Bishop Lilje, "whether the grace of God and the power of His Holy Spirit will use this worldwide assembly in Minneapolis as an instrument to revitalize the Lutheran Church. But if this happens it will be an immediate contribution to the Christian vitality of the church universal."

The Nursing Picture

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very enlightening article which appeared in the Boston Sunday Globe on August 4, 1957. The article follows:

THE NURSING PICTURE

(By Frances Burns)

The tall young doctor in the teaching hospital said that he wished the head of the nursing school would take a few students who weren't glamour girls.

"I thought when I looked down at our class today," he said, "that I never saw so many Powers models in my life. It's no wonder we can't keep any of them in the hospital afterward. Of course they all marry right away.

"It seems to me that it would make sense to go after some plain girls and keep 'em after they graduate."

His was just another voice raised in the chorus about the acute nursing shortage. It is a threnody heard through the cities today—as much in Massachusetts, which has more graduate nurses for its population than any other State, as anywhere else.

An associate talks about the man who was taken with a heart attack to a hospital and died before any nurse ever got to his bedside, so few were there to man the wing. Someone else was unable to get private duty nurses for an elderly father, frightened and sick as he was when returned to his bed after a serious operation. Voluntary hospitals complain that the girls they train are taken at higher salaries than they can afford to pay by veterans', State, and Army and Navy hospitals. But Govefnor Furcolo, on the other hand, the other day pointed to waiting lists of patients and empty beds at the Shattuck Hospital because of inability of the State to obtain nursing staff.

The State Employment Professional Nurses Registry last year placed more than 3,700 nurses in jobs, had calls for 700 private duty nurses a month that could not be filled. Hospitals advertise in the newspapers for staff and many a person who has had the problem of obtaining nursing help for some member of the family dropped in her lap by the doctor or hospital has wondered if she would have to go on bended knee to obtain it.

WHY NOT MORE?

Laymen and doctors, too, ask why more nurses aren't being trained to meet the increased number of hospital beds, the increased demand for nurses in industry, the increase in population with the inevitable addition at any one time to the number of sick, and the reduuction to an 8-hour day, 5 days a week for nursing which automatically multiplied the number needed for round-the-clock duty.

The answer is, says Massachusetts nursing authorities, that more nurses are being trained, though undoubtedly not enough more. In the 2 years between 1954 and 1956 practicing nurses in the country jumped from 401.700 to 430,000. At the same time there were another 300,000 to 400,000 who were trained but unable to practice because they were too old, sick, or had families that could not be left.

As for the glamour girls, Miss Ruth Sleeper, director of nursing and nursing education at the Massachusetts General Hospital, who has national and international experience and prestige in the field, smiles gently and says, "Take girls the day they come into training and they are not glamour girls. Scrub them up to show their own nice skins, let them brush their hair until it shines, under hospital regulations, and put them in uniform, and they're all beautiful. We had two cross-eyed girls. They were such nice girls and looked so nice that they were the first ones in the class to marry."

There are other factors that tend to develop personality, even if it's not to be called glamour. The young nurse learns self assurance when she is responsible for the lives of people older or younger than herself. She has started with good health, or she would not have been accepted. She knows that she is entering a career that she will have for all her life. And she is constantly thrown with people who are doing things.

It is the general practice today to permit girls to finish their education if they do marry while they are in training—time was when a girl was booted from a hospital staff the moment she headed for the altar—but few of them are lost permanently to the profession.

MARRIAGE DOESN'T STOP THEM

At 10- and 20-year reunions of nursing classes in the last few months practically everyone who did not have a brandnew baby reported that she was doing some kind of nursing, full or part time.

A graduate nurse married to a scientist moved with him to Washington where he had a new and important position with a university. When they made the change he said, "Now you have worked for 12 years, ever since we were married. We have come back here, and I hope you will stay home." She settled their new house and tried to stay home. One morning she went out to Bethesda Naval Hospital and returned with a job as assistant administrator. "I don't know how I am going to tell my husband," she said, "but I'm glad I've done this. By 8 o'clock in the morning I had the house all in order and an empty day stretching ahead * * * I could not stand it."

There are private wings in Boston hospitals that are being kept open by older married nurses who return for part or full time. The M. G. H has refresher courses for women who want to come back into nursing.

One of the difficulties encountered by hospitals and the nursing profession, terribly concerned as it is itself with expanding its numbers, is that of enlarging nursing schools to cope with greater numbers of students. For bigger schools call for more teaching staff, and more nurses trained to provide training on the wards for the girls. And that, say administrators, is the real bottleneck today.

MANY ENTER NURSING

All over the country 41 of every 1,000 girls graduating from high school are going into training for professional nursing. That isn't too bad, and if it continues as high schools bulge with the crop of war babies it will mean a considerable addition to the total of registered nurses, comments Mrs. Dorothy Hayward, spokesman for the Regional Nursing Council of the Red Feather Health Resources Advisory Committee. But it will call for more schools.

The United States Public Health Service already has provided a grant for a regional program for health services in Greater Boston. One plan is to set up an independent regional school of nursing which would use the facilities of a community college for scientific training and of five community hospitals, now without nursing schools, for bedside nursing experience.

The whole plan would take two, instead of the present 3 years, of training. This, point out nurses taking the down-to-earth view, would provide more bedside nurses, and would put further training for teaching and administration in the graduate class.

The Federal Government has made funds available for graduate nursing fellowships—299 this year. A scholarship bill in the General Court would make help available to girls going into collegiate nurse training, under which such institutions as Simmons, Boston University, Boston College, Radcliffe, and Tufts University provide degrees, with nursing diplomas from affiliated hospitals. But many people close to the problem think that more is needed—more scholarship help for girls enrolled in hospital schools, and Federal or State funds for more nursing schools.

Having experienced the blessings of the women in white for more than 75 years, the public's demands will, apparently, never be satisfied.

State Legion Backs Post on Negro Ban

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. RIVERS. Mr. Speaker, the left wing press and radio talk about segregation and intolerance in the South. The President and his assistant president, Mr. Sherman Adams, occasionally reflect on this alleged condition. However, a few days ago I was reading the Manchester Union Leader, of Manchester, N. H., under date of August 5, and I saw an article which said this, "State Legion Backs Post on Negro Ban." I know this brought sorrow to Mr. Sherman Adams and disappointed the Presi-

dent. It must have also caused the Vice President quite some embarrassment because we are led to believe that only these conditions exist south of the Mason-Dixon Line. I read the article and I agree with it 100 percent. To be sure, the American Legion which is involved was right and the law of the State of New Hampshire apparently was complied with. I include this article for those who are interested to read it. It only goes to show that one can be colored and not be recognized as a member of the superrace even by those who pretend to think that color means superiority. The article follows:

STATE LEGION BACKS POST ON NEGRO BAN

(By Robert J. Drury)

The William H. Jutras Post of Manchester acted properly when it refused to serve a Negro serviceman at the post taproom, the New Hampshire Department, American Legion, ruled here yesterday.

In a prepared statement issued after a closed meeting of the legion's executive committee, Dept. Comdr. William E. Sanborn said a "thorough investigation" disclosed the Manchester post was "conforming" to the rules of the post and the State liquor commission when it refused bar privileges to William Butler of East Elmhurst, Long Island.

"And further, there was no violation of the established policies and principles of the American Legion," Sanborn said.

Butler, a Reserve airman in training at Grenier Air Force Base, was refused service last month. The bartender admitted that Negroes could not obtain service because of a rule of the club.

Commander Sanborn's statement declared that Butler has the "reputation of being a troublemaker" and in 1956 got in trouble at a private Manchester club. Nowhere did the statement indicate Butler is colored.

MATTER CLOSED

The Legion official said the executive committee concurs with a statement issued by Comdr. Albert Plaisance of Jutras post and considers the matter closed. About 45 committee members attended.

The statement approved by the executive committee and issued by Commander Sanborn follows:

"In connection with the matter concerning one William Butler, of East Elmhurst, Long Island, N. Y., and the William H. Jutras Post, No. 43, Manchester, N. H., wherein said William Butler was refused bar privileges at the aforenamed post on July 19, 20, and 22, 1957, we find after having conducted a thorough investigation of the circumstances involved, it has been determined that said William H. Jutras Post, No. 43, was properly conforming to the rules of the post and the rules of the New Hampshire State Liquor Commission.

NO VIOLATION

"And further, that there was no violation of the established policies and principles of the American Legion.

"It is significant to note that during the summer of 1956 when this same William Butler was temporarily stationed as a member of the Air Force Reserve at the Grenier Air Force Base, he was involved in a controversy at a certain private club in Manchester and the Air Force base chaplain at Grenier succeeded in settling the difficulty.

"Information obtained by this committee from very reliable source from another State, among other things reveals that this same William Butler has the reputation of being a troublemaker.

NOT MEMBER

"According to Mr. Butler's own statement while being a veteran of World War II he never did and does not now hold membership in any American Legion post or in any other post of a war veterans' organization.

"We concur in the statements as contained in a signed press release dated July 25, 1957, over the signature of Albert Plaisance, commander of the William H. Jutras Post, No. 43, and insofar as the executive committee of the New Hampshire Department, the American Legion is concerned, we hereby consider the matter closed."

Bamboo—A Promising New Money Crop for Southern Farmers

EXTENSION OF REMARKS

OF

HON. W. KERR SCOTT

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, August 9, 1957

Mr. SCOTT. Mr. President, an article in the August issue of Farm Journal, entitled "Future Looks Good for Bamboo," presents a very concise picture of the potentials for bamboo as an agricultural and industrial product for the South.

I believe the article is worthy of the attention of other Members of the Congress. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUTURE LOOKS GOOD FOR BAMBOO

(by Jack Bickers)

President Eisenhower's Commission on Increased Industrial Uses of Farm Products wasn't just pipedreaming when it saw in bamboo a promising new money crop for southern farmers.

Farm Journal has just talked with scientists and pulp company officials in half a dozen Southern States. In general, they share the Commission's enthusiasm:

Bamboo grows much faster and yields 4 to 6 times as much pulp per acre per year as soft woods.

Harvesting could be almost completely mechanized as compared to individual cutting of trees.

It could possibly be as much as 20 percent cheaper to handle at the pulp mill.

It's better for certain specialty papers and for many papermaking uses.

It will grow almost anywhere that the average minimum temperature doesn't fall below 5 degrees. More than 50 million acres from Texas to Virginia appear adapted.

Then why hasn't bamboo caught on before now? Big reason seems to be an Alphonse-and-Gaston act over who'll make the first move.

Landowners hesitate to plant bamboo until they have an assured market. And pulp mills say it won't pay them to tool up for bamboo until they, in turn, are assured of sizeable plantings.

To get the ball rolling, the Commission has suggested that the USDA pay up to $30 per acre per year under the soil-bank program to get widespread plantings.

Spending that kind of money on a relatively untried crop apparently worries some lawmakers. But not Senator OLIN D. JOHNSTON, Democrat, South Carolina. "It would be just plain ridiculous and false economy for us to pass by such an opportunity for the South," he said. He plans to give the Commission recommendations full support in the Senate.

Years of research have already gone into bamboo, although it's a new idea to most of us. "Our Plant Introduction Station in Savannah, Ga., has been growing bamboo since about 1900," points out Dr. Carl Erianson, USDA chief of new crops work. "We know it has a wide variety of uses like fishing poles, furniture, and novelties. But none of these has been big enough to justify widespread plantings. We figured that it needed at least one big commercial use before it could be recommended as a new crop for the South."

With that in mind, they assigned independent researchers at the Herty Foundation in Savannah the job of trying out bamboo as a source of pulp.

"It's far better than pine for many types of paper—facial tissues and fine writing papers, for example," reported the Herty scientists.

"You can be sure that bamboo would be used for papermaking if a supply were available," says William L. Belvin, Foundation director.

"A while back, a vice president of a large paper mill was here and said, 'If we had a big enough stand to support a mill, we'd be ready to go into it right now.'"

Belvin emphasizes that bamboo is not competitive with pine, but rather a supplemental source of fiber. "It's no wonder crop," he says. "But when supplies are available and a few solvable problems worked out, it can be a valuable one."

D. A. Bisset, superintendent of the USDA's new plant farm near Savannah, spelled out production possibilities. Pointing to a 10-year-old timber-type bamboo test stand, he said, "We can get 6 to 9 tons of bamboo per acre per year from this kind of stand for the next 50 years by clean cutting ¼ to ⅓ of the acreage each year. Good pine stands for pulp will yield only about 6 tons per acre—and that's after 20 years of growth."

Besides growing faster and producing more tonnage, Bamboo will yield 4 to 6 times more pulp than pine.

Another big advantage: "Bamboo harvesting could be 95 percent mechanized. I'd guess it could be cut and put at the pulp mill for half the cost of pine," estimates Bisset.

Dr. E. P. Imle, USDA bamboo project leader, bears out Bisset's mechanization ideas. "We're trying a horizontal circular saw mounted on a tractor to clean-cut bamboo in strips. The cutter would be followed by a chipping machine and the chips baled in the field."

Imle figures the strip harvest method will give bamboo producers a crop every year, once the plant has reached maturity. "It'll probably be ready for first cutting after 3 years—maybe sooner."

You can't grow bamboo just anywhere. "All the researchers agree that it does best on clay loams and sandy loams in the Southern Coastal Plains and Piedmont section," says Dr. Imle.

You plant 1- to 1½-foot long rhizomes or 1-year-old nursery-grown plants on 25-foot centers. But after planting, mechanization can take over.

Bisset expects that "row or cover crops will be grown in the middles during the first and second years." A single plant will spread 4 to 6 feet in each direction by the second year. So it would soon fill the middles.

Three timber-type bamboos (the kind that'll be used for pulp) look good to researchers. All are planted at the Edisto Station, Blackville, S. C.

"We'll have 100 acres planted to timber-type bamboos pretty soon," says W. B. Rogers, superintendent. "While its main purpose is for harvesting and yield tests, it'll be available for planting materials, too."

But if the demand should develop very fast, plants will be hard to find. At least one timber type is available at the following nurseries:

Fruitland Nurseries, Augusta, Ga.; H. G. Hastings Co., Atlanta, Ga.; E. A. McIlhenny, Avery Island, La.; Reasoner's Nurseries, Brad-

enton, Fla.; Royal Palm Nurseries, Oneco, Fla.; Wilson Nursery, Gulfport, Miss.

All paper companies aren't ready to commit themselves to bamboo. Typical is one large Ohio papermaker's reaction: "We've looked into it and think it's a good source of pulp. But we wouldn't be interested in tooling up to process bamboo unless a large acreage were available."

Best chance that a large acreage will become available lies in the Commission's "growth incentive" plan. And right now, United States Department of Agriculture research workers are getting ready to give Congressmen an overall look at bamboo's possibilities. If reaction is favorable, you may be planting bamboo within the next few years.

National Cultural Center

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. WOLVERTON. Mr. Speaker, it is indeed unfortunate that the House on yesterday rejected the conference report providing for the construction of a national cultural center.

A group of public-spirited citizens, under the leadership of Mrs. Eugene Meyer, has worked long and zealously in behalf of this project and without expense of any kind to the Government. They deserve the commendation of all citizens for the interest they have taken in this all important matter. I trust that the action taken by the House so precipitously and under the stress of emotion will not discourage this splendid group of citizens, but that they will persevere with courage until provision is made by the Congress for the construction of this important and necessary facility that will add so greatly to our national prestige as a leader in things cultural.

In my travels in many countries throughout the world, I have been impressed with the emphasis so often placed in each of them upon the cultural side of their national existence and the buildings and other facilities provided for uses that enhance their cultural life. Today, our Nation stands foremost among the nations of the world in our achievement of things material. Is it not time that in the capitol city of our great Nation that we give evidence also to our adherence to things cultural?

We now have in our great city of Washington, as a result of the generosity of public-spirited citizens, museums of art, libraries, and other types of cultural facilities. All of these are the result of cultural-minded citizens. It is now time that we should have some evidence of a national character of our adherence as a Nation to things of cultural value.

The construction of a national cultural center as envisaged by Mrs. Meyer and the citizens who have labored with her would be a fitting answer to meet the need that exists for a national center where cultural gatherings, both national and international in scope, might meet and advance cultural interests among our own people and the people of other nations.

I trust that upon further consideration the Congress will accept its responsibility in this matter.

Murphy Army Hospital Should Be Retained

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very interesting news item concerning the Murphy General Hospital located at Waltham, Mass., which appeared in the August 1, 1957, edition of the Mattapan Tribune, the Roxbury Citizen, and the Hyde Park Tribune, newspapers published in Boston, Mass.:

MURPHY ARMY HOSPITAL SHOULD BE RETAINED

(By David Donahue)

As commander of Federal Employees Veterans Association, Post No. 18, Murphy Army Hospital, I was delegated to accompany Mr. Joseph S. McAteer, State commander of this association, to be present at a hearing in Washington, D. C., in connection with the retention of Murphy Army Hospital as a hospital.

Although the money covering the retention of this hospital for the fiscal year 1958, was actually included in the current budget appropriation to be used for no other purpose, and was accepted and approved by the House of Representatives, it was inadvertently not recognized by the Member of the United States Senate, who voted against the retention of Murphy to be retained as a hospital.

As a consequence, daily newspapers publicized "Murphy Army Hospital to close." However, due to the untiring efforts of Hon. JOHN W. MCCORMACK and Hon. EDITH NOURSE ROGERS, together with the able assistance of the entire Massachusetts congressional delegation, who recognized this discrepancy, a plan was devised to correct this technicality, and therefore, until such time as this piece of legislation is corrected, word has been received from the Department of the Army to the effect that Murphy Army Hospital will continue to function as it has in the past—patients will be received and accepted—outpatient service will be in constant operation—military personnel will not be transferred, and no reduction-in-force notices are to be issued to the civilian employees.

TRUE FACTS

May I present some true facts about Murphy Army Hospital:

This hospital occupies a 93-acre plot of well-elevated semirural land 12 miles west of Boston, and about 3 miles from the center of Waltham. Its 44 individual buildings are Georgian type in design of brick construction, and are all 1 story with the exception of the administration building, bachelor officers', and nurses' quarters, which are 2-story buildings.

All buildings are connected by enclosed heated corridors, excepting the motor pool, fire station, heating plant, and engineers' station, which are located on the rear outer circle of perimeter road surrounding the hospital. The main corridor alone is one-fifth of a mile in length. There is a chapel for all religious services, a post and medical library, theater, snack bar, post office, a post exchange, 2 large baseball diamonds, tennis courts, and other athletic facilities, and has 2 large dining halls for patients and duty personnel.

Murphy Army Hospital is equipped with the latest diagnostic and operative facilities for complete general medical and surgical care. An outpatient service is maintained for military personnel, widows and dependents of servicemen, and retired military personnel and their dependents.

Also, Murphy maintains a staff of prominent civilian professional men who serve this hospital as consultants. These doctors are all staff members from leading Boston hospitals, such as the Massachusetts General, Peter Bent Brigham, Harvard Medical School, Boston City, New England Medical Center, and St. Elizabeth's Hospital, and were assigned by the office of the Surgeon General. Medical care of the patient is the first consideration of our commanding officer, Col. Arthur J. Redland, Medical Corps., his entire staff of doctors, nurses, medical service officers, and the entire duty personnel.

The hospital is located in an area which was utilized by Waltham as a city park after World War II, but as time went on the park ceased to function. In October 1943 this park was chosen as a site for a new $2,500,000 Army hospital, and construction began immediately; the first post engineer arrived in February 1944, with the first commanding officer following, in April 1944. The hospital was activated in July the same year, and known as the Waltham Station Hospital; shortly thereafter it was redesignated the Boston Area Station Hospital. The name was again changed in September 1944 to that of the Waltham Regional Hospital, a class I installation under the First Service Command; finally, on May 15, 1946, it was redesignated as the Murphy General Hospital, and was known as such until, in keeping with the Department of the Army's policy in naming hospitals, on November 1, 1950, was changed to Murphy Army Hospital.

NAMED FOR ENLISTED MAN

This hospital is unique in that it is the only Army hospital named in honor of an enlisted man—Pfc. Frederick M. Murphy, born in Boston, July 27, 1918, who was wounded by rifle fire in a dawn attack in the Siegfried Line at Saarlauten, Germany. He refused hospitalization, went on as an aid and later lost a foot in a mine explosion. He continued to administer to wounded men, and finally was killed when another mine exploded. The Medal of Honor was awarded posthumously to Private Murphy.

Murphy Army Hospital is a class III installation directly under the command of the Surgeon General, Department of the Army, and at the present time has 150 operating beds which can be expanded in the event of disaster or another type of emergency to its original 550-bed capacity.

At the present time, the hospital plant, in addition to serving the needs of the Department of the Army Medical Service, also furnishes several hundred square feet of space to the New England district engineers, and to the United States Air Force for troop housing, office space, and classrooms.

THE WORD "ECONOMY"

After reading various articles released to the Boston newspapers, the writer finds the word "economy" promiscuously used as an excuse for closing Murphy Army Hospital. However, during my stay in Washington, I was informed that as soon as the hospital is closed, it is the intention of the Department of the Army to use the facilities for

the New England headquarters of the Corps of Engineers, who now employ approximately 1,000 in personnel.

How can the word "economy" possibly apply when you take into consideration the enormous amount of money necessary to convert the 44 individual 1-story buildings, originally planned to be used for a hospital, with average-sized wards, and present space utilized for offices by its various services, some with even a smaller amount of floor space than the wards, into an office building requiring large areas for office space to carry on efficient work performance?

In this readjustment, the word "economy" will mean added expense in the transferring of their personnel, now scatterred in various sections of Boston; the consolidation of their personnel alone will run into great expense, and, in certain instances, impose a hardship on many of their present employees living north and south of Boston, who will find it impossible to commute daily to Waltham.

Further, consider the expense involved in deactivating this hospital: Patients must be cared for and transferred to another hospital—military personnel must be reassigned, their families cared for, and their household goods crated and transported; some military personnel will be unable to have their families accompany them, creating further worry to the soldier. All hospital equipment must be broken down, crated and shipped to other installations. The paper work alone covering the reassignment or transfer of civilian employees will run into another great expense to the Government, so I ask you, what do they mean by economy?

The Federal Employees Veteran Association is primarily interested in retaining Murphy Army Hospital to care for our American soldiers, their widows and dependents, and for the retired personnel and their dependents who are rightfully entitled to receive the best medical attention at a modern Army hospital such as this installation provides, instead of being obliged to report to the Chelsea Naval Hospital, a 133-year-old antiquated institution, as this writer was informed when last in Washington.

It is our fervent hope that the Department of the Army will consider the true meaning of the word "economy" and realize that by deactivating this modern $2,500,000 Army hospital to spend another enormous sum trying to convert it into an office building is not true economy.

Detention of Members of Unlawful Organizations in Ireland

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the following statement by the Prime Minister of Ireland, Mr. Eamon de Valera:

DETENTION OF MEMBERS OF UNLAWFUL ORGANIZATIONS IN IRELAND

(Statement by the Taoiseach (Prime Minister), Mr. Eamon de Valera)

It must be clear to every thinking person that no democratic state could endure, that there could be neither ordered government, security, nor progress in any community in which groups could organise, arm, and equip themselves, assume powers of life and death and arrogate to themselves the right to make war at will, in defiance of the legitimate government and the basic law. Those against whom the Irish Government have had recently to take action were leading members of such groups, the activities of which had already led to loss of life and were likely, if continued, to embroil our people not only in war with another country but in a hateful civil war as well.

The government took this action only when other means had failed. These groups were appealed to and warned over the last 2 or 3 years by the head of the previous government, speaking for that government and for the several parties in it. I, as leader of the opposition, strongly supported the appeals and warnings; but all appeals and warnings were ignored, and armed activities, with loss of life, continued.

The constitution of the state, enacted by plebiscite, lays it down explicitly that—

"No military or armed force, other than a military or armed force raised and maintained by the Oireachtas (Parliament) shall be raised or maintained for any purpose whatsoever."

and that—

"The right to raise and maintain military or armed forces is vested exclusively in the Oireachtas."

It is further set out that—

"War shall not be declared and the state shall not participate in any war save with the assent of Dail Eireann."

Owing to our particular circumstances and the need to save the community from the action of illegal armed groups, a law was passed, some years ago, empowering the government, if need be, to restrain the members of such groups by placing them in detention. This law was necessary because armed groups are able, by intimidation of the private citizen and by secret conspiracy, to defeat the ordinary law processes, such as the production of witnesses and trial by jury. The ordinary processes are not designed to deal with private armies.

To prevent error, every one of the detained persons has the right of appeal to a commission, which consists of a judge of the circuit court, a justice of the district court, and a senior army officer. And, if the commission decides that there are no reasonable grounds for his continued detention, he has to be set free. Moreover, the government have made it clear that no one will be kept in detention who undertakes to respect the constitution and the laws and to refrain from being a member of, or assisting, any unlawful organization.

The partition of our country is one of the reasons put forward for the formation of the armed groups. Partition is indeed the source of many evils, and this is one of the worst. The division of our country was effected against the expressed wish of the overwhelming majority of the Irish people. But, if force were ever to be resorted to in an endeavour to end it, it would have to be force used with the authority of the government and the assent of Dail Eireann. To permit private armies, on the plea that they would end partition by force, could lead only to anarchy and chaos.

No party in Dail Eireann believes in force as a solution. They know that, even if a military victory were secured, the use of force would leave behind a nation more deeply divided than it is now. Our elections are of the freest and most democratic in the world. The constitution lays down that it is the people's right, in final appeal, to decide all questions of national policy. No minority group has the right to commit the nation to the use of force.

The suggestion is being made that, because 12 men were arrested whilst attending a Sinn Fein Executive meeting, and 11 of them detained, the government's action was directed against a constitutional movement. The persons detained were detained because they were members of one of the unlawful organizations, that is, one of those engaged in armed activities. They were, indeed, leaders in that organization. They included the so-called chief of staff and so-called adjutant general, as well as other members of what they call the army council. Can it be contended that by joining a movement, constitutional, or professing to be so, persons who are engaged in illegal armed activities in defiance of the constitution can secure immunity? If this were so, every group of lawbreakers has at hand an easy alibi and a ready sanctuary.

An Open Letter to the Sports Public of Western Pennsylvania

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. HOLLAND. Mr. Speaker, I believe that every Congressman should be acquainted with the power exercised by a baseball team in their control of broadcasting games.

WMCK in McKeesport, Pa., is trying to bring to the listening public a play-by-play description of the Brooklyn Dodgers ball games. The Pittsburgh baseball club objected.

Due to their objections, WMCK was not permitted to use the World News Service network to broadcast the Brooklyn Dodgers games. This, I believe, is exercising a monopoly of what the listening radio audience should or should not hear.

I have requested the FCC to take action in this case as the same thing may happen in other congressional districts as well.

This practice should be stopped immediately so that no future decision by a ball club or any other commercial enterprise may be made as to who should or should not broadcast.

The following is an open letter from the president of Mon-Yough Broadcasting Co., Inc.:

AN OPEN LETTER TO THE SPORTS PUBLIC OF WESTERN PENNSYLVANIA

MON-YOUGH BROADCASTING CO., INC.,
McKeesport, Pa.

What you are about to read may come as a shock and were it not for its tremendous importance to every sports fan in southwestern Pennsylvania, to the world of sports generally and baseball in particular, to Americanism itself with all that it stands for in the right of free enterprise instead of monopoly, protection of the small and weak against the power of the large and strong and the right of every American to choose what he will instead of having to take what may be forced upon him—were it not for all this and the thousands of inquiries as to why WMCK is not broadcasting Brooklyn Dodgers games this season, we would not make the following statements which we feel we owe the sports public by way of apology and explanation.

For many of its 10 short years WMCK has carried broadcasts of professional baseball including the Pittsburgh Pirates and Milwaukee Braves and in recent years has presented the games of the National League champion Brooklyn Dodgers via the World News Service network, Richard Eaton, president. During the years with the Braves and Dodgers we were not permitted to broadcast these games when the Pirates played at home or when the Pirates played these teams away from home. We did not like these restrictions because they curtailed our service to the greatest sports area in the world, but, realizing our relative unimportance, we complied.

This year, however, the restrictions were complete and the WNS network was informed that it might broadcast Brooklyn Dodgers games elsewhere, but not over WMCK in southwestern Pennsylvania, the Pirates' den, and, we are advised, the WNS network is broadcasting Brooklyn Dodgers games elsewhere this 1957 season including some cities where there are other professional baseball clubs.

Shaken up a bit but still full of desire to render this much-appreciated service to you we tried a direct contact with the Brooklyn Dogers management and finally, many weeks after the season had started, received an answer and were told that we could do the broadcasts on our own but at a price over 20 times greater than the previous years' figures on which we had suffered a loss because of the necessity, on many occasions, of carrying it as a sustaining program without a commercial sponsor. Since we're not pulling our punches we feel that you should know that the price quoted would have put out cost close to $1,000 per game which is more than 20 times greater, need we explain, than we could afford.

Feeling that the Brooklyn Dodgers club, through its contract with WNS, must or should have known that this arrangement, a belated offer, would squeeze us out completely in our attempts to bring the Brooklyn Dodgers games to you thereby limiting the area to Pirate broadcasts, we began to smell a rat slightly decayed and very strong, so strong in fact that our first impulse, in the interest of everything that is right and fair, was to bring suit against the Brooklyn Dodgers, the Pirates and a few others who would benefit by this monopolistic protection against grade A baseball and broadcasting of play-by-play.

However, believing that this type of action would be harmful to the sport (or is it a business? see congressional investigation) and not wishing to kick any opponent when he's already down or close to the cellar, we decided to write this letter of explanation, send a copy of it to the Congress of the United States as well as every Congressman in our area and rest our case.

Certainly we have not written this from selfish motives since the broadcasts were not money-makers; certainly we stand raedy to testify before a congressional committee if it will help to prevent a recurrence of such conspiracy toward monopoly or restriction of choice; certainly we shall testify fearlessly if called upon, for there can be no fear when one is right; certainly we are aware that we are fighting your fight and that it may harm us immeasurably, but we are willing to make this sacrifice if right will prevail, for, whatever the odds, right must prevail.

We'd sure like to be bringing these games to you now and we would if the powers that be will permit us to rejoin the WNS network as before. Incidentally, how sweet it would be to be able to hear broadcasts of the Brooklyn Dodgers games right now with the race so close and the action so exciting.

Sincerely,

ROBERT M. COX, *President.*

A Resolution

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. BROWN of Ohio. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Ohio Department of the Disabled American Veterans charging the Administrator of Veterans' Affairs with failure to follow legislation approved by the Congress in connection with the payment of compensation to veterans disabled as a direct result of war service:

Whereas the Ohio Department of the Disabled American Veterans, charges the Administrator of Veterans' Affairs at Washington with failure to follow legislation approved by the Congress of the United States in connection with the payment of compensation to veterans disabled as a direct result of war service, the Administrator admitting he has already terminated or decreased the benefits of more than 40,000 of these veterans, claiming that the original grant was in error; and

Whereas this is the result of a continuing review of compensation claims of the wars' disabled orginally granted under the provisions of Public Law 144, approved by the Congress of the United States; and

Whereas if a field office of the Veterans' Administration fails to remove or reduce the compensation of a sufficient number of wartime disabled veterans through error, the efficiency rating of that office is considered unsatisfactory and that office is ordered to conduct a second review; and

Whereas less than 40 percent of these cases of wartime disabled veterans have been checked to date and at the current rate those removed from the rolls will exceed 100,000; and

Whereas printed instructions, explaining this policy change of the Veterans' Administration have not been issued, this new policy being distinguished by the use of the term, "medical principles"; and

Whereas survey teams are sent from the Washington office of the Veterans' Administration to the many field offices to impart verbal instructions; individual claims files are called to Washington and the adverse decision rendered there affects the benefits of many other wartime disabled veterans; and

Whereas the Washington office of the Veterans' Administration has called all regional office adjudication officers to Washington for a period of instruction, and have admitted that the review of claims of wartime disabled veterans is in compliance with recommendation No. 69 of the report of the Bradley Commission; and

Whereas the rating boards at the regional offices of the Veterans' Administration are now hesitant to approve the claim of any veteran on war-incurred disabilities, the new theory of "medical principles" providing a tool for arbitrary denial; and

Whereas if the Veterans' Administration was sincere in its program of correcting alleged errors, it would also review the claims of wartime disabled veterans previously denied; and

Whereas the Veterans' Administration at Washington proposes a complete revision of the rating table to evaluate disability, 132 pages of material having already been issued with recommended changes; and

Whereas the drastic reductions being proposed are shocking and would materially reduce or discontinue payment of benefits to the wars' combat veterans; and

Whereas the ratings for muscle damage from gunshot wounds and other causes are to be slashed, along with most other disabilities, and to qualify for total disability the service-connected conditions must be so serious that the veteran be housebound, with similar reductions and eliminations of compensation across the board; and

Whereas the considered changes are said to be based on medical advances, but actually are the result of pressure from medical associations, the Bureau of the Budget, and the report of the Bradley Commission—with military pressure; and

Whereas if the present recommendations are carried to a conclusion, the number of wartime-disabled veterans receiving benefits will be reduced to a mere token, and the beginning of the end of this Nation of ours meeting its obligation to the wars' wounded and disabled among the enlisted personnel; and

Whereas no effort has been launched to interfere with the high rate of retirement to the disabled career officers, it appearing that the laws enacted by the Congress of the United States no longer apply to the Veterans' Administration: Now, therefore, be it

Resolved, That the Disabled American Veterans, Department of Ohio, assembled in the city of Toledo, July 26–28, 1957, at its 36th annual convention charge the Administrator of Veterans' Affairs with violating his oath of office in scrapping Public Law 144 of the Congress of the United States and replacing the law with recommendations of the Bureau of the Budget, medical groups, and military pressure in the conduct of reviewing claims of wartime disabled veterans; and be it further

Resolved, That we charge the Administrator with a violation of the moral code of decency in his proposal to destroy the present rating schedule and to replace it with evaluations that are grossly inhumane; and be it further

Resolved, That the DAV appeal to the Members of the Congress to cause an investigation to determine the Administrator's fitness for office; and be it further

Resolved, That we request the Members of Congress to enact legislation that will freeze the present or 1945 rating schedule and prohibit any change in the evaluation of disabilities of wartime disabled veterans, without the approval of the Congress.

KENNETH M. ROBEY,
Commander, DAV, Department of Ohio.

Prayer Given at Barratt O'Hara Diamond Jubilee Dinner

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. BOYLE. Mr. Speaker, on the occasion of the recent diamond jubilee dinner in honor of our good friend and distinguished colleague, the Honorable BARRATT O'HARA of the great second district of Illinois, the Reverend John Hayes delivered a prayer of such thoughtfulness and phraseology as to warrant inclusion

in the Appendix of the CONGRESSIONAL RECORD. I ask unanimous consent to insert the following:

PRAYER GIVEN AT BARRATT O'HARA DIAMOND JUBILEE DINNER

(By Rev. John Hayes)

Invisible, patient, permanent Ruler of men and the universe, to whom all of us, Congressmen and simple citizens are subject, to whom are subject even the chairmen of Senate committees, yea also in the long run Cabinet officers, the teamsters' union, and the National Association of Manufacturers, we hope this gathering meets with Your approval. You are aware of our purpose. It is surely patriotic, for we mean to extol honest and earnest public service, as exemplified by our chief guest, Mr. O'HARA. It may well be that this demonstration of appreciation will inspire other men, willing and able, to seek public office and fill it with similar distinction. The willing, as You know, are in ample supply; the able are not quite so plentiful. Please arrange that in future the combination turns up more frequently.

We think You will like the note of fraternal regard and affection which permeates this assemblage. I quote Your own words, "How good it is for brothers to dwell together in peace." We mean to express our fraternal regard not only for our kindly Congressman, but toward one another here present, men and women of diverse ideas and ancestry but all planted by Your loving care in this interesting land. We know You expect us to work together for the common welfare, as peaceably and efficiently as our limited intelligence permits. We are sorry this ideal has not made a deeper impression on us, but we do have it on our minds tonight.

We know You will be pleased by the nonpartisan character of this celebration and will overlook as not wholly uncalled for any slight emphasis upon the advantages of the party to which Mr. O'HARA gives his allegiance. May we explain that this apparent partiality tonight is purely in the interests of his greater comfort and happiness.

We hope that our activities here tonight are, to borrow a phrase dear to Congressmen, in pursuance of Your wishes, Your plans for our city and Nation, Your honor and glory. Nothing matters so much as to please You, for it is only in pleasing You that we promote our true well being and happiness. Forgive us our proclivity to place other things before You, to wit, our prejudices, the accumulation of cash, our own comfort and ease, the fear of taxes.

We know You will welcome a few requests. Grant the Congressman health and vigor to serve us until he reaches the age, say of Senator GREEN. Help us in Chicago and in the Nation to solve justly, wisely, and peacefully the racial conflicts which disgrace us and deserve Your anger. Enable us to provide for all Americans not racing cars and color TV but the material means to a good life, and instill in all of us an appreciation of and longing for the good life, a life suitable not to the well-fed automatons but to rational beings, yes, to the sons of God. Give us the generosity and energy to contribute all within our power to the welfare of other peoples, especially to the impoverished and downtrodden. Make us collectively an instrument of Your peace, peace at home, peace among nations.

Direct us, our friends and our enemies to avoid the calamities which we are so capable of bringing upon one another and mankind. By ourselves, despite the good intentions of many leaders, we are lost. We humbly beg Your assistance on an unprecedented scale.

The Modern United States Navy

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. HOSMER. Mr. Speaker, as the world changes and the international forces within it assume new proportionate relationships, the role and function of United States seapower becomes increasingly important. This was discussed editorially by the Long Beach Press-Telegram last Monday as follows:

THE MODERN UNITED STATES NAVY

The vital role of the United States Navy in free world defense is underscored again by the decision to withdraw all American ground combat forces from Japan.

Weakening of our ground position in the Far East, or elsewhere, has to be offset by our power afloat.

Land bases in other countries are subject to the hazards of politics and negotiation. Seagoing bases are not.

The waters of the oceans are international. A United States ship at sea is a United States possession, capable of moving to all parts of the world. It can be sent into the Formosa Strait as evidence of American strength to prevent precipitate action by Red China. It can be sent to the shores of the Mediterranean as a timely warning to Near Eastern nations against lighting the war fuse there.

Hence, the Navy has been growing in importance and power instead of declining in an age in which, according to some prophets, every weapon of warfare except the airplane was supposed to shrivel into insignificance.

Adm. Arleigh A. Burke, Chief of Naval Operations, recently summarized in this way the modern Navy's function and its ability to perform:

"Naval power with its tremendous combination of swift mobility, long range, and concentrated firepower is an indispensable element in projecting and applying the total military strength of the United States anywhere in the world. Naval power is America's first line of defense today.

"To defend America your Navy has developed new and startling weapons. Many of these weapons are operational on the ships of the fleet today; many more will go aboard in the near future.

"These weapons, called guided missiles, help keep the modern Navy first in mobility, ready to move and strike quickly and easily anywhere on the globe, above it, or under the sea; first in authority to deter aggression with capabilities tailored to the occasion—from crushing a single enemy feint, to unleashing tremendous retaliatory striking power."

Far from being a competitor of air power, Navy power has adapted to the air age. Limited fuel capacities make it necessary for most aircraft to take off and land at bases in the general region of their operations. The Navy furnishes the floating bases from which aircraft, as well as missiles, may be launched.

The importance which the Government attaches to the naval arm is shown conclusively by the fact that plans are going forward to create a fleet powered by nuclear energy. The first step was the production of atomic submarines. The second was the recent decision to construct the cruiser U. S. S. *Long Beach*, which will be the first nuclear-powered warship in history. More will follow.

All of this has special meaning for coastal cities, such as those along the shore of southern California, which have often wondered what the future holds in store with regard to naval installations and ship traffic in their harbors. The answer is that there will be a Navy for a long time; and its prospects are for development, not deterioration.

Better Than Nothing

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. COAD. Mr. Speaker, with great seriousness, we have all approached the civil-rights issue in order to form a better America. We are coming to very crucial days on this matter, for further decisions must now be made in this regard. A realistic approach to this situation is expressed in an editorial which appeared in the Des Moines Register August 6, 1957. The editorial follows:

BETTER THAN NOTHING

President Eisenhower apparently is seriously considering a veto of the civil-rights bill unless the House and Senate agree to revision of the Senate-passed jury-trial amendment.

The President's concern is partly centered on the fact that the Senate version of the bill calls for jury trials in criminal contempt cases involving Federal matters in addition to the right to vote. Litigation in labor, antitrust, and many other cases would be affected. The President declared in his statement last week that the provision would "weaken our whole judicial system." An administration spokesman claims it would "create chaos and utter confusion" in enforcement by Government regulatory agencies.

The House should look into this and consider limiting the jury-trial provision to cases involving voting. To eliminate the jury-trial amendment altogether could well mean no civil-rights legislation. Southerners would be certain to filibuster. Even if such a filibuster could be broken, it's questionable whether a law imposed on the South against bitter southern opposition could be as effective as the present Senate version.

House and Senate leaders also should clarify, if at all possible, a section of part I of the bill. This appears to subject newsmen to fine and imprisonment for using testimony taken before the Civil Rights Commission, set up under the bill, without consent of the Commission. The provision is interpreted differently by different Members of the Senate. It ought to be made clear that no punishment for publication, in violation of the first amendment, is intended.

Overall, supporters of civil rights need not be disheartened by the bill as it emerges from the Senate. It is weaker than it might have been, but it provides substantially better machinery than exists now for guaranteeing the right to vote.

The gloomy comments on the bill by Senate Minority Leader Knowland, Vice President Nixon, and President Eisenhower should be taken in the context of the American system of politics—and the 1958 and 1960 elections. The opportunity exists in this Congress to make a real gain toward voting equality in the South. It should not be lost.

A Cry for Correction

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. BUDGE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Examiner entitled "A Cry for Correction," dated July 29, 1957:

A CRY FOR CORRECTION

The American Bar Association, meeting in London, heard a comprehensive report from its committee on communism concerning the recent decisions of the United States Supreme Court that have left the country with weakened defenses against subversive conspiracies.

The report reflected the same conclusions about the decisions that the Examiner and other Hearst newspapers have previously voiced, mainly that the Supreme Court has ignored the basic right of a free Nation to protect itself against its enemies. As the committee said, the vital thing involved is the right of self-preservation, which is mankind's first law.

Speaking charitably, the report said the Court had fallen into the error of "oversealous protection of theoretical individual rights."

But with the greatest vigor and clarity it outlined the program of legislative correction which has been made necessary and urgent by the succession of judicial errors.

For example, the "condition of nakedness" in which the Court has left the unevaluated files of the Federal Bureau of Investigation will be a source of continuing national danger until there is legislative remedy.

The stripping of the investigating powers of Congress in the whole field of subversion is another of the byproducts of the distortions in which the Court has indulged.

The denial of the right of the Federal Government to make itself free of security risks in the so-called nonsensitive employment classifications totally disregards the gravest of national dangers.

The shielding of deportable aliens against questions concerning their guilty associations makes the whole Nation defenseless against those who would destroy it.

For utter idiocy, what is so far afield from judicial wisdom than the Court's interpretation that the Congress did not intend, in its enactment of the Smith Act, to prohibit the advocacy and teaching of the overthrow of the American Government by force and violence?

Granting all the needs for the safeguards of traditional rights, the committee said the greater need still remains for turning back the enemies at our gates.

The basic thing the Supreme Court has overlooked, in the sound opinion of this invaluable report, is this fundamental fact:

"It is equally necessary that the executive and legislative branches take effective action to gird our our country against Communist infiltration and aggression."

This is the important thing that the Supreme Court has not only left undone, but has gone so far toward leaving undoable.

The duty of correction is where the bar association's committee says it is, squarely in the hands of Congress.

The Trust Territory of the Pacific Islands

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. SAYLOR. Mr. Speaker, among the many tasks we as Members of Congress have, is the legislative responsibility for the Trust Territory of the Pacific Islands. Located in the western Pacific, north of the Equator, is the Trust Territory of the Pacific Islands, which on July 18, 1947, was assigned by the Security Council of the United Nations to the United States for administrative purposes.

By Executive order of the President, responsibility for the civil administration of six of the districts of the trust territory was placed in the Department of the Interior, while the seventh, Saipan District, is administered by the Department of the Navy.

Each year the High Commissioner of the trust territory files a comprehensive report with the United Nations Trusteeship Council and appears in person with his advisory staff before that body to discuss progress made in the various phases of his administration during the preceding year.

The present High Commissioner is the Honorable D. H. Nucker, a long-time resident of Altoona, Pa. Commissioner Nucker is doing an outstanding job in the trust territory and merits our commendation for his foresight, patience, and diplomacy in this delicate task.

I include for our reading Mr. Nucker's statement presented before the United Nations Trusteeship Council on May 28, 1957. I particularly call attention to several of the achievements of his administration during the past year; increased copra yield, remarkable progress in the settlement of land claims, rehabilitation of displaced Marshallese on Rongelap, Kili, and Ujeleng, and the assumption of major responsibilities by Micronesians in the fields of education, health, and in the municipal governments:

THE TRUST TERRITORY OF THE PACIFIC ISLANDS

It is a privilege to appear before you as Special Representative of the Trust Territory of the Pacific to report on the significant events that have occurred in the progress of our administration since July 1, 1956. This is the third time I have had the honor and pleasure of serving in this capacity, and I look forward, as I have in the past, to receiving the benefits of the views and recommendations of the members of the council.

My report this year has an added significance. This July 1957 marks the completion of 10 years of administration of the Trust Territory of the Pacific Islands under the auspices of the United Nations trusteeship agreement and thus affords me the opportunity to report briefly on the progress that has been made in this formative period of our administration.

Ten years ago, the area we call the Trust Territory of the Pacific had but recently emerged from the devastation and ravages of war. Although the area had been secured in 1945, it was a slow and hard struggle to repair the damages wrought by the war. The local economy, which had rested largely on copra, had been destroyed, the transportation system was almost nonexistent, schooling had all but disappeared. In almost all areas of activity a fresh start had to be made.

To rebuild the shattered economy was not an easy task. The difficulties of reclamation, then as well as now, went hand in hand with a geographical handicap perhaps unparalleled elsewhere in the world—that of a small population scattered on tiny islets spread over a segment of ocean surface as vast as the United States of America or the continent of Australia.

The progress achieved by the people of Micronesia in the past 10 years takes on added significance in view of the handicaps faced.

ADMINISTRATION

Among the most important events of general administrative significance this past year was the completion of the conversion program of our American employees to the competitive civil service. Except for a small number of employees who hold temporary jobs, such as those associated with our special construction projects, our American employees now enjoy the advantages of permanent civil-service status.

A minor administrative change came about by the upgrading of our personnel and supply sections to the status of separate departments. Headquarters staff was augmented during the year by appointment of a new deputy high commissioner, an internal auditor, and a general assistant to the chief counsel. Two new positions of considerable significance, that of a training supervisor and a full-time counselor for our Micronesian students in Hawaii, were added to our staff as part of our program of training Micronesians for responsible jobs in the administration of their area.

Our permanent Micronesian personnel increased somewhat during the year, from 1,437 to 1,539, the increase being brought about by sizable additions to our agriculture, education, and public-health departments. In addition, 318 Micronesians were employed in our special construction program.

During the year two top administrative positions formerly filled by American staff members were taken over by Micronesians; these were the finance officer position in Palau district, and the land title officer in Ponape district. A minor milestone also was reached in Palau, where for the first time a senior secretarial position was filled with a qualified Micronesian clerk-typist. Within the next few months it is anticipated that the position of finance officer in Truk district will also be filled by a qualified Trukese applicant.

ECONOMIC ADVANCEMENT

In the field of economic advancement we have continued to encourage the Micronesians to develop their natural resources within the limits of their own capabilities. We are giving encouragement by way of technical aid and advice, by providing substantial financial assistance to local concerns, and by sending qualified Micronesians abroad to acquire know-how in the fields where economic development appears promising.

We have loaned close to $400,000 to Micronesian-owned trading companies under a development loan program and shall continue this process within our financial capabilities and the needs of the Micronesian

companies. At the present time, some $275,000 is invested in such development loans.

During the past year 2 additional trading companies were chartered by the administration, making a total of 9 such limited stock trading companies now in existence throughout the territory. It is significant that these two new companies came into being in districts where there is stiff competition from large and well-established companies. This type of competition is to us a healthy sign, since by its existence prices of consumer goods will be kept at a reasonable level for the local population.

Copra remains the backbone of the economy of Micronesia and the major source of income for most of our Micronesians. The war completely shattered the copra industry throughout Micronesia, and in 1946, after the area had been secured, only a few hundred tons of copra were exported. By 1948 copra exports had risen to 8,000 tons annually, yielding about $700,000 in revenue. In 1956, 12,300 tons of copra were exported at a value in round figures of $1,250,000. This year we expect to export an estimated 13,300 tons with a revenue return of $1,400,000. The quality of our copra has continued to improve; 82 percent of all copra sold this past fiscal year was grade 1, 14 percent grade 2, and only 4 percent was grade 3. Through our coconut technical expert, a training program in better methods of processing copra was launched, and we anticipate that an even higher proportion of grade-1 copra should result in the future. By the institution of more regular field-trip service, a better quality of copra also is resulting since deterioration due to inadequate storage is being prevented.

In spite of the fluctuating world market for copra, we are able through the copra stabilization fund to maintain a constant price of $110 a ton to the producer for grade-1 copra during the year. This necessitated using only about $30,000 from the copra fund, and at the end of last month a balance of $890,000 was in the fund. During the year we also instituted a program of regular and widespread reporting on the operation of the copra stabilization fund in line with a recommendation made by the 1956 United Nations visiting mission. At regular intervals financial statements of the fund, as well as simple explanatory reports on what the fund is and how it operates, are released. These are translated into the various vernaculars and are given wide distribution. The public reaction to this regular reporting has been intense since it allows the small copra producer to anticipate his potential income at the time of harvest and enables him to plan for his family needs more systematically.

Trochus production during fiscal year 1956 rose to over 400 tons, producing an income of roughly $350,000. While the tonnage of trochus shell harvested during the 1957 season dropped to approximately 350 tons, the season proved to be the most profitable one for the people of Micronesia. A top price of $1,160 a short ton brought in a revenue of over $388,000, or $38,000 more than last year. The 1956 trochus season revealed that there was need for changes in the conservation program in some of the districts, and accordingly the Trust Territory Code is being amended to allow each district to establish its own conservation program.

During the past fiscal year handicraft income dropped somewhat. Uncertainty of supply and inadequate marketing have kept income from this source down. Currently one of the largest trading companies is planning to open a Micronesian handicraft store in Guam as an outlet for handicraft from all over the Territory, and handicraft income is expected to increase with this new outlet.

An appreciable increase in the production of vegetable produce in Rota and Saipan districts came about during the past fiscal year. Income from this source rose to $95,000 in 1956, an increase of about $17,000 from the previous season. The forthcoming year should see an additional increase as the result of improved commercial shipping service by a Saipanese-owned shipping company. This regular service, plus better marketing arrangements, should stimulate the fresh-vegetable produce business for the people of Siapan, Tinian, and Rota.

AGRICULTURE

We have continued to strengthen our agricultural programs since agriculture is the chief economic activity of our people. In the last 2 years our American agricultural staff has been more than doubled, and specialists in the fields of coconut development and marine biology have been employed. After a long search we have been able to recruit a much-needed specialist in plant diseases and now have a plant pathologist on the staff. Our training program for Micronesian agricultural assistants has been stepped up. We now have 178 Micronesians employed in this field, an increase of 25 over last year.

Two Micronesian students now are working for agricultural degrees at the College of Agriculture at the University of the Philippines, and several of our students in Hawaii are specializing in agricultural courses.

As part of our long-range program to introduce new cash crops, 3 members of the Agriculture Department, an American and 2 Micronesians, spent part of this year studying cocoa planting, harvesting, and processing methods in Costa Rica.

Our staff fisheries biologist continued to concentrate on the supervising of the trochus harvesting program. Experimental work in trochus planting started, and better plans developed for the conservation of this valuable shell resource. The staff fisheries biologist also gave attention to the planning of a subsistence fisheries program for the territory. As a first step in the establishment of this interdistrict program in subsistence fishing, 3 young Micronesians, 1 from Palau, 1 from Ponape, and 1 from Saipan, participated in a special 3-month fisheries training course at Noumea, New Caledonia, under the auspices of the South Pacific Commission. Two of these trainees will be sent this June to Honolulu, where for several months they will get additional training and experience as trainees assigned to one of the fishing boats of the Pacific Ocean Fisheries Investigations, an adjunct of the Fish and Wildlife Service of the United States Department of the Interior. Upon completion of this training, we plan to use these two Micronesians as the nucleus of an interdistrict subsistence fishing demonstration team. We are currently recruiting a qualified American fisheries staff man to head this team. Through the development of a program of subsistence fishing we hope to enable the Micronesians to better utilize the valuable resources of the sea.

The improvement of subsistence crops has been accelerated. Each district center has a functioning agricultural station, field nurseries, and an extension service in operation. Our animal improvement program has as its goal the improvement of the quality of the present Micronesian animal strain. Purebred swine from Hawaii were introduced into each district this past year as breeding stock.

In the higher islands where pasturage is available, cattle breeding for improvement of stock and production of meat is being stressed.

The work of the staff coconut expert has been concentrated on a coconut rehabilitation and replanting program and a demonstration program for better copra processing. Mother palms have been selected and coconut nurseries established in all districts. Supervised coconut plantings also have been started in each district and special demonstration plantings started in areas that need intensive coconut rehabilitation work.

The cocoa plantation in Palau, the coconut plantation in Metalanim in Ponape, and the experimental atoll research station in Jaluit in the Marshalls have expanded and increased their programs.

Work continues in the battle against insect pests and diseases that attack the food and money crops of the area. The first assignment of our new plant pathologist will be to investigate taro and breadfruit diseases in the Palau and Marshall districts. The fight against the rhinocerous beetle goes on in Palau. The agriculture department has intensified a cleanup program, and our entomologist continued experimental work with the predatory scolia wasp. The scolia wasp now appears to have successfully weathered its first stage, and in the past year we have been able to introduce the wasp in the larval stage to areas where coconut trees are still being damaged and killed by the coconut rhinocerous beetle. Although elimination of the rhinocerous beetle has not yet been achieved, we have now progressed in its control and extermination to the point where large areas, formerly pest ridden, have been effectively cleared. A large-scale program of replanting of coconut trees in such pest-free areas is underway.

Our agricultural program this year has been one of consolidation and of slow but forward expansion in extension and experimental agricultural work.

CLAIM SETTLEMENT

At long last we are able to report that appreciable progress was made in the settling of claims, particularly land claims in the territory.

All outstanding land claims in the Truk district were settled during May and June of last year.

A property claim by a Belgian family in the territory was brought successfully to conclusion, and a mutually satisfactory settlement both to the administration and claimants resulted.

It is with great satisfaction that we can state that the settlement to the people of Bikini and Eniwetok has taken place, both to their complete satisfaction and ours. The people of Kili accepted the sum of $325,000 and the use rights to the island of Kili and three islets in the Jaluit Atoll and gave in return the indefinite use rights of the atoll of Bikini to the trust territory government. At the request of the Kili people, made through their elected council, a trust fund of $300,000 was established in their name. The annual income of this trust fund will be equal to their present copra income so that the Kilians, from henceforth, can look forward to at least a doubling of their present yearly income. The first installment of the interest from their trust fund will be ready for payment in July of this year.

The people of Eniwetok, now resident on Ujelang Atoll, accepted in exchange for the indefinite use rights of Eniwetok the sum of $175,000 and the use rights to the atoll of Ujelang. Again, as in Kili, the people, through their council, requested that $150,000 of their money be placed in a trust fund. The first installment of interest on this fund will be paid to the people of Ujelang this July.

Work leading toward the settlement of remaining outstanding land claims continues. We expect to settle all remaining land claims which resulted from World War II in the Palau and Yap districts this calendar year. In the Marshalls sizable claims of this nature still remain to be settled. Certain of these at the present time are being negotiated; others still need additional cadastral surveying to determine settlement. We are now in the process of carrying out such necessary surveying.

At last year's session I reported that it was my earnest hope to be able to settle during

this year the Japanese bond and postal savings claims. Administrative difficulties appeared that did not make this achievement possible. We have now set aside money for the settlement of these claims, and plans are under way to effect its use to wipe out this small but important type of claim. When this is done, a source of irritation will have been removed from the minds of the Micronesians.

With the settlement of the land claims in Truk, the Etscheit claims in Truk and Ponape, the settlement of the Bikini and Eniwetok land claims, most of the major land claims have been met. We shall continue to exert every effort to settle all remaining land claims in the near future.

We have made progress also in releasing land to Micronesians. During the year the administration received title to the island of Ulul from a Belgian claimant, and plans are now underway to give the Trukese residents of the island title, through our homestead program, to the land on which they live. The island of Imiej in the Jaluit atoll, which had become public property, was homesteaded to its former owners. In Palau over 1,300 acres of public land on the island of Babelthuap was deeded to one of the municipalities for its use. As mentioned above, the use rights to the island of Kili, the islets of Jabet, Jar, Boklaplap, and to Ujelang atoll were transfererd from the Government to Micronesians during the year.

DISPLACED MARSHALLESE

A most important event shortly is to take place within the territory—that of the return of the Rongelapese to their home atoll of Rongelap. This is an event long looked forward to by the people of Rongelap and equally so by the administration. Rongelap atoll has been determined to be safe for habitation. This month a new and complete village is being constructed on Rongelap; houses, a school, a church, a community building, a dispensary, canoe sheds, and cisterns are being built. Adequate financial resources have been set aside so that a gradual readjustment to their previous subsistence pattern of life will come about without any hardship to the Rongelapese people after their return to Rongelap. A voice-radio station will be established to permit ready contact with our Marshalls district radio network.

The periodic annual medical reexamination of the Rongelapese and Utirikese carried out only 2 months ago demonstrated that they are in fine health and that no lasting effects of the radioactive fallout can be perceived. In addition to the overall medical check on the entire group, five representatives recently volunteered to undergo special refined testing at the Argonne National Laboratory near Chicago. These special tests supported the general examination results that the people had recovered fully and were in excellent health.

We have continued to give special aid to the economic, agricultural, social, and political problems of the people of Kili and Ujelang through our special Kili and Ujelang projects. The former isolation of Kili effectively has been broken by the operation of the Kili boat, the *Libra*, during the past year. This 50-foot auxiliary schooner has accelerated the economic and social progress of the Kilians. Copra production has increased, the Jabor facilities on Jaluit are being utilized, and the islets of Jebet, Jar, and Boklaplap are being cultivated. A truly integrated community is emerging on the island of Kili.

The people of Ujelang also have made an excellent adjustment to their new home. The outstanding success of the Marshallese project manager at Kili led this past year to the establishment of a similar post at Ujelang. Introduction of new food crops, the establishment of a coconut nursery, and the upgrading of local animal stock were among the main activities of the Ujelang project manager during the year. The Marshallese agriculturists of Kili and Ujelang participated in the recent agricultural conference at Guam, and I have been advised that their reports on their respective projects were among the outstanding features of this conference.

Better logistic support for Ujelang was achieved during the year through a more frequent field-trip schedule. Field-trip ships now regularly call at Ujelang once every 3 months. This coming year the installation of a voice-radio link is planned so that emergency communication with the district center at Majuro or Ebeye will be possible.

EDUCATION

One of the most outstanding developments in the past 10 years in the territory has been the growing consciousness on the part of Micronesians as to what public education is about and their acceptance of responsibility in supporting such a program. While the Japanese had instituted a limited public school system for island children, the war completely disrupted this school system and few of the children of school age in 1944 had had the opportunity of attending school for any appreciable length of time.

The first school in Micronesia was reopened in the Marshalls in 1944. Today 197 separate schools are operating in the Trust Territory, comprised of 158 public elementary schools, 20 nonpublic elementary schools, 7 public secondary schools, and 12 nonpublic secondary schools. Last year there were 7,952 children enrolled in the public elementary schools, 1,433 in the nonpublic elementary schools, 820 in the public secondary schools, 495 in the nonpublic secondary schools, and 135 in Pacific Islands Central School, our highest public secondary school, making a total of 10,835 students attending schools in the Trust Territory. Preliminary estimates for the past year indicate that the student enrollment has climbed to over 11,000 students this year.

Increasingly, Micronesians are taking over both the administration and the management of education. One Micronesian is district director of education, and five intermediate schools now have Micronesian principals. Each of the main districts have Micronesian superintendents of schools. In the five districts which still have American directors of education, the role of these Americans largely has become that of advisers to the local school boards and the Micronesian superintendents and principals of the schools.

With the except in the PICS staff we have continued to use our American teaching staff as teacher trainers. Each of our main districts has two or more teacher trainers who devote full time to teacher aid and training. It is our aim that at least one of these teacher trainers devotes the major portion of his time to the improvement of education in the schools away from the district center or on the remote off islands.

Local community support of education has climbed steadily in the past year. In three districts now the district legislative body has undertaken to pass legislation setting minimum salary standards for elementary-school teachers and centralizing payment of all elementary-school salaries. Every district now possesses functioning school boards which are playing active roles in determining educational policy for their respective communities.

New elementary-school buildings have been constructed. Some of these have been completely supported by the local community itself, others have been built through our grant-in-aid project. It can be reported in all sincerity that this administration's oft-stated policy of turning over the main responsibility for elemetniary education to the local community is producing notable results. I will grant that elementary schools on our remote off-islands sometimes fall short of the goal we desire. By and large, the community-sponsored schools that have developed elsewhere reflect a degree of interest and participation in education that is true and strong for the reason that the community itself has underwritten the school, its teachers, and its program.

Through our program of teacher training, the providing of more and better textbooks in the vernacular, the support of new school construction through our grant-in-aid program, the administration shall continue to give every aid and encouragement to this truly grassroots system of elementary-school education.

This past year has seen the planning of an additional public intermediate school. By next June Kusai Island of Ponape district will have a complete public intermediate school, the first such intermediate school to be established outside the district center. We are supplying the materials for construction, the teaching staff, both American and Micronesian, and the upkeep of the school. The Kusaiens for their part are supplying the land, part of the materials, and all of the labor. Through joint enterprise the seventh public intermediate school in the Territory will come into existence this coming year.

In 1956 the Pacific Islands Central School completed its first year as a full-fledged 3-year secondary school. A completely revised curriculum more responsive to the needs and interests of Micronesian youth was instituted.

Building plans for the new Pacific Islands Central School plant on a large site in Ponape were prepared during the year and preliminary work started. The building site area was cleared, roads put in, water lines laid. Preliminary estimates are that at least three major buildings will be ready for occupancy by the fall of 1958 although it now appears that it will be 1959 before the new plant will be completely finished. When this new plant is opened, it will afford opportunities also for a more practical curriculum, especially in the fields of agriculture and technical training, as well as allowing us to increase measurably the overall student enrollment.

An ever-increasing number of students are going outside the trust territory for higher education. Ten years ago only a handful of students had managed to go outside the Territory for schooling. In 1956, 225 students were studying outside the Territory. While the majority, 157, were attending secondary schools in Guam, 37 were studying in Hawaii, 16 in the Philippines, 11 in the United States, and 2 in Suva. This number appreciably increased this current year. Six years ago, other than the medical and dental students at Suva, Fiji, only 1 trust territory scholarship was granted for higher education. Last year 15 trust territory scholarships were granted. This forthcoming year we anticipate the starting of an additional scholarship program designed to give full degree university training to a select group of outstanding students.

In all districts the education department and health department have joined forces in developing a broad program of health education. A Trust Territory-wide health book is being planned for publication this next school year. A joint program between the district education and agriculture departments has been under way for the past few years.

The development of educational materials adapted to the local cultures and printed in the local vernaculars is being encouraged. Three of our districts have small printing presses for such purposes. So great is the demand for materials of this type that this past year we requested a specialist from the South Pacific Commission to make a survey of our local facilities for such reproduction work. It is anticipated that this report, which will be available within the next month, will be of significant value to us.

PUBLIC HEALTH

The safeguarding of the health of the Micronesians remains one of our primary concerns. Tuberculosis continues to be a serious health problem and is receiving major attention. This past year a BCG vaccination program was launched, and testing and vaccination is going on in all districts. The actual in-patient load of active tuberculosis is somewhat les than last year because of persistent treatment of cases at our hospitals and dispensaries. Fewer active cases of leprosy this past year confirm the value of the careful treatment now in process at the district hospital level. Continuous vaccination against smallpox and tetanus is carried on as a preventive medicine activity in all districts.

The inclusion of better trained Micronesians into the public health field remains the underlying and motivating factor of our overall public health program. Ten years ago there were but two qualified Micronesian medical practitioners in all of Micronesia. Since that time we have produced through training programs at Guam, Suva, and Hawaii 26 fully trained medical practitioners so that today 28 qualified Micronesian practitioners are on the job throughout the area. In addition, seven medical students currently are at the Central Medical School in Suva. Three of our medical practitioners presently are getting advanced medical work in a hospital in Hilo, Hawaii, and a fourth will go later this year.

In 1947 there were no dental practitioners in the Territory. Today 19 fully qualified Micronesian dentists handle all the dental work throughout the districts under the direction of an American interdistrict supervisor.

All the territory sanitation work now is done by qualified Micronesian sanitarians directed by an American interdistrict supervisor. One of the outstanding Micronesian sanitarians last year was sent to Honolulu for specialized training and is slated to take over the interdistrict sanitation position, now filed by an American, when he returns from training.

For the last 2 years the Marshalls district has had a Micronesian director of public health, and for the past year all medical services in Ponape district have been handled completely by Micronesian staff.

The two new hospitals at Ebeye and Kusaie will be headed by licensed Micronesian medical practitioners and supported by services staffed by qualified Micronesians.

Advanced training is being given in other fields. One laboratory technician is in training in Hawaii, as are two graduate nurses. Dental graduates are received advanced training through the Navy in Guam. This year plans call for an advanced course in anesthesia for selected trainees at the Guam Naval Hospital. During the year a refresher course in sanitation was completed for 34 employees.

We have increased our hospital units from 7 to 8 this past year and by the end of the calendar year anticipate that a ninth complete hospital unit will be operation in Kusaie. A similar out-island hospital unit for the Jaluit atoll is in the planning stage and is scheduled to be in operation in Jabor by 1958. New hospital construction has been completed at Rota, Truk, and Yap. Partial construction has been completed at Koror, and construction is being done at Ebeye and Kusaie.

The nursing school now is in its second year of operation in its new location at Palau and has intensified its basic-training program.

Training continues for out-island health aids at the district hospitals.

A general improvement in health conditions can be reported.

POLITICAL AND SOCIAL ADVANCEMENT

Ten years ago Micronesian participation in self-government had just begun. One advisory congress body had come into existence in July of 1947 in Palau, and a district council had been organized and had held one meeting in the southern Marshalls.

In the area of municipal government, half of all municipal magistrates in 1947 still held office by reason of hereditary position or by administrative appointment. Today, out of our 102 municipalities, 97 or 95 percent now elect their magistrates as well as other municipal officers. Only in five outlying islands of the Truk district do we still have magistrates that serve through hereditary status and there only because the conservatism of the island people still is strong enough for them to insist upon honoring their hereditary leader by conferring upon him the role of magistrate.

A great stride in the sphere of municipal government this past year has been the planning of a systematic program of chartering municipalities throughout the territory. Two municipalities of the Saipan district already are chartered, and four major municipalities in other districts are slated to receive charters by the end of June. Our target dates for chartering the remaining 96 municipalities are not completely determined, but according to our present program 9 additional major municipalities should be chartered by the end of this calendar year, at least 16 additional ones by the end of June 1958, and 5 more by the end of fiscal year 1959.

The chartering of municipalities must of necessity be accompanied by an educational program, and accordingly the outlying islands will be brought slowly into the program. We hope though that by the end of 1960 most of our major municipalities will be operating under formal charters.

Today the Palau Congress holds the distinction of being the most highly developed of all our district congresses, having been the first to achieve full legislative powers. This past year 2 regular sessions and 1 special session were held. Among the outstanding resolutions passed by the Palau Congress this year were a law governing inheritance procedures, a budget in which the district congress will take over full cost of paying elementary-school teachers, and the establishment of a special scholarship to train abroad a qualified Palauan in boat building.

In Truk district, the fifth annual magistrates' conference met last November and amongst other acts voted to establish a 2-year district scholarship to be supported by district tax funds. These local government-sponsored scholarships are of great importance since they demonstrate the interest and concern of the older, elected officials to give modern education and training to their young people. The magistrates' conference also unanimously voted to set up a district-wide congress with representatives elected directly by the people. Members of the trusteeship council who were present at last year's session may recall my statement that we hoped to have a district-wide congress in Truk by 1960. I am most pleased to be able to announce at this session that I have been advised by my staff that an official charter for a Truk district congress is almost ready for signature and that, if implementation goes according to schedule, the first session of the Truk district congress should be held this autumn, 3 years ahead of our previous target date.

In the Marshalls district, the former district council long since has become a full-fledged bicameral congress. Eleven resolutions of the sixth annual session received approval. These ranged from new taxation laws to a law subsidizing payment of out-island health aids.

In Ponape, the Ponape Island Congress held its fifth meeting passing resolutions on taxes, inheritance laws, trochus season, and other district affairs. This island congress also is studying ways and means to develop a true districtwide legislative body, the realization of which we hope may take place this forthcoming year.

The first chartered town in Micronesia, Kolonia, came into existence in April 1956. During the year the town elected a council, a mayor, and other officers. The town council in cooperation with an administration grant-in-aid program is building a town council building. This will be the third such government building to be built in the Ponape district through such a joint pooling of administration and community resources.

In Yap, the Yap Island Council during the year met at regular intervals and established new taxes, raised salaries for Yap elementary school teachers, and gave financial aid to a community-sponsored dormitory for the intermediate school male students.

In the northern Marianas an important event of the year was the first meeting of the newly established Tinian Municipal Congress. On Saipan the Saipan Municipal Congress met for its regularly scheduled sessions.

On a territorywide scale the political highlight of the year was the week long micronesian Leaders' Confrence held in Guam in August 1956. Delegates were elected by representative bodies in each district to attend this conference. The success of this conference, where common problems were discussed, led to the scheduling of a similar interdistrict conference for this coming August. Already, in all of the districts, congresses and councils have elected representatives for the forthcoming conference, and even now each delegation is busy conferring with local groups on problems to be discussed. While the conference of last summer and the forthcoming one this coming August cannot as yet be described in terms of a territorial council, they nonetheless are a basic step in the development of interdistrict political consciousness.

The growing interest of districts in common problems was well demonstrated this past year by the increasing number of observers who attended congress sessions in districts other than their own. At each such session this past year 1 to 2 observers from the other districts were in attendance. We are encouraging and aiding this pattern of exchanging observers within the limits of our transportation system.

A number of other joint conferences in Guam between administration staff and Micronesians occurred during the year. In September 1956 a trust territory judicial conference was held. Micronesian representatives, judges, and clerks of courts from each district participated in the adoption of a series of resolutions making recommendations for improvements in the work of the courts.

The annual meeting between administration officials and managers of chartered trading companies included for the first time Micronesian delegates chosen by the Micronesian boards of directors. These delegates took an active role in working out mutual problems faced by the trading companies and the administration.

During the most recent conference, that of the trust territory agriculturists, held only last month in Guam, two Micronesian agricultural project managers who were in attendance participated fully in all aspects of the conference.

We shall continue this policy of bringing representative Micronesians into trust territory conferences where problems that intimately concern the Micronesian people are under discussion.

The administering authority through actions such as these is attempting to set out a number of intermediate targets under which progressive growth may take place in the field of political advancement as well as in economic and social advancement.

LOGISTICS, COMMUNICATION, AND SUPPLY

The improvement of logistic support to our district centers and within the district area remains one of our major concerns. The enormity of our area, the small and scattered land units, makes this a logistic problem of considerable magnitude.

We have attempted in the past few years to achieve this improvement through the accomplishment of these major goals: That of placing the total responsibility of providing service between the outside world and the trust territory in the hands of established shipping firms; the gradual turning over of intradistrict shipping to qualified local companies or individuals; and lastly, to limit the role of the administration in the area of shipping to that of interdistrict ship operations.

The achievement of the first goal, that of turning over our outside shipping to established firms, is well on its way. Majuro, in the Marshalls, has been developed as a world port of call, and a well-known commercial line has been loading and unloading cargo there since 1954. During the past year this commercial shipping service was regularized so that ships now call there at the rate of 1 ship approximately every 2 months.

The turning over of intradistrict shipping to qualified Micronesian companies is of necessity a slow process. The cost of replacement shipping continually is rising, thus making the acquisition of new vessels prohibitive for private enterprise within the territory. Through a liberal loan policy we hope to enable qualified local companies gradually to move into such intradistrict shipping. In two districts, that of the Marshalls and Saipan, significant progress has been made in this field by local companies. In the Marshalls the purchase of a station vessel, made possible by a loan from the administration, augmented a local company's shipping service to the extent that it now handles 50 percent of all intradistrict shipping needs of the Marshalls area. Currently the administration continues to furnish the remaining logistic support for the district, but this, we hope, can be reduced gradually as the local company is able to increase its service.

In Saipan local businessmen raised $30,000 and the administration advanced $25,000 to organize a corporation which bought out an American-owned shipping company which has served the district for the past several years. Originally purchased to serve the islands of Saipan, Tinian, and Rota from Guam, the ship owned by the corporation has been chartered by the administration for field trips to the northern islands to pick up copra. Commercial cargo between ports on Guam, Rota, Tinian, and Saipan is carried on this vessel.

Our other districts have yet to move into this field of endeavor on any appreciable scale, but we shall continue to give every aid and encouragement to local desire to do so.

Through our fleet of amphibious SA–16 planes we have continued to provide weekly air service to each of the five main district centers and regular monthly service with frequent extra flights to the district of Rota. These planes also are used from time to time on emergency medical flights between outlying islands and the district center and between the district center and headquarters in Guam. Saipan is served by twice-weekly flights by Navy logistic aircraft.

We have continued to strengthen our radio communication system. This past year has seen the establishment of a net control center at Truk district center. From our Guam headquarters, voice contact is maintained with each of our districts. Each district center in turn is linked with a network of out-island stations. Four years ago only 5 such outer-island radio stations were in existence, currently 18 are in actual operation, and 4 additional stations are scheduled for installation within the next few months. By the end of this calendar year, 22 out-island radio stations manned and maintained by Micronesians themselves will be in operation throughout the trust territory. Through such a network we are able to provide emergency medical aid as well as to provide information to islanders on our field-trip ship movements.

In the Marshalls district a medium-powered broadcasting station, run and maintained by the Department of Education, is on the air for 3 hours each day from Monday through Friday. Through it the education department sends educational aid to elementary schools on the out-islands and the departments of public health and agriculture have regularly scheduled broadcasts.

This station also broadcasts the movements of our station vessels as they proceed from one atoll to another. This now enables Marshallese to better correlate the harvesting of their copra so as to prevent deterioration due to uncertain length of storage. The local trading companies have reported an upsurge in both quantity and quality of copra as a result in the past year.

Our training program to equip Micronesians to take over the maintenance and operation positions of our communication system has been accelerated. Of the 53 persons regularly employed in our communication department, 42 are Micronesians holding positions as qualified radio operators, radio mechanics, radio mechanic helpers, and communication clerks. In each of five districts the American communicator has a training program for his Micronesian employees. In one of our district centers the communication center is being operated successfully on an interim basis by the Micronesian staff while the American supervisor is on a special assignment. For 6 months of the past year all interdistrict repairs of an electronic nature were carried out solely by our Micronesian staff. One of the Micronesian radio operators currently is receiving specialized training in Honolulu. Our American communicators now are used only where a position requires extensive training, education, and experience not yet acquired by a Micronesian communicator. We are attempting to give our local communicators such training and education as rapidly as possible.

CONSTRUCTION

This past year we have carried out a complete reorganization of our public works division both on a district and headquarters level. This reorganization has enabled us to eliminate a dual supply and maintenance setup and will make for a more efficient construction operation.

While the achievement of an adequate physical plant will still require an intensive construction program for the next 6 years or so, progress is being made in every district. Eight hundred thousand dollars was expended for new construction last year, and a like amount will be used this present year. Work continues on permanent facilities such as powerplants, new hospital construction, administrative housing, warehouses, and harbor and dock installations in all districts. Road improvement is underway. This construction program will be continued this coming year.

CONCLUSION

I have attempted in this brief report to sketch in broad strokes the significant progress made in the past 10 years by the administering authority as well as to cite certain of the chief accomplishments of the past year. I shall endeavor to the best of my knowledge to clarify any details on aspects of our program as may be requested during the question period.

Looking back over the 10 years since the trusteeship agreement went into effect, I feel we have moved forward on all fronts, slower perhaps in some instances than might have been desired but always toward one primary goal, that of making Micronesia a better place for people to live in as Micronesians. We have at the same time tried to equip them with the knowledge and skills they will need to meet the inevitable change that contact with our modern Western World has brought about in their lives. The steady progress made in training Micronesians to take over positions of authority is seen in the ever-increasing number of top positions that are being filled by qualified Micronesians. We confidently look forward to a continuation of this program.

The Micronesian leaders, both those schooled in the old traditional ways and those emerging younger leaders trained under our tutelage, deserve commendation for the manner in which they have absorbed and assimilated concepts of self-government, of economic and social advancement, and the way in which they have passed on these concepts to their people. Our task is made easier by the caliber of leaders with whom we work.

The administering authority has been guided always by the realization that the Micronesians have a heritage of old and tried traditions and had developed a way of life that had served them well on their isolated islands long before we appeared on the scene. We shall continue to respect their way of life while aiding them to acquire the tools and techniques they must have to meet the changing conditions of their modern world.

I am deeply grateful for this opportunity to present this report. I will be pleased to receive the comments of the members of this council as well as to present any additional information the members may desire in connection with this statement or our annual report.

Veterans' Group Views Status-of-Forces Agreements

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mrs. GREEN of Oregon. Mr. Speaker, the emotional outburst against the status-of-forces agreements, ignited by the Girard incident, at times has taken on ridiculous proportions. Recently I received a letter concerning this issue from Mr. George D. Dysart, regional director of the Portland Area Council of the American Veterans' Committee, which merits the commendation of all Americans for the fine sense of civic responsibility this organization has exhibited. Under unanimous consent, I insert in the RECORD the following excerpt from this letter:

Because of the many expresions of opposition to these agreements which are being voiced these days, including the expressions of a number of veterans' organizations, I thought you would be interested in knowing that following a full and detailed discussion of the Girard case and of the status-of-forces agreements in general at its last

meeting, the Portland Chapter of the American Veterans Committee adopted the following policy statement:

"We endorse this Government's recognition of the jurisdiction of each nation over nonduty offenses committed within its territory by troops of other nations stationed there. We commend the recognition of this principle of sovereign equality to other governments—particularly the Soviet Union, whose occupation of satellite nations has been in complete disregard of the rights of such nations. We believe that our Nation has an obligation to American servicemen not to send them in peacetime into an area where it cannot assure them basic fairness and due process in connection with any acts they may be alleged to have commited there. We believe that the NATO and similar status-of-forces agreements provide assurances and that American servicemen have received satisfactory treatment under these agreements. We urge continued congressional surveillance of this matter, but we oppose the reckless criticism of these agreements that has been voiced in and out of Congress."

I hope that you will continue to resist efforts to attach a bow amendment on this subject to any foreign aid, defense, or other legislation, and also that you will vote against House Joint Resolution 16.

Larger Tax Revenue Share Needed

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include a very straightforward and truthful statement of the real facts that have been prevalent for a long time that appeared in the Evening Tribune, of Lawrence Mass., on August 6, 1957:

LARGER TAX REVENUE SHARE NEEDED

The revelation that Massachusetts is paying $1.34 in taxes to Uncle Sam for every dollar it receives in Federal funds is not as startling as it appears. This has been going on for years.

It ranks 10th in the United States in Federal taxpayments, shipping over $2 billion to Washington last year alone. This is not unusual because Massachusetts is loaded with industry.

It is 37th in its return on the tax dollar, away behind many Southern and Western States.

Transfer of some tax-revenue sources to the States is essential in checking the trend toward big government, a House Government Operations Subcommittee studying Federal-State relations was advised not long ago.

Shifting all Federal estate and gift taxes to the States would be a first step toward slowing the present trend.

Unless State and local finances can be built up, it appears ridiculous to talk about increasing State and local responsibility for programs now dominated by the Federal Government.

There is little question but that if they were given a larger share of tax revenues, State and local governments could resume financing and directing many Federal-aid projects.

The amount of Federal taxes Massachusetts residents are paying, in comparison with what is returned to this State by the Government, readily indicates that we are financing and supporting extensive Federal projects elsewhere. We are helping to greatly strengthen States already in competition with our industry, for one thing.

New England is conspicuous by its lack of flood-control financial assistance from Washington, while other sections of the Nation have been getting this gravy. This is one example.

It is time that Massachusetts received equitable consideration. Its State and local government tax burdens can stand relief.

A Vicious and Depraved Law

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jackson Daily News of Tuesday, August 6, 1957:

A VICIOUS AND DEPRAVED LAW

Even if passed in its present emasculated and watered-down form, the proposed civil-rights law means that an army of Federal bureaucrats will descend on Mississippi and other Southern States like a plague of locusts to intimidate the people and to demand that all Negroes, regardless of illiteracy, be allowed to register and vote.

That is the purpose of the law and it has not been cured by amendments.

That is the reason why Senator EASTLAND says he is unhappy about it and why he does not favor passage of the bill in its present form.

The proposed law is still as dangerous as a rattlesnake—even more so because it can strike without warning. Under its provisions that wild-eyed fanatic, Attorney General Brownell, could get a Federal court injunction against any person suspected of taking away the civil rights or voting rights of any Negro.

If you defy the Government when it tells you you must hire a "qualified" Negro as your secretary, or as a salesman, or as a lifeguard at the swimming pool, you would be tried on criminal contempt charges. Civil rights means perhaps the beginning of the end of State government and individual freedom in America.

That eminent Socialist turned Democrat, Walter Reuther, says, "The problem of civil rights in the United States is an international issue * * * the key issue in the world."

We must pass civil-rights legislation, the Reuthers, Harrimans, and Kefauvers profess, to keep Russia from exploiting against us our archaic horse-and-buggy conceptions of constitutional law, trial by jury and other freedoms guaranteed by the Bill of Rights.

Imagine! We must impress Russia, where the only people who vote are the 11 men in the Kremlin * * * where American soldiers with hands tied behind their backs were "tried" by being machinegunned into a common grave * * * Russia, which has butchered 20 million of its own citizens.

Or, are we trying to impress England, where aristocracy and colonialism still reign, South American countries where military dictators reelect themselves without opposition with guns? Or, maybe it's the African cannibals, or the untouchables of India we're trying to impress?

The same liberals whose hearts bleed so profusely for minority groups are now trying to kill the right to filibuster, which is the right of unlimited debate unless two-thirds of the Senators vote to cut off debate. The two-thirds requirement is adequate safeguard against the abuse of free speech and is in itself a protection of the minority.

Few northerners, even the worst bleeding hearts, if they knew and understood Deep South areas where backward blacks outnumber whites in some areas 2 and 3 to 1, would favor integration and full voting privileges. As in backward colonial dependencies, a people has to earn equality. To thrust it on them is to guarantee chaos. The beleaguered, back-to-the-wall South is not defying the Constitution, but upholding it. The Supreme Court, not the South, is guilty. The Court is guilty of unlawful and unconstitutional judicial and prejudicial tyranny. The New Dealers, modern Republicans, and crusading Justices are forcing us down the road to a centralized Socialist-labor welfare state, in which individual States and individuals are under the heel of an all-powerful Federal autocracy.

The civil-rights bill, even in its amended form, still denies fundamental rights guaranteed everyone by the Constitution: The right to own, manage, and enjoy property; the right to be presumed innocent until proven guilty; the right of appeal; and the rights guaranteed to the people and the States in the 9th and 10th amendments, limiting the Federal Government to the specific powers, except only those which the Constitution forbade the States to exercise.

We are chasing an illusion of equality under socialism instead of the reality of freedom under States rights and local self-government. Many have been deluded into a fuzzy morality which holds that equality and equal rights are the same thing. Forced equality contradicts the dream to excel; smothers individuality; restricts rights; removes freedoms; legislates mediocrity; waters down courage, thrift, self-reliance, and initiative, and nurtures tyranny. Civil rights, like socialism, doesn't level up, it levels down. An all-powerful Federal Government is a mass denial of freedom.

This land of the free was conceived by our Founding Fathers to preserve the inequalities of its people by a minimum restriction of their liberties. But this land, where anybody could be an eagle, is being forced to become a land where everybody must become dumb and spineless as an oyster.

Economy in Financing on the State Level

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. PELLY. Mr. Speaker, I note with much gratification the interest in Federal grants of the House Committee on Government Operations.

I had hoped to testify before this committee regarding the financing in full by the States of some programs now in part assisted by Federal aid. A study of the facts will show that in some instances a much more effective job could be accomplished on the local level if sources of income for such financing was relinquished to State and municipal governments.

The following editorial which appeared August 8, 1947, in the Tacoma

News Tribune points up the increasing interest in this subject:

TIME FOR A LOOK

The last two reports of Tax Foundation, Inc., should increase public interest in the President's suggestion of a national tax structure survey to see if some of the Federal programs cannot be undertaken more economically by the States.

This week's foundation report said the average $85-a-week American has to work a day and a half of every 5-day week before he has made enough to pay his taxes. Workmen in other brackets have a similar experience. Some work longer for the Government.

On Tuesday noon he is free to start making his own living.

An earlier report pointed up the secret nature of the taxes we pay. There are hidden taxes on almost everything we buy. Every operation along the production line is taxed until a dozen eggs contains 100 separate taxes, a suit 116, a loaf of bread 151. These don't show when we buy. All we are aware of is a sales tax or one special excise tax.

Are we getting enough Government service to warrant such burdens? Why not whittle the Federal bureaucracy down to a more decent size?

Farm Prices

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. HARRISON of Nebraska. Mr. Speaker, Representative POAGE professes in the August 1 CONGRESSIONAL RECORD, to be filled with fear and trepidation about the future trend of farm prices and cites certain statements of the Secretary of Agriculture to explain his jitters. But the Representative has thoughtfully left two key factors out of his discussion. First, he neglects to point out that farm prices had made a precipitous drop just before the Republicans took office. Second, he ignores the well-known fact that farmers, who must plan their operations months ahead, prefer stable prices, even though a bit on the low side, to fluctuating prices.

During the last 2 years of the Democratic administration, prices were far from stable. From a high point of 113 in February 1951, the parity level began to drop. By October 1951 it was down to 105; in April 1952 to 100; and by January 1953 to 95. In other words, within the short space of 2 years the Democrats let the parity level decline 18 points. Price "breaks" of that proportion can be disastrous. For example, farmers paid an average of $32.60 for feeder cattle in February 1951, but the average price they received for beef cattle in January 1953 was only $21.10. During those 2 years, many farmers feeding cattle forgot about profits. They concentrated on avoiding bankruptcy. Not all of them stayed out of bankruptcy.

The parity ratio in February 1953, the first full month under Republican stewardship, was 94. Since then prices have been about as steady as at any time in the history of American agriculture. Farmers have been able to plan with confidence, because there have been no precipitous declines. This conclusion is amply borne out by official Department of Agriculture statistics. From February 1953 through July 1957—a period of 54 months—the parity ratio has averaged 86. It was 84 in July 1957, only 10 points below what it was 4½ years earlier.

Mr. POAGE also failed to explain that the Republicans were saddled for over 2 years with unsound, unrealistic farm programs that had been carried over from the previous administration, which did nothing to improve the price record. Only now is agriculture recovering from its trip into an economic wonderland.

Representative POAGE's indictment of Secretary Benson's optimism can be dismissed at once. The Republican administration is happy that it has in Secretary Benson a man who can look at the bright side when the situation warrants—that he makes "cheery" statements. There was a time in this country—a time that has come to be known as the era of the New and Fair Deals—when the Government seemed to face a new emergency every day. During this era there was a premium on pessimism, not optimism, and the chap who could croak the direst predictions generally ended up at the head of the largest "emergency agency." In the past 4½ years of Republican guidance, the Secretary of Agriculture, the Secretary of Defense, the Secretary of State, and other Government officials have made many cheery statements, as Representative POAGE describes them. It has been an effective formula. As Representative POAGE must admit, the people of this country, under a Republican administration, have never had quite so much to be cheery about.

Opportunity Land

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. TRIMBLE. Mr. Speaker, we in Arkansas are proud of our State slogan "Land of Opportunity." That can easily be broadened to include our whole Nation.

Our country is great today because our young people can climb the ladder of success if they have the will to do it and can maintain the integrity which we have inherited from the pioneers.

If the time ever comes when they cannot do that, then our beloved land will go the way of the great nations of the past.

I am disturbed by the trend of our economic structure in recent years. I am not against bigness as such. We are a big country—the leader of the free world—and we need big business, big labor, and big agriculture as integral parts of the process of survival in this atomic age. However, bigness must never be allowed to swallow littleness as large fish swallow little ones in our lakes and streams. If business becomes so big that it becomes a monopoly; if organized labor becomes so big that it forgets the reason for its existence, the protection of those who labor; if agriculture gets so big that big farms drive out the small farmer—then we are in for a sea of trouble. Domestic monopoly is just as dangerous and deadly as government monopoly.

When our small-business people and small farmers, like the ones who helped make this country what it is, can no longer grow and prosper enough to sustain a home and family, but are forced to leave by the thousands for jobs elsewhere, something is wrong in the heartstream of this Nation.

May the time never come when big people are not little people, and when little people are not big people. Our Nation cannot survive without both.

Tenth in a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. MICHEL. Mr. Speaker, today I should like to insert the tenth in a series of editorial letters written by Mr. F. F. McNaughton, editor of the Pekin Daily Times in which he discusses at some length his visit to a collective farm in Russia.

The editorial letter follows:

[From the Pekin Daily Times of August 1, 1957]

THE EDITOR'S LETTER

(By McNaughton)

I got bawled out good by a Russian woman today.

She is a bull boss.

But I got a pic of the bull.

He weighs 2,530 pounds.

Also took pic of a truck that will lift 25 tons.

Then we took a long trip to a "collective farm." The state (the people) own the land. Much is dense forest, swamps, or mountains; but 1,632,500,000 acres of it is under control of 83,000 collective farms.

That's 20,000 to a farm.

The farm we visited today (named Lenin) was not average for it had only 2,030 acres and being near Moscow (almost big as New York), it was a dairy and truck farm. I believe the man who showed us about told us the exact truth.

Two hundred and fifty-six families live on it.

Three hundred and fifty people work on it.

Two hundred and twenty of them are women. Men were killed in war, or perhaps have jobs in city.

Their 125 cows averaged 4.3 bf. I saw one (Holstein) bull. Cows mixed. Some farms use artificial insemination.

They have 350 swine: 2,500 poultry; and although big grain or cotton farms use all

tractors, this farm has 80 horses because of extensive vegetable and fruit farming. They have 10,000 hot beds; 308 acres in garden; 218 acres in apples; many acres of berries. They raise own hay. Cows are never turned out to pasture.

The farm manager told us he has his workers in 8 brigades: 88 in vegetable brigade; 66 in garden; 86 in fodder; 40 in field; others in livestock, etc.

The manager confused me when he said that in 1956 he got an average of 410 unit days of work from each worker.

How 410 in only 365 days?

So he explained that jobs are rated; partly according to skill. Also, if a woman owned a horse and plowed a hectare (2½ acres) she got 3 unit days for the 1 day's work. (In Russia, you can exploit (make money off the labor of) a horse; but you cannot exploit a human.)

However, most plowing, etc., is done by tractors rented (for share of crop) from one of the many machine-tractor stations scattered over Russia. A skilled man comes with all tools and does your job quickly. Lenin usually rents 10 tractor outfits; uses them 100 percent on crops; 65 percent on potatoes, etc. The state takes its cut of the crops first; then the tractor station takes next cut.

How is farm worker paid?

One Lenin worker gets in cash 70 cents for each work day unit. Thus average worker who had 410 days got $287 in 1956 plus $410 worth of pork, milk, vegetables, etc.

In 1957 the workers aim to do better. They aim, on top of the $278 cash, to have $533 worth of produce to divide among themselves after all the initial cuts have been taken out. So, you see, after all, Russia makes use of the capitalistic "profit incentive." Difference is that in America, the thrifty farmer gets ahead by himself. In Russia, Stalin killed the thrifty farmers (kulaks), and the ones who are left now have to lift each other up, or pull each other down together. Since an average farm probably has 2,000 workers, there are many shiftless ones to pull down.

Of course other farms have different deals than "Lenin." Workers on a cotton farm get all their pay in cash. And while I think of it, I was told that farm "Dawning" has 17,500 acres and 2,000 workers. But when I showed them that that was a worker to every 9 acres, they told me they had only 1,000 workers. That's still a worker for each 17½ acres. Imagine an American farmer working only 17½ acres.

A thrifty farm hand can make money otherwise. He can let his wife work on the collective farm while he gets a job at the tractor station, or as a carpenter in town.

Or, he can make money from the acre that is allowed to each collective former at his home. He can keep a cow or two, hogs, poultry, and raise vegetables, berries, etc. What he gets from them is his; but he cannot hire a human to work for him. He can "exploit" an animal (horse or ox).

A collective farm man starts drawing a pension at 60; a woman at 55. If they keep on working, they get half pension anyway.

Remember, too, that clubhouse, recreation, library (they are great readers), free health care, free education (clear through university and medical or other professional school) for their children, and chances to win awards and medals and honors and travel, are all included in the collective farm package.

It is surely a come-up from the miserable life the poor peasant lived before 1917. For the kulaks, it would have been a comedown—but they've been shot.

Organization of the Unorganized

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the talk by Mr. Solomon Barkin, of the Textile Workers Union of America, which was part of the panel discussion on organization of the unorganized at the ninth annual meeting of the Industrial Relations Research Association.

The address follows:

ORGANIZATION OF THE UNORGANIZED

(By Solomon Barkin, Textile Workers Union of America)

Unionism in the textile industry is confronted by the stark realities of an eroding organized base in the North and employer resistance to further organization in the South where the major sector of the industry is now located.

The present textile union was formed by the CIO in 1937 and grew over the years to a high of 450,000 members. The greater part of the strength was located in the Northeastern States where well over 60 percent of the cotton-rayon, woolen and worsted, dyeing and finishing, and carpet industries were organized. Stabilized collective bargaining was substituted for the intermittent but recurrent battles with sporadically organized employee groups. Wage and benefit advances effected through collective bargaining lifted the industry from the low rung in the wage ladder. To reinforce the wage gains, the Textile Workers Union of America vigorously supported and activated the American labor movement in the fight for higher minimum wages under the Fair Labor Standards Act and Government Contracts Act and for higher minimum rates under the wartime regulatory procedures. In the years 1945–50, the benefits gained in the textile industry were on a par with those obtained for the remainder of American industry.

The postwar attrition in the cotton-rayon industry became evident immediately after the pent-up war demand was partially satisfied. Following the Korean incident, the rate of mill closings was sharply accelerated both in this and the woolen and worsted industry with the result that employment in the Northern States was halved. Union membership was also severely cut by these closings. Nor is this process of contraction of the northern textile industry at an end. In fact, the further shrinkage of the entire industry appears inescapable so that mills are closing both in the North and the South.

The maintenance or the growth of the union is largely dependent upon its success in organizing the southern sector, which employs more than 550,000 textile production workers. The union has applied itself assiduously and generously to this task, but the results have been meager to date. In the immediate postwar era, the CIO undertook Operation Dixie, but it succeeded in winning few elections and even fewer contracts. Subsequently, the TWUA took over the organizing drive, maintaining large staffs and conducting many campaigns. In recent months the AFL–CIO organization department has assigned staff members for the campaigns at two large southern textile chains, but the accomplishments have been limited.

In analyzing the problem of organizing the southern textile workers over these many years, we are impressed with the southern employers' ability to integrate and exploit their economic, political, and community power to mount vigorous, successful opposition to unionization. They have made a public, regional cause out of their determination to keep unions out of the Piedmont textile area. This opposition has continued and even extended during the postwar years as northern capital has taken over large parts of the southern industry and as mills have been merged into giant companies.

The corporations have exploited their economic power to destroy union following, to discriminate against union leaders, sympathizers, members, and following, to close mills in which the unions have gotten a foothold, and to corral local community forces in antiunion campaigns. They have utilized older myths of local dependence upon the employer and prevailing textile-worker attitudes on the race issue and segregation, the dominant parochialism and the plight of the textile industry to threaten and intimidate workers.

The southern textile-mill operators have shown no tolerance for unionism and have been determined to prevent union penetration of the industry. They resisted such organization through local efforts from 1943 through 1948. But since the latter date, the opposition has been more studied, organized, and coordinated through the use of a common group of attorneys and public-relations firms, the exchange of information, and the high concentration of ownership. The antiunion fight has been more aggressively pursued during recent years. Not only are they determined to stop the extension of unionism but also to destroy it where it exists.

Employers have used economic power to uproot unions where they have been formed. Unionized mills have been closed rather than permitted to stand out as beacons of union progress. Large mill organizations have shifted work to other plants to permit them to close mills in which the unions had won elections. In one case, the controlling interest shut down a mill after the Army, which had run it during the war, returned it, in order to clear out all union followers. This month it liquidated another mill where the union won an election. To assume complete discontinuity of operations, all of the equipment was sold piece by piece at a public auction.

The Taft-Hartley Act and its present administrators have removed most restrictions on the use of brutal economic power against union workers. Section 8 (c) of the act has become an open invitation for employers to intimidate workers through the free expression of their disapproval of unions and the dire predictions of what would become of the mill should the union win an election. Brain-washing conferences with individual workers are becoming the common practice as the NLRB has sanctioned the interrogation of workers regarding their union activities. The employer may now freely turn to third persons, i. e., nonemployees to reinforce his own antiunion campaign. He is no longer held accountable for the pressures exerted against the union by citizen groups and chambers of commerce.

In a number of communities, local employer groups, in their anxiety to prevent a break in the ranks of opposition to unions, have even coerced new employers to refrain from signing union contracts where they were so disposed or were actually in contractual agreements in other communities.

They have relieved the employer of the embarrassment of carrying on the antiunion campaign and have taken over this task themselves, resulting in the defeat of unions. Many southern community leaders, anxious to secure new plants have been persuaded that unions must be kept out if they are to succeed. The regional enforcement of the antiunion spirit pervading the textile industry is holding off the unionization of nontextile plants in the Piedmont region.

The opportunities for individual redress for workers who have been discriminated against or discharged for union activities have become more limited. In fact, unions have widely recognized that the protection offered by the act is nominal and of little assistance. They resort to this protection only in cases of blatant violations. The range of unfair labor practices has been narrowed by the Taft-Hartley Act and the Board decisions; the proof required by the Board's agents has become so exacting and difficult for private parties to obtain that their assistance is more limited and their sympathy and understanding have almost disappeared. The procedures for gaining relief are prolonged, costly, and exhausting. The final remedies are of doubtful value since the Board has overlooked employers' acts in offsetting findings of unfair labor practices through other propaganda devices. Back-pay awards have been severely cut through new rulings.

Employers have used their economic and political power to limit the union workers' constitutional rights of freedom of speech, press, and assembly. The local political authorities are often in league with the managements. Police officers frequently are also on the employer's payroll. They have interfered with the distribution of literature and have threatened and molested union organizers. Several Southern communities have passed ordinances requiring organizers to obtain licenses and pay prohibitive fees. While these have been considered unconstitutional by the Federal courts, the local officials continue to enforce them, contending that the specific local ordinance has not been passed on. The Federal Department of Justice has shown no sympathy for enforcing elementary constitutional rights, usually directing the union to turn to unsympathetic State courts for protection.

The churches, and particularly the apostolic preachers, have been used by employers to bring the curse of God upon the union. In this church-going area, these sermons, particularly of the itinerant lay preachers, have confused the working population.

In the final weeks of union campaigns employers have often raised the race issue to exploit deep fears of the Negro. They have identified the union with the desegregation movement and have intimated that the union movement has been the financial supporter of the NAACP and the mainstay of the movement for equal rights for Negroes. Workers have been told that a union victory would mean Negro supervisors for this lily-white industry.

Unionists of southern origin and, at times from the same community, are branded as foreigners who are coming to take "dues" money to alien parts. They are pictured as intruders who are breaking up peaceful communities. In an area where there is little contact with or knowledge of unions, this propaganda is effective in weakening the interest in unionism.

Every modern opinion polling technique is now employed in this antiunion cause. The surveys of employee attitudes serve to identify sullen areas. The supervisors of these departments are then fired and minor remedies made to relieve the tension. All types of modern propaganda procedures including literature, movies, radio, newspaper advertisements, community rallies and television are used against the union. Nothing is spared to defeat the union. Several corporations have special full-time staff men to combat organizational efforts.

In recent years employers have even pleaded the sad economic plight of the textile industry to counteract the union's appeals for higher wages. Textile workers have been told that they will lose their jobs if wages are increased. When the feeling for higher rates among the employees becomes too great, the industry's leaders have initiated voluntary wage increases which have served temporarily to dampen the desire for further organization.

Despite these forces the demand for unionism among the southern textile workers is real. Discontent is widespread. Our campaign records demonstrate that more than 30 percent of the workers of most mills are ever ready to stoutly stand up for the union. They will sign up with the union as soon as the campaign is launched. The remainder of the work force is more susceptible to employer pressure. They have not stood up against the antiunion campaign even though many had signed up with the union whose organizers have prepared them to meet it.

The southern textile worker appears ready to accept unionism but is not prepared to make the fight for unionism in face of these virulent organized and strongly financed employer pressures exerted by the employer, his agents and community groups. His dependence upon the employer is so great that the majority of employees is not ready to take the chance. Many of them have seen mills close and they do not want to face that alternative.

The problem of southern textile organization is similar to that faced by the American worker before 1933. While we have Federal legislation which nominally protects the workers against discrimination and coercion, the Taft-Hartley Act and its administrators have emasculated these protections so that they are now empty gestures. To the southern textile worker they are weak reeds upon which to rely. The Federal Government is not determined to restrain the antiunion employer or assure the worker the freedom to choose a union of his own selection. Nor is the United States Department of Justice ready to extend its helping hand in enforcing the elementary constitutional rights of freedom of speech and assembly. Community groups act in concert to support employers. There are no local civil agencies ready to defend individual civil liberties such as existed in northern communities even before 1933. The insistence on conformity to dominant regional patterns is so strong that there is little tolerance for individual freedom or deviation.

In the brutal fight against unions, section 8 (c) of the Taft-Hartley Act has been converted into the abuse of free speech to coerce and intimidate workers into a state of fear. Employers use the right to speak to snuff out independence and liberties.

To assure the same rights at organizing free democratic unions as are enjoyed by workers in other regions of this country, section 8 (c) of the act must be repealed and the provisions of the Wagner Act must be restored. Employer agents and those aiding him in his antiunion campaigns must be enjoined from interfering with the workers' freedoms. Representation procedures must be expedited for southern cases and older procedures under the Wagner Act, permitting recognition of unions on the basis of card checks and other substantial evidence of worker desires and prehearing elections must be restored. The older remedies against employers interfering with union organization and coercing and intimidating workers should again be made effective.

The southern textile worker wants unions but the greater number are not strong enough on their own without governmental protection to withstand the pressures of superior economic forces and coercion exercised by the employer. If the elementary rights of the worker freely to join unions of his choice were enforced as they were done under the Wagner Act, union organization would quickly spread throughout the southern region both in textile and other mills.

A Southern Christian Looks at the Race Problem

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include the following article written by Rev. G. T. Gillespie, D. D., Litt. D., president emeritus, Belhaven College, Jackson, Miss., which appeared in the Southern Presbyterian Journal of June 5, 1957:

A SOUTHERN CHRISTIAN LOOKS AT THE RACE PROBLEM

(By Rev. G. T. Gillespie, D. D., Litt. D.)

The charge has been frequently and loudly made that white people of the South are so blinded with prejudice and so filled with enmity against the Negro race that they cannot see the race problem in its true perspective. Personally and on behalf of some 30 million or more other southern Christians I wish to challenge the fairness and truth of that charge.

Prejudice is properly defined as "a judgment or opinion formed without knowledge or due examination of the facts." If any people on the face of the earth have had ample opportunity to learn at first hand the facts about the race problem, unquestionably the southern people must be accorded the preeminence in that respect. For more than 200 years the two races have lived here side by side, in relatively large numbers, in close and intimate contact, and on terms of mutual understanding and good will, so that out of this experience there has come not only to the white people but to the Negro as well, a vast accumulation of knowledge and practical wisdom in meeting the day-to-day problems of personal and race relationships. Moreover, let it be said with all emphasis, in spite of all the hue and cry which has been raised in recent years, we southern people, as a rule, do not have any enmity or ill will in our hearts against Negroes, but only feelings of kindliness and genuine sympathy. As friends and neighbors we wish to see them have better homes, higher standards of living, better schools for their children, and the fullest opportunity for development as law-abiding, liberty-loving, self-respecting citizens.

If there is any room therefore for a general charge of race prejudice it would seem to lie not against southern Christians, but against that very considerable group of sentimental enthusiasts whose knowledge of this problem is limited to what they read in the newspapers and sensational magazines, and to the grossly exaggerated and distorted information furnished to them by self-serving propaganda agencies, and yet who assume that they have all the answers to this diffi-

cult and complex problem, and a divine warrant to solve it by remote control.

THE SUPREME COURT DECISION

Southern Christians, generally, feel that the Supreme Court decision, outlawing the principle of segregation and ordering integration of the races in the public schools of the Nation, was a tragic mistake. This decree reversed previous decisions of the Supreme Court which had served as precedents for all Federal and State courts for more than a half century, nullified the constitutional and statutory provisions of 17 sovereign States, and prescribed radical and revolutionary changes in the long-established customs and social traditions of a large proportion of the people of the United States.

Southern Christians cherish a deep reverence for the Federal Constitution; and they wish to respect the dignity and integrity of our courts, and yet to many of us this sweeping decision of the highest court in virtually taking over the control and regulation of the schools of the Nation seems to be a clear violation of the Constitution itself, and an unwarranted usurpation of powers distinctly reserved to the several States and to the people of local communities.

The reasons assigned by the Supreme Court for its revolutionary decision are not based on legal or moral principles, but on the ex parte opinions of psychologists and sociologists, whose knowledge of this particular problem has been clearly shown to be superficial, and whose close affiliation with Socialistic and communistic organizations scarcely qualifies them as safe counsellors in formulating the policies which are to shape the education of the children of this great democracy, for generations to come.

Believing as we do, that this decision was based upon false premises, that it is unsound in principle, unrealistic, and impracticable, and that its consequences, if generally adopted, would prove disastrous and irreparable, we do not regard it as a proper or final adjudication of the issues involved. We believe that it should be reversed, and we appeal to the sober second judgment of the Court itself, to recognize and correct its error; failing that, we shall continue to appeal to the enlightened judgment and the unfailing commonsense of the fairminded people of the Nation to join us in mobilizing public sentiment in support of some wiser and better solution of the problem. For this attitude we have ample encouragement and high precedent. The Supreme Court has often reversed its own decisions, following changes in the personnel of the Court or in the political climate. Abraham Lincoln, in similar opposition to the pronouncement of a Supreme Court of his time, declared: "That burlesque of a judicial decision must be expunged from the books of authority * * *. We mean to reverse it; and we mean to reverse it peaceably" (see Lincoln Encyclopedia, MacMillan 1950, pp. 88ff). The events proved that Lincoln was no false prophet. Men of like vision and courage, who do not give up because the odds are against them, may live to see history repeat itself in our generation.

THE CRUX OF THE PROBLEM

In the South and in urban centers in the North, where the Negro population approximates or exceeds that of the white, enforced integration of the schools, just in proportion as the experiment succeeded, would inevitably lead to the cultivation of such attitudes and social intimacies as would result in intermarriage between the two groups, and eventually to the blurring of all racial distinctions, and the amalgamation of the Negro and white races.

Here therefore is the crux of the whole racial problem: Is it desirable that social relations leading normally to intermarriage and ultimate racial amalgamation should be encouraged and approved; or, is it more desirable, in the interests of all parties and society as a whole, that racial intermarriage should be discouraged or prohibited, and that each race should be enabled to preserve its own racial integrity?

This is the issue which overshadows all other considerations in the minds of parents in typical southern communities, which explains their uncompromising opposition to the integrated school, and which also explains the traditional southern attitude with respect to social intermingling of the races in homes, churches, hotels, public assemblies, recreation, transportation and other public facilities.

Many well-meaning civil and religious leaders who now endorse the policy of integration in schools, churches and other areas of life seem to ignore, or deliberately refuse to recognize, that the question of intermarriage and complete racial integration is necessarily involved, and is bound to overshadow all other issues in the minds of people whose children will be forced to serve as guinea pigs in this dangerous experiment in race relations.

To his credit, be it said that the average southern Negro attaches little importance to the possibility of intermarriage with the white race, and if left to himself would naturally prefer marriage within his own race. For this reason the professional agitators and Negro leaders have had comparatively little to say concerning intermarriage, and have based their appeal on the very natural desire of Negro parents to secure equal educational opportunities for their children, and on the exploitation of some of the (petty) grievances which the Negro feels, by insisting that he is being discriminated against as "a second class citizen."

However, many of the self-appointed promoters of the integration movement are fully aware of the inherent and logical implications of the race-mixing program with respect to intermarriage, and as one of them has frankly stated, the goal which they seek in America is "a social democracy which either begins with marriage, or necessarily includes marriage in its ideals and principles."

THE PRINCIPLE OF SEGREGATION FROM THE SOUTHERN VIEWPOINT

After long and painful experience, southern people are firmly convinced that where two widely different races live together in the same area in approximately equal numbers, that the only alternative to racial amalgamation is some reasonable and equitable form of segregation.

The pattern of segregation which has been in operation in the South, and throughout the Nation generally, is the result of a gradual process of evolution for many generations. It must be admitted that it has not always been consistent or equitable, and some of its features cannot be defended on rational or ethical grounds. Like all human institutions, it is still far from perfect. On the whole, however, it has provided a working basis for mutual understanding and effective cooperation between the two races. With occasional exceptions, peace and order have been preserved, mutual confidence and goodwill have been fostered, and each race has been able in the main to preserve its racial integrity, and to develop cultural and social patterns suited to its own capacities and needs.

The evils and injustices which have arisen under the system of segregation have been purely incidental, and have not been due to any fallacy in the principle of segregation, but to the weaknesses and perversities of individual members of both races. Southern Christians do not condone these wrongs, but everywhere condemn them, and are anxious to see them corrected. Up until the recent violent agitation precipitated by the Supreme Court decisions, steady progress was being made in the correction of such abuses and unfair practices and in the improvement of race relations. Even yet, except in a few localities, there is no indication of any serious disturbance of the friendly relations existing between the rank and file of Negroes and whites throughout the South; which is a tribute not only to the good sense and self-restraint of both groups, but also to the basic soundness and practicality of the system of segregation under which they have lived and worked.

Recognizing, therefore, that the system of segregation as heretofore maintained has certain obvious defects, but believing that in the course of time these objectionable features may be eliminated without sacrificing the major objective, we southern Christians, with some exceptions chiefly in the border States, approve the determination of our civil leaders to employ every legal expedient to prevent the integration of our schools, and to preserve the principle of segregation as a permanent feature of our public policy, with the confident assurance that in the long run, it will prove best for the present and the future welfare of both races.

THE MORAL AND ETHICAL BASIS FOR SEGREGATION

Aside from all questions of expediency, of constitutional technicalities, or of local interests, there is a firm conviction in the minds of southern people that the principle of segregation is amply supported by scientific, historical, and Biblical data, and that it may be defended on moral and ethical grounds, and as consistent with the principles of Christianity and the great traditions of American democracy. The limits of this discussion will permit only a brief summary of several of these reasons, which are believed to be factual and logical.

1. The widely different characteristics of the white and Negro races would render complete integration illogical and impracticable.

Modern anthropologists have discarded the term race as applicable to separate groups of people. They contend the differences shade off so gradually within each group that no valid distinction can be made between the groups. Their contention, however, appears to be largely a war about words or definitions. Actually, as a matter of common observation, we know that there are broad lines of difference between the several major branches of the human family, and whether they are properly called races or by some other designation, the white, the yellow, the brown, the black groups each have their own distinctive physical and cultural characteristics. For all practical purposes, therefore, we may just as well follow common usage, and refer to them as separate races.

Between the white and Negro races, with which we are directly concerned, these differences are quite obvious not only as to the pigment of the skin, but many other physical features. Even greater and more important than these physical differences, are those which relate to mental, emotional, and moral development, esthetic appreciation, social and religious impulses and experiences. It is not necessary to ask or determine whether one of these races is superior to the other, for, after all, that is only an academic question, and the decision would depend upon the standard of measurement and the qualities which were measured. One race is likely to rate high on one point and low on others, and vice versa. Of one thing, however, there is abundant and indisputable evidence; these two races differ in a great many respects. These differences are not incidental or superficial, they are fundamental, and any failure to recognize this fact is bound to generate irritations and tensions resulting in individual and social disorders and the ultimate impairment or destruction of moral and cultural values. That such racial differences have a decisive bearing on the problem of

race relations, and that they constitute a valid reason for the separation of the white and Negro races, is corroborated by no less an authority on race problems than President Lincoln, who, in a speech to a group of free Negroes at the White House in 1862, said: "You and we are different races. Whether it is right or wrong, I need not discuss, but this physical difference is a great disadvantage to us both, as I think * * * it affords a reason at least why we should be separated."

2. Intermarriage between widely different racial groups is unnatural, unfair to offspring, and prejudicial to human progress.

In all nature God has endowed His living creatures with an instinct to mate only with their own kind. The old adage, "Birds of a feather flock together," only expresses a universal law of nature. Bluebirds never mate with redbirds, doves with blackbirds, or mockingbirds with jays. The intelligent farmer does not allow his dairy and beef breeding stock to run in the same pasture, otherwise he would downgrade his herds and have only a herd of scrubs or mongrels. The same principle applies with even greater force to the mating of human beings of widely different types and cultural backgrounds. The offspring are generally unstable, eccentric, ill-adjusted, unpredictable, unhappy. Extend the experiment on a large scale and over successive generations, and the result is a retarded or decadent civilization. Both science and history confirm the truth that progress for the human species as well as for the lower orders of nature comes through selective breeding rather than through mongrelization.

Lebon, the noted French psychologist and sociologist of the past century, testifies as follows: "It is an historical fact that human stocks that have produced the highest civilizations have been strains of stock without mixture for many generations. Every race of fixed type that has attained the highest civilization, has quickly lost its power and standing after mixing with another race radically different."

In confirmation of the truth of this observation we have but to cite the remarkable virility of the cultures of the Hebrews, the Greeks, and the English-speaking peoples, all of whom kept their racial stocks pure, as contrasted with the retarded or decadent civilizations of India, Egypt, Spain, Portugal, who allowed their racial stocks to become mixed with the diverse peoples with whom they came in contact. Or, to take an illustration closer home; compare the achievements and progress of the people of North America, including Negroes as well as white people, where the principle of racial segregation has been generally maintained, with the status of the peoples of Central and South America where there is no color line, since the settlers from the Latin nations of Europe freely intermarried with the native Indians and imported Negro slaves. Let those who now so strongly urge the integration of white and colored races in this country cross the Rio Grande, and travel all the way to the southern tip of South America, and see the ignorance, poverty, squalor, superstition, undeveloped resources, inefficient and unstable governments, frequent revolutions, ruthless dictatorships, and the many other evidences of the blight that results from the mixing of dissimilar races.

To the same effect is the testimony of the late Dr. Charles W. Eliot, president of Harvard University, who with a staff of experts was sent by the Carnegie Foundation for Peace, to study the effect of race mixtures in the Orient. After spending many months in China, India, Japan, and the islands of the Pacific, they submitted their report, the gist of which is as follows: "First: The experience of the East teaches that the intermarriage of races which are distinctly unlike is undesirable because the progeny of such mixtures are as a rule inferior to each of the parent stocks, both physically and morally; a fact which has been demonstrated in large scale. Second: The Orient teaches the world that the pure race is best, and the crosses between unlike races seldom turn out well."

In the light of these indisputable facts, how can we consider any proposal or policy which involves the gradual integration and ultimate amalgamation of the white and colored races in the United States, except as a colossal blunder, a betrayal of unborn generations and a monstrous crime against civilization.

3. The principle of segregation is in harmony with the purpose and will of God as revealed in His word, and is consistent with the teachings and spirit of Our Lord Jesus Christ.

God, himself, thwarted the first manmade plan of integration, by the confusion of tongues at the Tower of Babel, and scattered the peoples abroad upon the face of the whole earth. Whether one accepts that as a true story, as do most southern Christians, or whether the allegorical interpretation of modern liberal scholarship is preferred, the fact remains that divine providence is directly responsible for the linguistic differences and other factors which have served to keep the peoples of the earth segregated into tribal, national or racial groups, from prehistoric times down to our day. By special divine decree Abraham and his descendants were separated from all the other peoples of the earth, and for 1,500 years Israel existed as a strictly segregated nation. They were forbidden by God to mingle socially, to intermarry, or to amalgamate with the nations around them. Violations of this command were considered as a capital offense, and punished with great severity, by Moses and later by Ezra.

Jesus used the Parable of the Good Samaritan to rebuke the smug complacency and narrowminded intolerance of the Jews and to show that the duty to love our neighbors is a practical principle of sympathy and helpfulness which knows no limitation of nationality or race. At the same time he did not ignore or denounce racial distinctions, nor did he set plans on foot to abolish them or to bring about amalgamation of the Jews with the Samaritans or other races. Insofar as we have any record there is no indication that Jesus or the Apostles were ever called upon to pass judgment upon the question of the rightness or wrongness of racial segregation or racial integration; certainly no question was raised concerning the mixing of races as dissimilar as the white and Negro races. Since this is primarily and essentially a social or political question, and since our Lord on several occasions refused to decide controversial issues of a social or political nature, but left these matters to the reason and conscience of the individual, we are justified in concluding that he has given us no mandate on this matter, but has left us free to decide the question in the light of reason and experience and the broad principles set forth in the Old as well as in the New Testament.

In this connection, therefore, and by way of reply to the statements made recently by numerous church leaders and various ecclesiastical bodies denouncing segregation as unjust, sinful, wicked, displeasing to God, and essentially un-Christian, from our point of view we confidently affirm, first, since the practice of segregation was instituted among the Hebrew people by divine authority, and enforced by stern theocratic sanctions for many centuries, and since Christ and the Apostles demonstrated that the principles of charity and Christian brotherhood could be made operative in all the relations of life without involving revoluntionary changes in the social, economic, or political order, there is certainly no valid ground for the charge that segregation is inherently wrong, contrary to the will of God, and essentially un-Christian.

4. Segregation is a well-considered and time-tested American policy, and is consistent with the principles of true Americanism.

Ample evidence is available to show that segregation is in accord with the best thinking of representative American leadership, and as a time-tested American policy rests upon moral and ethical principles, and not upon blind and unreasoning prejudice, as has been loudly charged by some of its latter-day critics.

Seventeen of the States of the Union have incorporated the principle of segregation into their constitutions. Most of the other States have approved it by statutory provisions, and all of the States with one or two exceptions, at one time or another have adopted laws prohibiting inter-racial marriages. State and Federal courts have uniformly approved these constitutional and statutory provisions, and until the violent political agitation was started some years ago, segregation was generally accepted as a firmly established principle of American public policy.

Thomas Jefferson, author of the Declaration of Independence, and Abraham Lincoln, author of the Emancipation Proclamation, both strongly opposed to the institution of slavery, were both so completely convinced of the necessity of the segregation of the races that they earnestly advocated the repatriation of the Negroes to Africa or the West Indies. Since the abolition of slavery many representative leaders in church and State, both in the North and in the South, who felt a keen sympathy for the Negro and wished to help him improve his lot, never questioned or proposed but that this should be done, and could be done, within the framework of a segregated society.

It was the recognition of this truth as an essential feature of the American way of life, which made Booker T. Washington an influential national leader and the greatest benefactor of the Negro race in the past generation. All would-be leaders and promoters of better race relations in America today would do well to study his realistic approach to the problem and follow his able and far-seeing Christian leadership. In a notable and epoch-making address, delivered at the Atlanta Exposition in 1895, pleading for understanding and cooperation between the races, he held aloft the torch which must guide us to the ultimate solution of this great and pressing problem. It is eminently fitting, therefore, that this discussion should be concluded with a quotation of his wise words. He said: "The wisest among my race understand that agitation of questions of social equality is the extremest folly, and that progress in the enjoyment of all the privileges that will come to us must be the result of severe and constant struggle rather than of artificial forcing * * * In all things that are purely social, we can be separate as the fingers, yet one, as the hand, in all things essential to mutual progress."

Investigating Trujillo

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting editorial taken from the Omaha World-Herald:

INVESTIGATING TRUJILLO

For 16 months liberal writers and commentators in this country have been accusing Dictator Trujillo, of the Dominican Republic, of kidnapping and killing a Columbia University lecturer, Dr. Jesus de Galindez. The State Department, which has had good relations with this thoroughly anti-Communist and pro-United States Caribbean strong man, has been embarrassed by the hammering against him.

Having tried and convicted Trujillo in print and on the air, the lefty-liberal combine in this country has been demanding that the United States break off diplomatic relations to force a showdown on the Galindez affair.

A few days ago Trujillo knocked the props from under his strident American foes by announcing he had hired two eminent liberal New York lawyers, Morris Ernst and William H. Munson, together with New York public relations man Sydney Baron, to investigate the Galindez affair. If they find Trujillo is involved they are to say so. If they find he is not involved they are to say that.

What has been the liberal reaction? They're in a frenzy looking for an angle or some evidence of bad faith on Trujillo's part. They are trying to dissuade Ernst and Munson from taking the job and are even threatening them. The hapless publicist, Mr. Baron, has already been fired by one of his clients, the New York State Democratic Party, on orders of Governor Harriman.

Do the left-wingers want the truth or are they enraged at the possibility that Trujillo may establish his innocence? It's a fair question.

The Jury-Trial Amendment to the Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Fatal Blow to Monster," which was published in the Aiken (S. C.) Standard and Review, an outstanding daily newspaper published in Aiken, S. C., by Mrs. Annie H. King.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FATAL BLOW TO MONSTER

The many-headed monster, ready to devour this Nation with its insatiable appetite for power of oppression and tyranny, has been dealt a mortal blow in the Halls of the Senate by a majority of statesmen who voted 51 to 42 to add a jury-trial amendment to the civil-rights bill vigorously advocated by President Eisenhower and administration backers.

In order to accomplish the purpose of the intended measure in its original and dictatorial form the present administration was eager and willing to take away one guaranteed right of the individual in order to impose another without considering the far-reaching consequences of such an act upon the future of the Nation as a free and democratic country governed by the people.

One might, in reality, say that the Senate by a small margin of votes, has saved this Nation from calamity, from decay from within, and from severing as a union of free States making up the greatest nation on earth today.

In the event the proposed original measure should have been passed in its original form all Americans could look forward to their inherent right of trial by jury cast to the four winds with political expediency being the measuring stick of justice; could vision the nation of tomorrow being ruled by a black-robed tyrant issuing decrees, dictated, perhaps, by an inner clique of despots and backed by the bayonet.

This Nation has passed a crisis more endangering to the welfare of the entire population than any aggressive force in history which has sought to invade and conquer—and from within—by far the more deplorable.

One can hardly believe that President Eisenhower had the welfare of the entire Nation at heart as he pressed and urged passage of such a measure as the civil-rights bill in its original form—delegating power to a few administration offices as powerful as despotism can make.

One cannot conceive that pressure was not brought to bear from outside groups on the present administration seeking to enact such measures regardless of future consequences to the American public as a whole and one cannot but have the thought that pressure outweighed good judgment.

How any true American statesman in the Senate could have gone on record, to be recorded in history for posterity, as favoring such legislation, so un-American, so devoid of democratic principles, and so pointedly tagged with despotism.

Old Age and Survivors Insurance Coverage for Policemen and Firemen—Resolution of Board of Supervisors of Westchester County, N. Y.

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Board of Supervisors of Westchester County, N. Y., favoring old age and survivors insurance coverage for policemen and firemen, at the exercise of their election.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION NO. 187–1957 OF HONORABLE BOARD OF SUPERVISORS, WESTCHESTER COUNTY, N. Y.

Whereas chapter 776 of the laws amended the retirement and social-security law. The amendments provide social security coverage for all members of the New York State employees' and New York State teachers' retirement systems who desire it, and for all public employees who are eligible for membership and who do not become members before completion of a new agreement between the State of New York and the Federal Social Security Administration; and

Whereas Public Law 881, 84th Congress, chapter 837, 2d session, H. R. 7089, an act to provide benefits for the survivors of servicemen and veterans, known as Servicemen's and Veterans' Survivor Benefits Act, amended the Social Security Act to afford coverage to members of the Armed Forces and their dependents; and

Whereas policemen and firemen are not eligible under the existing Federal law; and

Whereas there is no doubt that members of the Armed Forces and law enforcing officers and firemen fall into the same class of risks; and

Whereas to make ineligible policemen and firemen from this very important coverage, which is a vital necessity, to the families of these devoted and courageous public employees is discriminating against this very important group of public employees; and

Whereas the committee on budget and appropriations of this board reported on Resolution No. 145–1957 (old-age and survivors insurance coverage (social security) retroactive coverage): "It is particularly noted that members of the Westchester County Parkway police cannot at this time be included in the proposed social-security coverage by reason of the fact that all firemen and policemen are not eligible under the existing Federal law. Your committee is of the opinion that this phase of the matter be referred to the county's committee on legislation for a proper study of this aspect of the situation"; and

Whereas several Westchester communities have expressed their desire to include policemen and firemen under the old-age and survivors insurance coverage: Now, therefore, be it

Resolved, That this board of supervisors approves of old-age and survivors insurance coverage for policemen and firemen, and urges the passage of such a bill; and be it further

Resolved, That a copy of this resolution be sent to Congressman EDWIN B. DOOLEY and United States Senators IRVING M. IVES and JACOB K. JAVITS for their action.

Respectfully submitted.

GEORGE G. ANNUNZIATA,
Supervisor, Mount Vernon.

AUGUST 5, 1957.

Authorizing Appropriations for the Atomic Energy Commission

SPEECH
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

The House Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8990) to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and for other purposes.

Mr. COLE. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. HOSMER].

(Mr. HOSMER asked and was given permission to revise and extend his remarks.)

Mr. HOSMER. Mr. Chairman, I should like to ask this of the gentleman from Illinois [Mr. PRICE] following up our conversation earlier with respect to this reactor program: I believe the gentleman said it was of an experimental nature throughout, not an actual economic producer at this particular time?

Mr. PRICE. An experimental development program. No one can say now it is economically feasible in any of these projects.

Mr. HOSMER. The objective of the program is to eventually obtain something that is economically feasible?

Mr. PRICE. The gentleman is absolutely correct.

Mr. HOSMER. The program is then divided into a number of different approaches to the problem, different types of reactors?

Mr. PRICE. That is correct; numerous types of reactors. It is the desire of the committee—and, I take it, the Commission also—to get as many of these different types as seem reasonably feasible into the development program.

Mr. HOSMER. Actually it is a very large-scale scientific-research program; is that what it is?

Mr. PRICE. That is correct.

Mr. HOSMER. As I understood the chairman of the committee, he stated that the Joint Committee acted more or less like a board of directors in approving and disapproving certain of the projects that the Atomic Energy Commission recommended, and that some of them were disapproved, and the judgment of the so-called board of directors, the Joint Committee, was substituted. Is that right?

Mr. DURHAM. I think the gentleman is mistaken. I said that that is what Admiral Strauss said, and I quoted from the RECORD.

Mr. HOSMER. But the committee did, on its own initiative at least, initiate this project 58 (b) 8 for $3 million for a special nuclear material reactor.

Mr. DURHAM. Yes, and for a very sound and good reason.

Mr. HOSMER. Was that requested by the Atomic Energy Commission?

Mr. DURHAM. It was not.

Mr. HOSMER. What is this thing going to do, may I ask the gentleman?

Mr. DURHAM. That can be used to start the production and research and development of plutonium.

Mr. HOSMER. Was the judgment of the Commission overruled on this——

Mr. DURHAM. The Commission said they had no request in. The Commission asked for $150 million this year which they did not get because the Budget turned them down. The War Department asked for more reactors.

Mr. HOSMER. This one is a prerequisite to your plutonium reactor?

Mr. DURHAM. That is correct, because every reactor you have at the present time is 14½ years old.

Mr. HOSMER. You also have a project 58 (e) (15) for plutonium recycle experimental reactor, which the gentleman from California says is to try to make plutonium into something other than a bomb fuel. What is there about this project that is promising enough, in comparison to some of the others that have been suggested, to spend at this time $15 million on it?

Mr. DURHAM. I refer the gentleman to the AEC people down the street because they have already spent $2 million on it.

Mr. COLE. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield.

Mr. COLE. I would like to make a statement to clarify the RECORD. The gentleman from North Carolina said the War Department has asked for more reactors. I was not aware of that request.

Mr. HOSMER. I thought that this was a civilian program? Is it not a civilian program, or is it a War Department program?

Mr. DURHAM. There is nothing under the military here.

Mr. HOSMER. Is this part of the reactor program for the Army?

Mr. DURHAM. No, it is entirely different from that. Has the gentleman ever been at Hanford?

Mr. HOSMER. No, sir. I have never been there.

Mr. DURHAM. That produces plutonium out there in that reactor. I tried to tell you that they are all 14½ years old.

Mr. HOSMER. I realize that. I realize you have no commercial use for the stuff and you would like to use it. I was just wondering—are the prospects of an economical use bright enough to spend that money on it at this particular time or should this money be spent on some other line of research?

Mr. DURHAM. Plutonium is used to produce weapons. It is the entire weapons program.

Mr. HOSMER. I realize that and that is in connection with the plutonium bomb, but this is not for bombs, this is for a reactor.

Mr. DURHAM. You get plutonium out of the reactor.

Mr. HOSMER. As I understood the gentleman from California, [Mr. HOLIFIELD], this was to produce power and then the report says to produce 15,000 electrical kilowatts or equivalent.

Mr. DURHAM. They can build either one they want to.

Mr. HOSMER. Then let me ask you, sir, about this project 58 (e) (14) which is for a natural uranium gas-cooled reactor. What is the hope on that one that it should be in this program today?

Mr. DURHAM. Well, I thought I explained that pretty well in my opening statement.

Mr. HOSMER. I understood the British were working along that line.

Mr. DURHAM. If the gentleman will wait just a moment so I may complete my answer, I thought that the gentleman had understood it. There has been a division between the scientists in this country for some time as to whether or not to build a natural uranium gas fuel type reactor. England built it. England is selling it in the market in Europe. Now we have not got a natural uranium reactor. We have not built one. I think it is well worth spending the money on and everything else that goes with, and if it is no good then we can throw it out the window. If it is good, then American private enterprise can sell it.

Mr. HOSMER. Is this for a long-range program on this particular reactor?

Mr. DURHAM. You can make it as long as you want to and as long as you can get them.

Mr. HOSMER. I notice another program designated a very long range program which is liable to make so many of these things obsolete and that is why I ask.

Mr. DURHAM. Most of our reactors have been on the basis of trial and error.

Address of State Senator Harry F. Byrd, Jr., at Historic Jamestown

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. ABBITT. Mr. Speaker, as we all know, this is an important year in the history of Virginia. We are celebrating the 350th anniversary of the landing of the settlers at Jamestown and the establishment of the first permanent English settlement in the New World.

Thousands of people from all over the world are bearing testimonial to the importance of this event by journeying to Jamestown and viewing the exhibits set up there for this commemoration.

Jamestown is important in the annals of American history for many reasons but suffice it to say that it was there that, from the beginning, our democracy was set aright. Because of the ingenuity of the men who settled there in 1607 and the dedication of those who came after them to establish the Declaration of Independence and the Constitution we are blessed today with the fine system we have.

It is thus significant that we have this celebration at a time when there are many forces abroad in the land which would undermine the principles which they established at Jamestown. There are those who would take away the individual freedom which they fostered and reduce the States to less and less importance in the Government of the country.

Within recent days Ruritan International has been sponsoring a number of fine programs at Jamestown in which emphasis has been given to these facts. One of the finest addresses made during this series of meetings was delivered on Wednesday of this week by State Senator Harry F. Byrd, Jr. He draws from his wide knowledge of the history of Virginia to cite many of the stepping stones which led us into the fine government we have in America today.

Senator Byrd is well aware of the departures which have been made from the concepts of the Founding Fathers and he calls attention to these in his splendid address which I wish to insert in the RECORD. I congratulate him on the excellence of his material and his thoughts on the subject.

The address follows:

TEXT OF ADDRESS BY WINCHESTER SENATOR AT HISTORIC JAMESTOWN

In Jamestown we stand on hallowed ground, hallowed by the hardships endured with such great courage by those who came to these shores 350 years ago.

We are standing near the site of the first legislative body in the New World. The

Virginia legislature first met at Jamestown in 1619, 328 years ago.

It was in the historic area where the seeds of freedom were sowed.

It was here that the incomparable George Washington represented my home county of Frederick in the House of Burgesses.

It was here that the eloquent Patrick Henry raised his clear voice toward the creation of a government free from despotism and tyranny.

It was here that Thomas Jefferson began to espouse a political philosophy which led to the immortal words which he penned in the Declaration of Independence.

It was here that America was born, and it was here that was forged the great political philosophy which led to the creation of the world's greatest democracy.

It is fitting and inspiring that so splendid an organization as Ruritan National should meet here to reflect awhile on the glories of a Nation all of us are proud to call our own.

I know firsthand of the splendid work being done by the Ruritan clubs, and I know firsthand hundreds and hundreds of Ruritans. None anywhere are more dedicated to the preservation of the American way of life than are the splendid members of that organization known as Ruritan National.

JAMESTOWN INSPIRES

It is difficult for one to come to Jamestown without becoming inspired by the heroism of the men and women who came here in 1607. It is difficult to come to Williamsburg without becoming inspired by the wisdom of those men, who in the 18th century, sat in the legislative halls and created a new and dynamic political philosophy.

It was because of the fighting, adventurous spirit of those who set sail from England in 3 tiny ships 350 years ago that America was settled.

It was because of the gallantry and sacrifice of those men of 1776 who pledged their lives, their fortunes, and their sacred honor that America obtained its freedom.

It was because of the wisdom and the experience of those who drafted the Constitution that America became the world's greatest constitutional democracy.

Today we must ask ourselves this question: Are we playing our full part in helping to preserve this heritage which was given to us by the blood and the sweat and the toil of those who came before us?

I believe very strongly that eternal vigilance is the price of liberty. I believe very strongly that America's great strength lies not just in our great natural resources, not just in our great industrial know-how, but actually that it lies more in our great system of free enterprise, which itself is based on constitutional guaranties of individual liberty.

CONNECTION OF 1787

Last week I read anew some of the debates of the Constitutional Convention of 1787, and I pondered anew some of the writings of Thomas Jefferson and some of the speeches of Patrick Henry. I read and reread the Declaration of Independence and that great instrument of human freedom penned by Virgina's George Mason, the Bill of Rights.

And through all of these runs one central theme: Fear of a highly centralized government.

Our Government was founded on the principle, and our country grew strong under that principle, that all power not delegated to the Federal Government by the Constitution, are reserved to the individual States.

The basic political unit is in the State. The Federal Government is entitled to only such powers as the States grant it; and the localities within a State are created by the State.

Those men who came to Jamestown in 1607, those men who signed the Declaration of Independence, those men who gave their blood and their lives in the war of the American Revolution, and those men who created the American Constitution, all ladies and gentlemen, had lived under what, thank God, none of us have ever lived under, a despotic government.

They lived under a form of government which told the people when to sow and when to reap; which told the people what religion they could follow; when and where and how they could worship God; and what they could speak and what they could write.

It was because they knew first hand of the tragedies of such a system that they were determined to forge a constitutional instrument which would preserve for the people themselves the basic liberties, and preserve for the people themselves control over their own destinies.

They wanted to guarantee to themselves and to their posterity a government in which the people could speak and write as they chose, and could worship God according to the dictates of their heart.

CHECKS AND BALANCES

They had seen firsthand the frailties of man. They knew firsthand of the results of ruthless ambition when power became centralized. They were determined that our's should be a government of laws and not a government of men.

Thomas Jefferson expressed it this way: "Put not your faith in man," he said, "but bind him down from mischief by the chains of the Constitution."

That is the purpose of the Constitution. To prevent the usurpation of power.

The Constitution purposely established three coequal branches of government—the legislative, the executive and the judiciary. Our's was to be a system of checks and balances.

Dramatic evidence of how this system works was presented last week when the executive department was using all the power it could command to enact a so-called civil-rights bill which would (1) have invoked a reconstruction era law authorizing the sending of Federal troops to enforce judicial decisions; (2) would have injected the Federal Government into all types of racial activities; and (3) contained a section giving the Federal Government, through the Attorney General, the right to punish by judicial order, rather than by jury trial, citizens charged with certain crimes.

The bill passed the House of Representatives almost without change. But under the Senate's historic right of free debate, the evils of this legislation were exposed; the viciousness and the deception of it were brought to light. The President himself admitted that he did not know the full impact of this proposal, drawn by Attorney General Brownell. When the debate was over the Senate had pulled many of its teeth, had pierced its heart, and had removed at least one of its lungs. Its death may be recorded before this session of Congress is over.

STATES RIGHTS

And hand-in-hand with this system of checks and balances was the additional basic guaranty against centralization of power. That guaranty written into the Constitution in the Bill of Rights says this: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

This basic part of the American Constitution is now under sharp attack. The trend is toward more and more concentration of power in Washington, less and less regard for those rights clearly guaranteed to the States by our Constitution.

Sometimes in the past the attack on States rights has been led by a President; sometimes a Congress has usurped authority. Today the gravest threat is from the Supreme Court.

That Court, under the domination of a politically minded Chief Justice has, in decision after decision, whittled away at the prerogatives and rights of the individual States. In decision after decision, the Court has sought to put more and more power into the hands of the Government in Washington.

The Court has assumed jurisdiction over the local school systems, although no Federal funds are involved and no interstate commerce is involved.

In doing this the Court overruled precedent going back 60 years and cited as its authority for so doing a Swedish Socialist whose writings have been severely critical of the American form of government. Under the guise of interpretation, it in actuality amended the Constitution, a power which only the people can rightfully wield.

In case after case the Court has sought to increase the power of an already powerful Central Government. In case after case it has sought to reduce the prerogatives of the individual States.

CRITICIZING COURT

All of this, in my judgment, is greatly against the eternal fight to preserve individual liberties. The closer a government can be to the people the more democratic and the more responsive to the wishes of the people that government will be.

The more power that is centralized in Washington, the less opportunity the individual citizen will have to make his voice and his views felt.

A distinguished lawyer said the other day that the American people should not criticize the Supreme Court, that the Court is above criticism.

That, in my judgment, is so much bunk. In a democracy no individual or group of individuals is above criticism. The people have not hesitated to criticize and condemn a President when they believed a President to be advocating proposals not in the best interests of the people themselves. The public has not hesitated to condemn, and properly so, a Congress when it sought, as it has done from time to time in the past, to enact unwise laws.

And by the same token the people should not hesitate, in my opinion, to condemn a Court when the individuals who occupy judicial positions usurp authority to which they are not entitled.

And of the three branches of Government, it is only the Court which is not subject to check—the only effective check against its excesses being the voice of the people, speaking in condemnation.

The Virginia Legislature last year by an almost unanimous vote termed the Court decision on school segregation illegal, and 101 Members of the Congress, including the chairmen of 17 committees, solemnly resolved that the Court had usurped power to which it was not entitled.

JEFFERSON AND LINCOLN

Let's listen to what two great Americans have said about the Court:

Thomas Jefferson, in 1821, wrote "The great object of my fear is the Federal judiciary. It is the instrument which working like gravity, without intermission, is to press us at last into one consolidated mass. If Congress fails to shield the States from danger so palpable and so imminent, the States must shield themselves, and meet the invader foot to foot."

Jefferson stated further that "Whenever a free people should give up in absolute submission to any department of Government, retaining for themselves no appeal from it, then liberties are gone."

Another great American, President Abraham Lincoln, said this about a certain Court decision:

We propose so resisting it as to have it reversed, if we can, and a new judicial rule established upon this subject."

OUR GOLDEN AGE

One discerning philosopher once said, "No golden age was ever appreciated until it passed."

We in present day America are in a golden age. As individual Americans we have luxuries unknown to most other countries; we have a standard of living undreamed of only few decades ago.

But while our heritage is great and while our privileges as Americans are many, so too are our responsibilities. Liberties are lost when the people become too fat and too lazy and too complacant to govern themselves.

History records that more nations have been destroyed from within than ever have been destroyed from without.

The grandeur that once was Rome's fell not to foreign invasion but instead to the weakliness of a people more interested in bread and wine and circuses than in the maintenance of a great nation.

America has a great future, perhaps even greater than her great past. But I believe this: That America's future depends almost entirely on the character, the initiative and the energy of the people themselves in protecting basic constitutional rights, without which strength would turn to weakness.

Like Samson's hair, our Nation's strength is America's constitutional Government. There are Delilahs in high position who would not hesitate to use the scissors.

It is against the usurpation of power, from whatever source that threat might come, that Americans of 1957 must stand guard in order to protect the heritage initiated by those who came to Jamestown in 1607.

...'s Veto Threat Puts Him in Thick of Battle

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial which appeared in the Nashville Tennessean under date of August 6, 1957. This editorial, concerning the President's expressed disappointment over the Senate's action on the civil-rights bill and the possibility of a veto because of the jury-trial amendment, will be of interest to Members of the House.

The editorial follows:

PRESIDENT'S VETO THREAT PUTS HIM IN THICK OF BATTLE

President Eisenhower, expressing bitter disappointment over the Senate's action on the civil-rights measure, needs no briefing to understand that this, with all that went before, constitutes a decisive vote of no confidence in him and his too-smooth Attorney General, Mr. Herbert Brownell.

It is not too much to say that if a straightforward measure had been offered in the first place it could have won.

But in trying to outsmart everybody else, Mr. Brownell actually outsmarted his easy-going chief and himself.

Once it had been made clear that the bill was full of jokers, its amendment won favor on a wide front.

So now the time has come when the President must decide whether to reject the Senate version, if finally approved, with a veto which will have repercussions in distant places, or seek a compromise which hardly seems attainable. He might accept the bill, it is now said, if the controversial jury-trial amendment is curbed to apply only in voting cases.

Republican House leaders declare the measure is dead for this session, with the promise that it will be brought up again in the 1958 year of elections when it might do the party more good, in their estimation.

One thing they should not overlook, however, is that support for the jury amendment grew by leaps and bounds before the Senate voted. That strength, instead of being weakened in the future, is apt to be increased. The more one studies Mr. Brownell's handiwork, the less confidence it commands. And the more evident it becomes that the Nation's chief legal officer is a cunning and devious politician.

As passed by the Senate, the bill marks a decided step forward in dealing with civil rights regardless of the White House complaint about its unworkability. This much is attested by Senator H. ALEXANDER SMITH, Republican, of New Jersey, who voted against the jury amendment. Mr. SMITH doubted that the President would veto the bill even if the amendment were not modified, and told questioners on a television program that when the President "has the measure fully explained to him, he will see that it does not necessarily weaken the whole judicial system."

Two other Senators have joined in saying that any Republican wave to kill the Senate bill would be a display of partisan politics. They are Democrats JOSEPH S. O'MAHONEY, of Wyoming, principal author of the jury-trial amendment, and HUBERT HUMPHREY, of Minnesota, an opponent of the amendment.

"The civil-rights bill is not dead," said Senator HUMPHREY. "It can only be killed if Republicans now show that they are more interested in stirring up a partisan issue than in getting some constructive action."

Mr. Eisenhower's plan of action will hardly be formulated without the advice of Mr. Brownell and that other anti-jury-trial stalwart, Vice President RICHARD NIXON, who deplores the moderate plan worked out by wise Congress leaders. Add the name of Senator KNOWLAND to these, and you have the GHQ of Republican opposition to jury trials.

In the circumstances there is natural curiosity as to why the torrent of criticism by opponents of the rights bill as originally submitted is guided around and away from this eminent quartet.

Strangely enough, the schizophrenic press is not above assailing some southerners who led in the winning fight, among them Senator KEFAUVER, who was cosponsor of the jury-trial amendment. But at last reports they still looked upon President Eisenhower as the great friend of the South, and rendered hardly less homage to the slick Mr. NIXON, who knew what it was all about from the beginning.

Regardless of this, however, the Eisenhower administration has been properly rebuked for seeking to put over a fast one. That which the President so repeatedly described as a very moderate and decent thing was nothing of the sort. And it is mighty late in the day for him to be angling for a face-saving compromise. As we see it, the intelligent compromise has already been reached.

Israel and Her Neighbors

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 9, 1957

Mr. HUMPHREY. Mr. President, in the July 12 issue of the Detroit Jewish News there appeared an article by Philip Slomovitz entitled "Israel and Her Neighbors—Contrasting Views of Eminent Christian Leaders."

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ISRAEL AND HER NEIGHBORS—CONTRASTING VIEWS OF EMINENT CHRISTIAN LEADERS

(By Philip Slomovitz)

While the major Middle Eastern puzzle today revolves around the rumors about secret peace negotiations, the avalanche of propaganda, with its attendant anti-Israelism continues.

Arab leaders, divided among themselves, split asunder by desires for personal aggrandizements which cause them to plot for territorial control over their neighbors, put on a show of unity by mouthing one bit of evidence as proof of unity; their common hatred of Israel.

Nevertheless, there are signs of better understanding of the problem. Basil L. Walters, the executive editor of the Knight newspapers, was deeply impressed by Arab hospitality. Fortunately, the American sense of fair play also has led him to Israel, where he has learned something about modernity plus hospitality plus ingenuity plus determination to live. Senator HUBERT H. HUMPHREY also met with both Arabs and Jews, and he is today a stanch believer in the possibility of peace, the need for better understanding, the necessity to eliminate intrigue from Middle Eastern affairs. Dr. Everett R. Clinchy, the head of the National Conference of Christians and Jews and president of the World Brotherhood, is back from the Middle East with an abhorrence for extremism and praise for Israel.

Let us first take up the Clinchy argument. In a message to his coworkers from Rome, Dr. Clinchy pointed out that "the word 'Bible' came from the Greek word 'biblos,' derived from the name papyrus to Greece." He proceeded to say that in olden days "the standard of live and let live was disregarded. The morality of live and help other cultures to live was laughed at. Successive civilizations insisted on uniformity—cultural monism." Basically, he added, the struggle in the Middle East now is "between leaders 'possessed' by an obsession with cultural monism, and the merging possibility of cultural pluralism in that region."

Then comes his evaluation of Nasser's talk of driving the Israelis into the sea and he likens it to the totalitarian philosophies of all times. Reporting that "in Beirut, Christians of many cultures, Jews, and Moslems of Lebanon have agreed to work for World Brotherhood," Dr. Clinchy states: "To be sure, Israel is a word the rest of the Middle East do not want to recognize, but that can be overcome, if work is done now for all cultures."

In "just a paragraph about Israel," Dr. Clinchy has this to say in his message:

"I had not seen this area since 1928. Israel is an amazing expression of the human spirit of which we may all be proud. By combining science, technology, money, education, and spirit with will power, Israel is redeeming a land and 2 million human beings. Israel is proving something which all of Asia and Africa wants to believe: that individuals who have lived in ancient ways can skip centuries and be made into modern carpenters, plumbers, electricians, scientific farmers, engineers, musicians, teachers, and artists. Israel is proving that water can be piped hundreds of miles from its source to make deserts blossom, barren hills grow trees, machines free humans from drudgery. Its spirit can move youths to dance and sing in the streets. It is regrettable that circumstances force Israel to feel that she must put so much of her efforts into defense. But the total accomplishment is good, and Israel's culture, like Rodgers and Hammerstein's June blossoms, 'is busting' out all over'. This can happen in Jordan, Egypt, Syria, Iran, and Iraq: Knowhow, money, and machines are available. All it takes in addition is real brotherhood. In Israel there is no corruption in government; the distance between the poor and the rich is righteously reasonable, kept so by honest taxation, and the people are taught a moral faith. Israel's example speaks to Asia, "If you will work and pay this price you can live well too.'"

This is most interesting. Dr. Clinchy has no axes to grind. He deals with all faiths in his great movement for good will, in this country through the National Conference of Christians and Jews and on the international front through World Brotherhood. But we were especially intrigued by what Senator HUMPHREY, one of the most distinguished American leaders, had to say about his visit to the Middle East.

Senator HUMPHREY spoke of the importance of war: "There is a shocking contrast between irrigated land and unirrigated. When one sees the desolate Negev, the great southern desert of Israel, and learns that Israel expects 100,000 immigrants this year, he better understands too why the Israelis are so insistent on irrigation of the Negev. The fact is that water is at least as important as oil in the Middle East, if not more so. The Nile, Jordan, and the Tigris-Euphrates are all international rivers, and if maximum use is to be made of their waters it must be done under some kind of international arrangement."

Then he described his view of the vitality of Israel:

"The new Israeli state is a striking contrast to the ruins of older civilizations one sees on every side. It is a young, vigorous nation—strongly and confidently led by men and women of the caliber of David Ben-Gurion and Mrs. Golda Meier. It is a working democracy, with active political participation. Israel is a good friend of the United States; she has used to the utmost advantage every bit of economic aid we have given her. She is a showcase of what can be done in this dry, poverty-stricken area of the world when there is a will, when there is good organization."

The real contrast was drawn by Senator HUMPHREY a bit later. The Minnesota Senator, during his stay abroad and upon his return, emphasized Egypt's need for help from this country. He advocated assistance to the Egyptians and he had good things to say about Nasser and the Egyptians. Yet he was compelled, after an interval between his visit in Egypt and his return to this country, to make distinctions that merely proved the existence of cancerous enmities in the Middle East which must be traced to the lack of vision and the bias of Gamal Abdel Nasser.

Senator HUMPHREY met with David Ben-Gurion as well as with Nasser. He "tried to give President Nasser the benefit of every doubt, to thoroughly test his good faith"; and he pressed Ben-Gurion more than an acknowledged friend would expect. Here are his impressions:

"President Nasser is an arden nationalist who does symbolize revolt of the Arab people against colonialism. While wanting to be the strong man—the leader of Pan Arabism—his basic insecurity is revealed by his suspicion, prejudice, and distrust.

"With the candor of American fairness—not naive innocence—I put President Nasser's good faith to personal test; and found it lacking. Since our discussions, Radio Cairo and the Egyptian press, both under his direct control, have distorted and deliberately misrepresented my views expressed during my stay in Cairo. This distresses me because if Nasser wants a more sympathetic ear in America, the first thing he'd better learn is that we like people who deal on top of the table.

"President Nasser leaves you with an impression of stubbornness born partially out of trying to cope with huge tasks beyond his own experience or understanding. A stubbornness that could lead to dangerous desperation.

"Prime Minister Ben-Gurion leaves you with an impression of thoughtful determination to overcome any obstacles, of confidence in the justice of his cause and the ability of his people to accept any sacrifice in order to achieve their common objectives of a permanent, stable, homeland for the Jewish people.

"Nasser is overly sensitive and critical about what he terms domination by the western big powers.

"I heard no complaints from Ben-Gurion.

"Yet I heard a great deal of it from Nasser—complaints against the United States, despite the fact that he had been saved by the United States intervention in the United Nations. Nasser was definitely unhappy with the United States. He was pessimistic about our future relations.

"Ben-Gurion had his victory literally taken away from him, yet he did not complain. He was much more objective and philosophical in his attitude.

"When it comes to their educational backgrounds and personal qualifications for sound leadership, there is little comparison.

"Nasser is a military product, with little or no exposure to western culture or ideals, little real understanding of the United States, and handicapped both by lack of travel and knowledge of the world in which he has become such a force.

"By contrast, Ben-Gurion has all the qualifications of a great leader. He is a student of history—a scholar in his own right. He speaks nine different languages; he is a student of law, a talented orator, and skilled in the democratic processes of parliamentary government. With it all he has a greater secret—humility. Ben-Gurion really typifies his country: He is rugged, courageous, imaginative. He seems to combine some of the qualities and characteristics of Andrew Jackson and Franklin Roosevelt, with a noticeable dash of Harry Truman.

"In Egypt, the poverty is appalling; the people are still centuries behind the modern world about them. They deserve a better opportunity and that opportunity could be theirs if Egyptian rulers would concentrate their attention and resources on Egypt's social and economic needs. Assistance could and would be available.

"In Israel, a modern miracle is being wrought out of one of the oldest areas of the world; a youthful spirit is evident everywhere, and tremendous strides of progress are being made—and shared by all.

"Today, Egypt is headed in a dangerous direction, unwilling to stand up shoulder to shoulder with others who recognize the serious menace to freedom in the world, and letting itself get enmeshed into the tentacles of Kremlin influence preying u Egypt's nationalist spirit for ulterior s

"But of one thing you can be sure: I is a friend of the United States and the of the free world. There can be no d about this. She is a natural ally. Wit any formal treaty or alliance, we have in people and Government of Israel a loyal brave ally. This unwritten alliance is h upon mutual understanding and respect

"Israel is not only anti-Commun she is pro-freedom. And the Israelis prepared to defend that freedom.

"Perhaps if Nasser's aims were con trated on helping his own people, he w be facing fewer troubles today. But h obsessed with the past, and looks ahea terms of suspicion of the West and intri in the Middle East.

"As much as the Arab world professes yielding opposition to Israel's existe Israel is not only here to stay—it is alre contributing to improvements for the A people. It is forcing Arab leaders th selves to do more toward development their own countries to keep some semblan of pace with the shining example progress in the midst of their backwardn

"The truth is that eventually Israel benefit its neighbors—and will need neighbors for trade and commerce.

"Time, patience, and a regional appro to many of the pressing economic probl may be the key to lessening tensions eventual settlement of the area's com political problems."

This is a long quotation, but it is portant enough to share with every one has an interest in Israel, with all who concerned in world peace.

Perhaps all these messages from ab will bring the desired results: enlight ment to those who seek war that they c not succeed by the sword; that they m strive for peace; that only through pe will the sick be healed, the hungry those eager for enlightenment provided w means to advance their cultural cravings

The good Christians of America are h ing in this great effort, as Clinchy Humphrey have proven. More must co forth with demonstration of good will; ways in the interest of peace. Perhaps already are closer to it than we realize.

Third Supplemental Appropriation Bill, 1957

SPEECH

OF

HON. STUYVESANT WAINWRIGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

The House in Committee of the Wh House on the State of the Union had un consideration the bill (H. R. 7221) mak supplemental appropriations for the fis year ending June 30, 1957, and for ot purposes.

Mr. WAINWRIGHT. Mr. Chairm the distinguished chairman of the A propriations Committee has worked diligently on the multitude of mat before him that he has been unable study the details of the problem. T proposed act does not put the Gover ment in the insurance business. merely allows the private companies extend risks which ordinarily would n be taken. If these risks pass a certa stage, the Federal Government stan

hind the loss. These people pay a pre-
m, so this is not like many of the pro-
als supported by the gentleman from
ssouri, such as the giveaway farm
grams. In any event, people on Long
nd would like to be able to insure
ir houses and property against the
ges of hurricane. The gentleman
m Missouri is killing their chances.

Benson Program Would Hurt Iowa

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. COAD. Mr. Speaker, under leave extend my remarks in the Appendix the RECORD, I should like to include an which appeared in the August 3, 7, issue of the Wallaces' Farmer and s Homestead. This item, "Benson gram Would Hurt Iowa," is one which lso true for other States. I call at-tion to the Members of the Congress he following article:

BENSON PROGRAM WOULD HURT IOWA

arm price goals of the Eisenhower admin-ation were spelled out recently in Secre-y Benson's report to Congress on possible hods of improving the feed-grain pro-m.

enson explored several possible feed pro-ms. But he came up with a recommenda-n that would—over the long pull—provide d-grain prices at an average of around 65 cent of parity.

enson would eliminate acreage allotments corn, putting them in the same class in respect as the other feed grains. He allotments have not worked.

he Secretary would take corn out of the ic crop category that includes wheat, rice, ton, tobacco, and peanuts. That is, he ld drop corn from the 75 to 90 percent arity price range requiring boosts in sup-ts when supplies decline. Instead, he ts to set supports as he sees fit between and 90 percent or, if Congress insisted, 90 percent.

It is apparent," Benson added, "that this the direction toward which most corn ducers would prefer to go. The evi-ce is convincing that we should move in direction of more freedom for our farm-to produce, unfettered by allotments de-mined by rigid controls."

e forecast that the effects of his suggested d grain program on livestock producers' me would vary somewhat between those produce and those who buy most of their d.

t is likely that the income from livestock erprises would be reduced somewhat for ers who feed their own grain. But for stock producers who purchase grain for d, incomes would likely not be greatly erent, as lower feed costs and increased ume would tend to offset reduced prices livestock.

Total cash receipts from poultry would slightly," the Benson report added. "If y supports were lowered, dairy incomes ld decrease."

Other possible programs outlined by Ben-include:

A program that would establish a total eage allotment for all feed grains, com-nce with which would be a requirement price supports.

A program of direct payments to growers on an allotted share of production of feed grains.

A long-range soil-bank program directly aimed at feed grains.

Purchase of land by the Government to retire it from agricultural use.

Conservation land use aimed at shifting specific types of land areas out of tilled crops into conservation uses.

A Government-assisted price insurance program with producers paying premiums.

The national farm organizations did not express enthusiasm for the plan. The National Grange said it offered "very little" in the way of actual price support. The National Farmers' Union expressed sharp opposition. The American Farm Bureau Federation said it had "some merit."

Some USDA officials think the new soil bank acreage reserve rules for 1958 will limit its effectiveness. Funds have been reduced from $600 million to $500 million.

Payments to individual farm operators will be limited to $3,000. A plan to set up soil bank base acreages is also being considered. It would limit a farmer's harvested acreage to his base acreage allotment minus any land retired under either the acreage or conservation reserve.

To get worthwhile participation under tighter rules, payments would have to be increased considerably.

The appointment of Don Paarlberg as Assistant Secretary of Agriculture failed to strike any enthusiasm in farm circles critical of administration farm policies.

Paarlberg is a foremost proponent in the department of the idea that price supports should not be used to determine prices, but should be used only as a base or floor that would prevent collapse of prices and markets.

The soil bank program has done what officials consider to be a creditable job in reducing the acreage of corn. This year's corn acreage at 72,289,000 acres is down about 7,200,000 from 1955, the year before the program was inaugurated. It also is down about 3,700,000 acres from last year.

Under the program, farmers in the designated commercial area had signed agreements to retire 5,235,000 acres this year for payments of $196 million.

Americans Well Liked in Spain

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. GORDON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Constantine Brown, entitled "Americans Well Liked in Spain," which appeared in the New York Mirror of August 8. This is an interesting and timely description of conditions in Spain, a country of great strategic importance in the defense system of the free world because of the American bases being completed there. I commend Mr. Brown's article to the Members of the House for the significant facts he brings out.

AMERICANS WELL LIKED IN SPAIN
(By Constantine Brown)

Americans continue to be well liked in Spain although our prestige suffered somewhat from our do-nothing attitude in the Hungarian revolution last fall.

There is no "Yankee, go home" movement here. On the contrary the 2,500 airmen and sailors who are stationed at our unfinished air and naval bases seem to get along well with the Spaniards. The few incidents which have occurred so far have been trivial and caused by the fact that our boys have not become accustomed to Spanish drivers who frequently dart through intersections or out of side roads without slowing down.

Some people are worried what will happen next year when some 10,000 to 12,000 airmen and seamen and their families arrive to be stationed permanently at bases which the Spaniards have placed at our disposal. But most military men believe there will be few, if any, serious instances of friction between American personnel and Spanish civilians.

Conditions here are different from those in Germany and Japan. In both those countries the American forces came first as conquerors. Much as the German and Japanese people may appreciate the help they received from America which enabled them to become strong powers again, there is an inevitable strong feeling among the ordinary people against their conquerors.

No such feeling exists in Spain with which we have had no armed conflict since we decolonized Cuba.

But there is in Spain an element which looks with disfavor at the closeness of the Spanish-American relationship. This element, which cannot be described as Communist per se, has now coined a new name for America's intervention. It calls it cocacolonialism which is a repeat of the slogan invented by the French Communists 2 or 3 years ago. To back up their slogan of "Yankee, go home," they added the humorous expression of cocacolonizing France. They pretended that the introduction of our national soft drink, which has now spread more than American democratic ideals throughout the world, would hurt the traditional French wine and brandy consumption and thus ruin the chances of vineyard owners to make a living.

The French Communist deputies in the National Assembly bitterly fought the law permitting the sale of coca cola in France. They are now reviving their slogan in Spain through groups which are not Communist but are anxious to create trouble for Generalissimo Franco. And since El Caudillo has considerably relaxed the former strict controls on public expressions, these elements believe they can best serve their cause by trying to create an unfavorable atmosphere against the United States.

There are unquestionably many internal difficulties facing the Franco regime. They are caused, at least partially, by economic hardships. The generalissimo relies on close relationship with the United States to overcome these troubles. For the time being the Spaniards take their hardships fairly good naturedly. But there is unquestionably an underground swell which the Government cannot overlook. It would be too dangerous for the would-be helpers of communism or anarchism (the main revolutionary brand known in Spain for generations) to challenge Franco's rule openly. But they believe that by sneak attacks against the United States and by efforts to create doubt about America's intentions toward Spain they may be able to fish in troubled waters.

For the time being the work of these groups has been ineffective except in a few instances in the industrial north. But they are worth watching since nobody can gage the effects of galloping inflation anywhere in the world and especially in countries which are only now changing their economy from agriculture to industrial.

Meanwhile, however, Americans, and especially the tens of thousands of tourists representing a cross section of the States, are welcomed and liked.

An Editorial by Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mrs. BOLTON. Mr. Speaker, with the almost daily expression and criticism of the Supreme Court, it seems particularly apropos to bring to the attention of the Members of this body certain statements made by two extremely eminent Americans of earlier days: Thomas Jefferson and Abraham Lincoln. These comments appeared in separate editions of U. S. News & World Report.

I had hoped to insert both statements together, but the Jefferson extracts were introduced by the distinguished Senator from South Carolina [Mr. JOHNSTON] and will be found in the CONGRESSIONAL RECORD of July 29, pages 11659 and 11660.

Mr. Speaker, I take this opportunity to insert the statements of Abraham Lincoln which appear in U. S. News & World Report for August 9, together with Mr. David Lawrence's editorial comments in reference thereto:

AN EDITORIAL BY ABRAHAM LINCOLN

(On this page last week Thomas Jefferson's views criticizing the Supreme Court were presented. Here are the views of Abraham Lincoln, with particular reference to the right to criticize the Supreme Court, the right to urge a reversal of its decisions, and, indeed, the duty to urge such reversal. These statements are is timely today as any editorial expression that could be made on recent decisions of the Supreme Court.—David Lawrence, editor.)

JUNE 26, 1857, SPEECH AT SPRINGFIELD, ILL.

But we think the Dred Scott decision is erroneous. We know the Court that made it has often overruled its own decisions, and we shall do what we can to have it to overrule this. We offer no resistance to it.

If this important decision had been before the Court more than once, and had there been affirmed and reaffirmed through a course of years, it then might be, perhaps would be, factious, nay, even revolutionary, not to acquiesce in it as a precedent.

But when, as is true, we find it wanting in all these claims to the public confidence, it is not resistance, it is not factious, it is not even disrespectful, to treat it as not having yet quite established a settled doctrine for the country.

JULY 10, 1858, SPEECH AT CHICAGO, ILL.

All that I am doing is refusing to obey it (the Dred Scott decision) as a political rule. Somebody has to reverse that decision, since it is made; and we mean to reverse it, and we mean to do it peaceably.

The sacredness that Judge Douglas throws around this decision is a degree of sacredness that has never been before thrown around any other decision. I have never heard of such a thing. Why, decisions apparently contrary to that decision, or that good lawyers thought were contrary to that decision, have been made by that very Court before. It is the first of its kind; it is an astonisher in legal history. It is a new wonder of the world. It is based upon falsehood in the main as to the facts—allegations of facts upon which it stands are not facts at all in many instances—and no decision made on any question—the first instance of a decision made under so many unfavorable circumstances—thus placed, has ever been held by the profession as law, and it has always needed confirmation before the lawyers regarded it as settled law.

JULY 17, 1858, SPEECH AT SPRINGFIELD, ILL.

I think that in respect for judicial authority, my humble history would not suffer in comparison with that of Judge Douglas. He would have the citizen conform his vote to that decision; the Member of Congress, his; the President, his use of the veto power. He would make it a rule of political action for the people and all the Departments of the Government. I would not. By resisting it as a political rule, I disturb no right of property, create no disorder, excite no mobs.

OCTOBER 13, 1858, SPEECH AT QUINCY, ILL.

But we nevertheless do oppose that (Dred Scott) decision as a political rule which shall be binding on the voter to vote for nobody who thinks it wrong, which shall be binding on the Members of Congress or the President to favor no measure that does not actually concur with the principles of that decision. We do not propose to be bound by it as a political rule in that way, because we think it lays the foundation not merely of enlarging and spreading out what we consider an evil, but it lays the foundation for spreading that evil into the States themselves. We propose so resisting it as to have it reversed if we can, and a new judicial rule established upon this subject.

SEPTEMBER 17, 1859, SPEECH AT CINCINNATI, OHIO

The people of these United States are the rightful masters of both Congresses and courts, not to overthrow the Constitution, but to overthrow the men who pervert the Constitution.

MARCH 4, 1861, FIRST INAUGURAL ADDRESS

I do not forget the position, assumed by some, that constitutional questions are to be decided by the Supreme Court; nor do I deny that such decisions must be binding, in any case, upon the parties to a suit, as to the object of that suit, while they are also entitled to very high respect and consideration in all parallel cases by all other Departments of the Government. And while it is obviously possible that such decisions may be erroneous in any given case, still the evil effect following it, being limited to that particular case, with the chance that it may be overruled and never become a precedent for other cases, can better be borne than could the evils of a different practice.

At the same time, the candid citizen must confess that if the policy of the Government, upon vital questions affecting the whole people, is to be irrevocably fixed by decisions of the Supreme Court, the instant they are made, in ordinary litigation between parties in personal actions, the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal.

Essential Qualities for Successful Living

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BATES. Mr. Speaker, it is my privilege to incorporate in the RECORD the commencement address delivered [to] the graduating class of the Endi[cott] Junior College, Beverly, Mass., by [Dr.] Jesse P. Bogue, executive secretary of [the] American Association of Junior Colle[ges], Washington, D. C., on June 17, 1957:

ESSENTIAL QUALITIES FOR SUCCESSFUL LIV[ING]

(By Dr. Jesse P. Bogue)

Most of us who are graduating have [spent] 14 years in school and college. Some [of us] will continue formal education for 2 [or] tional years; others may spend several [years] for professional studies; still others [will] enter fields of gainful employment or [take] up the pleasures and duties of making [a] American homes. After the exercises of [this] day have been completed, therefore, [our] further goals and objectives selected by [each] of us will lead into divergent directions.

Now, at the end of our 14 years of [edu]tion, the question is, what have we learn[ed]? As we move ahead in divergent ways, [what] shall we take with us? Can we read [with] comprehension and speed, speak effectively, write with accuracy and clarity, listen [with] understanding and pleasure? Can we [on a] basis mathematical processes with [pre]sion? Do we know what our great Am[eri]can heritage is, its free economic system, [its] social and political structure? Are we [de]voted to our American way of life both [in] what it is and what it may become? Ha[ve] we learned something of the language, liter[a]ture, and ways of thinking of other peo[ple] who live beyond the borders of this Nati[on]? Have we gained insight into the physical [and] life sciences, and have we learned what [are] best relationships are to the environme[nt] in which we live? Have we developed a [de]sense of appreciation and value thro[ugh] literature, the fine arts, music, philosop[hy] and religion? Have we who are complet[ing] formal education mastered some useful [skill] whereby we may make a comfortable livi[ng]? We hope that these questions can be [an]swered in the affirmative. If the most [of] them can be affirmed, you have gained so[me]thing of the rich heritage of past gene[ra]tions, and you are now in a position to [im]prove and enlarge this heritage and to ass[ist] in extending it to others about you, [and] those who will follow you in the future.

What have we learned, however, outs[ide] the 2 backs of books and the 4 walls [of] classrooms? To what extent have we [as]gested facts and knowledge to attain g[en]understanding, and assimilated understan[d]ing so that it has become an integral part [of] the living organism of wisdom? On th[ese] more important questions may we make [a] few suggestions. They have grown out [of] lessons learned in a hard and practical wo[rld] and wide observations of what it takes [to] make the grade" as citizens, members [of] families, and as workers in the mill [or] of occupations.

First, we believe that the skill, will [and] habit of applying our intellectual abilit[ies] to all problems is essential for successful l[iv]ing. The unique difference between m[an] and animals is the ability of men to thi[nk] to reason with logical processes, to tr[ace] straight lines from cause to effect, and [to] formulate sound judgments on all issues. [The] distinctive characteristic of man is his f[a]ulty to look ahead and construct the ev[ent] before the fact. The habit of extending [the] application of our intellectual powers [and] skills to all issues in citizenship, in fam[ily] relations, and the daily questions of getti[ng] on successfully as productive workers is a sharp challenge to everyone of us.

Second, we suggest that the quality [of] initiative be added to the habit of appl[ying] intelligence. Initiative gets us under way, inspires us to venture and pioneer, to [at]tempt things which have never been tried, [to] accept responsibility and have courage [to] take the consequences. Lags in these ch[ar]acteristics have been identified many ti[mes] in recent years by industrial and busi[ness]

executives in altogether too many of our college graduates.

Initiative is akin to inventiveness—that daring and inquisitive quality which has so profoundly affected our economic development. With all the progress we have made to devise ways and means to satisfy our physical needs and wants, we have barely scratched the surface of what may be achieved. In the realm of human relations almost at every level, in the application of moral ideals to daily problems, in further discoveries of the secrets of nature we are on the frontiers.

Third, we further suggest that the quality of being industrious be added to intellectual ability and initiative. In a word, this means that whatever power we have must be geared to consistent and constant effort and hard work. With all of our mechanical gadgets and so-called push-button technology there is still much hard work to be done. Unless we retain the ability to do hard work, to put forth effort to full capacity, we could find ourselves out of step with the progress of American economy and civilization.

Perhaps most of us have heard or read about the heartbreaking ordeals of our men who were captured in Korea. To us they are symbols to remind us that the days in which we live demand toughness of body, mind, and soul. The habit of being industrious, the ability to stay by each job until it is completed is one of the essential qualities to insure successful living.

Fourth, hard work must be interfused with imagination. The Almighty endowed men with the faculty to recall what has been. This is reproductive imagination. We can look ahead with vision. This is creative imagination. In human relations this power is akin to sympathetic understanding of others. In trouble and sorrow it is faith and hope. In hardships and disappointments it is the healing light of a sense of humor.

In human culture imagination expresses itself in literature, the plastic arts, architecture, philosophy and religion. Imagination lifts the face of man from the clods to the skies. It transforms drudgery and dreariness into freedom of spirit for daily work and pleasant relations with others. It is one of the deep wellsprings of human happiness.

Fifth, integrity binds together into a solid striking force the other qualities we have mentioned as the thumb binds the four fingers of the hand to make it a fist. The chain of these essential qualities for successful living is no stronger than its weakest link. Certainly, the chain will break and fall apart if the link of integrity is weak. The man of integrity is whole, complete in a human sense, unified and straight in personality and character.

In business relations integrity is plain honesty. In law and in the courts it is justice. In sports it is fair play. In the home it is virtue, confidence, and sincere affection. In citizenship it is respect, reliability, and unity. In friendship it is loyalty. In work it is the will to do our best.

The essential quality of integrity is the rule and guide to faith and practice for the other qualities of intelligence, initiative, industry, and imagination. Integrity guides the intellect to face all facts fully and honestly. Integrity leads courage and confidence to initiative. In work it holds us steady to a true course of consistent and constructive effort. Integrity balances the wings of imagination with the tail of sound judgment to bear us up and keep us moving ahead toward proper goals.

Increasing Importance of the Navy

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. HOSMER. Mr. Speaker, able editor Jim Heinz of the North Long Beach Herald American spotted an important and prophetic discussion by Adm. V. D. Long of the United States Navy's increasing world importance in the Independent Businessmen's news magazine. In an unusual switch for a news editor, he reprinted Admiral Long's magazine article as spot news, and thereby achieved something of a scoop for his readers. As Commander, Mine Force, United States Pacific Fleet, Admiral Long's words carry special weight. They are as follows:

INCREASING IMPORTANCE OF THE NAVY
(By Rear Adm. V. D. Long)

Conflict is a characteristic of the human race and in the world as we know it there has never been a time of total peace nor a time of total war. The difference between war and peace lies in the degree to which force is actively employed. Were conflicts to be erased from the face of the earth, there would be no need for any instrument of force, but since we cannot see the day when such a condition will exist, it is necessary to possess force in some form or another to protect our rights and property and when necessary to impose our will upon our enemy. This is the function of the Navy for a navy is the backbone of naval power—the force element of seapower. True, in times of peace, our commerce may ply the seas unmolested and the need for active protection of that shipping is not necessary, certainly not as necessary today as it was in the 18th or 19th centuries when numerous perils other than the routine maritime hazards threatened seaborne commerce. However, there exists a threat to the peace of the world—the threat of Communist aggression, and included in that threat is a challenge to our continued use of the seas.

In order to counter or to contain the aggressive tendencies of the Soviet Union, sufficient force must be maintained to provide a deterrent and at the same time to offer visible signs of aid to our allies. The stationing of the 6th Fleet in the Mediterranean and the 7th Fleet in Asiatic waters furnishes excellent examples of this use of naval power, as an instrument for the advancement of national aims, through support of our national policies. The United States Navy, including the United States Marines, is the only sizable force in the free world capable of applying the right degree of force to any type of threatening situation. The degree of force indicated can run the gamut from a mere showing of the flag, through an emphibious operation, to the employment, if necessary, of nuclear weapons. Whatever the situation calls for, the United States Navy has the required mobility, flexibility, and diversity of forces to face it. The free world cannot afford to be without a strong United States Navy; it has no other armed force capable of handling a variety of situations.

The free world is an oceanic confederation bound together by mutual-security treaties. United States policy is firmly based on collective security. World peace and the security of the free world depends upon the continuing ability of the allied armed forces to maintain sufficient strength to counter and overcome any potential enemy. The projection of military power by air, land, or sea depends upon the ability of the United States Navy to control the sea.

Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. McGOVERN. Mr. Speaker, the most valuable resource we have in this Nation is our young people. It is thus a matter of profound concern to all of us when the strength of our youth is undermined. Juvenile delinquency has infected only a small percentage of America's youth but it is a cancer in our society that we should combat with every resource at our command.

This is a sentiment shared by the editor of the Huron (S. Dak.) Plainsman as expressed in his editorial of July 25, 1957, which I include as follows:

JUVENILE DELINQUENCY YOUTH'S NO. 1 ENEMY

Katherine Brownell Oettinger, chief of the Federal Children's Bureau, has arrived at the firm conclusion that teenage delinquency is the Bureau's most pressing problem.

Mrs. Oettinger says the juvenile delinquency rate has risen for the 8th consecutive year.

"It is a trend we can't ignore," she says. "It seems to me to be equally as important as infant mortality was when the Bureau started in 1912. After many years, that problem was greatly reduced just as juvenile delinquency can be."

She proposes grants-in-aid to the States to support research to discover the conditions which cause delinquency and to devise remedies for those conditions.

Ten States already have set up diagnostic centers which separate the emotionally disturbed delinquents for special assignment to proper institutions.

Fourteen States have consultants in juvenile delinquency to which the various communities can go for information and advice.

No doubt there would be more such projects on the State level, Mrs. Oettinger believes, if Congress adopts the pending program of grants-in-aid to help State finance projects to curb delinquency.

However, even grants-in-aid perhaps aren't enough activity on the Federal level. A recent world conference on the subject of juvenile delinquency brought out that those nations with national programs—and England was one of them—succeeded in reducing the delinquency rate while all other nations showed an increase.

Therefore Mrs. Oettinger and her Agency should be encouraged to take the lead in

formulating a national program and Congress should provide the necessary funds to put such a program into operation.

But even that won't be enough. South Dakota communities should follow the lead provided by Attorney General Phil Saunders and his juvenile delinquency committee and take action on the local level.

Certainly every possible resource should be mobilized against juvenile delinquency which now is the Nation's greatest youth problem.

The Ninth Column

SPEECH
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. THORNBERRY. Mr. Speaker, Mr. Charles E. Green is the executive editor of the Austin American-Statesman, of Austin, Tex.

One of the most interesting features of the Austin American is a column written by Mr. Green which he calls the Ninth Column. This column is followed very closely by the readers of this important daily. In the August 6, 1957, issue of the Austin American, Mr. Green emphasizes the great importance of providing for a jury trial in the civil-rights bill.

Because Mr. Green emphasizes not only the importance of trial by jury to the people of our country but the willingness to trust jurors in our Nation, I am presenting his column to the Members of the House.

The column is as follows:

THE NINTH COLUMN

We have not mentioned this before. No reason why but the whole amasing business seemed unreal. We refer to the bitter fight against the inclusion of a jury trial in the civil rights bill; and Mr. Eisenhower's anger at finding it being included.

It is perfectly obvious why some people did not want the jury system included. In general the people in the South and Southwest are not as clever as our eastern counterparts in dealing with snobbery and social situations.

And it was feared that juries would not be as harsh on offenders as a judge appointed for life, etc.

We presume that was the reason. Because that is probably what would happen at first. And will happen until we catch up with our more agile brothers in Chicago, Detroit, and points east.

But why make a trial by jury seem such a despicable thing? Many hardened criminals go scot free because a clever lawyer stacks a jury. But many a hardened criminal gets put behind the bars, also.

Sometimes a tycoon makes a farce of free enterprise through manipulating gentlemen's agreements, etc. And he puts a lot of little people out of business, runs roughshod over others. But no one has yet found a better way for the mostest to make a good living than by free enterprise.

Free speech is one of the firm roots of democracy. Yet, hardly a day passes that free speech is not abused in one way or another. And hardly a day someone in Government doesn't try to devise a way to do away with free speech.

That has not happened to date: But there are still thousands of persons who would forego free speech with the idea it would improve their lot.

So back to the jury system. Mr. Eisenhower seemed to indicate in his fury that by putting in the jury system someone was slipping a fast one by him. Mr. Eisenhower can argue until that hot place looks level, and that is all right. He can point out that in civil rights procedure the jury system might not be in order. Or that it isn't in order. He has a right to that opinion.

But how a man can approach a rage as he is supposed to have done is beyond us. Or why the tempest got into a name-calling stage, is also over our heads.

Personally, we will trust our lot to a jury—and they will make a number of mistakes. But all in all fewer than someone in a position who is not accountable to public opinion.

Raymond Brooks thinks that Senator LYNDON B. JOHNSON is masterminding the fight to put the jury system in the civil rights program and that he has made his best performance to date on that detail.

Memorandum of the Steuben Society of America

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BOSCH. Mr. Speaker, I have previously introduced bills dealing with the return of alien property. The Subcommittee on Commerce and Finance, Committee on Interstate and Foreign Commerce, headed by my distinguished colleague from Illinois, Hon. PETER MACK, is now conducting hearings on this legislation. Among the various groups and organizations urging favorable action on legislation dealing with this subject matter is the Steuben Society of America. Under leave to extend my remarks, I include herewith, for the information of my colleagues, the statement submitted by said society to the subcommittee:

MEMORANDUM OF THE STEUBEN SOCIETY OF AMERICA IN SUPPORT OF THE RETURN OF GERMAN AND JAPANESE ASSETS SEIZED DURING WORLD WAR II

STATEMENT

The Steuben Society of America, a national organization of American citizens, supports the return of seized German and Japanese assets. In the platform and program of this society, as adopted by the 17th national convention in Washington, D. C., on September 2, 1956, there is contained the following:

"We believe in the sanctity of private property and, therefore, advocate the immediate return of all private property confiscated by the Office of Alien Property under the Trading With the Enemy Act as amended."

This statement finds its basis in the traditional attitude of this country with respect to the sanctity of private property within its territory, whether such property belongs to nationals of former enemy powers or to friendly powers. As was said by Secretary Cordell Hull on the eve of World War II, "Taking over of such property except for a public purpose and coupled with the assumption of liability to make just compensation would be fraught with disastrous results."

To support its beliefs that seized assets of German and Japanese nations should be returned, this society makes these points:

POINT I—CONFISCATION IS NOT THE OBJECT OF THE TRADING WITH THE ENEMY ACT

The Trading With the Enemy Act of 1917, found in title 50 of the United States Code Annotated, was intended to prohibit and prevent the lending of aid and comfort to the enemy by frustrating the enemy's attempt to garner the sinews of war. Confiscation was not the objective. It would seem if the statements found in various cases which have interpreted the statute, are correct, that the time has come when the return of such property would no longer give aid and comfort to an enemy. It might well be said that the withholding of such property for an unreasonable length of time constitutes a form of confiscation because the beneficiary, recipient, or owner thereof may no longer reap the benefit to be derived from its use.

If confiscation is not the purpose of the act, no purpose is served by continuing to hold the property.

POINT II—USING PROPERTY OF A LIMITED NUMBER TO PAY THE OBLIGATIONS OF MANY CONSTITUTES AND IMPOSES AN UNJUST PENALTY

Assuming that the assets of German and Japanese nationals were to be applied to payment of damages assessed against the two nations as a whole, the taking of property of those who were unfortunate enough to have that property fall within the reach of a conqueror would mean that a very limited number of an entire nation is being compelled to meet an obligation which should be shared by many others. It must be remembered, however, that much of the seized property is that which became the property of enemy nationals by virtue of inheritance or gift from American citizens who undoubtedly made their contributions to the war effort along with every other citizen of this country. Taking such property and applying it to the payment of damages done to the United States of America would be the singling out of the beneficiary of American citizens as the prime obligor to pay obligations born of war because their property was most easily within reach.

POINT III—PROPERTY OF GERMAN AND JAPANESE NATIONALS SHOULD BE RETURNED FOR THE REASONS HEREIN STATED

It is respectfully submitted that Congress should anticipate the proposal to be made by the President of the United States of America as indicated in a statement of July 31, 1957, planning for the return of German and Japanese assets and thus reflect the historic American policy of maintaining the sanctity of private property even in wartime.

Respectfully submitted.

NATIONAL COUNCIL OF THE STEUBEN SOCIETY OF AMERICA,
O. HEERLEIN, *National Chairman.*

AUGUST 8, 1957.

Agricultural Trade Development and Assistance Act of 1954

SPEECH
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6974) to extend the Agricultural Trade Development

and Assistance Act of 1954, and for other purposes.

Mr. WAINWRIGHT. Mr. Chairman, the gentlewoman from New York is a very courageous person. She is defending international morality by refusing to aid a country which is clearly Communist and within the Communist orbit. It is a strange thing that many of the Members who are opposing her amendment—who are normally very isolationist—are doing so on the grounds that the Polish people in their districts are in favor of aid to Poland. We do strange things for politics in this House.

World Flooded With Narcotics From Red China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Victor Riesel showing the trade in deadly narcotic drugs already being pushed by Chinese Reds into our own country while they want us to supply them with machine tools and minerals and healing medicines. The article is from the Philadelphia Inquirer of July 24, 1957:

MAO POPPIES BLOOM
(By Victor Riesel)

WASHINGTON.—Why are we arguing about opening trade with covetized China? We are trading with the Mao (Let a Hundred Flowers Bloom) Tze-tung. We're exchanging good healthy American bodies and minds and souls for the weed—narcotics.

When Mao talks about letting those flowers bloom, he's not overlooking the opium-bearing poppies. Want evidence? Here's what Federal Narcotics Commissioner Harry Anslinger told the Joint Legislative Committee on Narcotics Study in New York not so long ago:

"Today your (narcotics) problem is New York City, Philadelphia, Pittsburgh, Washington, D. C., Detroit, Chicago, all through Texas and all through California. You don't see addiction in New England. A little in Boston, but not very much."

Much of "the stuff" comes from Mao's "blooming" China. Take Anslinger's word for it. For this is what he told this reporter:

"Sixty-five percent of the illicit opium came out of Red China last year. Most of it came across the Burma border.

"There were 500 seizures of opium, morphine, and heroin on that border all going through Thailand, Hong Kong, and then to the United States and Japan. It came from the province of Yunan. There were some 7,000 sorties which crossed that border successfully. These were the successful smuggling of amounts running up into the tons.

"You ask how much this brings the Sovietized Peiping government?

"Heroin sells for as much as $3,000 an ounce. The Chinese don't get all of it, but they do take about $100 an ounce and there are 32,000 ounces to the ton. That would give them $3,200,000 a ton to pay for armaments, reconstruction, subversion, and bribery of Asiatic unions and government chiefs.

"You get an idea of the size of this business from the staggering fact that there were 10,000 arrests of Red smugglers in Hong Kong."

This underground trade flows right across the world from the graceful old sampans of Hong Kong Harbor to the sidewalks of New York.

I report this latter city to give Harry Bridges a chance for redemption. You see, his union, the International Longshoremen's and Warehousemen's Association, ousted from the CIO on charges of following the Communist line, has gotten up a new seven-man trade committee. It is truly exercised and devoutly devoted to trade with the rest of the world, but especially with Mao's China. This committee got some travel money a few weeks ago and rushed to Washington to go through Congress beating the drums for dealing with Peiping.

Brother Bridges and his union aides would sound like the real sincere fellows if they coupled their pleas to Congress with an appeal to Mao Tze-tung to shut off the flow of dope from his blooming poppy fields.

But while we're waiting for the western longshoremen's leader to cry out against this trade, let's count on the Narcotics Bureau to fight it. There's a brave band of men—all of 300 across the world. A handful against Chinese millions.

Looks like that trade will be with us for a while.

Democrat Strategy of Abuse and Disparagement of President Eisenhower Exposed

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. HOSMER. Mr. Speaker, the technique of destroying a man to destroy what he stands for is a common one in national and international politics. It is not one that can be employed by those with sensitive minds or stomachs, nor even viewed by that kind of people with equanimity. Nonetheless, and however, unpleasant, it seems to be a fact of current political life which columnist David Lawrence felt dutybound to discuss in the following words:

THE PROBLEMS OF THE PRESIDENT—BASIC CAUSE IS VIEWED AS CONGRESS CONTROLLED BY OPPOSITION PARTY

(By David Lawrence)

Why is the obvious so often overlooked? This question might well be asked as one reads the many thousands of words being spoken and written about President Eisenhower's problems in dealing with Congress.

The obvious—that Congress is controlled by the Democratic Party, while a Republican administration occupies the White House—is hardly ever stressed as the basic cause of the differences between the executive and legislative branches of the Government nowadays.

But the ill effects of divided government cannot be suppressed.

It is, for instance, the objective and goal of the Democrats to win the next elections—both congressional and presidential. Plainly, Dwight Eisenhower gives prestige to the Republican Party. So the strategy of the Democrats is to see to it that Ike is discredited, ridiculed, and sniped at, in order that his hold on the people may be broken down. Speeches are prepared for Democratic Members of Congress to issue, and a whole barrage of publicity comes from the Democratic headquarters each week aimed at the President personally.

The drive was begun months ago to give exaggerated emphasis to Ike's illnesses. When this didn't impress the public, the next step was to hammer away at his absences from the White House or his playing golf or taking vacations. The statistics, of course, show that other Presidents—notably FDR—averaged more days per year away from the White House than Ike has. But the people are presumed to have forgotten this—if, indeed, it ever was stressed by the partisans of other days.

Next in importance in Democratic strategy is to spread the impression that Ike doesn't work on the job—that the man who took an oath to execute faithfully the duties of his office, the man who commanded one of the biggest armies in the world in the biggest war of all history, is so lacking in conscientiousness that he would play while Rome burns.

The public reads about official visitors and ceremonies and golf playing, but little is available to the press on what any President does from morning to night—the telephone calls, the cablegrams, the secret messages, as well as the many memorandums on complex problems that come to him from numerous executive departments and agencies for decision in the unspectacular phases of everyday government.

Much of this detail at present is channeled through President Eisenhower's staff, but even four or five knotty problems a day are enough to make anybody want to get some relief from tension and make a break for the golf course. What a cruel form of propaganda it is to deny the man in the White House an easing of his physical burdens by attempting to picture him before the public as lacking in fidelity to his job.

Some of the attack is cautiously and unctuously applied. The President, it is argued, is an honest man but he is incredibly naive, or he is easily imposed upon" or he is bewildered by his job due to lack of experience. There have been many Pdesidents who have been imposed upon or mislead. Some of their official advisers in past administrations have gone to jail for fraudulent behavior. The public recognizes that no President can be responsible for the occasional misbehavior of his appointees. Eisenhower may not have enough experienced politicians on his staff, but at least they are an honest group of advisers.

When all the attacks are appraised, it must be said that, as of this month—less than a year after his relection for a second term—the prestige of President Eisenhower still seems to the Democrats very important to breakdown. It's a curious contradiction—there has been so much said about the waning influence of a second-term President, yet there is so much effort being exerted to weaken an influence that is supposedly nonexistent.

Eisenhower's prestige with the people is not going to be affected by partisan attacks, because the public believes he is doing the best he can while a Democrat-controlled Congress attempts every day to sabotage his administration. The next election will not be decided on the issue of whether Ike played too much golf but on whether his administration was able to maintain the kind of conditions that permit Americans to play golf instead of poring over the casualty list of their sons killed in action on the western front.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

Appendix

Labor Legislation

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, August 10, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a letter to the editor of the New York Times, written by Mr. Dean Alfange, of New York City. This letter appeared in the August 4 issue of the New York Times and contains recommendations with regard to labor legislation, which are well worth the consideration of the Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO CONTROL LABOR UNIONS—LEGISLATION TO REMEDY PRESENT ABUSES IS ADVOCATED

To the EDITOR OF THE NEW YORK TIMES:

Much good can come from the disclosures of the Senate Labor-Management Rackets Committee. They provide compelling reasons for needed remedial legislation.

The privileges and immunities which many labor unions and labor leaders have arrogated unto themselves stem primarily from the belief by them that they are sacrosanct, above and beyond the regulating legislation governing every other phase of our economic life.

The basis of this belief is their voting strength at election time. It must be conceded that with some notable exceptions our public officials and legislators have in the past been so fearful and timidly delicate in the handling of matters concerning labor and labor unions as to give ample substantiation to this belief.

AID FOR RANK AND FILE

We must, of course, not confuse the rank and file of labor with the labor union as an entity or with those who dominate the labor unions' activities. The members of labor unions suffer as much or more from the misdeeds and arbitrariness of their leaders as do the people outside the union. Their jobs and the welfare of their families depend upon their uncritical, unwavering obedience to every union act or demand.

They suffer in many instances from unnecessarily high dues, special assessments and the indignities which they must silently accept. The union worker, more than anyone else, feels the need of, and would welcome, corrective legislation controlling the activities of labor unions and labor leaders. Such legislation is long overdue.

Labor unions are necessary and rightly led they can be a bulwark of our democracy. Without the right to collective bargaining the workers would be at the mercy of the employer. But, as with any large new movement which succeeds, the rapid growth of unionism has brought many abuses in its wake.

Wildcat strikes, jurisdictional strikes, boycotts, unauthorized walkouts called not to gain any benefit for the worker but to serve the ulterior purposes of the labor leaders, featherbedding, the refusal by unions in many trades to take on aprentices and new members so as to create a shortage of skilled workers, and the use of political coercion, are but a few.

TAFT-HARTLEY LAW'S MERITS

The Taft-Hartley law was designed to correct some of these abuses but it left many uncorrected. Taft-Hartley is a good law primarily because it frees the worker from the absolute control of union bosses just as the Wagner law freed him from the absolute control of hiring bosses.

Yet, for obvious reasons, labor bosses have gone to extremes to berate this law which so greatly benefits the worker and, unfortunately, the worker has not attempted really to understand it.

Labor unions and labor leaders, and this too is true of big business, have become too powerful. They take unto themselves rights which neither private individuals nor private businesses are permitted.

In many respects labor leaders account to no one, not even to their own members. Unions are virtually exempt from taxation. More serious still, they dictate who shall and who shall not have employment. They have the power, which they exercise in 29 States (19 States have enacted right-to-work laws) to prevent anyone from working who will not join the union and pay whatever dues and other exactions the union demands.

They also have the power to boycott those seeking employment and who are willing to pay union dues and assessments. And it is not an exaggeration to say that labor unions possess the power to generate inflation of the kind that can impair the Nation's economy.

ACTIONS OF LEADERSHIP

The leaders of labor, and this is also true of many leaders of business, have not been notable for thinking and acting for the general good. Until they do, that requirement must be filled by appropriate legal restraints.

Legislation should be enacted to provide that:

Each union shall submit to its members and file with the Department of Labor, annually, a report under oath by two of its officers of its financial condition, listing investments, financial transactions of every kind, income and expenses;

Union funds of every kind shall be declared to be trust funds which may be used only for the conduct of proper union activities or invested in investments legal for trust funds;

Union pension and welfare funds shall be brought under Government regulation and supervision and the trustees of these funds shall be required to report regularly to the beneficiaries thereof with respect to income, expenditures and investments;

Salaries, gifts, bonuses, pensions, and other compensation to union officers shall be paid only if notice in respect to the same shall first have been given to all union members and provided that a majority of the members present shall have voted the same at a meeting called for that purpose;

Action in respect to strikes and settlements of strikes, agreements with employers, wage demands and demands for other benefits, pension and welfare plans, may be taken only when authorized by a majority of the union members present at a meeting called for those purposes of which ample notice shall have been given to all members;

Union labor monopoly and other union monopolistic practices shall be brought under the jurisdiction of the antitrust laws and power shall be given to the Department of Justice to curb all practices which are in restraint of trade.

Never before has the Congress had a better oportunity and a more favorable climate for the enactment of legislation along these lines. The immediate beneficiaries of such legislation would be the rank and file of union members who are unable by themselves to cure these abuses and to protect their interests.

In the long run, legal and moral responsibility should help the labor movement and should be welcomed by the great majority of honest labor leaders who have nothing to hide or fear and whose aim it is to better conditions for the worker and the country at large.

DEAN ALFANGE.

NEW YORK, *July 31, 1957.*

Record of American Indians as Faithful Workers and Employees

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, August 10, 1957

Mr. NEUBERGER. Mr. President, a very interesting memorandum has come to my desk, as chairman of the Indian Affairs Subcommittee. It was written by the engineering department of the Union Pacific Railroad and presents some significant facts on the experience of the Union Pacific Railroad as an employer of Indians on five of their far western divisions.

In studying this memorandum, I was impressed with the fact that a great railroad, one of the Nation's big businesses, if you please, has shown a consciousness of the social significance inherent in their act of employing Indians. It is noteworthy, and certainly commendable, when a company takes into recognition the factors evaluated in this memorandum. In my opinion, this presentation prepared by the engineering division of the Union Pacific Railroad merits wide reading and also equally wide emulation. It answers the vicious canard that American Indians are not reliable employees.

My own experience in my own State, confirms that of the Union Pacific Railroad. Indians at Warm Springs, at Klamath Reservation, at Umatilla Agency, and elsewhere in Oregon, are dependable and trustworthy workers. They help to operate sawmills, pulp plants, and other essentials of Oregon's economic development.

As chairman of the Indian Affairs Subcommittee of the Interior Committee, I am pleased to ask unanimous consent for inclusion in the Appendix of this Union Pacific Railroad report which gives so favorable an aspect to the ability, capacity, and trustworthiness of our splendid American Indian Nations.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

OMAHA, NEBR., *June 12, 1957.*

EMPLOYMENT OF INDIANS BY THE UNION PACIFIC RAILROAD CO.

During the past 10 years this company has utilized Navaho Indians to a great extent on our track gangs in the maintenance of way department.

Our experience has been that the Navaho Indians are willing and anxious to learn the methods employed in track maintenance. They have been especially eager to learn the use of all tools and equipment on our rail relay and ballast gangs where mechanized tools and equipment are used. For a number of years the mechanized tools and equipment on such gangs have been operated by Navaho Indians.

We have employed Nayaho Indians as follows during period 1946 to 1956 inclusive:

1946	3,391
1947	5,143
1948	5,361
1949	4,772
1950	4,589
1951	5,363
1952	5,909
1953	5,402
1954	2,416
1955	3,643
1956	2,549

As a result of the interest these people have shown in railroad maintenance work, through close cooperation with the Bureau of Indian Affairs, a plan was started in 1954 to place Navaho Indians on sections, locating them wherever possible in small groups at one location if housing was available, otherwise every effort was made to locate them on adjoining sections. This proved very successful in cases where families of the employees accompanied them, as it provided relief from homesickness of being away from the reservation. This plan has progressed very satisfactorily as can be noted from the following figures:

Navaho Indians employed on sections August 1, 1955:	
Wyoming division	13
Utah division	22
California division	5
Idaho division	27
Oregon division	5
Total	72
Navaho Indians employed on sections May 1, 1957:	
Wyoming division	20
Utah division	57
California division	52
Idaho division	28
Oregon division	8
Total	165

The railroad has not only been interested in the Navaho Indians as employees, but has made every effort to cooperate with Mr. George P. LaVatta, administrative officer of the Bureau of Indian Affairs, in his campaign to provide education for Indians when away from the reservation. In Portland, Oreg., Mr. LaVatta was able to set up night-school classes in which a large number of the employees on one of our extra gangs enrolled, and have continued in service becoming more valuable employees by virtue of a better understanding of the English language.

Mr. LaVatta's campaign to provide education for the Indians has not stopped with night school classes, but rather has expanded to full time trade schools at various locations. Two such schools are located near our property at righam City, Utah, and Chewawa, Oreg., where courses in carpentry, painting, machine operation, plastering, cement work, welding, general blacksmithing, cooking, etc., are taught in addition to advance training in English. Early in 1958 some of the students of the Brigham City school will be ready for a period of practical application of the trade they have been studying, and every effort will be made to place them with our maintenance gangs. Mr. LaVatta, in a recent visit to this office, extended an invitation for a representative of this office to make a tour of the Brigham City School to observe the training available, and to determine if the skill and type of work performed by the students could be employed by the railroad.

Progress made by the Navaho Indians in adapting themselves to off reservation conditions, also educationally, has been remarkable during the period we have utilized them on our track gangs. This is emphasized by noting that when we first started to recruit them for our service, a very small percentage could sign their name, however, at the present time we find relatively few that cannot sign their name. It should also be noted from records of Navaho Indians employed by years, that from 1954 through 1956 there was a sharp decline in the number recruited. This is practically due to men remaining on the job longer having become better acquainted with living conditions off the reservation, also realizing the economic advantages of outside employment.

We have also found that the safety record of the Navaho Indians on this railroad has been exceptional, however, over the years we had a number of cases where the Indians were involved in off-duty accidents resulting in serious injuries or death, and the financial status of the relatives was such that they could not provide proper care or burial. To alleviate this condition, negotiations were completed early in 1956 whereby the Navaho Indians employed by this company were eligible to participate in a group accidental death or dismemberment insurance policy. The coverage of this insurance is for a 1-year period starting with date application is signed, and remains in effect for that period even though the insured party may leave our service and return to the reservation. Premium for this insurance is deducted from the empoyes' wages by payroll deduction. This plan has been praised highly by the Navaho people. Mr. Paul Jones, chairman, Navaho Tribal Council, in a letter dated May 8, 1956, to President Stoddard, stated in part:

"Information has come to me that in the first month that accident insurance was made available to Navajo employes of the Union Pacific Railroad, approximately 700 workers voluntarily subscribed for such insurance. This will provide our people with over $2 million of protection for them and their families which was formerly not available to them.

"I want you to know that we here at Window Rock deeply appreciate what the Union Pacific Railroad has done for our people in this matter. * * *"

The participation of Navaho employees in this insurance plan continues to be 100 percent with result that it has been possible to increase coverage in the dismemberment clause substantially.

Experience has proven that the Navaho Indians are the most efficient and satisfactory source of track labor available in this area.

Atomic Research Cooperation at University of Minnesota

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Saturday, August 10, 1957

Mr. THYE. Mr. President, a new and major discovery in atomic science has been made recently at the University of Minnesota. An atomic particle with 10 or possibly 100 times the energy of any other particle before known to man was discovered 22 miles in the sky over Minnesota by an atomic research team from the University of Minnesota and the University of Bristol, Bristol, England.

This discovery is important to further study of cosmic rays, which to this day have remained a mystery to our scientists. The fact that these mysterious rays contain basic elements was first discovered by another University of Minnesota research team in 1947 working together with scientists from the University of Rochester, Rochester, N. Y.

Now we can again point to the University of Minnesota as a leader in the field of atomic research. This most recent discovery also points up the fact that cooperation in the field of scientific research is a necessity if the knowledge of scientists throughout the world is to be pooled together to extend our understanding of the natural forces and things about us.

Mr. President, in recognition of the fine work being done by Dr. Edward P. Ney and Dr. John R. Winckler, together with their associates, I ask unanimous consent that an article which appeared in the Minneapolis Morning Tribune of August 8, 1957, be printed as a part of my remarks in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIVERSITY REVEALS DISCOVERY OF MOST POWERFUL ATOMIC PARTICLE

(By Victor Cohn)

A new and major discovery in atomic science has been made in Minnesota—a discovery that indicates man has only begun to tap the basic energy of the universe.

An atomic particle—a chunk of an atom—with 10 to 100 times more energy than any before observed by man has been detected in the sky over Minnesota.

It was detected 22 miles up by a balloon flown September 18 for University of Minnesota and University of Bristol, Bristol, England, cosmic ray scientists.

This balloon's unusual cargo was an $18,000, 200-pound stack of silver bromide photographic plates—almost solid silver—used not as part of a camera but as a clever, precious trap to detect cosmic ray effects.

This was the biggest cosmic ray trap of its kind ever flown, and its study has occupied months and is not ended.

But through its bulk, it is now established, streaked a particle—a helium nucleus—with an energy estimated at from 1 million billion to 10 million billion electron volts.

This is more than 150,000 times greater than the greatest energy so far produced

on earth by man, the 6 billion electron volts produced in the Berkeley, Calif., "bevatron" or particle accelerator.

Even the individual particle energies in an atomic bomb explosion are far, far smaller, though, altogether, they add up to terror.

The Minnesota particle is a primary cosmic ray, or atomic particle still unaffected by the earth's atmosphere.

Cosmic rays are a mysterious rain of such particles. And here is how the Minnesota discovery confirms their role in providing man an invaluable laboratory for studying the nature of the still-mysterious atom.

It reveals several effects, say the discoverers, that will give theoretical physicists some new things to consider.

For example, it raises new questions about the nuclear particles called mesons—some of which seem to represent the unknown forces that somehow keep all atoms (and the world) from flying apart.

These questions, even partly answered, might give man spectacular new control over the basic forms of atom energy that he has just begun to tap.

This and other particles that streaked into this stack should also contribute new knowledge about the distribution of elements in outer space.

This could help answer the great question: How do the cosmic rays originate?

This bears directly on the very origin of the universe.

The scientists doing this work basically are after a description of nature, small and large. They seek to understand the forces inside the atom, and they seek to understand the forces in outer space that originate and accelerate atoms in the first place.

What their work could really lead to, no one can say.

But these forces are all electro-magnetic forces, and man's whole modern technology, almost, is based on his exploitation of these forces.

Now, here is how this discovery came about.

The men, and one woman, heading the studies here have been Dr. Edward P. Ney, professor of physics; Dr. John R. Winckler, associate professor; Dr. Phyllis Freier, research associate; and two distinguished visitors who arrived last September—Prof. Peter Fowler, of Bristol, and Prof. C. M. G. (for Cesare Mansueto Giulib) Lattes, of University of Brazil.

Lattes was codiscoverer (while working at Bristol in 1948) of a basic atomic particle. Fowler, a keen young British scientist, is a nephew of the famed Lord Rutherford, discoverer of the atom's nucleus.

These men combined the high-altitude balloon work pioneered in Minnesota and the use of photographic-type plates that the Bristol group started.

All were present when the balloon—launched by Winzen Research, Inc., of Bloomington—stayed at 116,000 feet for 8 hours and came down near Redwood Falls, Minn.

Half of the silver stack was sent to Bristol and half developed and processed at the university, with transatlantic phone consultation once the track of this super particle was discovered by microscopic examination.

The track—caused by the action of the electrically charged particle on the silver bromide of the plates—became many tracks, and, finally, 6,000 individual tracks as the scientists worked through the stack.

This was the result of the particle's colliding with more atoms in the silver and "breeding" new particles.

The studies of all the effects may continue for as long as 2 years more.

"For there are millions of events in this stack," Fowler said before he left for Bristol. "For one thing, we are studying thousands of less energetic primary particles. These are nuclei of many basic elements of the universe, elements like carbon and iron."

The fact that primary cosmic rays contain such nuclei at all was discovered by Minnesota and University of Rochester, N. Y., men in flights here in 1947.

Fowler continued, "The distribution of these elements, if known in considerable detail, can tell us much about cosmic rays' real origin and subsequent history. And the beautiful thing about this stack is that it is so big that about one-third of all the primaries in it can be followed to rest—and we can thus know the energy of many particles very accurately.

"We also expect to find and analyze in detail 20 or 30 high-energy nuclear disintegrations. These disintegrations or stars—that's how they look—are caused when the primaries that come in strike nuclei in the silver.

"I'd say there will be about 20 million such disintegrations readily detectable in this stack. We'll study the 20 or 30 of the highest energy we can find—we won't bother with chicken feed."

Studies like these—many of them, here and elsewhere—should give physicists new clues to many present questions.

For example, what are the really "basic" particles that compose the atom's nucleus? Physicists in recent years have turned up a whole zoo of new particles. Among them are the short-lived mesons.

"Here's just one thing in this event," said Ney.

"From what we believed, an event of this magnitude should have made about 100 charged mesons—precisely, pi-mesons. It made only six. I don't know what the answer is, but at this high energy I'd be surprised if something new didn't happen."

So in this way and more, the Minnesota discovery may at first turn up more questions than answers.

It will also, it's sure, spur still more balloon flights at still higher altitudes with probably even greater silver-bromide stacks.

The physicists know that particles of even greater energies exist.

Scientists at Massachusetts Institute of Technology recently spread particle detectors over a space of 50 acres. They detected several large showers, each containing several hundred million secondary cosmic-ray particles.

They deduced that the most energetic of these showers were caused by primary particles with an astonishing energy of a billion billion electron volts.

In effect, the Minnesota-Bristol group has found in the sky the cause of the sort of thing the MIT men have found on the ground. But what the MIT men have found on the ground indicates there are even greater prizes to be snared in the skies.

"You need an immense detector, like the one we used," says Ney, "one with an immense amount of stopping power. But you also have to go higher and stay longer, even for weeks."

This is part of the reason the Minnesota physicists in the past 6 years have been doing their own balloon development, under Government contracts. Last September they sent up a new design, new light-plastic balloon that rose 142,000 feet, breaking altitude records.

From Texas and Saskatchewan, Guam, and the Galapagos Islands, they have sent balloons up to measure things like "east-west effects" and "energy distribution by latitude." These things, again, bear on the cosmic rays' origin.

The group here was visited in March by C. N. Yang (of the Institute for Advanced Study at Princeton, N. J.)—one of the men who made the startling "antiparity" claim last March that atomic particles do not behave symmetrically, but are actually "right- or left-handed" in their direction of spin.

Yang—one example of cosmic rays' importance—came here because cosmic-ray results were different from those observed in earthy, man-made particles.

Minnesota results are even shedding light on the age of the earth, and the true nature of its gigantic magnetic field.

And if we ask again, "What can all this mean?" we can quote England's Fowler:

"Before the war, physicists were involved in low-energy research—and we've seen what that led to. Now we're in the high-energy field."

The Small Business Administration

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, August 10, 1957

Mr. YARBOROUGH. Mr. President, the small-business man is one of the bedrocks of the Texas economy as well as the entire way of life. His individuality, his desire to be his own boss, is a great example of our heritage of free enterprise.

In recent days the small-business man has had a hard road to travel. In this day of international cartels and world-wide chainstores, the small-business man must have stopped many times and asked himself if the struggle is worth the price of individuality.

The Small Business Administration, in recent months, has been one of the few places to which the small-business man could turn for hope. It is to be commended for its work.

I was happy to work for the passage of such a Small Business Administration bill, Mr. President, because I believe the Small Business Administration is indispensable for the survival of many small-business men.

The Dallas News, one of the largest and most influential journals in the Southwest, too notice of the aid for the small-business man from Congress, and has commended the passage of the Small Business Administration by the Congress.

Mr. President, I ask unanimous consent of the Senate that the editorial from the Dallas Morning News of Sunday, August 4, 1957, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE LIFE FOR SBA

Extraordinary action Friday by Senate and House managed to save the life of the Small Business Administration as it was about to expire. A single objector in the Senate could have ended it now, since it took unanimous consent to shunt aside the civil-rights debate long enough to pass the life-renewing bill.

The evident popularity of SBA is due to an odd fact. It has largely justified itself in a role other than its original main purpose. That is as a disaster-relief agency.

When the mighty Reconstruction Finance Corporation was nearing its end, many urged a Small Business Administration to carry

on at least part of RFC's Government money lending. The idea seemed to be that many small businesses which could not qualify for straight commercial credit should be given a helping hand from Washington.

As SBA has worked out in practice, most of its loans have gone to small-business men, including farmers and ranchers, who were victimized by drought, floods, or other communitywide disasters. Most of them in ordinary times could have gotten credit at regular banks.

The Challenge to American Higher Education

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 10, 1957

Mr. WILEY. Mr. President, one of the most significant facts in the postwar era is the enormous increase in the number of young Americans who are now being educated in institutions of higher learning throughout our land.

Back in 1870, 1.7 percent of youngsters aged 18 through 21 were enrolled in colleges in our country.

But by 1955, 32.1 percent of all the young people in this age group—2¾ million in all—were enrolled in the Nation's colleges.

And this tidal wave of students is going to increase still further. Indeed, the Educational Policies Commission—cosponsored by the National Education Association and the American Association of School Administrators—estimates that college enrollment will just about double between now and 1970.

Where are we to find the teachers for this vast tidal wave of students? Where are we to find the facilities, the college buildings, the laboratories, the campus space, in general, and how are the States to provide the tax revenue?

These are questions which engage the serious thinking of thoughtful persons throughout the land.

In my own State, for example, higher education now absorbs around one-fifth of the State's tax income. Enrollment in Wisconsin higher education is already well above the 54,000 mark.

Wisconsin has always had a deep interest in higher education.

Ten years before our admission to statehood, the University of Wisconsin, for example, was provided for by law by the Council of the Territory of my State—in 1838.

On February 5, 1849, the first class opened in a little red brick building.

In the 108 years which have followed, the higher education facilities in my State—the university itself and Wisconsin's State colleges—have emerged as literally the keystones in the arch of progress for the Badger State.

Yet we, like the rest of the Nation, are concerned with the problem of how not simply to expand faculty, but how to find the wherewithal to pay faculty members salaries which they truly merit and which will enable them to continue educational careers. And we are concerned with all of the other financial and less tangible problems confronting the higher institutions of our land.

On July 16, I pointed out in the CONGRESSIONAL RECORD the financial problems facing independent, privately-endowed colleges in my own and other States.

As an indication now, however, of the broader phase of this problem—the problem facing higher education as a whole, particularly tax-supported education—I send to the desk two articles.

The first consists of excerpts from a column by Mr. John Wyngaard in the July 23 issue of the Janesville Gazette.

The second is an article by the education editor, Mr. Benjamin Fine, of the New York Times on April 28, 1957.

I ask unanimous consent that both artices be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Janesville (Wis.) Gazette of July 23, 1957]

TIDAL WAVE OF STUDENTS IN NEAR FUTURE IS POSING BIG TAX PROBLEM IN STATE

(By John Wyngaard)

MADISON.—A recent State document that was not given the attention it probably deserves was the advice of the State coordinating committee for higher education that public and private interests must ponder the problems of higher education service in the years ahead.

The committee warned of the tidal wave of students in colleges and universities, and especially tax-supported schools, that is inevitable.

The statisticians have an abundance of evidence. Wisconsin higher education enrollments will rise from some 54,000 during the school year just concluded to about 60,000 in 1960, to about 72,000 in 1965, and to 88,000 or about in 1970.

These are highly conservative projections, moreover. They don't take into account the strong chance that the ratio of young people attending college will grow.

WHAT DOES IT MEAN?

Today slightly less than one quarter of the college age young people of Wisconsin attend college. The ratio has been growing at the rate of 1 percent a year. There is no reason to suppose that the trend will be halted, barring such a cataclysm as war.

What does it mean for the anonymous taxpayer?

Obviously it is one of the significant trends of the times. Higher education now takes about a fifth of the State's tax income. The tax structure is strained nearly to the breaking point.

What if the number of students in college and university is increased by a third or more? It is unlikely that the students or the faculties will tolerate any diminution of the quality of service. Indeed, today's students are expecting standards of service that are far beyond what prevailed only a generation earlier.

[From the New York Times of April 28, 1957]

PROJECTIONS OF FUTURE COLLEGE ENROLLMENT POINT UP THE NATIONAL PROBLEM

(By Benjamin Fine)

A report on higher education last week brought the problems of American colleges and universities into sharp focus. It documented the many issues that have been considered at college conferences in recent months. And it also made a number of sharp recommendations and pertinent observations.

The report, prepared by the educational policies commission, was 4 years in the making and runs 150 pages. The commission is cosponsored by the National Education Association and the American Association of School Administrators—two of the most powerful and influential school groups in the Nation.

The study shows that in the next dozen or more years—from 1957 to 1970—the college enrollment will just about double. This is not serious in itself; the college student body has shown a strong and continuing rise since 1870 both in numbers and in percentage of the college-age group, as this table shows:

Year	Enrollment	Percent of group 18 to 21
1870	52,286	1.7
1880	115,817	2.7
1890	156,756	3.0
1900	237,592	4.0
1910	355,213	4.8
1920	597,880	8.1
1930	1,100,737	12.2
1940	1,494,202	15.3
1950	2,659,021	30.2
1955	2,755,000	32.1

But the growth from here on in will tax the colleges more than ever in the past. For one thing, the colleges are not prepared to admit the huge numbers expected to seek a college education. And for another, educational costs have skyrocketed. The private colleges say they can, at best, expand by 40 percent in the next decade.

These projections show the expected enrollments over the next 15 years. (The first projection is based on the current proportion of 18–21-year olds attending college, the second on an estimated increase in the proportion):

Year	Number	Percent of college age population	Number	Percent of college-age population
1960–61	2,976,683	32.1	3,523,800	38.0
1965–66	3,764,954	32.1	5,134,778	44.0
1970–71	4,365,786	32.1	6,804,916	50.0

Even on the minimum estimate the college enrollment will jump by more than 1 million from its present 3 million figure. But every year for the past 15 years, the percentage of those attending college has increased, going from 15 percent in 1940 to 32 percent in 1955. It is reasonable to expect that this rate of increase will continue at a comparable pace.

FACILITIES

Existing institutions cannot meet the problem. But there are definite steps that can be taken at this time. The report points out that many colleges are fully used. While it is true that the Ivy League and big-name colleges are crowded, many institutions west of the Mississippi or south of the Mason-Dixon line are still seeking students.

The Nation supports 1,855 colleges and universities today. Of these, 540 have fewer than 250 students each. At the other end of the scale, 24 institutions enroll more than 15,000 students each.

The report makes this point: First consideration should be given to the fullest use and wisest expansion of existing institutions. This is specially true of those colleges advantageously located but now underdeveloped. It says further: Plant expansion should be undertaken only after statewide or regional analysis of needs. A large number of new institutions, uneconomically small and unwisely located, would ultimate

ly hurt the development of a strong system of higher education in this country.

FACULTIES

The problem of expansion is a faculty problem even more than one of brick and mortar.

There are not enough competent faculty members to meet the needs of an expanding college enrollment. Many reasons may be assigned for this sorry state. But the truth of the matter is that college faculty members are not paid enough to make their jobs attractive.

While every other profession has received recognition, financial and otherwise, the teachers have been overlooked. In terms of actual purchasing power, the salaries paid faculty members in 1953 were 2 percent below those paid in 1904.

Low salaries make the task of recruiting faculties difficult. The love of teaching is not enough to bring capable men or women into the profession, especially when Government and industry sometimes offer a doubled or trebled starting salary for the doctors of philosophy.

FACULTY RAISES

What is the solution? The report makes a bold proposal: Raise faculty salaries 75 to 125 percent. On the average, this would mean doubling the salaries. Now, that is not as drastic as it might sound. A recent study by the National Education Association showed that the median salary for faculty members was $5,243.

Faculty salaries have, for 40 years, received a declining percentage of university budgets. In 1908 professorial salaries of $5,000 were not uncommon. A present salary would have to go to $20,000 to equal the purchasing power of the 1908 salary. Yet how many teachers get that amount today?

The commission does not say that higher salaries alone will solve all educational problems. But it surely will make teaching more attractive; and it will bring more persons into the fold.

Hells Canyon and Bruces Eddy

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Saturday, August 10, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hells Canyon and Bruces Eddy: An Object Lesson," which appeared in the August 1 issue of Conservation News, published by the National Wildlife Federation.

This leading conservation organization candidly states that the Hells Canyon and Bruces Eddy issues have "demonstrated to conservationists the necessity of offering alternatives to river-development plans that jeopardize wildlife and other valuable resources."

In other words, mere opposition to potentially-destructive dams can defeat the worthwhile goals of the conservationists. They must fight for the alternatives which safeguard conservation interests.

I want to commend the conservation organizations for their valiant fight for Hells Canyon Dam, and their opposition to the Bruces Eddy Dam. Congress has not yet received needed departmental reports on the effect of that proposed dam on fish and wildlife.

Mr. President, I commend the National Wildlife Federation for its efforts to conserve all the Nation's resources.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELLS CANYON AND BRUCES EDDY: AN OBJECT LESSON

The long fight against authorization of Bruces Eddy Reservoir on Idaho's North Fork of the Clearwater River has reached a decisive stage. The House Public Works Committee has amended and reported S. 497, the Rivers and Harbors omnibus bill, in which the Senate included Bruces Eddy among more than a hundred Army engineer projects. The House committee took Bruces Eddy out. Assuming the House will uphold its committee and keep Bruces Eddy out, the issue will then be settled, at least for this Congress, in conference committee.

If the proponents should prevail in conference, and Bruces Eddy be restored, conservationists will urge a veto.

Hells Canyon Dam, proposed for construction on the Snake River and considered by many as an alternative to Bruces Eddy, appears to be entombed in the House Committee on Interior and Insular Affairs. Opponents succeeded in blocking the Hells Canyon bill after the Senate passed it June 21 in a surprising vote.

Their experience with Bruces Eddy, together with the emerging pattern of relationship to Hells Canyon, has demonstrated to conservationists the necessity of offering alternatives to river-development plans that jeopardize wildlife and other valuable resources. It has convinced many that the task of protecting fish, game, wilderness and scenic values for future generations involves a greater burden of responsibility than simply opposing the projects which threaten those resources.

Until recent months few conservation groups had voiced support for alternatives to Bruces Eddy or to other potentially destructive dams in the middle Snake Basin. This is partly because the recommendation of alternatives would have involved them in the bitter struggle between public-power advocates and private-power groups, a struggle in which Hells Canyon has been the grand prize. The opposing ideologies here do not necessarily bear any relationship to the sound management of natural resources. While some political leaders are classed among the country's leading conservationists, as a group, conservationists are not politicians in the Republican and Democratic style. They are inclined to shy away from a political brawl. So in the partisan battle over Hells Canyon they had a tendency to stand on the sidelines while the politicians fumbled the ball.

Throughout their long fight against Bruces Eddy, the position of conservationists has been one of principle. They have protested any congressional action to approve or finance construction of the 570-foot barrier until studies have been completed to show what the effect will be on fish and wildlife. This is a sound position. They are now optimistic of winning—at least in this Congress—if the group of conservation-minded legislators who make up the leadership of the House Public Works Committee can prevail against the Senate conferees. They are not so optimistic about future success in saving the great wildlife and recreational resources of the Salmon and Clearwater Rivers against the dambuilders. Many have become convinced the future task would be easier if a big dam, developing the full power and water storage potential of the site, were built at Hells Canyon.

That is the reason a number of conservation groups throughout the country came out recently in support of the high Hells Canyon Dam as a workable alternative to the Clearwater project. It offers 3,800,000 acre-feet of storage compared to 1,433,000 acre-feet at Bruces Eddy. Its power potential exceeds the capacity of Bruces Eddy. The Hells Canyon location, while causing inundation of a spectacular section of the deepest river gorge in North America, does not threaten vast fisheries, wildlife, or recreational resources.

Licenses for the three private dams in this same stretch of the Snake River—Brownlee, Oxbow and low Hells Canyon—have been granted to the Idaho Power Co. by the Federal Power Commission. Brownlee is now under construction. But these dams together offer much less in the form of flood storage and hydroelectric potential than the proposed high Hells Canyon project. They do little to relieve the pressure for Bruces Eddy and for the project proposed at the Nez Perce site, downstream from Hells Canyon on the Snake River. The Nez Perce Dam would block the vast runs of steelhead and chinook salmon that now use the Salmon River. It is considered to be the biggest single dam threat to the great sport and commercial fisheries of the entire Columbia basin.

Elsewhere in the Columbia system similar problems are faced and similar losses threatened through construction of high dams. Proposed Glacier View Dam in western Montana, for example, would flood portions of Glacier National Park. Proponents of Glacier View have been quiet of late but like dam promoters everywhere, they have the blueprints filed away and are biding their time. When they decide to push, the Nation will see another controversy not unlike the Echo Park Dam struggle that was won by the conservationists in the 84th Congress.

Nearby in Montana, on the Middle Fork of the Flathead River, proposed Spruce Park Dam would flood out wilderness, big-game wintering areas, and some of the last remnants of grizzly bear range in the United States. Here again conservationists might well consider the wisdom of supporting multipurpose dams at less destructive sites. Two that are now proposed, Libby Dam on the Kootenai River and Paradise Dam on the Clark Fork, would relieve much of the demand for upriver projects that place park, wildlife and wilderness resources in jeopardy.

The lesson to be drawn, then, from the related Bruces Eddy and Hells Canyon fights, is that in controversies over river development, conservationists must choose, or devise, a plan that will serve best to protect the valuable resources which, if not fought for, will be lost in America's passion for pouring concrete. Sometimes the choice may parallel the desires of private industry; in other instances, it may support the plans of public power. This is not to depreciate the private enterprise-versus-Government issue, the outcome of this issue may well be critical, in one way or another, to the future of America. But the way we use or misuse natural resources can be equally critical, and much more quickly, in the ultimate question of survival or disaster. The peculiar function of conservationists, and part of their great opportunity to serve America, is to insist that river-development plans make conservation sense. And if they do their job for America, they cannot be deterred by false accusations of partisanship that will be hurled at them by partisans. Conservationists must hew to the line and let the chips fall where they may.

Dual Compensation and Employment; a Reexamination of the Federal Doctrine

SPEECH
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. HOSMER. Mr. Speaker, at least 35 dual employment and dual compensation statutes are now in effect. It is a practical impossibility to administer them, let alone avoid repeated cases of inadvertent hardship and injustice. This is a situation badly needing a remedy, and the latter involves much more than first meets the eye.

After briefly studying the problem I became aware that both a tremendous research job and a tremendous job of analysis were required. I requested help from the Library of Congress, and Dr. Freeman W. Sharp of the American Law Section spent many months tirelessly assembling and analyzing the required data. I present it in detail today because it is important, and because I feel it should be preserved in a public document readily available to the many persons now and in the future who will want to study it.

For the purposes of clarity and reference, this study, based entirely on the work of Dr. Sharp, to whom full credit is hereby given, is sectionalized under the following topical headings: I—The Problem; II—Dual Employment of Military Retirees; III—The Federal Doctrine; IV—The Common Law and English Background of Officeholding; V—American Colonial and Post-Revolutionary Ideas; VI—The Federal Constitution; VII—The Early Federal Period, 1789–1850; VIII—The Middle Period, 1850–1874; IX—Restatement and Revision, 1874–1924; and X—The Test, 1924–1927.

DUAL COMPENSATION AND EMPLOYMENT: A REEXAMINATION OF THE FEDERAL DOCTRINE

I—THE PROBLEM

The shortage of trained personnel to staff Federal departments and agencies, from typists to atomic scientists, has persisted from the beginning of World War II to the present day, a period of some 15 years. Competition for the services of those available has led to the lowering of standards and the establishment of all kinds of makeshift devices without apparent effect upon the shortage. This has naturally caused Federal employment officers to eye a possible source of adequately trained personnel beyond their reach due to the laws prohibiting dual employment and dual compensation. In recent years an increasing number of bills have been introduced into the Congress to revise and liberalize those laws so that the Federal Government might obtain the benefit of that potential manpower without the return of the evils which those laws were designed to prevent.

The United States Civil Service Commission in a report, Dual Employment and Dual Compensation in the Federal Service, dated June 1955, has outlined the situation respecting the restrictions (pp. 3–4):

"There are now in effect at least 35 dual employment and dual compensation statutes. The earliest of these was enacted in 1894, the most recent in 1954.

"These statutes are extremely complicated; some are overlapping, some are inconsistent, and a number are no longer realistic in light of present-day economic conditions. No central management agency has responsibility for their administration through policy guidance and regulations. This situation results in poor manpower utilization, continuing administrative problems for agencies, and injustices to individuals because of inadvertent errors.

"Because the statutes arbitrarily restrict employment, and are badly out of date, many exceptions are sought. In the absence of any administrative means, such exceptions (sometimes for one individual) are obtained through enactment of additional laws.

"The present dual employment and dual compensation statutes have the following principal effects on the hiring and utilization of Federal employees. In considering the dollar limits discussed, it is important to have in mind that the lowest rate payable under the Classification Act is now more than $1,800 per year. Under Public Law 763, 83d Congress, the lowest Classification Act rate, upon abolishment of the CPC schedule in September 1955, will be at least $2,500 per year. (Today the lowest rate is $2,690.)

"1. A civilian employee cannot hold more than one position at the same time, even while on leave without pay from one of them, if the pay rate for either position is $2,500 per year or more.

"2. When a person does hold 2 positions, such as 2 part-time positions, each having a salary of less than $2,500 per year, he cannot receive salary from both positions for the same period of time if the combined annual rate exceeds the rate of $2,000 per year.

"3. The following retired military personnel can hold civilian Government positions and continue to receive their retired pay without any limitations:

"(a) Retired enlisted personnel other than warrant officers;

"(b) Warrant officers who are retired for disability incurred in line of duty; and

"(c) Retired commissioned officers who are retired for disability incurred in combat or caused by an instrumentality of war in time of war.

"4. Commissioned officers and warrant officers who are retired for another reason than disability incurred in line of duty (nondisability retirees) cannot hold a Federal job if either the retired pay to which they are entitled or the salary of the position is $2,500 a year or more. This restriction cannot be avoided by waiving retired pay. An exception exists for Reserve officers retired (on the basis of age and service credits) under title III of Public Law 810, 80th Congress.

"5. Commissioned officers retired for disability, but not for disability incurred in combat or caused by an instrumentality of war in time of war, may hold any Government position and receive the full salary of the position, but they cannot receive their retired pay while receiving the salary if the combined rate would exceed $10,000 a year. If the retired pay exceeds $10,000 a year, the officer may elect to waive the salary and receive only his retired pay. Reserve officers retired under title III of Public Law 810, 80th Congress, are subject to this limitation.

"6. Many agencies which have special or unique problems in connection with dual employment have obtained exceptions to all or certain provisions of the statutes. Examples: Panama Canal Company, Canal Zone Government, Post Office Department, Weather Bureau, Department of Agriculture, Census Bureau, Federal Civil Defense Administration, District of Columbia government, International Boundary and Water Commission (Department of State), and Central Intelligence Agency. These exceptions are contained in a number of specific laws and appropriations acts."

II. DUAL CIVILIAN EMPLOYMENT AND MILITARY RETIREES

The contrast in the employment of civilians and employment of military retirees can be gleaned from the civil service report, as follows (pp. 9 and 12–13):

"We have not been able to obtain data on numbers of civilian personnel employed in dual capacities, or numbers of applicants found ineligible for or unwilling to take Federal employment because of the dual employment-dual compensation restrictions. This information is not maintained by Federal agencies."

"Dual civilian employment

"Past thinking about changing the restrictions on dual employment of civilians has tended in the direction of arguing for greater freedom to hold more than one Federal job, particularly at the lower salary levels. However, sound personnel management indicates that dual job holding is acceptable practice only if it is consistent with efficiency and economy in Government operations. Such dual employment should be controlled so that it will not be so burdensome as to adversely affect employee efficiency, or be damaging to the employee's mental and physical well-being.

"Except under these circumstances, no employee should be permitted to hold more than one full-time job, or a combination of part-time work equaling more than a full-time job in terms of total hours worked. this is equally true at all salary levels. The rate of an employee's pay should not be a deciding factor in determining whether or not he should be permitted to hold more than one Government job.

"Employment of military retirees

"Civilian office holding by retired military personnel is not the same thing as dual civilian office holding. Only in a legal sense does receipt of military retired pay constitute office holding—no double work or conflict of work is involved. The Government's need for hiring retired military personnel generally differs from its need for dual employment of civilians in terms of type of job, salary level, and duration of employment. Military personnel often retire at a relatively early age, and with service-developed special skills. These factors combine to make their Federal civilian employment particularly valuable and feasible. These facts argue for a separate policy governing civilian employment of retired military personnel as distinguished from dual employment of civilian employees.

"The present restrictions on Federal civilian employment of retired military personnel are inconsistent and inequitable and have no relation to the Government's hiring needs. Gradually, various categories of military retirees have been exempted from the original prohibitions and restrictions. All enlisted men, certain commissioned officers, and some warrant officers retired from military service now may be hired for Federal civilian jobs without restricton on receipt of retired pay. At present, certain officers retired for age and length of service remain as the only retirees who cannot hold Federal positions if either their retired pay or the salary of the position is $2,500 per year or more. Of the disabled commissioned officers, only those whose disability was not incurred in combat or caused by an instrumentality of war in time of war, are limited to a maximum combined rate of $3,000 per year.

"The two tables herewith illustrate how the major restrictions on employment and compensation apply to the approximately 182,000 personnel on the military retired list as of October 1954.

"TABLE I.—*Federal civilian employment of retired military personnel*

	Percent
"Enlisted personnel, disabled officers, reservists: Can hold Federal civilian job at any salary level	87
Nondisabled officers: Virtually barred from holding Federal job because of $2,500 prohibition	13
Total	100"

"TABLE II.—*Compensation of retired military personnel is federally employed*

	Percent
"Enlisted personnel: No limit on combined salary and retired pay	52
Disability commissioned officers: No limit if disability resulted from combat or instrumentality of war, otherwise $3,000 limit applies	31
Nondisabled commissioned officers, including reservists: $3,000 limit on combined annual rate of salary and retired pay	17
Total	100"

III—THE FEDERAL DOCTRINE

The Federal doctrine concerning dual employment and compensation, since it covers both public officers and employees, reaches historically all the way back to the common law.

The basic doctrine is presently stated in two sections of the United States Code, i. e., title 5, sections 58 and 62. Although as stated by the Civil Service Commission, supra, numerous statutes contain exceptions, etc.

Section 58 provides:

"Unless otherwise specifically authorized by law, no money appropriated by any act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum" (R. S. par. 1763; May 10, 1916, c. 117, par. 6., 39 Stat. 120; Aug. 29, 1916, c. 417, 39 Stat. 582).

Section 62 provides:

"No person who holds an office the salary or annual compension attached to which amounts to the sum of $2,500 shall be appointed to or hold any other office to which compensation is attached unless specifically authorized thereto by law; but this shall not apply to retired officers of the Army, Navy, Marine Corps, or Coast Guard whenever they may be elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate. Retired enlisted men of the Army, Navy, Marine Corps, or Coast Guard retired for any cause, and retired officers of the Army, Navy, Marine Corps, or Coast Guard who have been retired for injuries received in battle or for injuries or incapacity incurred in line of duty shall not, within the meaning of this section, be construed to hold or to have held an office during such retirement" (amended July 30, 1937, c. 545, par. 6, 50 Stat. 549; June 25, 1938, c. 694, 52 Stat. 1194; May 31, 1924, c. 214, 43 Stat. 245; July 31, 1894, c. 174, par. 2, 28 Stat. 205).

It is the purpose of this study to trace the history of this doctrine and to indicate the practice thereunder as manifested in administrative and judicial decisions.

IV—THE COMMON LAW AND THE ENGLISH BACKGROUND

The common law placed no limit upon the number of offices which a person might hold at the same time provided that no one of them was incompatible with any of the others. The rule was well settled that "if two offices are incompatible, by the acceptance of the latter, the first is relinquished or vacant, even though it should be a superior office, *Milward* v. *Thacher* (2 T. R. (D and E) 81); *Rex* v. *Pateman* (2 T. R. (D and E) 777); *In re Dyer* (Dy. 158b); *Rex* v. *Jones* (1 B and Ad. 677); and *Rex* v. *Tizzard* (9 B and C 418). For a detailed discussion of the common law see, Mechein, Public Offices and Officers, 1890, pp. 420–427; and Throop, Public Officers and Sureties in Official Bonds, 1892, pp. 30–40.

The feudal system of the middle ages lay behind the concept of office holding. That system had been both a system of land tenure and a system of government. The tenure was not only applied to land but to many things connected with land including those governmental rights which went with such tenures. When Kings desired to secure the performance of governmental functions they did not make a contract with a person to perform them, they granted him a right to perform them on certain terms. The profits of the office were then his. The office was regarded as a piece of property which gave the official certain rights and placed him under certain duties just as land gave the tenant certain rights and placed him under certain duties, *Vaux* v. *Jefferson* ((1556), Dyer 144 b). Thus offices might be bought and sold like land. This conception of the nature of offices and the position of office holders came naturally to medieval common law because it had a very rudimentary law of contract and a very highly developed law of property in land and rights in land. As might be imagined abuses and corruption crept in. In the sixteenth and seventeenth centuries, more modern ideas were beginning but legislation which was passed to give effect to such ideas was ineffectual, see 5, 6 Edward VI, c. 16, sec. 1 (1551–1552) and [British] Hist. Mss. Com. Thirteenth Rept., Pt. V, 17 No. 244 (1690) and same Fourteenth Rept. Pt. VI, 362 No. 710 (1692–1693). With respect to judicial offices, it was not until the beginning of the Nineteenth Century that medieval ideas concerning the nature of an office were rooted out of the English judicial system, for a detailed discussion of office holding upon which the foregoing is based in Holdsworth, A History of English Law, vol. I, pp. 246–264.

V—AMERICAN COLONIAL AND POST-REVOLUTIONARY IDEAS

When Englishmen moved to their colonies in North America they, of course, took their ideas with them including those with respect to offices. Two forces were at work, however, in the New World, i. e., English precedents and local conditions. From the interplay of these forces new ideas respecting officeholding evolved. The Pennsylvania Charter of 1682 provided that a person should hold only one public office at a time. No other colony went so far. Most simply provided that certain offices could not be held simultaneously: Sheriffs could not hold office in the colonial assembly, etc. In some colonies attorneys and clerks of courts were barred. Several, as Virginia and New Jersey, required persons accepting salaried positions to stand for reelection in order to hold their place in the assembly.

In the Revolutionary period prohibitions respecting multiple officeholding were extended further. The Articles of Confederation (1777) provided that no person, being a delegate to Congress, shall be capable of holding any office under the United States, for which he, or another for his benefit receives any salary, fees or emolument of any kind (article V). Although varying in detail, provisions against multiple officeholding became quite general. Most of the new State constitutions had sections requiring the three departments of the Government to be kept separate and barring officers of one holding office in another. While the original purpose was probably to prevent encroachment of one department on another, the provisions were interpreted to prevent the simultaneous holding of offices in the different departments. Many States also adopted general provisions against holding two lucrative offices at the same time, see *Doyle* v. *Raleigh* (89 N. C. 133). All States prohibited holding United States and State offices at the same time, see *Ryan* v. *Green* (13 N. Y. 295). In one form or another provisions were adopted by most of the new States to prevent incumbents from holding another office during the term of an office to which they had been elected. The most common of these was copied from the United States Constitution. For a detailed discussion of officeholding during this period see Miller, Legal Qualifications for Office in America, 1619–1899, pages 90, 103–104, and 145–150, upon which the foregoing statement is based.

VI—THE FEDERAL CONSTITUTION

Surprisingly enough the United States Constitution contains no prohibition against multiple officeholding with the exception of that in article I, section 6, clause 2:

"No Senator or Representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States, shall be a Member of either House during his continuance in office."

The lack of a general constitutional prohibition on multiple officeholding opened the door wide. We will see, in the early days of the Federal service, those charged with making decisions respecting multiple officeholding enunciating the principle that the law placed no restrictions on the number of offices held so long as they were not incompatible. Although the Constitution left the door wide open, it did not leave control and correction of such abuses as might occur beyond the powers of the Congress. It provided in article II, section 2, clause 2, that the "Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments."

Further, it gave to the Congress the broadest possible control over the disbursement of public moneys (art. 1, sec. 8). That abuses crept into Federal officeholding and that control was needed is evidenced by the series of acts enacted by the Congress and the long series of opinions and decisions by the Attorneys General, the Comptroller General and the courts.

VII—THE EARLY FEDERAL PERIOD, 1789–1850

The early controversies took the form of claims for extra pay for extra duties. Examples of these were Bullus' case (1819) where a naval agent appointed for New York, whose duties were not defined by law, claimed extra compensation for being required to purchase and forward from New York supplies for the lake service (1 Op. Atty. Gen. 302) and Governor Cass' case (1828) where the Governor of Michigan was employed to perform services which did not belong to his duty as Governor. His claim was upheld on the principles of a quantum meruit (2 op. Atty. Gen. 189). As a result of such claims provisions were included in a series of appropriation bills as follows:

1. The Civil and Diplomatic Expenses Appropriation Act, 1839 (5 Stat. 349, sec. 3):

"That no officer in any branch of the public service, or any other person whose salaries, or whose pay or emoluments is or are fixed by law and regulations, shall receive any extra allowance or compensation in any form whatever for the disbursement of public money, or the performance of any other service, unless the said extra allowance or compensation be authorized by law."

2. The Civil and Diplomatic Expenses Appropriation Act, 1842 (5 Stat. 487 (item No. 200)):

"That no alowance shall be made, out of any moneys appropriated by this bill, to any

clerk or other officer for the discharge of duties, the performance of which belongs to any other clerk or other officer in the same or any other department; and that no allowance shall be made for any extra services whatever, which any clery or other officer may be required to perform."

3. The Army and Military Academy Appropriation Act, 1842 (5 Stat. 510, sec. 2):

"That no officer in any branch of the public service, or any other person whose salary, pay, or emoluments, is or are fixed by law or regulations, shall receive any additional pay, extra allowance, or compensation, in any form whatever, for the disbursement of publim money, or any other service or duty whatsoever, unless the same shall be authorized by law, and the appropriation therefor explicitly set forth that it is for such additional pay, extra allowance, or compensation."

4. The Incidental Expenses Appropriation Act, 1842 (5 Stat. 525, sec. 12):

"That no allowance or compensation shall be made to any clerk or other officer, by reason of the discharge of duties which belong to any other clerk or officer in the same or any other department; and no allowance or compensation shall be made for any extra services whatever, which any clerk or other officer may be required to perform."

After the enactment of these acts such claims were disallowed (see 3 op. Atty. Gen. 422—clerks for selling Indian lands; same, 473, messengers and watchmen; same, p. 621, War Department clerks for business connected with Indian reservations; 4 op. Atty. Gen. 126–128, Navy officers for an exploring expedition; same, p. 138, officers at West Point; same, p. 342, Navy officers for distant duties; same, p. 463, Pension Office clerks for acting as secretary to commissioners appointed to treat with the Indians; and Acting Secretary of State, 5 Op. Atty. Gen. 74).

This period might be characterized as the extra compensation period. Job descriptions, where they existed, were ill defined and lines of demarcation between them obscure. An officer or employee might find himself responsible for performing many unrelated duties for which he might demand and receive extra compensation. Today, many of the unrelated duties would have constituted separate jobs or offices. Even in that period some did constitute separate jobs or offices to which the officer or employee held separate appointments, see Bullus' case, Governor Cass' case, the Navy Officers' case, and the Pension Office Clerks' case, cited supra. However, the question of the right of the officer to perform the additional duties or to hold the additional office does not seem to have been questioned in this period. The right to receive extra compensation appears to have been the only question litigated. Congress dealt with the question through the enactment of the appropriation acts of March 31, 1839, May 9, 1842, August 23, 1842, and August 26, 1842, supra. The net effect of the congressional action could be summed up in the words of Attorney General J. Y. Mason in the *Pension Office Clerks'* case (1846), supra, as follows:

"The Executive, under the recent opinions from this office and the judiciary, in the case of the *United States* v. *Eleason's Administrator* (16 Peters) is required to see that these laws are construed and executed according to the plain intention of Congress. This was to put an end to a practice which had long prevailed of salaried officers receiving compensation, over and above their salaries, for services which were not regarded as within the range of his official duties."

VIII—THE MIDDLE PERIOD, 1850–1874

The refusal to allow payment under the guise of extra compensation for what was in effect two offices, squarely pointed up the question of the right to hold two or more offices and to receive pay for each. What appears to have been the first legislative decision specifically on this question occurred as a result of the claims of Richard Rush, then Secretary of the Treasury for compensation for occasional services performed between the years 1825 and 1829 as Attorney General ad interim by designation of the President during the absence of William Wirt, Attorney General (6 Op. Atty. Gen. 83). The President's authority to so designate Rush was contained in the acts of May 8, 1792, and February 13, 1795 (1 Stat. 281, sec. 8: 451). In 1850 Congress included an item in the Civil and Diplomatic Appropriation Act, 1851, specifically compensating Rush for the services performed but added a proviso (9 Stat. 542–3) as follows:

"That hereafter the proper accounting officers of the Treasury, or other pay officers of the United States, shall in no case allow any pay to one individual the salaries of two different offices on account of having preformed the duties thereof at the same time. But this prohibition shall not extend to the superintendents of the executive buildings."

This proviso would seem on its face to make it clear that, with the exception of executive building superintendents, an individual could not receive salaries for two offices held by him at the same time. However, Attorney General Crittenden in 1851 held otherwise (5 Op. Atty. Gen. 765). By an act of 1807 (2 Stat. 413, ch. 8) the President had been authorized to survey the coasts of the United States and to employ persons for that purpose. He delegated this power to the Secretary of the Treasury. In 1844 (5 Stat. 660, ch. 37) the Secretary was authorized to sell the maps and charts of such surveys and in March 8, 1850, hired one, Gilbert Rodman, to perform these duties at an annual salary of $400. While so acting Rodman was also a clerk in the Treasury Department at a salary of $1,400 per annum. The opinion of Attorney General Crittenden was that Rodman was entitled to hold both offices and to receive the salary of each. The Attorney General reasoned thusly (5 Op. Atty. Gen. 776, 768):

"The statutes of March 3, 1839, (V. stat. at large, p. 439, ch. 82, sec. 3d) enacts:

" 'That no officer in any branch of the public service or any other person, whose salaries or whose pay or emoluments, is or are fixed by law and regulations, shall receive any extra allowance or compensation in any form whatever, for the disbursement of public money or the performance of any other service, unless the said extra allowance or compensation be allowed by law.'

"The act approved August 23, 1842 (V. stat. at large, p. 510, ch. 183, sec. 2), enacts:

" 'That no officer in any branch of the public service or any other person, whose salary, pay, or emoluments, is or are fixed by law or regulation, shall receive any additional pay, extra allowance or compensation in any form whatever, for the disbursement of public money or for any other service or duty whatsoever, unless the same shall be authorized by law, and the appropriation therefor explicitly set forth that it is for such additional pay, extra allowance or compensation.'

"These two sections of the statutes are, in words, nearly the same, in sense and meaning, identical, the latter being only a repetition of the former. The extra allowance or additional pay forbidden by these sections is that exceeding the salary, pay, or emoluments, which was fixed by law or by a regulation, officially made by the President or by the head of a department, or by an officer of the Government, having competent authority to make such regulation. At the passage of these acts, there was no law forbidding any person from holding under the Government of the United States, two compatible offices or employment at one and the same time, and receiving the salary and emoluments belonging to each of the offices, whether fixed directly by law, or by a regulation made by a person lawfully authorized to make it. These sections do not forbid it. They are intended to fence against arbitrary extra allowances in each particular case; but do not apply to distinct employments with salaries or compensation affixed to each by law or by regulation.

* * * * *

"The 12th section of the act, approved August 26, 1842 (vol. 5, of Statutes at Large, p. 525, ch. 202), enacts:

" 'That no allowance or compensation shall be made to any clerk or other officer, by reason of the discharge of duties which belong to any other clerk or officer in the same or any other department; and no allowance shall be made for any extra services whatever, which any clerk or other officer may be required to perform.'

"This act does not prohibit the same person from holding two different offices at one and the same time, nor from receiving the compensation fixed, by law or regulation, to both offices, respectively, if he holds both offices, and performs the duties of both. In such case, the officer, so holding the two offices, is not, when officiating each and either, performing the duties of any other officer or clerk; he is performing his own duties, and in receiving the compensation affixed to each, he is receiving pay for his own proper services in his own proper offices respectively, and not pay for the services which should have been performed by any other clerk or officer, nor for extra services, but for the proper services belonging to his respective offices and proper employments.

"The opinion given by Chief Justice Taney, before cited, makes the holding of two offices and performing the duties of both at one and the same time, an exception from the prohibitions of this statute of August 26, 1842, as well as from the two previous statutes of August 23, 1842, and March 3, 1839. He makes no discrimination between the provisions of the statutes of August 23, and August 26, 1842; but classed them together as the acts of 1842. There is, in truth, no difference in the sense and meaning of the three several acts before quoted.

"Neither does the act of September 30, 1850 (Session Acts by Little and Brown, ch. 90, pp. 542–3), prohibit the holding of two compatible offices by the same person, or the payment to him of the fixed salary or compensation of each of his offices. That was not the mischief intended to be guarded against; for indeed, it might often happen that it would be most convenient and conductive to public economy, as well as to the public service, to confer two offices on the same person. The provision of the act, last referred to, is in these words: 'That hereafter, the proper accounting officers of the Treasury, or other pay officers of the United States, shall in no case allow any pay to one individual the salaries of two different offices, on account of having performed the duties thereof at the same time. But this prohibition shall not extend to the superintendents of the executive buildings.'

"The plain meaning of this seems to be that an individual holding one office and receiving its salary, shall, in no case, be allowed to receive also the salary of another office, which he does not hold, simply 'on account of his having performed the duties thereof.'

"The prohibition is against his receiving the salary of an office that he does not hold, and not against his receiving the salaries of two officers, which he does legitimately hold.

"If it had been the intention of Congress to prohibit, in all cases, the holding a plurality of offices, that purpose could have been easily and directly expressed. The language they have used imports no such purpose, but is directed at an object and abuse, distinct and seperate.

"The case of Gilbert Rodman does not, according to my view of the subject, come

within the prohibitions of the above-cited statutes."

The following year a provision was included in the Civil and Diplomatic Expenses Appropriation Act, 1853 (act of August 31, 1852, 10 Stat. 100), which provided as follows:

"SEC. 18. *And be it further enacted*, That no person hereafter, who holds or shall hold, any office under the Government of the United States, whose salary or annual compensation shall amount to the sum of $2,500, shall receive compensation for discharging the duties of any other office."

This provision, in identical language, had been included as section 7 in the original appropriation bill reported to the House on February 5, 1852, by the Ways and Means Committee (H. R. 196, 32d Cong., 1st sess., no written report). This provision appears to have passed the House without debate as section 9 of the bill. A brief glimpse, however, of the evils aimed at is afforded by the debate on a somewhat similar proposal to limit a proposed salary increase to only one salary where double salaries were involved. Attorney General Crittenden's opinion of 1851, supra, was also criticized (Cong. Globe, 32 Cong., 1st sess., pp. 2165–2166):

"Mr. DEAN. I move the following proviso, by way of amending to the amendment: *'Provided*, That this section shall not extend to any person receiving a salary for discharging the duties of more than one office at the same time, or to any person who does not actually discharge the duties of the office for which he receives such salary, or to any person engaged in prosecuting any claim before any of the departments or Congress; and that in case any paying or accounting officer of the Government shall pay said additional percentage to any such person, it shall be a misdemeanor in the person knowingly paying or receiving such additional percentage, rendering him liable to indictment, and punishment by fine and imprisonment.'

"Mr. Chairman, I am not disposed strongly to resist the proposition of the gentleman from Tennessee [Mr. Gentry], to add to the remuneration of the clerks who are legitimately engaged in the various departments of the Government. I have no doubt there may be instances where that remuneration should be increased, and if the section can be so guarded that the heads of departments and of bureaus cannot further abuse the power now in their hands, I shall vote for it. If I am correctly informed, however, there are individuals now, pets of the heads of departments, who, in the face of laws which have been passed, commencing in 1842, and reenacted year after year since, are receiving the salaries of at least three offices, the duties of none of which they adequately discharge.

"Mr. GENTRY. I know the objection which the gentleman states is an objection with many, and, as a consequence, an argument for voting against this additional compensation; but we cannot correct executive abuses. It is our duty to put it in the power of the executive government to do right, and to impeach them if they do wrong.

"Mr. DEAN. I want to guard the proposition of the gentleman, so that no head of a department of this Government, or head of an executive bureau, can pay to his sons, nephews, cousins, or favorites, salaries to the amount of $2,000, $3,000, or $4,000 each. By the passage of the gentleman's proposition without a provision of the character I have indicated, we shall increase the salaries of these pets to a greater extent. If there be any proper object for the increase of the salaries, it is to enable those men permanently engaged as clerks in the various departments of the Government in this city with families, to support them with respectability; it is not for the purpose of increasing salaries, but to reward labor adequately, and for that only can I support it.

"Another abuse will be corrected by that proviso, very prevalent, I am informed, in the departments—the allowing of persons to take a clerkship at $4 per day, who hire, for the discharge of its duties, other individuals at $1 per day, while they spend their time around the hotels, the gambling houses, or the lobbies of Congress to press claims through here or smuggling them through the departments. My provision is designed to reach cases of that kind. If there be any, it will prevent their continuance and repetition. If there be none, there will be no harm in the adoption of the amendment. It is intended, also, not only to reach those paying, but those receiving two salaries. There is an express law, passed in 1850, prohibiting any person from receiving two salaries except the Superintendent of Public Buildings. I understand the Attorney General, the law officer of this administration, has given it as his opinion that there is no objection whatever to the giving of a man two salaries. How he could give such an opinion I cannot understand. The Secretary of State and the Attorney General, within the last year, have given their certificate to a man as entitled to $3,000 for doing nothing, or discharging the duties of an office which did not exist, while he was at the same time receiving $2,500 for another office. I desire to have it provided by law that any person who shall receive more than one salary shall be liable to indictment. That is the only way in which the evil can be eradicated. If my amendment be adopted, I am willing, as a temporary expedient, to vote for this or some increase of compensation. I believe the expenses of living have increased here as well as in other places; but still, sir, it will be an unpleasant matter for us to meet our constituents, and to tell them we are voting increased salaries to clerks in Washington, while clerks in the various offices of our counties receive only $500 salary, and yet lay up a portion of that. This amendment should not apply to young men, who have no families, receiving a salary exceeding $1,000 per annum. If that will not support them, I fear their expenses are not such as we should countenance or encourage.

"Mr. GORMAN. I am opposed to this amendment. I have had occasion to look into the opinion of the Attorney General upon the subject of paying the officers of the Government, when they perform the duties of two offices. I had occasion in the last few days to present the question before the second Comptroller of the Treasury, and give my views, humble as they were, at some length. The second Comptroller decided, as indeed the former Comptroller has decided, that no person, under the existing law, can receive pay in two capacities. He has decided, if a clerk or other officer of the Government shall perform the duties of any other trade or office, that he cannot thereby get the additional pay. That decision has been made, I say, by the Comptroller, and the Comptroller of the Treasury has overruled, to some extent, the decision of the Attorney General heretofore made. But the Attorney General has not decided the point in the manner in which the gentleman states it. He has decided that an individual cannot draw the pay for two offices; but where a person is in any office, and is detailed to the discharge of other duties not incompatible with the duties of that office, he may receive pay for the duties to which he is detailed."

The salary increase and the limitation passed the House as section 2 of the bill and in fact was enacted with some slight modification as section 2 of the act, see 10 Stat. 97.

The Senate Finance Committee proposed to eliminate the $2,500 double salary limitation which had passed the House as section 9 of the bill. The committee appears to have made no written report. In reading the bill for amendment, the Senate eliminated section 9 and inserted other matter in lieu without debate (Congressional Globe, p. 2371), thus striking out the $2,500 double salary limitation. A detailed search of the proceedings of the Senate from that point through the adoption of the conference committee report by both Houses (Congressional Globe, 32d Cong., 1st sess., pp. 2371–2477) has failed to reveal exactly how the excluded language reappeared in the bill as approved by the President (10 Stat. 100, sec. 18, supra). The original copy of the bill as enacted by the two Houses and sent to the President and which was signed by him contains section 18 as set out in the Statutes at Large. It can only be assumed that the conference committee restored the stricken language as section 18 without specifically mentioning it in their report. There seems to have been some pressure upon the conference committee respecting a time deadline which may account for an omission in the conference report due to haste (Congressional Globe, 32d Cong., 1st sess., p. 2472):

"Mr. HOUSTON. I wish to make a report from the committee of conference upon the disagreeing votes of the two Houses upon the civil and diplomatic bill. I will state, in addition to other reasons for desiring to advance that bill as rapidly as possible, that it may be enrolled in time, I understood from one of the Senators upon the committee of conference, a few moments ago, that he had received a line from the President, saying that it would be impossible to look over the bill unless we act hastily upon it; and he made a special request that an expeditious course should be pursued with it. I call the previous question."

The rest of this period was marked by a series of opinions rendered by the Attorney General which guided the disbursing officers of the Government respecting dual office-holding and salaries. The first of these was rendered by Attorney General Cushing in *Hardin's* case on August 18, 1853 (6 Op. Atty. Gen. 80). Hardin held two offices in the Navy Department, one as clerk and the other as superintendent of the southwestern executive building. The question arose concerning his entitlement to the salary increase provided in the act of August 31, 1852, which had been limited therein to 1 salary for those with more than 1 office. In the course of his reasoning with respect to the pay raise, Cushing commented on the question of holding 2 offices and receiving 2 salaries thus:

"It is observable, on the very surface of the inquiry, that the act of 1852 explicitly assumes that persons exist, within the purview of the act, who hold two separate offices, discharge their distinct duties, and lawfully receive their different salaries. The words are, 'This section shall not extend to more than 1 salary of any person receiving a salary for discharging the duties of more than 1 office at the same time.'"

It should be noted that Cushing is referring to the pay raise section of the act (sec. 2), and not to the $2,500 double salary limitation in section 18. It is rather curious that he does not also mention the latter section in connection with this point.

Cushing also considered the Rush proviso in the act of September 30, 1850, supra, but limited its application strictly to situations involving the temporary performance of duties of another office by designation of the President. He then quoted the opinion of Chief Justice Taney of the Supreme Court, then on circuit in the United States Circuit Court, District of Maryland, in the case of *U. S.* v. *White* (Fed. Cas. No. 16, 684 (1852)). Chief Justice stated that there is no law which prohibits a person from holding two offices at the same time. Cushing stated that the Chief Justice had expressed this opinion with the acts of 1839, 1842, and 1850 before him as the very subject of consideration.

Cushing was obviously right with respect to the acts of 1839 and 1842 respecting extra compensation; however, a reading of *U. S.* v. *White* reveals that the facts do not bear him out with respect to the act of 1850 and the Rush proviso. *U. S.* v. *White* was filed in the circuit court on March 25, 1850, and dealt with matters occurring before that date. The act of 1850 was not enacted until September 30, 1850, and its application to *U. S.* v. *White* would have been ex post facto. Nowhere in the opinion does the Chief Justice refer to the 1850 act and in fact at the outset states that the case is governed by the acts of 1839 and 1842.

Attorney General Crittenden's opinion in the Rodman case, supra, on the question of 2 salaries and 2 offices was cited with approval by Cushing who then closed his own opinion by deciding that the salary increase could be applied to only 1 of Hardin's salaries.

The next opinion which specifically dealt with the question of dual offices appears to be that in Maj. R. B. Lee's case (8 Op. Atty. Gen. 352 (1857)). Major Lee was treasurer of a board appointed under the Army Appropriation Act of August 31, 1852 (10 Stat. 108), to pass on the claims for supplies furnished to the command of Captain Fremont in California. The board employed a War Department clerk to serve also as its clerk and proposed to compensate him for such service. The question in the case was whether such compensation could be allowed in the accounts of Major Lee. In his opinion, Attorney General Cushing inquired first whether there was any provision of law which forbade the same person holding two distinct offices. This question was answered by him as follows:

"I am not aware of the existence of any such provision. A clause of the act of September 30, 1850, forbids the allowance to 1 individual of 'the salaries of 2 different offices, on account of having performed the duties thereof at the same time' (9 Stat. L., p. 542). This provision has been construed by my immediate predecessor (Mr. Crittenden), and also by Chief Justice Taney, as not applying to the present question. It means, that a person, holding one office, shall not receive the salary of another, which he does not hold, but of which he merely performs the duty, by temporary appointment, in place of the proprietor of the office." (See opinions, vol. V, p. 765; and vol. VI, p. 84.)

"Indeed, more than 1 of the provisions of statute in question expressly speaks of the same person as holding 2 distinct offices." (See act of August 31, 1852, secs. 2 and 18, 10 Stat. L., pp. 97, 100.)

It should be noted that Mr. Cushing was still in error respecting the opinion of Chief Justice Taney. The rest of his opinion deals with the question of extra allowance and the act of 1842. He reached the conclusion that Major Lee's case involved a separate office under distinct authority, and that the dual salaries might be allowed.

By 1857, Attorney General Cushing had been succeeded by J. S. Black. During Black's incumbency the question arose again in *Stackpole's* case (9 Op. Atty. Gen. 123). Stackpole was a watchman at the President's House who claimed dual compensation for services as assistant doorkeeper. Attorney General Black considered the questions of extra compensation and dual office holding, and reviewed the series of statutes enacted by Congress beginning in 1839, including the Rush proviso of 1850 and the $2,500 limitation of 1852. He stated further:

"A consideration and comparison of these acts plainly show that each of them had a specific aim and purpose. The act of March 3, 1839, was designed to put an end to the system of extra allowances and compensation, which, under various pretexts, were claimed by officers and employees for extra services in their respective offices or departments. Going a step further, the act of May 18, 1842, cut off extra pay for performing the duties of any other clerk or officer either in the same or any other department. A blow at the whole system of extra pay and double compensation was then struck by the act of August 23, 1842, by forbidding any extra pay or additional compensation, in any form whatever, to officers or persons having fixed salaries, for any other services whatsoever, unless on specific appropriation, explicitly setting forth that it was for such additional pay. But notwithstanding the comprehensive terms of this act—it having been held in the spring of 1950, by the circuit court of Baltimore, in White's case, that where 1 officer had performed the duties of 2 offices at the same time he might claim the salaries of both—the act of September 30, 1850, prohibited the payment of the salaries of 2 offices to 1 individual. There still remained, however, another class of officers who were receiving, or claiming, double pay—those; namely, whose salary or compensation was not fixed by law or regulations, but depended upon the amount of service or other contingency. Upon these the act of 1852 operated, by the provision that where the salary or annual compensation of an office amounted, in the aggregate, to $2,500 per annum, no pay for discharging the duties of any other office should be allowed him.

"The whole of this legislation manifests a determined purpose to prevent double compensation in any form, or under any pretext whatsoever. It cannot be denied that the policy which dictated these provisions is founded on just notions of public and private morality. Plurality of offices, and extra allowances to those who hold them, are the vices of a bad government, and have always prevailed to the greatest extent in the worst times. It may be that some officers have performed double duty for which they are justly entitled to additional compensation. In these cases, I do not doubt that proper provision will be made by Congress; but the justice of a claim cannot authorize its payment by the executive while the law forbids it."

With respect to Stackpole, Black noted the exceptions of watchmen and messengers in the act of 1842 and of superintendents of public buildings in the act of 1850. He therefore concluded that Stackpole came within the exceptions. He concluded in general, however:

"That no officer of the Government, having a salary fixed by law, nor no other officer whose compensation amounts to $2,500 per annum, can receive extra pay for any service whatever, whether it be within the line of his duty or outside of it. Nor is it possible for any such officer to receive the salaries of more than one office, no matter under what circumstances he may have performed the duties of more than one."

The next year Black considered the case of a court clerk who had held both the office of clerk of the district court and of the circuit court (9 Op. Atty. Gen. 250). Officers of this class have no fixed salaries but are entitled to retain a percentage of fees and emoluments. It should be pointed out that such offices had not been included in the provisions of the act of 1842 because of separate and distinct provisions enacted in another part of that act with special reference to the judiciary. The provisions in the act of 1842 had been reenacted as section 5 of the act of February 26, 1853 (10 Stat. 165), in substantially the same form:

"No clerk of a district court or clerk of a circuit court shall be allowed by the said secretary to retain of the fees and emoluments of his said office, or in case both of the said clerkships shall be held by the same person of the said offices, for his own personal compensation, over and above the necessary expenses of his office and necessary clerk hire included, also to be audited and allowed by the proper accounting officers of the Treasury, a sum exceeding $3,500 per year for any such district clerk or circuit clerk."

As pointed out by Black, the question of entitlement to the fees and emoluments of offices held at the same time had been settled by Mr. Justice Story in *U. S.* v. *Bassett* (Fed. Cas. No. 14539 (1843)). In that case Mr. Justice Story had decided that the defendant who had held two offices in Massachusetts was entitled to retain the marimum compensation which the law would have given if such offices had been held by different persons. In view of the fact that judicial offices appear to be covered by special provisions they need not be considered further unless they should at a future date come under the general provisions.

Chief Justice Taney again came into the picture in the case of *Converse* v. *U. S.* (62 463 (1858)). In that case the collector of customs had been directed by the Secretary of Treasury to perform extra duties in connection with disbursements for the Lighthouse Service, not only in his own customs district, but throughout the United States. On the death of the customs collector, a claim was brought against his estate for some $17,000, which he had retained as fees for the performance of this service. As collector of customs, his salary was fixed. Justice Taney in his opinion stated:

"The just and fair inference from these acts of Congress, taken together, is, that no discretion is left to the head of a department to allow an officer who has a fixed compensation any credit beyond his salary, unless the service he has performed is required by existing laws, and the remuneration for them fixed by law. It was undoubtedly within the power of the department to order this collector, and every other collector in the Union, to purchase the articles required for lighthouse purposes in their respective districts, and to make the necessary disbursements therefor. And for such services he would be entitled to no compensation beyond his salary as collector, if that salary exceeded $2,500."

He then pointed out that the Secretary was not bound to entrust these services to the several collectors, but might require the whole to be performed by a single agent. This was the action actually taken by the Secretary. With respect to this, Judge Taney stated:

"Undoubtedly, Congress has the power to prohibit the Secretary from demanding or receiving of a public officer any service in any other office or capacity, and to prohibit the same person from accepting or executing the duties of any agency for the Government, of any description, while he is in office, and to deny compensation altogether, if the officer chooses to perform the services; or they may require an officer holding an office with a certain salary, however small, to perform any duty directed by the head of the department, however onerous or hazardous, without additional compensation. But the legislative department of the oGvernment has never acted upon such principles, nor is there any law which looks to such a policy, or to such unlimited power in the head of an executive department over its subordinate officers.

"No explanation is given of the principle upon which the $400 additional compensation was allowed. If the services were regarded as extra and additional, and within the prohibition of the law, then he was not entitled to this additional allowance, because his salary exceeded $2,500, and nothing more than the salary fixed ought to have been allowed him. But if they were not within the prohibition, but for services in a different agency, then he was entitled, not merely to $400, but to the commissions fixed by law. This sum could not have been allowed for

supplies in his own district, excluding those for other districts, because, as regards his own district, there is an express prohibition as above stated. We, however, express no opinion upon that particular item; and whether it is a proper allowance or not, must be determined by the circuit court, when it hears the evidence at the trial.

"For the reasons above stated, the judgment of the circuit court must be reversed."

The question of dual compensation was raised again in 1860 in *Brown's* case (9 Op. Atty. Gen. 507). Brown, at different periods, held various diplomatic and consular offices in Turkey, including that of dragoman and vice consul. Attorney General Black held that according to the decision in the Converse case, a person holding two compatible offices or employments under the Government is not precluded from receiving the salaries of both by anything in the general laws prohibiting double compensation. Subsequently Brown was appointed consul general and in addition discharged the duties of secretary of legation and dragoman. In contrast to the prior situation, where Brown had exercised the duties of several offices to which he had been appointed, Black held that where he had been appointed consul general and merely discharged the duties of secretary of legation and dragoman, without a special appointment thereto, he was not entitled to additional compensation under the $2,500 prohibition in the act of August 31, 1852. Still later, Brown was appointed secretary of legation and dragoman and continued to act as consul general without a regular appointment. Black stated then that he was to receive salary for the two appointments as secretary of legation and dragoman, but not for performing the duties of consul general.

Attorney General Bates, in *Whiting's* case (10 Op. Atty. Gen. 435 (1863)), attempted to bring some order into the confusion existing by reason of the growth of majority and minority schools of thought respecting dual office holding and salaries. Whiting had been appointed clerk in the Interior Department, at a salary fixed by law, to deal with matters respecting the act to suppress the slave trade. He was also appointed by the Secretary of the Interior as a clerk to deal with matters relative to Capitol extension and a new dome, at a small salary fixed by the Secretary. The majority school comprised Attorneys General Grundy (3 Op. 422, ibid. 47); Gilpin (3 Op. 621); Legare (4 Op. 126, ibid. 149); Nelson (4 Op. 432); Mason (4 Op. 464); Toucey (5 Op. 74); and Black (9 Op. 123).

Legare had stated the basic reasoning and conclusion of the majority to the effect that:

"The policy of the act of 1839 and several other statutes on analogous subjects is to deprive the executive department, first, indirectly to raise salaries by extraordinary allowances, and second, to create pluralities in favor of incumbents in office. Should any necessity arise for either of these deviations from the spirit and practice of our Government, it must be acknowledged by some act of Congress, expressly making provision for them."

Bates also quoted a paragraph from the opinion of Black in Stackpole's case, supra, pointing out that the whole of the legislation manifested a determination to prevent dual compensation in any form or under any pretext whatsoever; that plurality of offices and extra allowances are the vices of a bad government. The minority school of thought was composed of Attorneys General Crittenden (5 Op. 765) and Cushing (8 Op. 325), who concluded that these statutes did not forbid the holding of two distinct offices or appointments by one person; that the prohibitions on extra allowances and additional pay meant extra service pay, or allowance in some office, and not distinct service in separate offices.

Bates applied *Converse* v. *United States* (supra) to Whiting's case. He pointed out that the Converse case was not in harmony with the opinions of the majority, but that nevertheless the Court did not go so far in the other direction as Crittenden and Cushing had gone. The Court construed the statutes so as to allow compensation for services in the additional office, only in case such services are required by law and the compensation therefor fixed by laws. He stated:

"After reviewing the acts I have cited, the Court says: 'The just and fair inference from these acts of Congress, taken together, is that no discretion is left to the head of a department to allow an officer who has a fixed compensation any credit beyond his salary, unless the service he has performed is required by existing laws, and the remuneration for them fixed by law.'

"This is the latest and most authoritative construction of these statutes, and having been adopted with all the light which the discussions to which I have referred shed upon the subject, I think it should be accepted as the rule for the decision of these frequently recurring and often difficult questions of additional compensation to public officers."

Under this conclusion, Whiting was not entitled to compensation for services in connection with the Capitol extension where the salary had not been fixed by law but by the Secretary.

On the same basis, Bates decided *White's* case (10 Op. Atty. Gen. 442). White, a clerk in the General Land Office, had also been appointed Assistant Secretary to sign land patents, by appointment of the President under the act of Congress which did not fix the compensation for such an appointment. He also decided *French's* case (10 Atty. Gen. 444), in accordance with the ruling in Whiting's case. On the day following these decisions the question of the offices of register of wills for Washington County and commissioner of police, and the offices of member of the levy court, commissioner of police, and collector of internal revenue for the District of Columbia were decided favorably to the incumbent. The compensation of these various offices was fixed by law. (See 10 Op. Atty. Gen. 446.)

In 1868 Evarts, then Attorney General, was called upon to decide the case of Secretary of the Interior Browning, who had been authorized by the President as the head of the Interior Department, to act as Attorney General ad interim under the act of 1863 following the resignation of Attorney General Stanbery. This, of course, was the Rush proviso situation again, act of September 30, 1850. On examination of the act of February 20, 1863, which authorized the President to make ad interim appointments, Evarts found a very strong implication that Congress intended to make it the official duty of each head of department to perform functions of another executive department when called upon by the President, in the case of a vacancy in the latter office or inability of its chief to discharge his duties. Evarts concluded that independent of the act of September 30, 1850 (the Rush proviso), Secretary Browning was not entitled to receive the salary of the Office of Attorney General, but that in any event, the act of September 30, 1850, was a bar to the receipt of such salary. *U. S.* v. *Shoemaker* (7 Wall. 338 (1868)) involved the question whether a customs collector could receive extra compensation for duties in connection with the erection of a new marine hospital and customs house within his own district. Mr. Justice Nelson, in a brief opinion, pointed out that the difficulty was "that there is not only no law providing for compensation, but the collector is forbidden to receive it" (act of May 7, 1882, sec. 18). The duties even within his own district fell within the prohibitions of the acts of 1822 and 1839, as interpreted in the Converse case.

Stansbury v. *U. S.* (8 Wall. 33 (1868)): Stansbury, being at the time a clerk in the Department of Interior, was appointed in 1851 by the Secretary of the Interior as an agent to proceed to Europe and to prepare an account of the London Industrial Exposition for that Department. During all the time he was engaged in London and subsequently in Washington, a term of 17 months, he drew his pay as a clerk. The Secretary had promised in writing to pay his expenses and to allow him a reasonable compensation for his services. The actual expenses were paid but on his return, a new Secretary having been appointed, the new Secretary declined to pay him anything more. Stansbury then brought suit in the Court of Claims which decided that his claim was barred by the act of August 23, 1842. Mr. Justice Davis, in his opinion, pointed out that no authority of law existed for the promise by the Secretary, neither was there any appropriation authorized; nor was the Secretary authorized by Congress to create such an agency to perform such service. He thereupon cited section 2 of the act of August 23, 1842, prohibiting extra compensation.

IX—RESTATEMENT AND REVISION, 1874–1924

The various provisions with respect to dual and extra compensation which have been enacted by the Congress starting in 1839 were included in the general revision and publication of the laws in force December 1, 1873, known as the Revised Statutes of the United States. The first edition of the Revised Statutes was approved June 22, 1874. The dual and extra compensation provisions were condensed into sections 1763–1765 as follows:

"SEC. 1763. No person who holds an office, the salary or annual compensation attached to which amounts to the sum of $2,500, shall receive compensation for discharging the duties of any other office, unless expressly authorized by law.

"SEC. 1764. No allowance or compensation shall be made to any officer or clerk, by reason of the discharge of duties which belong to any other officer or clerk in the same or any other Department; and no allowance or compensation shall be made for any extra services whatever, which any officer or clerk may be required to perform, unless expressly authorized by law.

"SEC. 1765. No officer in any branch of the public service, or any other person whose salary, pay, or emoluments are fixed by law or regulations, shall receive any additional pay, extra allowance, or compensation, in any form whatever, for the disbursement of public money, or for any other service or duty whatever, unless the same is authorized by law, and the appropriation therefor explicitly states that it is for such additional pay, extra allowance, or compensation."

In *Hall* v. *United States* (91 U. S. 559 (1875)) Mr. Justice Clifford touched upon the question of compensation for extra services stating:

"Compensation for extra services, where no certain sum is fixed by law, cannot be allowed by the head of a department to any officer who has by law a fixed or certain compensation for his services in the office he holds, unless such head of a department is thereto authorized by an act of Congress; nor can any compensation for extra services be allowed by the court or jury as a set-off, in a suit brought by the United States against any officer for public money in his hands, unless it appears that the head of the department was authorized by an act of Congress to appoint an agent to perform the extra service, that the compensation to be paid for the service was fixed by law, that the service to be performed had respect to matters wholly outside of the duties appertaining to the

office held by the agent, and that the money to pay for the extra services had been appropriated by Congress" (*Converse* v. *United States* (21 How. 470)).

One year later Pierrepont, Attorney General (15 Atty. Gen. 71), ruled that where a special agent of the Post Office Department is in receipt of a fixed compensation and in addition performed the duties of a Deputy Marshal, he cannot be allowed in respect of such services as marshal anything beyond his actual expenses incurred. (See 1765 Rev. Stat.)

The question of retired Army officers holding civil office was considered by Devens, Attorney General in 1877 (see *Retired Officer's* case (15 Atty. Gen. 306)). Devens ruled that a retired officer does not vacate his commission in the Army by accepting a civil office unless that office is in the diplomatic or consular service, in which case he is considered to have resigned his place in the Army. He pointed out that section 1222, Revised Statutes, forbidding officers to hold civil office, was limited to officers on the active list, and that even the prohibition respecting diplomatic or consular posts under section 1223, Revised Statutes, although applying to both the active and retired lists, did not apply to certain officers excepted under the act of March 3, 1875 (18 Stat. 512, ch. 178), concerning officers wounded in battle. The excepted officers, even though accepting consular and diplomatic posts, would not vacate their commissions thereby. Devens in respect to retired officers in general stated:

"The provisions of the statutes in regard to retired officers direct that they may be assigned to duty at the Soldiers' Home under certain circumstances, and that they shall not be assignable to any other duty (Rev. Stat., sec. 1259). And, further, that they may on their own application be detailed to serve as professors in any college. (Sec. 1260.) It would not, in my opinion, be a legitimate construction of these two sections to say that they prohibit an officer from accepting or being appointed to a purely civil office under the United States Government. In the absence of any provision of law forbidding such officers to hold civil offices, especially when these sections are taken in connection with the law that officers upon the active list are (by sec. 1222 of the Revised Statutes) held to have vacated their commissions by the acceptance of any civil office, and that all officers who accept or hold appointments in the diplomatic or consular service are (by sec. 1223) considered as having resigned their places in the Army, with the exception above alluded to, it must be considered that a retired officer is not precluded from holding a civil office under the United States Government, unless in the consular or diplomatic service.

"The third question proposed by you is, whether a retired officer is entitled to draw his pay as such and also the salary of any civil office he may hold under the United States Government.

"Sections 1763, 1764, and 1765 of the Revised Statutes forbid any person who holds an office, the salary or annual compensation of which amounts to the sum of $2,500, to receive compensation for discharging the duties of any other office, unless expressly authorized by law; they also direct that no allowance or compensation shall be allowed to any officer or clerk by reason of the discharge of duties which belong to any other officer or clerk in the same or any other department, and that no officer in any branch of the public service, or any other person whose salary, pay, or emoluments are fixed by law or regulations, shall receive any additional pay, extra allowance, or compensation, in any form whatever, for the disbursement of public money, or for any other service or duty whatever, unless the same is authorized by law, and the appropriation therefor explicitly states that it is for such additional pay, extra allowance, or compensation.

"The construction which has been given to these statutes (especially in the case of *Converse* v. *The United States* (21 How., 463)) is that the intent and effect of them is to forbid officers holding one office to receive compensation for the discharge of duties belonging to another, or additional pay, extra allowance, or compensation for such other services or duties where they hold the commission of but a single office, and, by virtue of that office, or in addition to the duties of that office, have assigned to them the duties of another office. According to that decision, however, if an officer holds two distinct commissions, and thus two distinct offices, he may receive the salary for each. The evil intended to be guarded against by these statutes was not so much plurality of offices as it was additional pay or compensation to an officer holding but one office for performing additional duties, or the duties properly belonging to another. If he actually holds two commissions, and does the duties of two distinct offices, he may receive the salary which has been appropriated to each office. Sections 1763, 1764, and 1765, above referred to, are condensations from statutes which were in existence at the time that this decision was made, and in conformity with it I deem it my duty, in answer to your inquiry, to say that a retired officer may draw his pay as such, and may also draw the salary of any civil office which he may hold under the Government, assuming always that the duties of the civil office are performed under and by virtue of a commission appointing him to that office, which he holds in addition to his rank as a retired officer."

On April 14, 1882, the Senate by resolution requested the Judiciary Committee to inform the Senate whether or not a retired United States Army officer could rightfully hold a civil office under the Government of the United States (CONGRESSIONAL RECORD, vol. 13, p. 2878). The committee, through its chairman, Mr. Garland, reported in the affirmative (p. 2977), as follows (S. Rept. No. 429, 47th Cong., 1st sess.):

"There is nothing in the Constitution touching the question embraced by the resolution.

"In the Revised Statutes (sec. 1222) any officer of the Army on the active list is prohibited from holding any civil office, whether by election or appointment, and by the same law, if any Army officer on the active list accepts or exercises the functions of a civil office, he shall thereby cease to be an Army officer and his commission as such shall be thereby vacated.

"This is limited to the active list and would clearly imply that an Army officer on the retired list could be a civil officer.

"The next section (1223) provides expressly that any officer of the Army who accepts or holds any appointment in the diplomatic or consular service of the Government shall be considered as having resigned his place in the Army, and it shall be filled as a vacancy. But this disqualification in the diplomatic or consular service was virtually repealed by the act of March 3, 1875, as follows: 'And every such officer now borne on the retired list shall be continued thereon notwithstanding the provisions of section 2, chapter 38, act of March 3, 1863'; and, also, 'and be it also provided, that no retired officer shall be affected by this act who has been retired or may hereafter be retired on the rank held by him at the time of his retirement.' (Rev. Stat., supp., ch. 178, p. 195.)

"Comparing the different statutes on the subject, the committee answer the question in the affirmative."

Devens once again upheld the right to hold two distinct offices and to receive the pay of each in *Riley's* case (16 Op. Atty. Gen. 7 (1787)). He again applied the ruling concerning the performance of extra duties only, which under section 1763, Revised Statutes, would prohibit extra payment in such cases (see *Dinsmore's* case (16 Atty. Gen. 565)).

"The case of *U. S.* v. *Converse* (21 How. 463) was confirmed in 1884 in *U. S.* v. *Brindle* (110 U. S. 688). In that case, Brindle was employed as a receiver of public moneys in the sale of public lands for a district in Kansas, having an annual fixed salary. He was also appointed agent for the sale of Indian trust lands under the Treaty of July 17, 1854 (10 Stat. 1048). The Court noted that the duties under the latter statute and treaty were different and not imposed upon Brindle by an office under the Government of the United States. Therefore he held two distinct offices. The Court stated:

"In *Converse* v. *United States* (21 How. 463), it was decided that provisions in appropriation acts, like section 18 of the act of August 31, 1852, prohibiting an officer from receiving more than one salary, could not by 'fair interpretation be held to embrace an employment which has no affinity or connection, either in its character or by law or usage, with the line of his official duty, and where the service to be performed is of a different character and for a different place, and the amount of compensation regulated by law.' Page 471. In the present case the employment was for a special service in connection with a special trust assumed by the United States for the benefit of certain Indian tribes, in which express provisions were made for the payment of expenses. In legal effect, the appointment was to an agency for the sale of lands for the Indians, with an implied understanding that a reasonable compensation would be paid for the services rendered. So far as anything appears in the record, the appointment was not made because Brindle was receiver of the land office. The duties to be performed were of a different character and at a different place from those of the land office, and while the exact amount of compensation for this service was not fixed, it was clearly to be inferred that such compensation as the law implies where labor is performed by one at the request of another, that is to say, a reasonable compensation, would be paid. This case comes, therefore, within the rule in *Converse* v. *United States*, and Brindle is not excluded by the act of 1852 from demanding compensation for this service by reason of his being receiver of the land office."

In 1885, Garland, Attorney General, applied the rule in the Converse and Brindle cases to the case of *Donovan* (18 Atty. Gen. 303). He held that a clerk in the office of the auditor of the District of Columbia, who was also appointed a referee by the Court of Claims, under the act of June 16, 1880, was entitled to receive the salaries of both offices.

The question was again raised in the Supreme Court in *U. S.* v. *Saunders* (120 U. S. 126 (1887)). Saunders, a clerk in the Office of the President, was also appointed clerk of the Committee on Commerce of the Congress of the United States. The Comptroller refused to pay him the salary of his position as committee clerk. Mr. Justice Miller, in his opinion, stated:

"We are of opinion that, taking these sections all together, the purpose of this legislation was to prevent a person holding an office or appointment, for which the law provides a definite compensation by way of salary or otherwise, which is intended to cover all the services which, as such officer, he may be called upon to render, from receiving extra compensation, additional allowances, or pay for other services which may be required of him either by act of Congress or by order of the head of his Department, or in any other mode, added to or connected with the regular duties of the place which he holds; but that they have no application to the case of two distinct offices, places, or employments, each of which has its own duties and its own compensation which of-

fices may both be held by one person at the same itme. In the latter case, he is in the eye of the law two officers, or holds two places or appointments, the functions of which are separate and distinct, and, according to all the decisions, he is in such case entitled to recover the two compensations. In the former case, he performs the added duties under his appointment to a single place, and the statute has provided that he shall receive no additional compensation for the class of duties unless it is so provided by special legislation. The case of *United States* v. *Brindle* (110 U. S. 688), in which an Indian agent received large additional compensation for services connected with the sale of lands belonging to the Indians of his agency, which was affirmed in this court, was upon the ground that these additional services were performed for the benefit of the Indians, and the statute implied the payment of a reasonable compensation for such services. See also *Converse* v. *The United States* (21 How. 463).

Attorney General Garland covered the question again in *Marshal's* case (19 Op. Atty. Gen. 121 (1888)). The marshal had, in addition to his duties as marshal, been appointed an agent under section 5276, revised statutes, to bring back a fugitive criminal from a foreign country. Garland pointed out that the construction of the various statutes had been repeatedly passed upon by his predecessors. He reviewed the thinking of the majority school of thought represented by Attorney General Black that the $2,500 limitation prohibited not only the receipt of extra pay, but also the salaries of more than one office, no matter under what circumstances the duties of that office may have been performed and the minority school of thought, represented by Attorney General Crittenden, that none of the acts forbade a person from holding two offices and receiving the salaries thereof, because the prohibition was against his receiving salary of an office that he did not hold, and not against his receiving a salary of two offices which he did legitimately hold. Garland also reviewed the Supreme Court cases concerned in this general question: *Converse* v. *U. S.* (21 How. 463 (1858)); *Stanbury* v. *U. S.* (8 Wall 34 (1868)); *U. S.* v. *Shoemaker* (7 Wall 338 (1868)); *Hall* v. *U. S.* (91 U. S. 559 (1875)); *U. S.* v. *Brindle* (110 U. S. 688 (1884)); and *U. S.* v. *Saunders* (120 U. S. 126).

The question of retired officers was again reviewed by W. H. H. Miller, Attorney General, in *Major Smith's* case (19 Op. Atty. Gen. 383 (1889)). Major Smith, who held the civilian position in charge of river and harbor work at Wilmington, Del., was appointed from civil life to the position of major of engineering in the Army, and thereupon was placed on the retired list of the Army. Miller pointed out that this question had been passed upon by the Senate, the Attorney General and by the courts. He stated:

"The last two questions submitted have substantially been passed upon by the Senate, by this Department, and by the courts before.

"On the 14th of April 1882 the following resolution was submitted to the Senate of the United States:

"'*Resolved*, That the Committee on the Judiciary be instructed to inquire, and report by bill or otherwise, whether or not a retired United States Army officer can lawfully hold a civil office under the Government of the United States.'

"It was referred to the Committee on the Judiciary, which, on the 18th, through Mr. Garland, reported to the Senate, 'answering the question in the affirmative.'

"On the 7th of June 1851 a similar question was submitted to Attorney General Crittenden under the statutes of the 3d of March 1839 (5 Stat. 334–349), and of the 23d of August, 1842 (5 Stat., 508–510), from which section 1765, Revised Statutes, was derived. He replied (5 Opin., 768):

" 'The plain meaning of this seems to be that an individual holding one office and receiving its salary shall, in no case, be allowed to receive also the salary of another office, which he does not hold, simply on account of his having performed the duties thereof. The prohibition is against his receiving the salary of an office that he does not hold, and not against his receiving the salaries of two offices which he does legitimately hold.'

"On the 11th of June 1877 like questions were submitted to Attorney General Devens. In his reply (15 Opin., 306) he considers and interprets all the sections to which you refer, and declares:

" 'Sections 1763, 1764, and 1765, above referred to, and condensations from statutes which were in existence at the time that this decision (*Converse* v. *The United States*), was made, and in conformity with it I deem it my duty, in answer to your inquiry, to say that a retired officer may draw his pay as such, and may also draw the salary of any civil office which he may hold under the Government, assuming always that the duties of the civil office are performed under and by virtue of a commission appointing him to that office which he holds in addition to his rank as a retired officer.'

"This interpretation is sustained by the Court of Claims in *Meigs* v. *United States* (19 C. Cls. R., 497), and by the Supreme Court in *Converse* v. *United States* (21 How. 464), *United States* v. *Brindle* (10 U. S. R., 688), and *United States* v. *Saunders* (120 U. S. R. 126), in which last case Miller, J., delivering the opinion, declares:

" 'We are of opinion that, taking these sections (1763, 1764, and 1765) all together, the purpose of this legislation was to prevent a person holding an office or appointment, for which the law provides a definite compensation by way of salary or otherwise, which is intended to cover all the services which, as such officer, he may be called upon to render, from receiving extra compensation, additional allowances, or pay for other services which may be required of him either by act of Congress or by order of the head of his Department, or in any other mode, added to or connected with the regular duties of the place which he holds; but that they have no application to the case of two distinct offices, places, or employments, each of which has its own duties and its own compensation, which offices may both be held by one person at the same time. In the latter case he is in the eye of the law officers, or holds two places or appointments, the functions of which are separate and distinct, and, according to all the decisions, he is in such case entitled to recover the two compensations.'

"I am of opinion that the above interpretation of sections 1259, 1763, 1764, and 1765, Revised Statutes, to which you refer, is well established alike by reason, precedent, and authority.

"I therefore answer your first inquiry in the affirmative, and your second and third inquiries in the negative."

The year 1894 saw the passage of legislation which appears to have reversed in part the doctrine propounded by the Supreme Court. In the Converse case, Attorney General Crittenden's opinion was disallowed to the effect that a person might hold two offices to which he had been legitimately appointed and receive the salary of each. As we have seen, retired military officers had been specifically included within the limits of this doctrine. In 1894 language was attached to the Legislative, Executive, and Judicial Expenses Appropriations Act, 1895, in the form of a rider to section 2 which made it clear that persons holding an office, the salary or annual compensation attached to which amounted to $2,500, were not to be appointed to or hold any other office unless specifically authorized thereto by law.

That this rider applied to retired military officers is implied by the fact that the following was a part thereof:

"But this shall not apply to retired officers of the Army or Navy whenever they may be elected to public office, or whenever the President shall appoint them to office by and with the advice and consent of the Senate."

The Legislative, Executive, and Judicial Expenses Appropriations Act, 1895, had been introduced in the House of Representatives as H. R. 7097 and had been passed. In the Senate, the Senate Committee on Appropriations inserted the rider as the second sentence of section 2 of the bill. However, the committee did not discuss the matter in its report (S. Rept. 506, 53d Cong., 2d sess.). When the Senate considered the bill as reported on July 13, 1894, the following debate took place (CONGRESSIONAL RECORD, vol. 26, p. 7423):

"The next amendment was, in section 2, on page 126, line 10, after the word 'each,' to insert:

" 'No person who holds an office the salary or annual compensation attached to which amounts to the sum of $2,500 shall be appointed to or hold any other office unless hereafter specially authorized thereto by law; but this shall not apply to retired officers of the Army or Navy whenever they may be elected to public office.'

"Mr. PLATT. I supposed we had a provision of law to the effect that no officer in the Government employ could draw a salary for two offices. Is there not such a law?

"Mr. COCKRELL. There is such a law, but we do not think it covers the case.

"Mr. PLATT. Will the Senator please explain why this amendment is necessary?

"Mr. COCKRELL. This is simply to prohibit in certain classes of cases the payment of double salaries, and yet not to make it an invariable rule in all kinds of cases. There is an exception to be offered to it. The Senator from Iowa has the amendment to the amendment which was prepared for submission. After the words 'public office,' in line 15, to insert 'or whenever the President may appoint them thereto, by and with the advice and consent of the Senate.'

"Mr. PLATT. Let the amendment to the amendment be read at the desk.

"The PRESIDING OFFICER. The amendment to the amendment will be stated.

"The SECRETARY. After the word 'office,' in line 15, on page 126, it is proposed to insert 'whenever the President shall appoint them to office by and with the advice and consent of the Senate.'

"The amendment to the amendment was agreed to.

"The amendment as amended was agreed to."

No further debate took place in either House respecting the rider. The conference committee in its report to the Senate stated with respect to the final text of the rider (CONGRESSIONAL RECORD, vol. 26, p. 7844):

"That the House recede from its disagreement to the amendment of the Senate numbered 186, and agree to the same with an amendment as follows: In line 4 of said amendment strike out the word 'unless' and insert in lieu thereof the following: 'to which compensation is attached, unless specially heretofore or'; and the Senate agree to the same."

With respect to this the conference report in the House states (CONGRESSIONAL RECORD, vol. 26, p. 7856):

"On amendment numbered 186: Instead of the provision proposed by the Senate, prohibiting the holding of two offices by one person, inserts the following: 'No person who holds an office the salary or annual compensation attached to which amounts to the sum of $2,500 shall be appointed to or

hold any other office to which compensation is attached unless specially heretofore or hereafter specially authorized thereto by law; but this shall not apply to retired officers of the Army and Navy, whenever they may be elected to public office, or whenever the President shall appoint them to office by and with the advice and consent of the Senate.'"

The bill H. R. 7097 with the rider in section 2 as amended was approved by the President on July 31, 1894 (28 Stat. 205).

The final text of section 2 of the act was (the text of the rider is in brackets):

"SEC. 2. That the pay of assistant messengers, firemen, watchmen, laborers, and charwomen provided for in this act, unless otherwise specially stated, shall be as follows: For assistant messengers, firemen, and watchmen, at the rate of $720 per annum each; for laborers, at the rate of $660 per annum each; and for charwomen, at the rate of $240 per annum each. [No person who holds an office the salary or annual compensation attached to which amounts to the sum of $2,500 shall be appointed to or hold any other office to which compensation is attached unless specially heretofore or hereafter specially authorized thereto by law; but this shall not apply to retired officers of the Army or Navy whenever they may be elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate.]"

The 1894 statute was considered by Attorney General Griggs in Putnam's Case, 22 Op. Atty. Gen. 184 (1898). The Honorable William L. Putnam was a United States circuit judge who had been appointed as one of the commissioners under the convention of February 8, 1896, concerning claims growing out of seizures of vessels in the Bering Sea. Griggs considered that, provisions for the appointment of commissioners having been included in the convention, the office of commissioner was one growing out of the foreign relations of the United States and was not an office comtemplated by article 2 ,section 2 of the Constitution, which provided for appointments by the President by and with the advice and consent of the Senate, etc. He concluded that under these circumstances the office of commissioner, not being a constitutional office, was therefore not within the prohibition of section 2 of the act of 1894. Griggs further considered the definition of office in the more popular sense and found that the Supreme Court had indicated that an officer was one whose office included tenure, continuation, emoluments, etc., citing *U. S.* v. *Germaine* (99 U. S. 510), *U. S.* v. *Mouat* (124 U. S. 307), *Auffmordt* v. *Hedden* (137 U. S. 327). He concluded that the office of commissioner being only temporary and for a specific purpose only and having neither tenure, duration, or emoluments, could not be said to be a public office within the prohibition of the 1894 act. He therefore ruled that Judge Putnam could receive both his salary as a Circuit Court Judge and compensation for his work as commissioner under the convention, notwithstanding the fact that his salary as circuit court judge exceeded $2,500.

Putnam's case appears to have been the first exemption from the prohibition against duel office holding in the 1894 act. A further exemption was made by Attorney General Bonaparte in *Neill's* case (26 Op. Atty. Gen. 247 (1907)). Commissioner of Labor Charles P. Neill was also appointed a member of the Immigration Commission under the act of February 20, 1907 (34 Stat. 898, 909), to investigate immigration affairs. His salary as Secretary of Labor exceeded $2,500. Bonaparte duly noted the holding of Griggs in the Putnam case. He rested his decision in behalf of Neill on the grounds that the position of member of the Immigration Commission, being of a temporary nature and for a single specific purpose, did not fall within the definition of "public office" as defined by the United States Supreme Court in *U. S.* v. *Hartwell* (16 Wall. 385, 393), *U. S.* v. *Moore* (95 U. S. 762), *U. S.* v. *Germaine* (99 U. S. 511), *Hall* v. *Wisconsin* (103 U. S. 8), *Auffmordt* v. *Hedden* (137 U. S. 327), *Opinion of the Judges* (3 Greenl. (Me.) 461), *Eliason* v. *Coleman* (86 N. C. 235), and *U. S.* v. *Maurice* (2 Brock 96). On this basis, Bonaparte held that Neill was entitled to hold both offices and receive the salary of both.

In 1916, the question of double salaries reoccurred in the Congress by the enactment of a rider on the Legislative, Executive, and Judicial Appropriations Act, 1917 (39 Stat. 120, sec. 6). That act had been reported in the House by the House Committee on Appropriations as H. R. 12207, 64th Congress, 1st session. As reported and as passed by the House, the bill contained no provisions respecting double salaries. The Senate Appropriations Committee in reporting the bill to the Senate (S. Rept. No. 329, 64th Cong.) included a section 6 in the bill without comment as follows:

"SEC. 6. That no money appropriated by this or any other act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum, but this shall not apply to retired officers of the Army or Navy whenever they may be elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate."

When the bill was read for amendment on the floor of the Senate the following debate took place (CONGRESSIONAL RECORD, vol. 53, pt. 6, pp. 5731–5732):

"The next amendment was, on page 154, after line 14, to insert as a new section the following:

"'SEC. 6. That no money appropriated by this or any other act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum, but this shall not apply to retired officers of the Army or Navy whenever they may be elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate.'

"Mr. Lodge, Mr. Swanson, and Mr. Kern addressed the Chair.

"Mr. LODGE. I merely wish to offer an amendment to the amendment. I dare say the Senator from Virginia rose to offer the same amendment I was going to propose.

"Mr. SWANSON. About the Marine Corps?

"Mr. LODGE. To insert, after the word 'Navy,' the words 'Marine Corps.'

"Mr. SWANSON. And, in line 20, 'appointed or.'

"Mr. LODGE. 'Appointed or' before 'elected.'

"Mr. OVERMAN. What is the amendment?

"Mr. LODGE. The amendment is to insert, after retired officers of the Army or Navy,' the words 'or Marine Corps,' and, of course, it ought also be read 'whenever they may be appointed or elected to public office.'

"The PRESIDING OFFICER. The proposed amendment will be read.

"The SECRETARY. On page 154, in section 6, after the word 'Army,' insert a comma and strike out the word 'or'; after the word 'Navy' insert the words 'or Marine Corps'; and, in line 20, before the word 'elected,' insert 'appointed or'; so as to make the section read:

"'SEC 6. That no money appropriated by this or any other act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum, but this shall not apply to retired officers of the Army, Navy, or Marine Corps whenever they may be appointed or elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate.'

"Mr. MARTIN of Virginia. I think that is a proper amendment."

"The amendment to the amendment was agreed to.

"The amendment, as amended, was agreed to.

"Mr. SHEPPARD. Mr. President, I wish, for information, to make an inquiry regarding section 6. As I understand it, the combined amount of salaries that one person may draw has heretofore been limited to $2,500. Am I correct in that?

"Mr. MARTIN of Virginia. No. The former law was that no clerk who was receiving as much as $2,500 per annum should have any second appointment at all.

"Mr. SHEPPARD. Why was that amount reduced to $2,000?

"Mr. MARTIN of Virginia. Because we were informed of abuses in some of the departments; that when they could not raise a clerk's salary—when Congres refused to make the allowance—they would just give him some other place in addition to that which he held.

"Mr. SHEPPARD. That is entirely satisfactory to me, Mr. President."

As thus adopted, the rider passed the Senate. At the conference certain additions were made to the amendment (H. Rept. No. 617, 64th Cong., pp. 6, 7, 12, 13), as follows:

"Amendment No. 229: That the House recede from its disagreement to the amendment of the Senate numbered 229, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment, insert the following:

"'SEC. 6. That, unless otherwise specially authorized by law, no money appropriated by this or any other act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum, but this shall not apply to retired officers of the Army, Navy, or Marine Corps whenever they may be appointed or elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate or to officers and enlisted men of the Organized Militia and militia in the several States, Territories, and the District of Columbia.'

"And the Senate agree to the same.

* * * * *

"No. 229: Inserts section 6, proposed by the Senate, prohibiting the payment of more than one salary to any person where the combined salaries exceed $2,000, modified so that the section shall not operate where more than one payment is specially authorized by law, and shall not be effective in the case of officers and enlisted men of the Organized Militia and the Naval Militia of the States, Territories, and the District of Columbia."

As thus amended the rider was enacted and became section 6 of the act, supra. Later in the same session the matter was taken up again in the Naval Service Appropriations Act, 1917 (39 Stat. 582), by means of another rider. This act had been reported in the House by the House Committee on Appropriations as H. R. 159457. Here also, the rider was attached in the Senate Committee by amendment and without comment. The following occurred on the floor of the Senate (CONGRESSIONAL RECORD, vol. 53, pt. 11, pp. 11025–11026):

"The next amendment was, on page 70, after line 2, to insert:

"'Section 6 of an act entitled "An act making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1917, namely" approved May 10, 1916, is hereby amended so as to read as follows:

"'SEC. 6. That unless otherwise specially authorized by law, no money appropriated by this or any other act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per

annum, but this shall not apply to retired officers or enlisted men of the Army, Navy, Marine Corps, or Coast Guard, or to officers and enlisted men of the Organized Militia and Naval Militia in the several States, Territories, and the District of Columbia; *Provided*, That no such retired officer, officer, or enlisted man shall be denied or deprived of any of his pay, salary, or compensation as such, or of any other salary or compensation for services heretofore rendered, by reason of any decision or construction of said section 6.'

"Mr. NORRIS. Mr. President, I should like to inquire of the Senator from Virginia what change is made in section 6 from the law as it exists now?

"Mr. SWANSON. The only change is in the proviso.

"Mr. NORRIS. From the proviso on?

"Mr. SWANSON. In the proviso itself. I will state to the Senator that this takes care of Mr. Theall, who is the secretary of the Naval Affairs Committee of the House. We passed a provision that permitted that, and the Comptroller of the Treasury decided that the clerk of a committee was not a public officer, which precluded him from occupying that position. This simply puts a construction there so that the Comptroller of the Treasury cannot deprive him of his persent position. We had previously passed a law taking care of him, and he decided that the clerk of a committee was not a public officer, and would not pay the salary.

"Mr. NORRIS. Does this apply to anybody except this official of the House of Representatives?

"Mr. SWANSON. To no one, I understand, except this officer.

"Mr. NORRIS. Why not make a direct reference to the particular person?

"Mr. LODGE. We are amending the statute. You cannot mention him in another statute.

"Mr. NORRIS. This particular position in the House of Representatives is filled by a retired naval officer. There is another question. If this applies only to an official or employee of the House of Representatives, why did not the House of Representatives put it in?

"Mr. SWANSON. I understand that there is another one at the Navy yard. If the Senator will permit me, we amended section 6 so as to enable them to employ a retired officer in the Navy to be clerk of the committee. That was included in the bill. The provision was included in the legislative, executive, and judicial appropriation bill. Having used the words 'public officer,' the Comptroller of the Treasury, I understand, rules that the clerk of the committee is not a public officer, and consequently he cannot receive his salary. The amendment is in the proviso which prevents the Comptroller from giving that interpretation to the law.

"Mr. LODGE. If the Senator will allow me, I may remind him that this ruling was not made until after the bill had left the House.

"Mr. NORRIS. Even if that be true, this is to give relief to some one in the House, and this is simply, of course, class legislation put on an appropriation bill. I had my attention called to it by a Member of the House, who said that it applied to a large number of retired persons, and I should think it would apply to practically the entire Navy Department. If there is any good reason why one man should be excluded from the operation of the law, I would not have any objection if he was excluded and excluded directly by name or his office or position excluded.

"Mr. LODGE. But the general law expressly provides that the provision about the salaries shall not apply to retired officers and enlisted men. That is the general provision of the statute. The exception is in the proviso, because there is an attempt made to exclude this one man from the general law by the Comptroller by a ruling which, it semes to me, is absurd. Down to the proviso it is the general existing law.

"Mr. NORRIS. Commencing, then, at line 17, with the proviso, that is the only change made in the existing law?

"Mr. LODGE. It is to enable him, if the Senator will read it, to receive his compensation as provided by law for services heretofore rendered.

"Mr. NORRIS. Let us see how it reads: '*Provided*, That no such retired officer, officer, or enlisted man shall be denied or deprived of any of his pay, salary, or compensation as such, or of any other salary or compensation for services heretofore rendered, by reason of any decision or construction of said section 6.'

"Do I understand that the effect of that will be that this official in the House of Representatives, who seems to be the beneficiary, will get his back pay, but will in the future not be able to get any?

"Mr. LODGE. No; he will get it in the future. It covers both.

"Mr. NORRIS (reading)—

"'Of any of his pay, salary, or compensation as such, or of any other salary or compensation for services heretofore rendered.'

"Mr. LODGE. Yes; no such retired officer 'shall be denied or deprived of any of his pay, salary, or compensation as such, or of any other salary or compensation for services heretofore rendered.'

"Mr. SMOOT. Mr. President——

"Mr. NORRIS. I yield to the Senator from Utah.

"Mr. SMOOT. The Appropriation Committee of the Senate in reporting the legislative, executive, and judicial appropriation bill for this year inserted section 6 in the bill as follows:

"'That unless otherwise specially authorized by law no money appropriated by this or any other act shall be available for payment to any person receiving more than 1 salary when the combined amount of said salaries exceeds the sum of $2,000 per annum.'

"That is what the committee reported to the Senate. While the bill was under consideration the Senator from Massachusetts [Mr. LODGE] offered an amendment to the committee amendment as follows:

"'But this shall not apply to retired officers of the Army, Navy, or Marine Corps whenever they may be appointed or elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate or to officers and enlisted men of the Organized Militia and Naval Militia in the several States, Territories, and the District of Columbia.'

"That is the way section 6 of the bill finally passed the Senate. I understand, of course, that this proviso is put in the pending bill to take care of one man in the employ of the House of Representatives. I will say to the Senator that that case was called to the attention of the Appropriation Committee when it first considered the amendment, but the committee at that time did not feel justified in proposing an amendment to take care of one man, but after the Senate adopted the amendment offered by the Senator from Massachusetts it exempted retired officers and enlisted men of the Army and Navy and Marine Corps, and so forth. It develops now that the employee in the House of Representatives referred to is a retired officer, and if that be true he should be exempted under the amendment offered by the Senator from Massachusetts, but under a ruling it is held that no matter whether he is a retired officer or not, holding the position he does with a committee of the House, he is not entitled to the two salaries.

"Mr. NORRIS. I rather think since we have exempted everybody else from the effect of the law we ought not to hesitate to exempt this one man who is left. I understand the law prohibiting anyone from drawing two salaries is so amended that it does not apply to anyone except this clerk in the House of Representatives, and this is to let him out, also.

"Mr. SMOOT. That is the effect of the proviso, but I will say to the Senator——

"Mr. NORRIS. Why not repeal the law altogether?

"Mr. SWANSON. If the Senator will permit me, it was held that the appointment by a committee of Congress, as I understand the ruling of the Comptroller of the Treasury, is not a public officer, and consequently not being a public officer he cannot get the benefit of the exemption that others have. He is a very valuable man, one of the most valuable men in the House of Representatives as far as naval affairs are concerned, and he cannot afford to accept a clerkship in the committee unless this exemption is permitted. This is put in the bill at the request of the chairman of the Naval Committee of the House, who desires to retain the valuable services of this man, and it is made necessary on account of what seems to me to be the foolish ruling of the Comptroller of the Treasury that a clerk of a committee is not a public officer.

"Mr. NORRIS. I should like to inquire how many men are drawing two salaries now who are not affected by the law.

"Mr. SMOOT. I will say to the Senator that at the time the amendment to the legislative, executive, and judicial appropriation bill was being considered in the Committee on Appropriations we undertook to find out just how many there were in the employment of the Government drawing two salaries. We were unable to ascertain the exact number, but I will say to the Senator there were a great many of them, but since the passage of the legislative, executive, and judicial appropriation bill it has done away with all except retired officers, as stated before.

"I will state further to the Senator that the committee found that the practice was growing to such an extent that it decided to pass a law prohibiting it. That is the reason why the committee reported the amendment to the legislative, executive, and judicial appropriations bill.

"Mr. NORRIS. Yes; but after it was amended it did not apply to anybody.

"Mr. SMOOT. Yes; it applied to everybody, with the exception of enlisted men and officers in the Army and Navy, Marine Corps, and Organized Militia, and Naval Militia.

"Mr. NORRIS. How many are there of those? Can the Senator state the number?

"Mr. LODGE. If the Senator will allow me, it has never been attempted to prevent retired officers from accepting private employment. It would be a useless cruelty.

"Mr. MORRIS. This law does not attempt to do that. We could not pass a law under the Constitution that would be of any validity, probably, that would do that, but we could pass a law that would prevent a man from drawing two salaries from the Government of the United States.

"Mr. LODGE. You could prevent a retired officer from accepting any other employment in private life.

"Mr. NORRIS. Nobody wants to do that.

"Mr. LODGE. You could make him forfeit his pay. That has never been done. Officers have always been allowed to accept private employment. Of course, they are always at the orders of the Government.

"Mr. NORRIS. Can the Senator from Utah answer my question as to how many men were drawing two salaries from the Government and are not drawing it now by reason of the enactment of this law?

"Mr. SMOOT. It would be only an estimate, but I will say to the Senator that there must have been something over 50 men who were drawing 2 salaries who are not doing so today. I do not want to state positively the number, but there were at lesat that many, and perhaps a great many more.

"Mr. NORRIS. I do not know that that is material now, bectuse it is in the law anyway, but what was the reason for exempting Army officers and officers of the Marine Corps?

"Mr. SMOOT. The reason was this: As to retired officers of the Army, Navy, and Marine Corps, and officers of the Guard, their time belongs to them, and if any department of the Government desires to avail itself of their services, there should be no objection to that. The exemption was adopted so that the Government could avail itself of their services.

"Mr. NORRIS. Why not the other people who are not retired officers of the Army or Navy?

"Mr. SMOOT. The reason is this, because their time is already paid for by the Government, and extra long hours must of necessity interfere with their efficiency in both positions.

"Mr. WEEKS. It is the custom to pay certain officers connected with the Government a higher rate of pay on account of the excellence of their service. For instance, the clerk of the Committee on Appropriations of the House of Representatives is paid an annual salary of $5,000 a year as long as he holds that position. It is simply a reward for efficiency. The salary which he receives is a thousand dollars greater than would be the salary of any other man holding that place. The same general principle applies to this case. The clerk of the House Naval Committee is a graduate of the Naval Academy and served in the Marine Corps. He was retired for physical disability, but he is entirely competent to perform the duties of that technical position not only as well but better than almost any other man. Therefore it has seemed fair that he should receive his retired pay and such salary as the committee gave him. As a matter of fact, he is paid $2,400 as clerk of the committee, and his retired pay is between $1,900 and $2,000 or about $4,300 a year. That is his entire pay from the Government, and it is not a high salary for that particular place, which he fills so acceptably to the House Naval Committee.

"There are 3 or 4 other cases which come under this limitation, I understand. There are perhaps three other naval officers who are employed in such a way that they will not receive their salary under the ruling of the Comptroller. In this particular case the salary for the last 2 months which this House employee actually received is being checked up against his retired pay of the Navy, and unless something is done, as proposed in this measure, not only will he in future receive only the retired pay from the Navy, but the actual pay which he has received under the law up to this time will be checked against that retired pay. It seems to me, from my knowledge of the case, there cannot be two sides to the fairness and desirability of adopting the provision which the Committee on Naval Affairs has proposed to the bill.

"The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

"The amendment was agreed to."

In the conference committee, the House receded from its disagreement to this amendment by the Senate. The amendment was explained by the committee as follows (H. Rept. No. 1099, 64th Cong., p. 23):

"Amendment No. 107: Amends section 6 of the Legislative, Executive, and Judicial Act, approved May 10, 1916, whereby no person who receives more than one salary from the United States when the combined amount of said salaries exceeds the sum of $2,000 per annum shall be paid from any appropriation in that act or any other act, and excludes from the operation of the act retired officers of the Army, Navy, or Marine Corps who were appointed to public office. The Senate amendment excludes retired officers and enlisted men of the Army, Navy, Marine Corps, or Coast Guard, or the officers and enlisted men of the organized Naval Militia in the several States, Territories, and District of Columbia, and further provides that no such retired officer shall be checked in his pay due to any construction of section 6 prior to the passage of this act. And the House recedes."

This amendment constitutes the present text of the Federal doctrine on double salaries (U. S. C. 5: 58). The proviso respecting acceptance of retired officers or enlisted men appears in the United States Code, title 5, section 59. Various other amendments have been made to this act. However, the basic principle of the legislation has not been specifically changed. These amendments took the form of exemptions from the provisions of the act. For instance, United States Code, title 5, section 60, exempted employees of the Library of Congress, who perform special functions in connection with its trust funds, from the provisions of section 58. See also section 59a. The decisions and opinions on section 58, which have occurred since the 1916 amendment, are concerned with construing its effect and are reviewed below.

No questions concerning dual compensation and dual employment seem to have occurred during the years between the enactment of the 1916 amendment, supra, and 1921. On June 10, 1921, the Congress established the office of Comptroller General, who succeeded to the powers and duties theretofore imposed upon the Comptroller of the Treasury as well as the duties of the six auditors in that department. The opinions of the Attorney General gradually ceased to concern themselves with questions of dual employment and compensation and the decisions of the Comptroller General, since he was vitally concerned with the payment of money of the United States in accordance with law, supervened.

Between 1921, the date of appointment of the Comptroller General, and 1924, date of the latest and present text of the law (except for a minor amendment) respecting dual office-holding, the Comptroller General issued a number of decisions as follows:

"The act of May 10, 1916, 39 Stat., 120, prohibiting the use of any appropriation for payment to the same person of more than one salary from the Government when the combined amount exceeds the sum of $2,000 per annum, is applicable to the funds of the United States Shipping Board Emergency Fleet Corporation; hence an employee of the corporation may not also receive compensation from the United States Shipping Board when the combined compensation is more than $2,000 per annum." (1 Compt. Gen. 14, July 13, 1921.)

"A clerk of United States district court may legally be paid as clerk while holding a commission in the Officers' Reserve Corps of the United States Army, except for such periods as he may be on active duty as an officer in the Officers' Rserve Corps when he would be prohibited by provisions of section 6 of the act of May 10, 1916, as amended by the act of August 29, 1916, 39 Stat., 582, from receiving compensation as a celrk of court." (1 Compt. Gen. 65, Aug. 11, 1921.)

"The employment of a major retired from active duty as special assistant to the Attorney General with compensation attached, and payment to him of that compensation in addition to his retired pay, is prohibited by the act of July 31, 1894 (28 Stat. 205)." (1 Compt. Gen. 219, Oct. 17, 1921.)

This case concerned the desire of the Attorney General to employ Col. E. G. Davis, a retired Army officer, as a special assistant to the Attorney General. The Comptroller General after quoting section 2 of the act of July 31, 1894, to the effect that no "person who holds an office, the salary or annual compensation attached to which amounts to the sum of $2,500 shall be appointed to or hold any office to which compensation is attached, unless specially heretofore or hereafter specially authorized thereto by law; but this shall not apply to retired officers of the Army or Navy whenever they may be elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate" pointed out that the retired Army officers hold office within the meaning of the section unless they fall within the exceptions noted above. The Comptroller General distinguished the case in volume 38, Court of Claims, page 39, by pointing out that the compensation allowed there was payable from a discretionary appropriation which had been given to the President for national security and defense and was allowed by the court as not open to question for that reason. He further pointed out that *Geddes* v. *United States* (38 Court of Claims 428) turned largely upon the construction of another statute and is not decisive of the application of this section of the act of 1894 to retired Army officers. He stated that the prohibition applies to retired officers sought to be appointed to or to hold any office not elective or appointive in the manner prescribed by the statute. He noted that the earlier decisions permitting the appointment of retired Army officers rested upon the conclusion that the element of duration, thought to be one of the essentials to an office, was lacking in such appointments and concluded that it was clear that the proposed appointment of Colonel Davis at a yearly salary and for the purpose indicated would establish duration as one of the incidents of appointment.

With respect to the question of whether Colonel Davis could give up his retired pay and accept only the pay of the office of special assistant to the Attorney General, the Comptroller General pointed out that the United States Supreme Court has held that public policy prohibits any attempt by unauthorized agreement with an officer of the United States under guise of a condition or otherwise, to deprive him of the right to pay given by statute. (*Glavey* v. *United States* (182 U. S. 595), *United States* v. *Andrews* (240 U. S. 90).) He concluded that any attempts by the colonel to relinquish his retired pay and restrict himself to the right to compensation as special assistant only would be ineffective for that purpose.

"The act of May 12, 1917, 40 Stat. 72, granting officers and employees of the United States, who are members of the Officers' Reserve Corps, leave of absence without loss of pay for not exceeding 15 days per year during which ordered to duty with troops or at field exercises or for instruction, together with section 39 of act of June 3, 1916, 39 Stat. 191, bring such employees within the exception to the general prohibition in section 6 of the act of May 10, 1916, as amended, as to the payment of 2 salaries aggregating more than $2,000 per annum, and they may be paid both their civilian pay and the pay of their rank or grade in the Reserve Corps for the period of such duty or exercises." (1 Compt. Gen. 544, Mar. 24, 1922.)

"Retired officers or enlisted men of the Army or Navy are not prohibited by the act of July 31, 1894, 28 Stat. 205, or the act of May 10, 1916, as amended, 39 Stat. 120, 582, from holding a Government position or office, provided neither the retired pay nor the salary attached to the position or office amounts to $2,500, the aggregate of the two being immaterial." (1 Compt. Gen. 571, Apr. 15, 1922.)

"The act of July 31, 1894 (28 Stat. 203), appropriating from the costs collected by the clerks of the circuit courts of appeals the amounts necessary for clerk hire and other expenses of the courts bring the em-

ployees of such courts within the scope of the act of May 10, 1916 (39 Stat. 582), and they are therefore prohibited from receiving compensation as bailiff of the court and also as clerical assistant when the aggregate of the two salaries exceeds $2,000 per annum." (1 Compt. Gen. 592, Apr. 24, 1922.)

"Retired officers or enlisted men of the Army or Navy hold offices with compensation attached within the meaning of the act of July 31, 1894 (28 Stat. 205), and are accordingly prohibited by said act from holding any other office under the Government, except an elective one or one to which appointment is made by and with the advice and consent of the Senate, if either the retired pay or the salary attached to the office or position amounts to $2,500 per annum." (1 Compt. Gen. 571 adhered to.) (1 Compt. Gen. 700, May 25, 1922.)

"Charges by an assistant surgeon of the Alaskan Engineering Commission for performing autopsies outside of the scope of his official duties are fees and not salary and do not come within the inhibition of the act of May 10, 1916 (39 Stat. 120), as amended; and as the salary of such assistant surgeon is not fixed by law or regulation he is not prohibited from receiving such additional fees by section 1765, Revised Statutes." (2 Compt. Gen. 37, July 22, 1922.)

"Retired enlisted men of the Army, Navy, or Marine Corps, whose retired pay is not in excess of $2,500 and who have been employed in the Veterans' Bureau at salaries exceeding $2,560 per annum contrary to the act of July 31, 1894 (28 Stat. 205), may be reappointed to positions paying less than $2,500 effective from the date the appointment is actually made and accepted, but such appointments may not be made retroactive to cover the period of service under the prior illegal appointment." (2 Compt. Gen. 373, Nov. 16, 1922.)

"Teachers in the night schools of the District of Columbia are paid from funds appropriated by Congress and are accordingly prohibited by the act of May 10, 1916 (39 Stat. 120), as amended by the acts of August 29, 1916 (39 Stat. 582), and October 6, 1917 (40 Stat. 384), from receiving for any 1 day's work as such teacher any compensation in excess of one three-hundred-and-twelfth of the amount by which $2,000 exceeds the salary they may be receiving from other employment by the Federal Government or by the District of Columbia in any other capacity than as teacher in the public schools." (2 Compt. Gen. 436, Jan. 13, 1923.)

"A retired captain of the fire department of the District of Columbia may be employed and paid as watchman at $720 per annum in the Treasury Department while continuing to draw his retirement relief of approximately $78 or $79 per month, provided such duty as watchman is not incompatible with his status on the retired list for the purposes of the act of September 1, 1916 (39 Stat. 720)." (2 Compt. Gen. 460, Jan. 27, 1923.)

"Teachers of the public schools of the District of Columbia are not in the Federal service and may therefore be employed during school vacation as expert examiners of the Civil Service Commission, the special appropriation for such examiners relieving them from the restrictions of the act of May 10, 1916, as amended (39 Stat. 120, 582)." (3 Compt. Gen. 24, July 11, 1923.)

"An employee of the United States Tariff Commission having had 15 days' military leave as a member of the Officer's Reserve Corps is not entitled to receive his civilian salary, with annual leave, while performing a second period of military service in the same calendar year if the annual rates of the civilian salary and military pay for such second period of military service exceed $2,000 in the aggregate." (3 Compt. Gen. 116, Sept. 5, 1923.)

"Employment of the same person as laborer and as clerk at the same time when the combined salaries exceed an aggregate rate of $2,000 per annum is prohibited by the act of May 10, 1916 (39 Stat. 120), it being immaterial that by reason of the intermittent character of the employment the total pay actually received per annum does not amount to $2,000." (3 Compt. Gen. 260, Oct. 26, 1923.)

During the course of the 68th Congress, 1st session, an amendment was added to section 2 of the act of 1894 which had prohibited the holding of another lucrative office. The Senate bill 2450 containing the amendment provided for the addition of a new sentence at the end of section 2 of the Legislative, Executive, and Judicial Appropriation Act, approved July 31, 1894, to read as follows:

"Retired enlisted men of the Army, Navy, Marine Corps, or Coast Guard shall not be construed to hold an office within the meaning of this section."

This bill was reported by the Senate Committee on Military Affairs (S. Rept. 254, 68th Cong.), passed the House, and was reported by the House Committee on Military Affairs (H. Rept. 498). The House committee in its report repeated the report of the Senate committee as follows:

"The Committee on Military Affairs, to which was referred the bill (S. 2450) to amend section 2 of the Legislative, Executive, and Judicial Appropriation Act approved July 31, 1894, having considered the same, report thereon favorably with the recommendation that the bill do pass without amendment.

"A similar bill was reported to the Senate by your committee during the 67th Congress and the report accompanying that measure is appended hereto and made a part of this report, as follows:

" 'The bill was introduced at the suggestion of representatives of the American Legion, and the purpose of it is explained in the following memorandum presented by them:

" ' "The men affected by this bill are about 12 oldtime noncommissioned officers, who have been retired as enlisted men for length of service. All of these men are veterans of the Spanish-American War, the Philippine Insurrection, and the World War; two at least are veterans of Indian wars. All served as officers during the World War and returned to their grades as retired enlisted men after the war was over. These bills do not call for any appropriation or expenditure of funds.

" ' "It is evident from a study of section 2 of the act of 1894 that Congress had no intention, nor even had in mind including retired enlisted men in the provisions of the act, which provides that no person holding an office with the Government shall hold any other office with compensation over $2,500. The Comptroller General has recently held that a retired enlisted man, as such, holds an office under the Government.

" ' "Due to their ability and fitness in administrative and financial matters, certain of these men have been appointed under congressional and civil-service authority to offices of trust in the Veterans' Bureau, Department of Agriculture, and other departments, and have proved to be valuable men. Under the Comptroller's decision they must now suffer a reduction in salary below many others doing similar or less important work.

" ' "It is surely not the intent of Congress or the public that these men who have spent the better part of their lives in the military service should now be discriminated against on account of being retired enlisted men. It is the intent of this bill to rectify this discrepancy and to place these men on an equal footing for employment as other American citizens of equal ability." '

"A letter requesting the passage of this bill has been received from the Director of the Veterans' Bureau, Colonel Forbes, which is included in this report, as follows:

UNITED STATES VETERANS' BUREAU,
Washington, January 15, 1923.

Hon. JAMES W. WADSWORTH, JR.,
Chairman, Committee on Military Affairs, United States Senate, Washington, D. C.

DEAR SENATOR WADSWORTH: I desire to invite your attention to Senate bill 4315, introduced by you and which is now before your committee.

This bill allows retired enlisted men of the Army the same privileges of occuping a Government position or office as those enjoyed by the ordinary citizen. The bill has particular application to a limited number of former noncommissioned officers employed in this Bureau. These men are all of exceptional ability and particularly capable of filling positions of importance in the United States Veterans' Bureau because of their experience gained through long service, and it does not seem just that they should be discriminated against because of their service to the country.

I sincerely hope you will find it possible to act favorably with regard to this bill at an early date, in order that the men who have so forcibly demonstrated their devotion to these United States may be treated equitably.

Very truly yours,

C. R. FORBES,
Director.

"Your committee is convinced of the justice of this legislation and urges that it be acted upon by the Senate at an early date."

During the course of the floor debate in the Senate, the purpose of S. 2450 was explained as follows (CONGRESSIONAL RECORD, vol. 65, p. 5131):

"Mr. KING. I should like an explanation of that measure.

"Mr. WADSWORTH. This bill is here on account of another ruling of the Comptroller General, and I think one of the most extraordinary ones I ever heard of.

"The law provides that a person holding office in or under the Government shall not hold another position under the Government which carries a salary in excess of $2,500 per annum. That needs no explanation.

"There are retired enlisted men of the Army and Navy and Marine Corps who have served 30 years in the service and are retired at three-fourths pay of the grade they occupied on the date of retirement. The Government, in other departments, has employed those men, some of them to the great advantage of the Government on account of their extraordinary training and experience. The Comptroller General comes along and says that a retired enlisted man holds an office as such, a most extraordinary conclusion. This bill states definitely that a retired enlisted man does not hold an office, and, of course, he does not hold an office. His relations to the Government are contractual in nature, that is all. If a retired enlisted man is held to hold an office under the Government, then an active-duty enlisted man must likewise be held to hold an office under the Government. As a matter of fact, we know that when an enlisted man enlists he takes a contract to serve the Government for a fixed period of years. How the Comptroller General or anybody else could say that an enlisted man in the Army or Navy holds an office under the Government passes my comprehension.

"Mr. FLETCHER. Does the bill permit a retired enlisted man to draw his three-fourths pay and at the same time draw his salary?

"Mr. WADSWORTH. Certainly, if he is serving the Government in another capacity. That ought to be the case.

"The bill was reported to the Senate without amendment, ordered to be engrossed for

a third reading, read the third time, and passed."

The bill however was amended on the floor of the House as follows (CONGRESSIONAL RECORD, vol. 65, p. 9137):

"The Clerk read the bill as follows:

"'*Be it enacted, etc.*, That section 2 of the legislative, executive, and judicial appropriation act, approved July 31, 1894, is amended by adding at the end thereof a new sentence to read as follows: "Retired enlisted men of the Army, Navy, Marine Corps, or Coast Guard shall not be construed to hold an office within the meaning of this section."'

"Mr. STEPHENS. Mr. Speaker, I desire to offer the following amendment.

"The Clerk read as follows:

"'Amendment by Mr. Stephens: Strike out all of the printed bill after the word "follows", in line 6, and insert in lieu thereof the following: "Retired enlisted men of the Army, Navy, Marine Corps, or Coast Guard retired for any cause, and retired officers of the Army, Navy, Marine Corps, or Coast Guard who have been retired for injuries received in battle or for injuries or incapacity incurred in line of duty shall not, within the meaning of this section, be construed to hold or to have held an office during such retirement".'

"The SPEAKER. The question is on agreeing to the amendment.

"The amendment was agreed to.

"The bill as amended was ordered to be read a third time, was read the third time, and passed."

The amendment of the House was adopted and concurred in by the Senate as follows (CONGRESSIONAL RECORD, vol. 65, p. 9279):

"RETIRED ENLISTED MEN OF THE ARMY

"The Presiding Officer laid before the Senate the amendment of the House of Representatives to the bill (S. 2450) to amend section 2 of the Legislative, Executive, and Judicial Appropriation Act approved July 31, 1894, which was, on page 1, line 6, to strike out all after 'follows:' down to and including 'section', in line 8, and to insert in lieu thereof:

"'Retired enlisted men of the Army, Navy, Marine Corps, or Coast Guard retired for any cause, and retired officers of the Army, Navy, Marine Corps, or Coast Guard who have been retired for injuries received in battle or for injuries or incapacity incurred in line of duty shall not, within the meaning of this section, be construed to hold or to have held an office during such retirement.'

"Mr. WADSWORTH. I move that the Senate concur in the amendment of the House. It relates to the eligibility of persons in a retired status in the military service being employed in the civil service.

"The amendment was concurred in."

It should be noted in connection with the passage of this act that the first argument was that enlisted men do not hold offices under the Government of the United States, but enter into a contract of service. They, therefore, are contractors and not officeholders. The conclusion is that the prohibitions of the 1894 act would not and should not apply to enlisted men. The contrary holding by the Comptroller General therefore was incorrect. (See 2 Compt. Gen. 373 supra.) Although this seemed to be the basic theory of the bill, the House amendment completely shifted from this basis to what is obviously an idea of rewarding those enlisted men who have performed extraordinary service and have been retired for injuries received in battle or for injuries or incapacity incurred in line of duty. Only such enlisted men apparently are to be construed as not holding another office during such retirement. All other enlisted men would therefore be presumed to hold an office provided they were retired merely for age.

X—THE TEST, 1924–57

By 1924 the broad principle of prohibiting dual officeholding and double salaries had become generally established in our law. Although the basic principle has not been revised or changed since that date, exceptions have been made to take care of obvious situations. During this period, the doctrine has been subjected to the test of both depression and total war. In the first decade since 1924, there was a period of prosperity when undoubtedly little attention was paid to the doctrine. Jobs were plentiful, money easy and everybody was on a merry-go-round of prosperity. Then came the depression of 1930 when the idea of spread-the-work was foremost, since unemployment mounted to alarming proportions. The doctrine certainly fitted into that period. The next decade included a long, slow, and painful recovery from the ravages of the depression. This was followed by a period of prosperity accentuated by total war. In the depression period, manpower has been plentiful but jobs scarce. Total war brought the reverse, plenty of jobs but manpower in short supply. The third decade since 1924, found us with the reverse problem still unsolved. The advent of the cold war and the birth of atomic energy have all contributed their part to the continuance of the problem.

During this period a number of opinions and decisions have been rendered by the Attorney General and the Comptroller General of the United States respecting dual employment and compensation in connection with both civilian employees and Armed Forces personnel. While none of the opinions and decisions actually change, by way of interpretation, the basic principles of the doctrine as developed up to 1924, they do represent a refinement of the doctrine, by way of exception, under the stresses of both depression and total war. Digests of the opinions and decisions, divided into two groups, those affecting civilian employees and those affecting Armed Forces personnel, follow:

"1. CIVILIAN EMPLOYEES

"Chief, Bureau of Efficiency—Board of Actuaries, Civil Service Retirement Act—34 Atty Gen. 490—May 23, 1925:

"'Chief of the Bureau of Efficiency may be appointed a member of the Board of Actuaries under the Civil Service Retirement Act, to serve without compensation and such appointment will not be in violation of any statute.'

"Civilian Army employees—court-martial reports—5 Compt. Gen. 374—November 23, 1925:

"'Civilian employees of the Quartermaster Corps of the Army are not entitled to extra compensation for services rendered as court-martial reporters when such extra compensation, combined with their regular salary, exceeds the rate of $2,000 per annum.'

"Member of Alaska Legislature—Alaska Railroad employee—5 Compt. Gen. 806—April 8, 1926:

"'As the act of August 24, 1912 (37 Stat. 513) prohibits an officer or employee of the United States from being a member of the Alaska Legislature, and the act of July 31, 1894 (28 Stat. 205) prohibits any employee of the United States whose salary amounts to $2,500 per annum from holding any other position to which compensation is attached, an employee of the Alaska Railroad receiving compensation of $2,500 or more per annum vacates his position with the railroad by his election to and taking his seat in the Alaska Legislature.'

"National Sesquicentennial Exhibition Commission—5 Compt. Gen. 891—May 4, 1926:

"'Under the provisions of the joint resolution of March 15, 1926 (44 Stat. 207), employees of the Government may be paid compensation in addition to their regular compensation for work performed after regular office hours in preparing exhibits for the National Sesquicentennial Exposition, upon the certification as to the necessity for such work, notwithstanding the provisions of section 1765, Revised Statutes, and the act of May 19, 1916 (39 Stat. 120), to the contrary.'

"Compensation—Quarters in kind—6 Compt. Gen. 359—November 20, 1926:

"'The allowance of quarters in kind free of charge, in addition to the fixed rate of compensation specified in the schedule of wages for the regular daytime positions, is prohibited as compensation to employees of the Naval Establishment for duties performed outside of regular working hours, either on the basis that the duties outside regular working hours are separate and distinct from the regular duties of the employees, or on the basis that the duties outside regular work hours are not incompatible with employment in the regular daytime positions, but as extra duties.'

"Two positions in same Department—6 Compt. Gen. 435—January 4, 1927:

"'An employee may not be paid the salary of two separate and distinct positions in the same department or establishment even though the combined salaries thereof do not exceed the rate of $2,000 per annum.'

"Department of State—Public Health Service—6 Compt. Gen. 732—May 11, 1927:

"'An employee of the Department of State receiving an annual salary is prohibited by sections 1764 and 1765, Revised Statutes, from receiving any extra compensation for services rendered the Public Health Service after office hours where such additional compensation was not fixed in advance by law or regulation.'

"Postal service employees—8 Compt. Gen. 487—March 13, 1929:

"'Under the provisions of section 1 of the act of March 1, 1929 (45 Stat. 1441), dual employments are authorized when both positions are in the postal service, regardless of the rates of compensation, provided the total compensation actually paid for all services for any one fiscal year does not exceed $2,000. The act is not applicable to cases where one or both positions are in some other branch of the Government service. 8 Comp. Gen. 262 modified only insofar as postal service employees are concerned.'

"Postal service employees—8 Compt. Gen. 578—May 2, 1929:

"'A postmaster may not serve as substitute or temporary rural carrier and be paid therefor.

"'A postmaster, assistant postmaster, or other postal employee may not enter into contract to carry mail or perform service on a star route.

"'A rural carrier may serve as mail messenger and be paid not in excess of $300 for any one year provided his total compensation from postal funds does not exceed $2,000 for any one fiscal year.

"'A contractor or subcontractor for star-route service may not be employed as substitute or temporary rural carrier.'

"Postal service employees—8 Compt. Gen. 611—May 18, 1929:

"'Section 2 of the act of March 1, 1929 (45 Stat. 1442), authorizing the Comptroller General of the United States to relieve postmasters from unlawful payments made by them to "mail messengers, postal employees, and other employees of the United States employed in post offices" for services in a dual capacity, is not applicable to relieve a postmaster from refunding Government funds he received for carrying a rural route during the absence of the regular carrier.'

"Postal Service Employees—8 Compt. Gen. 662—June 24, 1929:

"'A special-delivery messenger may enter into a contract for mail messenger service and receive therefor in excess of $300 in any one year, provided he is the lowest bidder and his total compensation for all services does not exceed $2,000 for any one fiscal year.'

"Postal service employees—8 Compt. Gen. 76—July 19, 1932:

"'In view of the terms of section 1765, Revised Statutes, and the act of July 31, 1894 (28 Stat. 205), a civilian employee of the Government holding a position, the salary attached to which amounts to $2,500 per annum or more, may not be employed in any other position under the Government with compensation attaching during the period of administrative furlough without pay required under the terms of section 216 of the act of June 30, 1932 (47 Stat. 407).

"'In view of the terms of section 6 of the act of May 10, 1916, as amended by the act of August 29, 1916 (39 Stat. 582), a civilian employee whose compensation is at a rate less than $2,500 per annum may not be employed in a position under another department or office of the Government during the period of administrative furlough without pay required by section 216 of the act of June 30, 1932 (47 Stat. 407), if the combined rate of compensation under the two positions is in excess of $2,000 per annum.'

"Home Owners Loan Corporation and National Recovery Administration employees—14 Compt. Gen. 822—May 10, 1935:

"'Dual compensation statutes disqualify for further appointment under the National Housing Act those Federal officers and employees already receiving a rate of compensation under any other statute, including those applicable to the Home Owners' Loan Corporation, and the National Recovery Administration, which, together with the rate proposed to be paid by the Federal Housing Administration would exceed the maximum joint salary rate prescribed by the applicable dual-compensation statute to be received in more than one Federal office or position.'

"Federal Land Bank appraisers—Farm Credit Administration—15 Compt. Gen. 134—September 9, 1935:

"'The authority contained in the act of May 17, 1935 (49 Stat. 247), making appropriation for the Farm Credit Administration for "special reports by personal service without regard to the provisions of any other act," does not authorize the employment of temporary personal services without regard to the statutes relating to dual employment and Federal land-bank appraisers, appointed on a permanent basis with annual salaries in excess of $2,000 per annum, may not, during leave of absence without pay, hold any other permanent or temporary office or position under the administrative appropriation for the Farm Credit Administration.

"'Federal land bank appraisers are "required by law to be exclusively engaged upon some specific work" within the meaning of section 3, act of May 28, 1896 (29 Stat. 179), and when employed full time on an annual basis may not be temporarily detailed or assigned to other duties.'

"Fees from one Department—'per annum' from another—15 Compt. Gen. 828—March 21, 1936:

"'The receipt of fees for services rendered a Government agency while employed by another such agency on a per annum basis is prohibited by section 2 of the act of July 31, 1894 (28 Stat. 205), but said statute is not for application to reimbursement of traveling expenses incurred on behalf of the Government while so employed.'

"Inspector of hulls, Commerce Department—16 Compt. Gen. 813—March 5, 1937:

"'Inspectors of hulls of the Commerce Department may be appointed as deputy collectors of customs for the purpose of issuing "continuous discharge books" to seamen on merchant vessels of the United States as required by section 3 of the act of June 25, 1936 (49 Stat. 1934), notwithstanding their compensation is in excess of $2,500 per annum, provided the appointments are without compensation.'

"Contract fee basis—16 Compt. Gen. 909—April 1, 1937:

"'The employment by one Federal agency on a contract fee basis of a person serving under another Government agency in a part-time position on a per annum pay basis is not prohibited by the dual compensation statutes—section 1765, Revised Statutes; section 2, act of July 31, 1894 (28 Stat. 205); and section 6, act of May 10, 1916, as amended by the act of August 29, 1916 (29 Stat. 120, 582), notwithstanding the combined compensation of the two employments exceeds $2,000, or either of them exceeds $2,500 per annum, and a low bid for such contract services on a fee basis may not be rejected because of such other part-time employment.' (15 Compt. Gen. 751; id. 828, amplified.)

"Alien Property Custodian employees—19 Compt. Gen. 751—February 26, 1940:

"'While the moneys available to the Alien Property Custodian appointed to administer the Trading with the Enemy Act of October 6, 1917 (40 Stat. 411), for the payment of expenses of his office were derived from funds, etc., "due or belonging to an enemy, or ally of enemy," the position of chief of accounts in his office was nevertheless an "office" within the meaning of the act of July 31, 1894 (28 Stat. 205), prohibiting appointment of a person holding an "office" with an annual salary of $2,500 to another "office" to which compensation is attached unless specially authorized by law. Question whether appointment to said position of employee holding an "office," with salary of more than $2,500 per annum, was valid or void because of the said prohibition discussed and determined in favor of its validity, thus requiring refund of salary paid under the first "office" after the second appointment.' Various dual compensation acts—sections 1763, 1764, 1765, Revised Statutes; and acts of July 31, 1894, and May 10, 1916, as amended—discussed.

"Federal Housing Administration employees—19 Compt. Gen. 926—May 14, 1940:

"'Compensation payments to a person employed by the Federal Housing Administration during a period of employment under another Government agency need not be questioned as in violation of the Dual Compensation Act of May 10, 1916, as amended, in view of the broad personnel appointment, etc., authority vested in the Federal Housing Administrator by section 1 of the National Housing Act (48 Stat. 1246).'

"Annual Salary—fees—22 Compt. Gen. 312—October 3, 1942:

"'The employment by one Government agency of a medical adviser on an annual salary basis, who is also employed, whether by contract or otherwise, by another Government agency as a consultant on a fee basis does not constitute a violation of the restriction against the holding of more than one office contained in the act of July 31, 1894, as amended (15 Compt. Gen. 828, modified), nor does such employment constitute a violation of the dual compensation restrictions of section 1765, Revised Statutes, and the act of May 16, 1916, as amended.'

"Nurses aids—23 Compt. Gen. 900—May 27, 1944:

"'In the case of full time Federal employee receiving $2,000 or more per annum, the payment of $1 per annum compensation for services under appointment as nurses' aids outside of their regular hours of work would constitute payment of "salary" in contravention of the prohibition in the dual compensation statute of May 10, 1916, as amended, against the payment of more than one salary to a person if the combined amount of the salaries exceeds $2,000 per annum.

"'The furnishing of subsistence and lodging in kind, when necessary for the benefit of the Government—to full time Federal employees while they are serving as nurses' aides in Government hospitals outside of their regular hours of work does not constitute "salary" within the meaning of the prohibition in the act of May 10, 1916, as amended, against the payment of more than one salary to a person if the combined amount of the salaries exceeds $2,000 per annum; nor is it to be regarded as payment of salary or allowances within the meaning of the other dual compensation statutes (secs. 1764 and 1765, Revised Statutes, and the act of July 31, 1894, as amended).

"'Part time or intermittent employment of a regular full time Federal employee as a nurses' aide in a Government hospital does not constitute the "holding of an office to which compensation is attached" within the meaning of the act of July 31, 1894, as amended, prohibiting persons whose annual compensation in one office amounts to $2,500 or more from holding another office to which compensation is attached.

"'A nurses' aide employed in a Government hospital on a part-time or intermittent basis is not an "officer or clerk," and, therefore, where regularly employed Federal personnel are engaged, outside their regular hours, on a part time or intermittent basis as such nurses' aides, the "additional services" prohibition in section 1764, Revised Statutes, with respect to officers and clerks has no application.

"'Employment of full time Federal employees as nurses' aides in Government hospitals outside of their regular hours of work would not be incompatible with services performed in the regular positions and, hence, would not be in contravention of the additional compensation restrictions of section 1765, Revised Statutes, which have no application in the case of separate and distinct compatible employments.

"'The practice of authorizing the payment of compensation at the rate of $1 per annum is unnecessary unless required by some statute or appropriation act other than section 3679, Revised Statutes, as amended, prohibiting the acceptance of voluntary service for the Government, so that the payment of $1 per annum to Federal employees serving as volunteer nurses' aides in Government hospitals outside of their regular hours of work is not required.'

"Within-grade salary advance—24 Compt. Gen. 52—July 19, 1944:

"'If there have been met all of the terms and conditions necessary to authorize a within-grade salary advancement under the act of August 1, 1941, is one of the two positions which an employee holds, the advancement may not be delayed or defeated by action of the administrative office or the employee even though such advancement may preclude the employee from remaining in the position because of the operation of the act of July 31, 1894, as amended, prohibiting persons whose annual compensation in one office amounts to $2,500 or more from holding another office to which compensation is attached.

"'In view of the provision in the act of July 31, 1894, as amended, prohibiting persons whose annual compensation in one office amounts to $2,500 or more from holding another office to which compensation is attached, the holding by a retired Army officer of a civilian position became invalid on the date the salary attaching to the position equaled $2,500 per annum due to a within-grade salary advancement pursuant to the act of August 1, 1941, and the salary paid to him in such position on and after that date, having been made in direct contravention of law, must be refunded by him.'

"State Federal Agricultural Extension Service employees—25 Compt. Gen. 868—June 13, 1946:

"'Federal funds granted to a State under the act of May 8, 1914, for cooperative agriculture extension work, upon being properly receipted for by the State, lose their identity as Federal funds and become funds of the State, and therefore, the concurrent employ-

ment by the Federal Government of a State employee paid from such funds need not be regarded as in contravention of the dual compensation and employment statutes (5 U. S. Code 58, 62, and 69), provided the dual Federal and State employment prohibition of Executive Order No. 9, dated January 17, 1873, is not for application.'

"State and Federal positions—29 Compt. Gen. 277—December 15, 1949 (B-83536):

" 'The appointment of a full-time Federal employee with a salary in excess of $2,500 to a position as part-time administrative assistant in a State National Guard would not result in the holding of more than one office under the Federal Government in violation of the dual employment restrictions of the act of July 31, 1894, as amended, or of the dual compensation limitations of section 1763, Revised Statutes; nor is the latter employment incompatible with the former so as to constitute a violation of the additional compensation prohibitions of section 1765, Revised Statutes.'

"Dual offices—leave status—30 Compt. Gen. 386—March 28, 1951:

" 'An employee on leave without pay from a Government department may be employed by a Government commission of temporary character without contraventing the act of July 31, 1894, as amended, prohibiting persons whose annual compensation in one office amounts to $2,500 or more from holding another office to which compensation is attached unless specially authorized by law.

" 'An employee placed in a leave-without-pay status from one Government agency is not prohibited from employment with another agency by the Dual Compensation Act May 10, 1916, as amended, which prohibits the receipt of more than one salary of the combined amount of the salaries exceeds $2,000 per annum.'

"Double salaries—aggregate rate governs—30 Compt. Gen. 525—June 26, 1951:

" 'Under the dual compensation act of May 10, 1916, as amended, prohibiting the use of appropriated funds for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum, the aggregate rate of compensation and not the total amount received in any particular year governs the application of the act, so that a person who is in receipt of two salaries covering the same period of time the aggregate rate of which exceeds the sum of $2,000 per annum is required to refund one of the salaries.'

"Congressional committee—Government employees—31 Compt. Gen. 414—February 19, 1952:

" 'An employee on leave without pay from a Government agency may be employed by a temporary Congressional Committee without contravening the act of July 31, 1894, as amended, prohibiting persons whose annual compensation in one office amounts to $2,500 or more from holding another office to which compensation is attached unless specifically authorized by law.'

"District of Columbia judges—reemployment—31 Compt. Gen. 505—April 10, 1952:

" 'In view of the dual compensation restriction in the act of August 29, 1916, as amended, a judge of the Municipal Court of Appeals of the District of Columbia who receives the retirement salary provided under the act of April 1, 1942, may not in addition thereto receive the compensation attaching to a position or office with the Federal Government nor may he waive the retirement salary for the purpose of accepting said compensation.

" 'A judge of the Municipal Court of Appeals of the District of Columbia, who receives the retirement salary provided under the act of April 1, 1942, is not prohibited by the dual compensation and employment statutes from accepting compensation as an employee of a State or municipal government or agency having no connection with the Federal or District of Columbia Governments.

" 'In view of the dual compensation restriction in the act of August 29, 1916, as amended, a judge of the Municipal Court of Appeals of the District of Columbia who receives the retirement salary provided under the act of April 1, 1942, may not in addition thereto receive the compensation of a position or office with a territorial government such as Alaska, the Virgin Islands, Puerto Rico, or Hawaii.

" 'A judge of the Municipal Court of Appeals of the District of Columbia who receives the retirement salary provided under the act of April 1, 1942, may accept compensation as an employee of an international agency, such as the United Nations, International Bank for Reconstruction and Development or the International Labor Organization, without violating the dual compensation and employment statutes.'

"Scholarship and pay—31 Compt. Gen. 670—June 19, 1952:

" 'An employee who was granted a one-year leave of absence from his position to accept a scholarship of limited duration, awarded by the Department of State and Board of Foreign Scholarships pursuant to the act of August 1, 1946, and who during the leave of absence received payment for a scrap survey conducted for his agency while drawing an allowance under the scholarship is not to be considered as having violated any of the dual employment or compensation statutes.'

"District of Columbia teachers—33 Compt. Gen. 466—April 16, 1954:

" 'The Dual Compensation Act of 1916, which prohibits the payment of combined salaries to any Government employee at a rate in excess of $2,000 per annum is applicable to District of Columbia school teachers, therefore an employee who was employed as a District of Columbia teacher while on annual leave prior to separation from the Government, and whose leave payment and compensation as a teacher exceeded the $2,000 per annum rate, is required to refund one of the salaries received.'

"Public Health Service officers—36 Compt. Gen. 243—September 27, 1956:

" 'Members of the commissioned corps of the Public Health Service who are receiving retired pay which amounts to $2,500 or more a year are prohibited by the act of July 31, 1894 (5 U. S. C. 62), from holding any office or position under the Federal Government to which compensation attaches, and the exemption relating to members of the Army, Navy, Air Force, Marine Corps, or Coast Guard who are retired for physical disability is not applicable to officers in the Public Health Service.'

"2. ARMED FORCES PERSONNEL

"Navy Officer retired for disability 'in line of duty'—3 Compt. Gen. 1009—June 28, 1924:

" 'Navy officer retired for incapacity incurred in line of duty may be employed in a civil position, not in the Diplomatic or Consular Service, irrespective of the salary thereof, and at the same time received his retired pay from the Navy.'

"Army enlisted man on active duty—5 Compt. Gen. 408—December 5, 1925:

" 'Where a retired enlisted man of the Army is detailed to active duty pursuant to law and is in receipt of active-duty pay he may not, at the same time, be paid from Federal funds the pay and allowances of any other military office.'

"Naval Officer on active duty—5 Compt. Gen. 548—January 29, 1926:

" 'A retired officer of the Navy on active duty, whose salary is in excess of $2,500 per annum is prohibited by the act of July 31, 1894 (28 Stat. 205), from holding another position to which compensation is attached.'

"National Guard enlisted men—caretakers—6 Compt. Gen. 683—April 20, 1927:

" 'The employment of enlisted men of the National Guard in the dual capacity of caretakers of material, animals, and equipment of the National Guard and caertakers of target ranges, and the payment of compensation for both employments, are in violation of the provisons of section 1765, Revised Statutes.'

"Emergency officers—Panama Canal—6 Compt. Gen. 221—November 23, 1929:

" 'A retired emergency officer who is entitled to retired pay under the act of May 24, 1928 (45 Stat. 735), is not a person "in military or naval service of the United States" within the meaning of section 4 of the Panama Canal Act of August 24, 1912 (37 Stat. 561).

" 'The act of May 24, 1928 (45 Stat. 735), is a part of the provisions made for disabled veterans of the World War, and in the construction of statutes imposing disabilities on persons in the military or naval service with respect to employment in the Federal civil service the act of May 24, 1928, should have a construction in keeping with its purpose.'

"Army officer—Bureau of the Census—10 Compt. Gen. 65—August 23, 1930:

" 'The employment under the Census Bureau of a retired officer of the Army, who was retired at his own request after 30 years' service, is in direct contravention of the act of July 31, 1894 (28 Stat. 205), as amended by the act of May 31, 1924 (43 Stat. 245), and is unauthorized.'

"Army officer—Commissioner of the District of Columbia—36 Atty. Gen. 388—March 4, 1930:

" 'A retired Army officer, who has the qualifications of citizenship and residence specified in section 2 of the act of June 11, 1878 (20 Stat. 103), is eligible for appointment of the office of Commissioner of the District of Columbia.'

"Military personnel—National Recovery Administration—13 Comptroller General 60—August 30, 1933:

" 'The National Recovery Administration may employ retired enlisted personnel, who have been retired on enlisted service only, and fix their rates of compensation for such civilian service on the same basis as that for any other officer or employee without restriction other than the value of the services and such employees would be entitled to continue to receive their retired pay.

" 'The National Recovery Administration may employ retired commissioned and warrant officers of the Army, Navy, Marine Corps, Coast Guard, and Coast and Geodetic Survey, who were retired for "injuries incurred in battle or for injuries or incapacity incurred in line of duty", but with the exception of those "retired for disability incurred in combat with an enemy of the United States" whose rate of compensation for civilian service may be fixed without regard to the restrictions of the dual compensation status, the rate of compensation paid for such civilian service, when combined with the rate of retired pay received, may not exceed $3,000 per annum.

" 'The National Recovery Administration may employ retired commissioned and warrant officers who were retired for causes other than disability, i. e., after 30 years' service or for age, only if the rate of retired pay and the rate of compensation fixed for the civilian office or position are each less than $2,500 per annum, but under section 212 of the Economy Act the officer or employee in such case could actually receive a combined rate of retired pay and civilian compensation not in excess of $3,000 per annum.

" 'The National Recovery Administration may not employ retired commissioned and warrant officers who were retired for causes other than disability incurred in line of duty if the rate of either the retired pay or

the compensation fixed for the civilian position is $2,500 per annum or more.'

"Army and Navy Officers (for age) holding temporary positions—14 Compt. Gen. 68—July 25, 1934:

"'An officer of the Army, retired after 30 years' service, or an officer of the Navy, retired after 40 years' service, is not prohibited by the act of July 31, 1894 (28 Stat. 205), as amended from holding a temporary Federal office or position under appointment by the President or the head of a department, notwithstanding his retired pay is at a rate in excess of $2,500 per annum, and if both the retired pay and civilian compensation exceed the rate of $3,000 per annum, he may elect, under the terms of section 212 of the Economy Act, for the period of temporary civilian employment, between his retired pay and the compensation fixed for the temporary civilian office or position.'

"Naval officer (for age) Assistant Deputy Commissioner of Internal Revenue—14 Compt. Gen. 179—August 29, 1934:

"'Pursuant to the act of July 31, 1894 (28 Stat. 205), the appointment of a retired naval officer, retired for length of service, whose retired pay is in excess of $2,500 per annum, to the position of Assistant Deputy Commissioner, Bureau of Internal Revenue, a permanent full-time position, was void ab initio, and payment of compensation in the civilian position is not authorized.' (Affirmed, 14 Compt. Gen. 289, Oct. 6, 1934.)

"Chief boatswain, Navy—14 Compt. Gen. 942—May 22, 1935:

"'A retired chief boatswain of the Navy employed in a civilian office or position whose retired pay is based on longevity, including war-time commissioned service subsequent to retirement, is receiving pay "for or on account of services as a commissioned officer," within the meaning of section 212 of the Economy Act of June 30, 1932 (47 Stat. 406), which limits his combined rate of retired and civil pay to $3,000 per annum.'

"Navy nurses—15 Compt. Gen. 74—July 24, 1935:

"'A retired nurse of the Navy retired for disability is within the inhibition of section 6 of the act of May 10, 1916, as amended by the act of August 29, 1916 (39 Stat. 582), being neither a retired officer nor a retired enlisted man within the express exception to that statute, and accordingly may not be employed in a civilian position with a salary rate which, together with the annual rate of retired pay, would exceed $2,000 per annum.'

"Naval officer—in line of duty—39 Atty. Gen. 94—August 17, 1937:

"'A naval officer retired on account of incapacity incurred in line of duty may be appointed Director of the Bureau of Marine Inspection and Navigation without affecting his right, subject to the limitations in United States Code, title 5, section 59 (a), to receive retired pay.'

"Officers' Reserve Corps—39 Atty. Gen. 107—October 26, 1938:

"'Section 1222, Revised Statutes, does not prohibit appointment of an Army officer on the active list to a civil office, but acceptance of such office vacates his commission in the Army.

"'The section is inapplicable, under circumstances stated, to an officer of the Reserve Corps on leave of absence without pay from active duty with the Army.

"'Section 2, act of July 31, 1894, prohibiting the holding of more than one office, is inapplicable where the annual compensation attached to each office amounts to less than $2,500.'

"Army warrant officer—reclassification of position—23 Compt. Gen. 445—December 16, 1943:

"'The reclassification of a position, which is finally consummated, from grade CAF-6, $2,300 per annum, to grade CAF-7, $2,600 per annum, may not be regarded as void merely because the incumbent, a retired Army warrant officer, is prohibited by the dual compensation statute of July 31, 1894, as amended, from receiving salary in a civilian position at the rate of $2,500 or more per annum, and, therefore, the said retired warrant officer may not be deemed to have continued in grade CAF-6 after the reclassification but, rather, he is required to refund the entire amount of salary paid in grade CAF-7 at the rate of $2,600 per annum (21 Compt. Gen. 38, distinguished).

"'A retired Army warrant officer who has been appointed to a civilian position and has received the salary thereof at a rate in excess of $2,500 per annum, in contravention of the dual compensation statute of July 31, 1894, as amended, may not elect to retain the salary of the civilian position and refund his retired pay for the period involved, but, rather, the civilian salary paid must be refunded.

"'The words "salary or annual compensation" as used in the dual compensation statute of July 31, 1894, as amended, which provides that "no person who holds an office the salary or annual compensation attached to which amounts to the sum of two thousand five hundred dollars shall be appointed to or hold any other office," refer to basic compensation of $2500 per annum, which is exclusive of overtime compensation authorized to be paid under the War Overtime Pay Act of 1943.'

"Coast Guard officer—merchant seaman—24 Compt. Gen. 344—November 3, 1944:

"'In view of the provisions of section 1 (a) of the act of March 24, 1943, excluding seamen employed on vessels owned or operated by the War Shipping Administration for the operation of certain statutes applicable to Federal employees generally, thus indicating a legislative purpose to preserve the private-employee status of such seamen, a retired Coast Guard officer so employed is not to be regarded as within the limitation of section 212 of the act of June 30, 1932, respecting the concurrent payment of retired pay and civilian compensation in an office or position under the United States Government.'

"Marine Corps officer—United States Minister—24 Compt. Gen. 467—December 20, 1944:

"'Irrespective of the fact that a retired Marine Corps officer may be receiving retired pay "for disability incurred in combat with an enemy" and, hence, is within the exception to the dual-compensation restrictions of section 212 of the act of June 30, 1932, as amended, such retired pay is "salary" within the meaning of the prohibition in the Department of State Appropriation Act, 1945, against the receipt by ambassadors and ministers of any other salary from the United States, so as to preclude the officer from receiving retired pay while receiving the salary of a United States minister.'

"Fleet Reserve members—retired enlisted men and warrant officers—25 Compt. Gen. 521—January 11, 1946:

"'In view of the provisions of section 4 of the Naval Reserve Act of 1938, permitting enlisted men transferred to the Fleet Reserve to receive the compensation attached to civilian employment in addition to pay and allowances accruing under said act, the dual-compensation provisions of section 212 of the act of June 30, 1932, have no application to prevent such reservists from being paid the retainer pay authorized by said 1938 act in addition to civilian compensation, regardless of the civilian salary rate or whether retainer pay be regarded as "retired pay" under said section 212 or whether commissioned service was included in computing retainer pay or in determining eligibility for transfer to the Reserve.

"'A retired enlisted man of the Navy receiving retired pay on the basis of his enlisted grade is not to be considered as receiving retired pay "for or on account of services as a commissioned officer" within the meaning of the dual compensation provisions of section 212 of the act of June 30, 1932, solely because service as a commissioned officer or commissioned warrant officer is included in the computation of his length of service for longevity pay and retirement purposes as an enlisted man, irrespective of whether such commissioned service was before or after retirement. (12 Compt. Gen. 37; 21 id. 72, distinguished.)

"'Since retired enlisted men are expressly exempt from the restrictions of the dual compensation and employment statutes (act of May 10, 1916, as amended; act of July 31, 1894, as amended; and section 212 of the act of June 30, 1932, latter section being applicable only to retired pay "for or on account of services as a commissioned officer"), retired enlisted men of the Navy who are in receipt of the retired pay of their enlisted grades may receive the compensation attached to civilian employment and continue to receive their retired pay.

"'Since a retired warrant officer may not be regarded as receiving retired pay "for or on account of services as a commissioned officer" within the meaning of the dual compensation provisions of section 212 of the act of June 30, 1932, such an officer may be employed in a civilian position and accept the compensation attached thereto while in receipt of his retired pay, provided the retired pay and such compensation each is less than the $2,500 per annum maximum contained in the dual-employment statute of July 31, 1894, as amended.'

"Army officers—Army emergency relief—26 Compt. Gen. 192—September 16, 1946:

"'The Army Emergency Relief, a charitable and benevolent corporation organized for the benefit of personnel of the Army of the United States, which, while directed by War Department officials by virtue of their office and administered, for the most part, by Government personnel, conducts its lawful functions without interference or assistance by the Government, is not an agency of the Government, and, therefore, a retired Army officer may be employed by the Army Emergency Relief without regard to the dual-compensation limitation of section 212 of the act of June 30, 1932, as amended, or the dual-employment restriction of section 2 of the act of July 31, 1894, as amended.'

"Navy enlisted personnel advanced on retired listed commissioned rank—26 Compt. Gen. 271—October 28, 1946:

"'A retired Navy enlisted man who, as provided by section 10 of the act of July 24, 1941, as amended, is returned to inactive status with the commissioned rank held under a temporary promotion while on active duty after retirement does not hold the "office" of a retired officer but, rather, continues to hold the "office" of an enlisted man on the retired list and, therefore, remains within the exception of retired enlisted men from the prohibition in the act of July 31, 1894, as amended, against the appointment to, or the holding of, more than one office.

"'Retired Navy enlisted men who, as provided by section 10 of the act of July 24, 1941, as amended, are returned to inactive status with retired pay computed on the pay of the temporary commissioned rank held while on active duty after retirement are to be regarded as in receipt of retired pay "for or on account of" commissioned service within the meaning of section 212 of the act of June 30, 1932, as amended, so as to be subject to the restriction therein on the combined rate of civilian compensation and retired pay which may be received.

"'Navy enlisted men placed on the retired list pursuant to section 8 (a) of the act of July 24, 1941, or retired enlisted men advanced thereon pursuant to section 8 (b) of said act, with retired pay computed on the pay of the temporary active-duty commissioned rank held at the time of incurrence of physical disability, are to be regarded as in receipt of retired pay "for or on account of" commissioned service within the meaning of section 212 of the act of June 30, 1932, as amended, so as to be subject to the restriction therein on the combined rate of

civilian compensation and retired pay which may be received.

" 'Enlisted men or retired enlisted men of the Navy who, pursuant to sections 8 (a) or 8 (b), or section 10, as amended, of the act of July 24, 1941, become entitled to retired pay computed on the pay of their temporary active-duty commissioned rank may not waive computation on such basis and elect to receive retired pay based on enlisted ratings, so as to render themselves exempt from the limitation of section 212 of the act of June 30, 1932, as amended, on the combined rate of civilian compensation and retired pay "for or on account of" commissioned service which may be received. Statements to the contrary in prior decisions no longer will be followed.

" 'The restriction of section 212 of the act of June 30, 1932, as amended, against the receipt by retired military, etc., personnel of retired pay at a rate which, when combined with the "annual rate of compensation" from a civilian position, equals or exceeds $3,000 per annum, has reference to basic civilian compensation, and, therefore, the salary differential payable in certain cases of civilian employment outside the continental United States, being a part of basic compensation, is for inclusion in applying such restriction.

" 'The monetary allowance for quarters, etc., prescribed for certain civilian employees on duty in foreign countries is not a part of basic compensation to be included in applying the restriction of section 212 of the act of June 30, 1932, as amended, against the receipt by retired military, etc., personnel of retired pay at a rate which, when combined with the "annual rate of compensation" from a civilian position equals or exceeds $3,000 per annum.

" 'In the case of a retired Navy enlisted man, employed in a civilian position when recalled to active duty, who, after return to inactive status, becomes entitled under the act of July 24, 1941, as amended, to retired pay computed on the pay of his temporary active-duty commissioned rank, application of the restriction of section 212 of the act of June 30, 1932, as amended, as to concurrent receipt of civilian compensation and retired pay on account of commissioned service does not, constitute an abridgment of his reemployment rights under the Selective Training and Service Act of 1940, as amended—such restriction being operative in respect of retired pay only.'

"Reserve officers—28 Compt. Gen. 367—December 17, 1948:

" 'The payment of retired pay under title III of the Army and Air Force Vitalization and Retirement Equalization Act of 1948 to Reserve officers on inactive duty, who also occupy Federal civilian positions the compensation attached to which equals or exceeds $2,500 per annum, need not be regarded as in contravention of the dual employment restriction in the act of July 31, 1894, as amended.

" 'Commissioned Reserve officers retired under title III of the Army and Air Force Vitalization and Retirement Equalization Act of 1948, with retired pay computed on the basis of their highest grades, and who also hold civilian positions with the Federal Government, are to be regarded as receiving retired pay "for or on account of services as a commissioned officer" within the meaning of section 212 of the Economy Act of June 30, 1932, as amended, so as to be prohibited from receiving combined retired pay and civilian compensation in excess of $3,000 per annum.

" 'A person in receipt of an annuity under the Civil Service Retirement Act of 1930, as amended, on account of Federal civilian service, and who is entitled to be paid retired pay under title of the Army and Air Force Vitalization and Retirement Equalization Act of 1948 for military Reserve service, concurrently may receive retired pay under the 1948 act and annuities under the 1930 act as amended.'

"Nurses, Armed Forces—29 Compt. Gen. 80—August 17, 1949:

" 'Retired members of the Navy Nurse Corps who were placed on the retired list prior to April 16, 1947, the effective date of the Army-Navy Nurses Act of 1947, which granted commissioned officer status to members of the Navy Nurse Corp, do not receive retired pay for or on account of commissioned service within the purview of section 212 of the act of June 30, 1932, as amended, so as to be subject thereunder to the prohibition against the concurrent receipt of civilian compensation and retired pay at a combined rate in excess of $3,000 per annum.

" 'A member of the Navy Nurse Corps retired under the act of December 3, 1945, without having acquired a commissioned status, and who is receiving retired pay concurrently with civilian compensation in a combined amount in excess of $2,000 per annum—being neither an officer nor an enlisted man—is to be regarded as receiving a "salary" in her retired status within the meaning of the dual compensation statute of May 10, 1916, as amended, and, therefore, such person should be required to refund the salary which she has not elected to retain.'

" 'Fleet admiral, Navy—member of Presidential commission—30 Compt. Gen. 371—March 7, 1951:

" 'The receipt of compensation as a member of the President's Commission on Internal Security and Individual Rights concurrently with active-duty pay as fleet admiral of the Navy would be in contravention of the act of May 10, 1916, as amended, prohibiting payments from appropriated funds to any person receiving more than one salary when the combined amount of the salaries exceeds the sum of $2,000 per annum.'

"Commissioned officers—Veterans' Administration—31 Compt. Gen. 27—August 8, 1951:

" 'The 5-year period in section 2 of the act of August 10, 1946, during which the Administrator of Veterans' Affairs is authorized to employ retired commissioned or warrant officers without loss of their retirement rights is a limitation on the authority to appoint such officers rather than a limitation on the length of their employment, so that retired officers employed pursuant to said act may be continued on the rolls of the Veterans' Administration indefinitely so long as their services are needed, without loss of retirement rights.'

"Navy enlisted man advanced on retired list—31 Compt. Gen. 619—May 29, 1952:

" 'A retired enlisted man of the Navy who is advanced on the retired list, retroactively to the date of his retirement, to commissioned rank pursuant to the provisions of the act of July 24, 1941, as amended, would not be subject to the restrictions of section 212 of the act of June 30, 1932, as amended, prohibiting receipt of civilian compensation and retired pay in excess of a combined rate of $3,000 prior to the date of the order retroactively advancing him on the retired list.'

"Reserve officers—35 Compt. Gen. 497—March 2, 1956:

" 'Federal civilian officers and employees who have been or may be granted retired pay under title III of the Army and Air Force Vitalization and Retirement Equalization Act of 1948 and who, prior to January 1, 1953, were members of the Officers' Reserve Corps or National Guard or who, after that date, were members of any of the Reserve components, during the period covered by the payment, may receive retroactive and prospective military retired pay in addition to civilian compensation in accordance with the precedent in *Tanner v. United States* (139 C. Cls. 792), which excluded such reservists from the dual compensation statutes.' "

Statistics Regarding 61 Vessels To Be Inactivated by United States Navy

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. HOSMER. Mr. Speaker, for the convenience of those interested I have prepared a tabulation of the types of vessels, together with home ports and home shipyards, of the 61 vessels being inactivated by the Navy prior to the end of this year. One battleship, 8 destroyers, 5 destroyer transports, 16 destroyer escorts, 2 submarines, 4 landing ships—tank, 5 attack cargo transports, 13 coastal minesweepers, and 7 coastal mine hunters comprise the list. The specific shipyards to which these ships will be assigned for inactivation, and their ultimate disposition in Reserve fleet groups have not yet been determined, according to Navy sources.

The tabulation referred to is as follows:

Summary tabulation of home yards and home ports of 61 ships to be inactivated by U. S. Navy prior to Dec. 31, 1957

City	Battleship	Destroyer	Destroyer escort	Submarine	Destroyer transport	LST	Cargo (attack)	Minesweeper	Total
Balboa								[1] 1	[1] 1
Newport		[1] 8	[1] 1						[1] 9

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Scott, Symington, Talmadge, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Lausche, Clark, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, Morse, Frear, Clark, Beall, Morton, Javits, ———.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Yarborough, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Neely, Ervin, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Kennedy, McNamara, Morse, Thurmond, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Scott, Neuberger, Church, Clark, Yarborough, Carlson, Jenner, Langer, Martin of Iowa, Morton, and Martin of Pennsylvania.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Carroll, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.

The Little Man in Business

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. HUMPHREY. Mr. President, I call attention to a speech recently delivered by John W. Gwynne, Chairman of the Federal Trade Commission, before the National Association of Retail Grocers, Chicago, Ill. I am confident that my colleagues, as well as small-business men, generally, will find Judge Gwynne's remarks as stimulating as I have.

In reading the address by Judge Gwynne, I was particularly impressed by his approving reference to the late President Woodrow Wilson's admonition that the antitrust laws must be accepted by the people as a rule binding upon the conscience and honor of the Nation. As I have long felt that Woodrow Wilson's advice on this matter held the key to preservation of our Nation's free and competitive system of private enterprise, to know that the Chairman of the Federal Trade Commission concurs is indeed reassuring. Let us hope that the businessmen, large and small, will soon give intellectual assent to the proposition that the effectiveness of our antitrust laws lies in compliance with them for the sake of doing the right thing, and not merely because a violation brings prosecution.

I ask unanimous consent that the speech by Judge Gwynne be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REMARKS OF JOHN W. GWYNNE, CHAIRMAN OF THE FEDERAL TRADE COMMISSION, BEFORE THE NATIONAL ASSOCIATION OF RETAIL GROCERS, CHICAGO, ILL., JUNE 10, 1957

I appreciate this opportunity to attend your convention. We often have contacts with the officers and members of your organization, particularly with your Washington representative, Henry Bison. We have found Henry most cooperative and helpful in those matters in which we have a common interest.

There are many industries in the country with which many people have little, if any, contact. That is not true of the grocery business. The distribution of food is important to everyone. In fact, it is essential to our very existence. As a poet once put it:

"Man can live without music; he can live without books;
But civilized man cannot live without cooks."

In a relatively short space of time, the methods of producing and distributing food have been greatly changed. My first recollection is that of the corner grocery store which bought much of its produce from local farmers and distributed it to those living in the small town. Brand names were virtually unknown. Many staple articles were bought in bulk and packaged in the store. Stores were locally owned by people who were an important part of the small community. Competition was usually keen in price, quality of products, and in service. Capital requirements were not great. Therefore, there was ease of entry into the business by new competitors, which fact always makes for the maintenance of competition and of free enterprise.

The increase in the variety of foods now available, the new methods of packaging, of refrigeration, of distribution—all of these have greatly advanced the standard of living. There are, however, certain forces in our economic life today which threaten to limit competition. It is to a few of these that I wish to invite attention.

In the investigation which preceded the adoption of the Robinson-Patman Act, there was considerable evidence of discriminations in prices and allowances in many industries including that of food distribution. Substantial discounts and allowances were being given to preferred large buyers. It appeared in some instances that certain buyers were buying at prices lower than the normal and necessary selling price of smaller competitors. Under the guise of advertising allowances, some suppliers were giving great advantages to some customers not made available to others.

It was discovered that many smaller business enterprises were unable to continue under this situation and that competition was being endangered. The Robinson-Patman Act, which was passed to solve the problem, prohibits discrimination between different purchasers of commodities of like grade and quality, where the effect of such discrimination may be to lessen competition or to create a monopoly. There are, of course, certain exceptions and defenses which need not be considered here.

The law also prohibits the payment of advertising or other allowances, unless such allowances are made available on proportionally equal terms to all other competing customers.

The intention of Congress in passing this legislation was to aid small business, to enable it to keep its place in the sun and thus, over the long pull, to preserve competition and free enterprise. It is not enough, however, to simply put a law on the statute books. It must be enforced by those departments and agencies of the Government to which that duty is entrusted. Furthermore, the law must be accepted by the people as a rule binding upon the conscience and honor of the Nation, as Woodrow Wilson so well expressed it.

In accordance with a congressional mandate, the Federal Trade Commission has brought many actions under this section and many other matters are under investigation. We hear from various sources that violations are all too common and seem to be on the increase. In fact, some leaders in the industry have sounded warnings against present practices. One person in particular has referred to the growing pressure now prevailing in some areas for alowances, discounts and handouts of all kinds. In some trade areas, he said, this has become a regular rat race with both manufacturers and distributors participating to see who can get the most. It can only lead to disaster.

Some of these allowances and handouts run into substantial figures. We heard of instances where sellers offer sizable cash sums to induce a purchaser to handle a certain line instead of that of a competitor. Sometimes it takes the form of discounts or other favors. Sometimes, too, a powerful buyer exerts pressure for discriminatory treatment.

These violations often set off a chain reaction. One company takes an illegal step and his competitors feel they must do the same, or even more, in self-defense. The result is a race in which the small competitor sometimes does not survive the early laps, even though the quality of his product and service may entitle him to a better fate.

Our economic system is based on competition. Everyone benefits when there is vigorous competition, provided that competition is fair and in accordance with established rules. But the use of discriminatory allowances and handouts as substitutes for such competition will in the long run, prove harmful to all concerned. It will prove harmful to those who offer or who receive the illegal allowances, because they will eventually learn that their competitors can also play that game and may even outbid them. Unfair methods of competition sometimes offer a windfall to lucky members of the buying public; nevertheless, in the long run, an undeserved advantage must be paid for by someone.

The methods of law enforcement available to the Federal Trade Commission are very different from those of law enforcement officials generally. It has no authority to administer punishment simply for past wrongs. It can only, either by agreement or after trial, condemn a certain practice as contrary to law and issue a cease and desist order against its continuance. For the violation of such order, a money penalty may be imposed.

In other words, the work of the Commission is largely preventive. One of its functions is to counsel with business and to aid it in complying with the law. Although the number of cases being filed and tried has increased, nevertheless, when the same result can be accomplished by cooperative and mutual understanding, that is the more economical and satisfactory course. Therefore, we comment very highly the efforts of all business people who strive for better law observance.

The other matter I wish to mention has to do with mergers and acquisitions. This is a problem which has been before the country since prior to the Sherman Act in 1890. In 1950, Congress strengthened the law so that it now prohibits the merger or acquisition of a competitor, either by purchase of the stock or assets, where in any line of commerce in any section of the country, the effect of the acquisition may be substantially to lessen competition, or to tend to create a monopoly.

Although there is a difference of opinion as to the extent, it is generally stated that we have been for some time experiencing another merger wave. The first one occurred in the period from 1887 to 1904 and resulted in many combinations which obtained substantial control over their respective markets. The Sherman Act was found to be ineffective in controlling the situation

and, in 1914, the Clayton Act was passed. This also proved to be inadequate because of the failure of the law to deal with acquisitions of assets as well as capital stock. So we experienced another merger wave during the period from 1919 to 1930. According to Professor Markham of Princeton University: "In the course of this wave, some 8,055 mining and manufacturing firms disappeared through mergers; so did 2,757 public utilities, 1,060 member banks of the Federal Reserve System and 10,519 stores absorbed by various distributive chains."

In 1955, the Federal Trade Commission published a report showing roughly the situation during the period from 1940 to 1954. During that time, mergers and acquisitions have continued. While individual acquisitions did not usually affect as large a share of the market as in the first wave (1887 to 1904), nevertheless, the cumulative effect has been considerable.

There have, of course, been acquisitions in the grocery and allied industries. Many of these have been in the bakery and dairy products field. For example, a partial list of acquisitions by some large dairy corporations in recent years shows the following:

	Acquisitions
Corporation No. 1:	
1951	3
1952	5
1953	5
1953	5
1955	5
Corporation No. 2:	
1953	10
1955	6
Corporation No. 3:	
1951	15
1952	3
1953	12
1954	5
1955	14

The sales of fluid milk by 5 large dairy corporations has increased from 1950 to 1954 by the following percentages: 59.9 percent; 34.1 percent; 878.5 percent; 63.4 percent; 44.1 percent.

This trend exists to some extent in all retail establishments as is shown by the fact that there were 43,000 fewer retail establishments in 1954 than in 1948—this in spite of the fact that sales during that period were up 32 percent. A report prepared by your organization indicates that the so-called independents accounted in 1948 for about 65.6 percent of the total grocery business. In 1954, the figure was 62 percent.

In many instances, particularly in the bakery and dairy fields, the acquired company was not engaged in interstate commerce. It was, therefore, not within the wording of section 7. This has led to the suggestion that the law be amended to cover acquisitions where either the acquiring or acquired corporation is in interstate commerce. Some objection has been made to this proposed amendment on the ground that it would make the law applicable to insignificant transactions. However, in any event, the acquisition must be of such a character as substantially to lessen competition or to tend to create a monopoly.

The House Judiciary Committee has recently reported favorably a bill proposing two important amendments to the existing law. The first would require corporations intending to merge where the combined assets are in excess of $10 million to give notice of that intention to the Federal Trade Commission and the Department of Justice 60 days prior to the consummation of the merger.

Our experience in administering the amended Clayton Act has demonstrated the need for this advance information. At the present time, there is no source from which complete and adequate information may be obtained. The Federal Trade Commission now obtains much of its information regarding proposed or pending mergers by scanning financial periodicals, trade journals and other publications.

The amendment would be helpful for several reasons. First, it would afford more complete coverage of acquisitions having probable economic consequences. Second, the information would be secured early in the proceeding, when the chances of adequate and timely consideration and action would be greater. Finally, the whole process of consideration and action, if thought necessary, would be expedited and at a considerable saving. The amendment has been carefully drawn to eliminate the necessity of reporting certain business transactions not material for the purpose of the law.

Another amendment contained in the reported bill would give the Federal Trade Commission authority to apply to the courts, in the proper case, for an injunction requiring the maintenance of the status quo pending the hearing. We are trying to speed up the trial of merger cases and we give them a high degree of priority in the investigation and litigation stages. Nevertheless, the proceedings are complicated and a certain amount of time is required. Past experience has shown that in some instances before the question of a final order of divestiture could be reached, the property of the two corporations has become so commingled that it was not possible to "unscramble the egg."

These proposed amendments have been recommended by the Federal Trade Commission, the Department of Justice and the President's Council of Economic Advisers.

We must consider all acquisitions and mergers against a background of an economy which has already been somewhat concentrated. It is also true that new discoveries in science and advances in technology have increased the average size of operation even in the business of farming.

All of these things may make the preservation of competition and the maintenance of the free enterprise system more difficult; it does not make their preservation and maintenance any less essential. The tremendous development of this country and our high standard of living are due to several facts. One has certainly been a competitive, free-enterprise system. It has lent aid and encouragement to the ambition which exists in most people. It has opened the door of opportunity to our youth—a door which we must at all costs keep open. The grocery clerk aspiring to own a store of his own, a workman at his lathe dreaming of his own shop or factory—these are the things on which we have grown great.

Trial of Armed Services Personnel Overseas

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, August 12, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful editorial entitled "Must Our Soldiers Be Tried by Foreign Courts?" published in the Key West Citizen of June 10, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUST OUR SOLDIERS BE TRIED BY FOREIGN COURTS?

A hearing Tuesday in Washington will help decide whether an American soldier, Spc. William Girard, will be turned over to Japanese courts for trial in the slaying of a Japanese woman.

Girard was on duty at an Army firing range when the woman, one of several licensed scrap collectors, was there picking up shell casings for scrap metal. He fired a grenade launcher that someone had stuffed with an empty shell. The shell struck the woman and killed her.

Who loaded the launcher?

Why did he fire it?

The Japanese, crying for blood, charge that Girard killed the woman deliberately. Girard says it was an accident. He didn't explain.

The United States Government, watching fearfully as the Communists used this slaying to whip up a storm of anti-American feeling, decided to turn Girard over to Japanese courts for trial.

Several newspaper columnists who apparently consider themselves above nationalism (a few years ago, it was called patriotism) coolly point out that if Americans insist on a trial by Americans, the Japanese won't like it and we'll lose friendship over there. There is a treaty saying that Japanese courts can try Americans who break Japanese laws on Japanese soil. If we didn't live up to the letter of this treaty—and perhaps a little more—it would make good Communist propaganda, they say.

They're probably right.

This is the issue:

Should we toss Girard on the altar as a sacrifice to Japanese public opinion? Or should we risk losing Japanese friendship and try him ourselves, thus giving the Communists some heavy propaganda weapons?

Maybe Girard would get a fair trial in Japanese courts. And perhaps he wouldn't. Nobody who fought the Japanese in World War II, nobody who knew the horrors of Japanese prison camps where torturers smiled at the agony of the men they killed by inches, will ever completely trust these people.

Yet we signed this treaty.

We're stuck with it perhaps.

We've signed other treaties like it. And the thing we at the Citizen wonder about is how we get ourselves into such messes in the first place. What bubbly overflow of childish enthusiasm signs our names to such agreements, anyhow? How much of a price are we supposed to pay for this so-called international good will?

Suppose one of your neighbors were a moody, unpredictable character who had been jailed a few years ago for assult and battery on your child. Let's suppose you sent a son of yours into his yard, on an errand, and your boy committed some offense while he was there. Would you turn your child over to that neighbor to punish? We'll bet you wouldn't.

If your neighbor were hungry, you'd feed him; if he were needy, you might lend him money; you might go to all kinds of trouble to win his friendship—but when it came to letting him punish your family, we think you'd draw the line.

We think it's time our country draws the line.

This "one-world" business has gone too far.

The American people have coughed up billions of dollars in taxes to help buy food, clothes, houses, factories, medicines for the enemies whose bullets killed our husbands, sons, and friends.

The American people have paid for seeds, plows, farms, factories, powerplants, schooling all over the world, to buy friendship abroad. How much "friendship" and "loyalty" have we bought? The Formosa riots and the down-with-American movement in Japan supply an answer.

If the Japanese and Formosa Chinese are so forgetful that they can't balance the lives this country has saved and the help we have given them against two unfortunate incidents, then heaven help the United States if we ever need to depend on them for anything.

If, for the sake of losing the right to try American soldiers in their courts, they turn against the country that has taxed its own people to put them on their feet, then our money and help were wasted. Our dollars would have been better spent at home, strengthening our own arsenals; for we can at least depend upon ourselves.

We do not imagine that the Russian Army turns over its soldiers who commit offenses on foreign soil for trial in foreign courts. Let's renegotiate these treaties.

Excessive Imports of Foreign Oil

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. JOHNSON of Texas. Mr. President, when the administration recently took action designed to curb excessive imports of oil into this country, I considered that a step had been taken in the right direction. I expressed the hope that the President's order would strengthen our national security and would give some relief to our hard-pressed independent oil producers.

I still hold to that hope, but there is no denying that the import-cut plan is being resisted in certain quarters. We must keep an alert eye on the operation of the plan to make sure that it has the needed effect.

A thoughtful editorial published last week in a progressive west Texas newspaper, the San Angelo Standard-Times, is pertinent and timely in this connection. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Were excessive imports of cheap foreign oil impairing the national security? For the third time a committee made up of the President's Cabinet made a study of the subject and reported: Yes, imports were sufficiently in excess of requirements as to impair the national security.

So the committee recommended a 10 percent cutback in imports—not across the board, not including the Pacific Northwest, but applying to long-established importers, and based on their average imports for the years 1954, 1955, and 1956. Newcomers would be asked to make some reductions; some others were not asked to make any at all.

Under the plan, the Government will take 6 months to see how well the importers are acceding to the Presidential request. Failure to comply with the request, the White House said, "could lead to mandatory controls." Since 1955 the President has had full authority to compel compliance.

Texas Railroad Commissioner Ernest O. Thompson thought the Presidential request "would be of great help to our national security." He said it would bring "reasonable greater exploration and put idle drilling rigs back to work."

Commissioner Olin Culbertson was not impressed.

"It is my considered opinion that the action recommended will not result in much improvement of the situation as it pertains to Texas"—where oil production is now limited to 13 days a month, a new low, attributed to the effect of excessive imports.

Texas oilmen seem to be divided similarly on the effect, or lack of effect, on the domestic oil situation. Gov. Price Daniel called the request a step in the right direction, but insisted "the step is not firm enough and does not go as far as necessary to meet the present emergency."

The requested cutbacks on imports date back to July 1 and will run for 1 year.

Not encouraging was Secretary of Interior Seaton's comment that there would be a period of several months during which the Interior Department and the Office of Defense Mobilization would check up to determine whether individual companies intend to comply.

A lot of cheap foreign oil could find is way into this country in the meantime.

Tribute to Climax Molybdenum Co.

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. MARTIN of Pennsylvania. Mr. President, Dr. Paul R. Stewart, president of Waynesburg College, at Waynesburg, Pa., is the dean of small college presidents in Pennsylvania. He is a rugged individualist and a patriotic American. At Waynesburg College he teaches that in order to retain our individual freedom each man and woman must carve out his or her destiny. There is no communism or subversive activity at Waynesburg, because Dr. Stewart exemplifies American ideals.

Dr. Stewart is an outstanding geologist, and I have just received a very interesting letter from him about his work in that field. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROCKY MOUNTAIN GEOLOGY STATION,
Florissant, Colo., August 7, 1957.

The Honorable EDWARD MARTIN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MARTIN: This summer at the Waynesburg College Rocky Mountain Geology Station I had one of the most inspiring experiences of my life. The Climax Molybdenum Co., at Climax, Colo., was not only gracious and courteous host to our summer geology class, but furnished us with guides through by far the most magnificent and efficient mining plant I have ever observed. You know the subsidiary plant at Burgettstown in our own Pennsylvania, but this is the parent plant. Its development is a romance of industrial achievement.

Since the discovery in World War I that molybdenum is an essential material for proper hardening of armament steel, Climax has passed through pick-and-shovel days on through almost unbelievable difficulties. Climax, as you may know, is located north of Leadville at Fremont Pass on our Continental Divide. The waters from that pass flow through the Colorado tributaries to the Pacific and, on the other side, through the Missouri, the Mississippi, and finally into the Gulf of Mexico. At this altitude tremendous difficulties from ice, snow drifts, and intense cold, along with transportation troubles make it seem impossible that from the sweat-and-muscle days of World War I they could have won through to such climactic achievement. Yes; without doubt their product gave such personality to the steel of ourselves and our allies that America can proclaim Climax as one of the saviors of the world in World War I.

But to me, and I know to you, the greatest thought is that here America is at its best—its climax. Hardships make men. Therefore, as you would surmise, the efficiency of the Climax staff is high, and with very few labor troubles, the morale of its almost 2,000 employees is at a peak.

Finally, to give to you and to me a real thrill, high above the Climax plant, high above that lofty Rocky Mountain pass, floated the American flag.

I must not close without a word of gratitude to the superintendent, Frank Windolph; public relations director, Don Stephens; Bill Gregory; and our other guides. President Arthur Bunker, at the New York offices, 500 Fifth Avenue, also deserves congratulations.

Yes, here is a spot of rugged Americanism which will really hold back influences subversive in our Nation.

Sincerely,

PAUL R. STEWART,
President, Waynesburg College.
WAYNESBURG, PA.

The Stay-in-School Program

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. JOHNSON of Texas. Mr. President, two fine civic organizations in the bustling west Texas city of Abilene have announced their own contribution to a far-reaching stay-in-school program.

The Kiwanis and Rotary Clubs of Abilene have announced that each will give a college scholarship to an Abilene high-school graduate.

The Abilene Reporter-News commends this action and offers throught-provoking editorial comment on a Texas law that encourages students in our State to stay in school every day. I ask unanimous consent that the Reporter-News editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Comes now a booklet published jointly by the United States Departments of Labor, Health, etc., and Defense suggesting each community launch a stay-in-school campaign. And, at the same time comes an announcement from the Chamber of Commerce Education Committee that Abilene Kiwanis and Rotary Clubs will each give a $400 scholarship to an Abilene high grad, good in a local college.

The booklet-suggested drive is aimed at the high school level. The local scholarship program is designed to, on one hand, help the student who is both worthy and needy and, on the other, do something in line with the national effort to provide a better educated populace.

The high school stay-in-school drive is good for the Nation as a whole, since nationally about 40 percent of the youngsters who start to high school get their diploma. But, actually, Texas has a constant school-sponsored drive to keep kids in school, one which proves very effective. Under Gilmer-Aiken the amount of money which a local district gets from State coffers is tied closely to the average daily attendance. The schools are, therefore, most diligent and to a high degree successful in keeping youngsters in school at the lower levels.

The Abilene Kiwanis-Rotary scholarship program comes in to help the boy or girl who wants to but can't go on to college—the kids who need a hand with their bootstraps operations, the ones who stand a good chance to make a real contribution if they can only get a boost to get started.

Deadlines for the scholarships, two each for $400, is August 16. Abeline high grads interested and qualified take note.

Dam Numbers Game

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a detailed article from the Oregonian of Portland, Oreg., of August 9, 1957, entitled "Storage Lost in Dam Numbers Game." Author of this presentation is Herbert Lundy, editor of the editorial page of that daily newspaper.

Mr. Lundy emphasizes that the loss of full development of Hells Canyon, plus impending private licenses at the Mountain Sheep and Pleasant Valley sites, is resulting in the sacrifice of vast quantities of storage in the canyons which the great Snake River has trenched where it cuts through the Seven Devils and Wallowa Ranges, on its route to join the Columbia.

Like myself, Mr. Lundy opposes dams below the mouth of the Salmon River which would blockade off the valuable salmon migrations which surge upstream from the sea to their remote spawning grounds. Yet, as the Oregonian's editor stresses, important sites for storage still exist above the Salmon's mouth and below the Brownlee project of Idaho Power Co. However, these sites may be irreparably lost for full use if the schemes of the private utilities to carve up the Snake River are consummated.

When any natural resource is lost, our generation and future generations suffer. This is happening along the Snake River today. In my opinion, the Republican administration and its private-utility allies must accept major responsibility for such a sad eventuality.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STORAGE LOST IN DAM NUMBERS GAME
(By Herbert Lundy)

The Snake River power and flood-control fight continues to provide stark examples of piecemeal planning as it sweeps downstream from Hells Canyon. No clearer reason could be given for the establishment of a regional agency with authority to plan orderly and comprehensive development of Columbia Basin water projects for maximum public benefits from all resource values.

The staff of the Federal Power Commission recommended construction of Nez Perce Dam and denial of a permit for Pacific Northwest Power Co. (set up by four private utilities) to build Mountain Sheep and Pleasant Valley Dams in the same area.

An examiner of FPC, Edward B. Marsh, reviewed the same set of facts and handed down a decision rejecting Nez Perce as too far in the future because of the fish problem, and approving the Mountain Sheep-Pleasant Valley project for immediate construction. FPC itself will have the final say.

Both the staff and the examiner made their own interpretations of what comprehensive development means. But neither ventured to suggest that FPC had made a prior error. That was in licensing a low dam in Hells Canyon which, if it should be built, will prevent the full use of the flood-control storage potential of Pleasant Valley Dam, 34 miles below the Hells Canyon site.

A preliminary study by the Bureau of Reclamation shows the advantages which would accrue from eliminating the low Hells Canyon Dam and building Pleasant Valley high enough to back the river up to Idaho Power Co.'s licensed Oxbow Dam.

Instead of 500,000 acre-feet of usable storage for flood control, attributable to Pleasant Valley under the license approved by Marsh, a higher dam at Pleasant Valley would provide 1,300,000 acre-feet of usable storage on top of the dead storage, Idaho Power's Brownlee dam, above Oxbow, will impound 1 million acre-feet of usable storage, by FPC order. Thus, Pleasant Valley and Brownlee together could store 2,300,000 acre-feet, which could be released as needed in a master control plan of the Columbia Basin. This, by coincidence, is the exact amount of usable storage which FPC conceded would have been provided by a high dam in Hells Canyon.

But the staff and examiner did not even lift their eyes above the low Hells Canyon site. Instead, they discussed two hypothetical plans—plan I and plan II—for development between river miles 151 and 245 (the low Hells Canyon Dam site) of the Snake, plus a piece of the tributary Salmon River.

The FPC staff declared itself for plan I. This would provide:

1. A high dam at the Asotin site (river mile 151), with only 50,000 acre-feet of usable storage and an installed generating capacity of 550,000 kilowatts.

2. An 800-foot-high dam at the Nez Perce site, 35 miles above, which would back water 60 miles up the tributary Salmon River and 64 miles up the Snake to the Hells Canyon site. Nez Perce would have 3,900,000 acre-feet of storage usable for flood control, power and downstream regulation during low-water periods, and an installed capacity of 1,672,000 kilowatts initially and 2,128,000 kilowatts ultimately.

Examiner Marsh plumped for plan II. This calls for five dams, reading upstream, as follows:

1. A lower dam at the Asotin site, with no usable flood control storage, initial installed capacity of 270,000 kilowatts and ultimate capacity of 360,000 kilowatts.

2. China Gardens dam, 25 miles upstream from Asotin, no flood control, installed capacity 240,000 kilowatts initially and 320,000 kilowatts ultimately.

3. Lower Canyon Dam in the Salmon River 4 miles above its confluence with the Snake; height 600 feet, reservoir 59 miles long, usable storage about 1,560,000 acre-feet, generating capacity 456,000 kilowatts initially and 760,000 kilowatts ultimately.

4. Mountain Sheep Dam in the Snake, 25 miles above China Gardens, 4½ miles above the mouth of the Salmon River, 1 mile above the mouth of the Imnaha River; maximum usable storage 46,000 acre-feet; installed capacity 282,000 kilowatts initially and 376,000 kilowatts ultimately.

5. Pleasant Valley Dam, 20 miles above Mountain Sheep; 500,000 acre-feet of usable storage; installed generating capacity 720,000 kilowatts initially and 864,000 kilowatts ultimately (but with maximum capacity 850,000 kilowatts initially and 1,014,000 kilowatts ultimately).

In playing this numbers game, the FPC staff tossed in enough mythical dams to come out with a paper balance for 94 miles of the Snake and 64 miles of the Salmon River. Plan I has more benefits in power and flood control than plan II. But either Nez Perce Dam in plan I or Lower Canyon Dam in plan II would be insurmountable barriers to upstream migration of adult salmon and death-traps to downstream migration of fingerling salmon and steelhead. Either would destroy the bulk of the Columbia spring Chinook runs. Hence, no one in responsible position wishes to build either.

Then why the paper work with unauthorized, hypothetical and unwanted dams? Why not obtain the storage still available in the Snake above the mouth of the Salmon River? The case for a high dam at Pleasant Valley is so incontrovertible that the Federal Power Commission and the utilities cannot deny it if enough pressure is brought to bear. The storage lost at Hells Canyon could be regained by a simple agreement between the Northwest Power Co. and the Idaho Power Co., and the construction of 1 dam instead of 2. No power benefits would be lost. In fact, downstream benefits would be gained.

Dr. Raymond Ross Paty

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. SPARKMAN. Mr. President, a few days ago Dr. Raymond Ross Paty, one of the members of the board of the Tennessee Valley Authority, died. There was published in the Tuscaloosa (Ala.) News, of Friday, August 9, an editorial entitled "Loss for this Region." It was a great loss for our area, and a great loss to the TVA. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOSS FOR THIS REGION

The death of Dr. Raymond Ross Paty, former president of the University of Alabama, came as a shock to this community and to this region.

His death from a heart attack struck down Dr. Paty at a time when he was at the center

of a controversy over the moving of a branch of the TVA system from Knoxville to Muscle Shoals. As a director of the TVA system, Dr. Paty and Dr. Harry Curtis, who had retired at the conclusion of his term in May, had approved the moving of the agricultural relations department of TVA to Muscle Shoals where it was originally intended to establish TVA headquarters.

His untimely death leaves the TVA directorate in a difficult situation, as far as southern supporters of the system are concerned. Dr. Paty was named to be a TVA Director in 1952 by former President Harry Truman. Since that time President Eisenhower has named two Directors and now will be in position to name a third.

Dr. Paty's career was devoted to education and public service. A native of Tennessee, he was a graduate of Emory University. He taught school in his native State, later was on the faculty at Emory, served for 4 years as president of Birmingham Southern College and another 4 years as president of the university here.

From this position he went to Georgia as chancellor of the university system, later was connected with the public relations department of an Atlanta department store and since 1952 has served as 1 of the 3-man board for the TVA system.

During the 4 years of his presidency here at the university, the Capstone felt the impact of World War II and its immediate aftermath. Wartime training programs were instituted here when civilian student enrollment was at a low point. It was during his administration that the university felt the impact of the returning veterans and a tremendous enrollment surge.

This was a trying period for administrators at the university. The rapid return of veterans to the campus created a major problem of expanding the physical plant in face of construction restrictions imposed by war conditions. But in the 4 years that Dr. Paty was here the physical plant was expanded by a value of over $13 million. Most of the additions were not of the permanent building type but the property and structures obtained through the Federal Government not only served an immediate need but have been of great help to the university since that time. It was during Dr. Paty's administration that the Northington property was acquired as were the facilities in Birmingham for the medical center.

In faculty-student relationships, the office of dean of students was established and a retirement program instituted for faculty supplementing the State teacher retirement benefits. Research also was expanded greatly and a $100,000 appropriation from the State for research and extension was obtained.

His resignation from the university to accept the Georgia system chancellorship was a shock to the Capstone community just as his death now is to the State and the region.

Expressions of sympathy and appreciation for a devoted career to public service are in order to his family from his many friends here and in other communities where he served.

The Continuing Danger of Natural Gas Rate Bill; Consumers Must Wake Up

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 12, 1957

Mr. WILEY. Mr. President, this morning we were all rather entertained when we saw the majority leader and minority leaders of the Senate—we call them Damon and Pythias—engage in what were, let us say, countermovements as to what was involved in the civil-rights bill. I am glad they came to an agreement that they would not bury the civil-rights bill. I should like now to speak of something I wish I could get them to agree on. If the gas bill comes up, I hope they will agree to bury it.

Mr. President, within the past few days there have been hopeful indications that the new version of the natural gas rate increase bill will, very fortunately, not be brought up in the House of Representatives for final vote at this session. Apparently, the realistic backers of the bill, after detailed counting of noses, have determined that they do not have enough votes to steamroller it through.

This is good news to the Nation's consumers, because if the news is true, it means that consumers will be saved literally hundreds of millions of dollars in inflationary gas rate increases which might otherwise have "socked" them.

We hear discussion about the increase in steel prices and the increase in wages, because they all make an impact on the inflationary pressures. However, if the gas bill were to be enacted, it would "sock" the ordinary housekeeper around $40 a year additional. Senators can imagine what that would mean in terms of the probably 40 million persons involved.

CONSUMERS HAVE ALMOST BEEN ASLEEP

I wish to say, in all frankness, that the apparent inability of the gas lobby to pass the bill thus far is not due—I repeat, it is not due—to vigilant consumer reaction. On the contrary, the inability of the gas lobby to prevail is due to the basic good sense of the Members of the House of Representatives.

The fact is that, unfortunately, consumers and their organizations still have not spoken in large numbers to the Members of Congress. The fact is, and I say this in all candor, that consumer organizations have almost been asleep on this issue.

But the gas lobby has not been asleep. It might almost have won by default if it had not been for the good sense and the basic good judgment of Members of the House of Representatives, themselves.

Consumers, therefore, cannot take very much credit for delaying this bill, because they have done virtually nothing to stop it.

ACTIVE MINORITIES ON COMMITTEES AGAINST BILL

Fortunately, a minority of the House Interstate Commerce Committee was active against the bill, as was a minority, at least, of the House Rules Committee.

Thanks in large part to those minorities, consumers this time have won—yes, largely, too, by luck, and by the good sense of the House itself. Next time, however, consumers may lose, just as they have lost in the past when a similar bill has several times been passed by both Houses.

Even now, there is no certainty that consumers' luck will hold out. Some Friday, when some Members of the House from nearby large cities are absent, who knows but the gas-rate bill may come up all in a rush and be whisked through to passage?

And then, in the Senate, the bill's prospects are, unfortunately, still more favorable.

HANDFUL OF ABSENTEES CAN SPELL GAS VICTORY

Now, Mr. President, my reason for speaking so frankly is that I may alert the consumers of this country.

The gas lobby is not going to cease in its efforts. For these final 2 weeks of the session, and then during the recess period, it is going to concentrate on trying to round up that last handful of votes which will give it, it hopes, the margin of victory in the House of Representatives. Just a few absentees among opponents will assure the gas lobby literally billions in added profits.

If the consumers of this country do as little in the future against this bill as they have in the past, then there is a very real danger that the consumers' luck will run out and that the gas bill will pass next year. Consumers will have only themselves to blame.

I do not in any way underestimate the efforts which have been performed at the grassroots by a relatively handful of interested individuals—by mayors of leading municipalities, by some State attorneys general, city attorneys, and others.

In my own State of Wisconsin, Mayor Frank Zeidler, of Milwaukee, and Mayor Jack Humble, of Racine, have been active in this fight, as have some other leading individuals. But infinitely more must be done if the bill is to be assured the oblivion which it deserves.

TRADE UNIONS INTERESTED

I was glad to read in the August 1957 issue of the newspaper the Textile Challenger, published by the United Textile Workers of America, a warning as to the dangers of this inflationary bill. The editorial quoted in detail from comments which I personally have previously made.

As a welcome indication that the trade union movement is fortunately not asleep on the dangers of this bill, I send to the desk the text of this editorial from the Textile Challenger. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE IS THE BREAKING POINT IN LIVING COSTS?—A WARNING

On July 9, Senator ALEXANDER WILEY, of Wisconsin, broke into the civil-rights talkfest to sound a note of warning and to alert 30 million consumers of natural gas. Mr. WILEY said:

"Mr. President, I wish to take a few moments of the time of the Senate to discuss what I think is a very dangerous condition; namely, the inflationary situation. There are many causes. The increase of $6 a ton by the steel companies will add impetus to the inflationary trend. But I wish to speak from another angle.

"Mr. President, 30 million American consumers were dealt a severe blow yesterday. The House Committee on Interstate and Foreign Commerce, by a vote of 15 to 13, unfortunately approved the gas rate increase bill. This bill is designed to eliminate effec-

tive regulation over gas going into interstate pipelines.

"The legislative battle now shifts to the House Rules Committee, and thereafter will go to the floor of the House of Representatives.

"My purpose in speaking today is once more to sound the alert to the American people.

"In connection with the gas bill, there may be diversionary tactics. We may be diverted by the civil-rights bill, and by other matters, so that we lose sight of one of the great dangers to our economic health.

"Once more I wish to caution the American people the gas-rate bill is undoubtedly the most inflationary single piece of legislation coming up for action voting in this first session of the 85th Congress."

DEFEAT THE GAS BILL

"Unfortunately, the American people to date, because of their preoccupation with other problems, have failed to recognize this danger.

"Of course, the lobbying and propaganda forces of the natural gas industry have been concentrating 365 days a year on passing this proposed legislation. But, by contrast, there is not a single force in the United States which has devoted concentrated and continued attention to opposing this inflationary bill. The organization of mayors of the various cities and few consumer organizations have been able to give to this problem only the spottiest attention. As a result, the evil gas bill may win by default, unless the consumers of this country rise up and demand that it be defeated.

"Let me point out that the American dollar is already losing more and more of its purchasing power. On the first day of every month, when 30 million consumers receive their gas rate utility bills, the consumers are going to find, if this inflationary bill shall be enacted, that their dollar will have lost still more purchasing power. So the time to act is now. This gas rate increase bill should not win by default. It must be defeated. The bill must be defeated, because its impact upon the inflationary cycle would be most dangerous to our economic health."

A WORD TO THE WISE

If enacted, this bill would mean an annual increase of $40 or more for the housewife and consumers of natural gas. Congress passed this bill at the last session of Congress but it was vetoed by the President on the grounds of questionable conduct by some of the proponents. However, he said he would sign such a bill under different circumstances.

Organized labor fought the "gas steal" in the last Congress and labor must fight it harder than ever in this Congress.

Textile workers are vitally effected by this legislation. Our opposition is powerful. We now have a combination of the President with leading Democrats and Republicans in the House and Senate. We must write to our Congressmen and Senators urging the defeat of the gas bill.

Preservation of Free and Competitive System of Private Enterprise

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 12, 1957

Mr. HUMPHREY. Mr. President, I wish to bring to the attention of my colleagues an article by Dr. John W. Dargavel, which appeared recently in the Credit Executive magazine. Entitled "The Little Man Who Is There," the article describes the growing economic crisis in the small-business community.

John Dargavel, the author of the article, is well known to every Member of Congress and to small-business men from coast to coast as a vigorous champion of economic opportunity and equality. At present, Mr. Dargavel is chairman of the Bureau of Education on Fair Trade, and was formerly vice president of the American Pharmaceutical Association, and the National Association of Retail Druggists. In my opinion, no man is better qualified than John Dargavel to speak about the competitive problems of small business.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LITTLE MAN WHO IS THERE

(By Dr. John W. Dargavel)

America's small-business man is very much the little man who is there. He's a key figure in our economy. The country's 4 million small-business concerns add up to 95 percent of all the businesses operating in the United States today. Yet he's facing a growing crisis. If it is not checked, America's small-business man will become the little man who isn't there.

Study findings by Dr. John W. Dargavel, executive secretary of the National Association of Retail Druggists and chairman of the Bureau of Education on Fair Trade, show that the small-business man, with his independent stores, factories, and enterprises of all sorts, provides the livelihood for 1 out of every 3 people in America. This is an impressive fact. It demonstrates that America needs the little- and the medium-sized-business man as well as the giants.

SMALL-BUSINESS IN TROUBLE

But the picture is not so bright as it sounds, Dr. Dargavel finds. Small-business, in the midst of record-breaking prosperity, is in trouble. Bankruptcies and failures are mounting. To date, there have been more failures among small-business men this year than in any year since 1939. Cautious estimates by Dun & Bradstreet indicate that in 1957, over 13,000 small-businesses will be wiped out—unless the present trend reverses itself.

The failures are concentrated in retailing, small manufacturing and home building. This has been going on for some time. The United States Senate Small-Business Committee, for example, reports that in 1956, small-business failures totaled 12,686. This represents a 16 percent increase over 1955, and a post-World War II high. Retailers ranked second highest in business failures last year. Figures from the Small-Business Administration show that 6,841 stores closed their doors in 1956. This is 18.6 percent higher than retail failures in 1955.

Are enough people taking the plunge of opening up their own businesses to offset the alarming increase in failures among small-businessmen? The answer seems to be no. During the 5 years from 1951 through 1955, for example, only 39,000 new business enterprises opened their doors each year, on the average. In the 20 years from 1930 through 1950, an average of 53,000 firms hung out their signs each year. Since 1950, therefore, there has been a 26 percent decrease in the number of new businesses opening every year.

SENATE COMMITTEE HAS ANSWERS

Why is small-business confronted with the growing threat of failure in the midst of a boom? The United States Senate Small-Business Committee has some answers. One is the constantly rising costs of labor and materials. Another is the heavy tax burden which never allows the small-business man to get off the hook. A third is the tight money situation which makes it harder and harder for the little man to get bank loans, even at high interest rates. Then there is the growing trend toward mergers of the little companies with big ones.

And of vital importance, there is the squeeze of cut-throat competition—such as price wars on the popular brands which constitute the independent retailer's bread and butter.

To prevent this destructive competition from creating chaos in the marketplace, rules of fair competition are needed. In the interest of the good society, the freedom of the individual to do as he pleases in the marketplace—as in any other area of life—must be limited by the commonsense restraints which society itself imposes.

COMPETITION ON FAIR TERMS

The fair trade laws are rules of fair competition and fair play over the counter. Enacted by 45 State legislatures, these laws have been supported by Congress and upheld by the United States Supreme Court and 16 high State courts. But today, in 10 States, courts have knocked out fair trade and new legislation is needed to give small business an opportunity to compete on fair terms with big business. As the Senate Business Committee says:

"Independent businessmen simply are not equipped to survive the low blows of unfair competition."

In the absence of fair laws of competition, small-business men, in order to survive, would need lots more dollars—which they don't have.

What is the average citizen's stake in keeping the small-business man from becoming a vanishing American? What would America be like without small business? For one thing, it would be a collection of supergiant businesses, so big and so tough that they would inevitably invite control by a super-big and supertough government. This is not the road to democracy. That the threat of a monopoly by bigness is not an idle one is indicated by the recent statement of a big industrialist who said:

"I think that, if our economic system is to continue, we must have smaller businesses developing, otherwise competition will be eliminated in the next 5 to 10 years, and we will end up with 1, or possibly 2, large companies in each of the major fields."

BIG BUSINESS VERSUS SMALL?

Certainly big business is not deliberately seeking to eliminate small business. But, in the complex conditions of our 20th century marketplace, big business simply moves into the vacuum when small business goes under.

Yet small business is a kind of growth vitamin for America.

How will our communities be affected if small business disappears? The burden of the taxes now paid by small-business men will be shifted to others, including all consumers. Who will take over the financial support and participation which small business now contributes to civic activities and organizations such as hospitals, churches, community chests, the boy scouts and all other efforts to improve our communities? The exit of small business will leave a serious vacuum in towns and cities all over the Nation—a vacuum which cannot be filled by absentee business owners.

SMALL BUSINESS NEEDS FAIR TREATMENT

And finally, there is that precious American dream of working for yourself. If this

dream is to be a reality and not a myth, small businessmen must have conditions of fair competition so that they can prosper if they have what it takes. If people can see no possibility of success in their own business, America must inevitably become a nation of the many working for the few. Freedom of opportunity will come to mean less and less in America.

The American people have it within their power to save small business by supporting legislation to preserve this vital part of our economy and by letting their representatives in State legislatures and in the Congress know they want action before it is too late. Adequate laws to assure fair competition can prevent this.

Jury Trial Victory in Senate Civil Rights Battle

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Notable Jury Trial Victory Won in Senate Civil Rights Battle," published in the Birmingham News of August 3, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOTABLE JURY TRIAL VICTORY WON IN SENATE CIVIL RIGHTS BATTLE

By a surprisingly wide margin—51 to 42—a notable jury trial victory has been won in the Senate by opponents of the administration's civil rights proposals. An amendment assuring jury trials in criminal cases under this legislation has been adopted and Senator KNOWLAND, leader of the fight for the bill, says the action probably means it is dead for this year. That would be fine, as we see it. Such a program as remains even in the Senate bill would complicate and make more difficult and dangerous problems in this field.

Senator KNOWLAND'S view is based on the belief that the House probably will not accept changes. The House passed the legislation without the jury trial provision and with a section, eliminated by the Senate, which would empower the Attorney General to use the injunctive process in civil rights cases in general. KNOWLAND'S estimate seems reasonable to us.

The Senate measure still is to be acted on as a whole. That may come next week. It contains, besides the injunction section, provision for a Presidential bipartisan commission to study civil rights and for appointment of an additional assistant attorney general and establishment under him of a civil rights division in the Department of Justice.

The Senate jury-trial amendment would permit selection of Federal court jurors without qualifying under State laws. This change was made with a view to strengthening support for the amendment, as there has been contention that under the amendment jury trials might be held in such cases without any Negro jurors. Qualification of Federal jurors under State law is sound practice. Departure from it would be a highly questionable change. What would be Federal qualifications for such service?

We continue to believe that failure of the legislation as a whole would serve the national as well as southern interest. A Federal civil-rights inquiry now would intensify problems in this field. But the bill as revised by the Senate is substantially less objectionable than it was as approved by the House.

What has been done in the Senate reflects a high regard for sound principle and practice in upholding jury trials in criminal actions under such legislation.

The Senate's action in eliminating proposed use of the injunctive process in civil-rights matters in general, as for instance in school cases, and confining such authority to voting cases, greatly curtailed the scope of possible trouble under such an act.

We are impressed by the comment of Senator RUSSELL, of Georgia, leader of the opposition forces, that the Senate was at its very best in voting the jury-trial amendment and that his faith in representative government was renewed in seeing men have the courage to rise above the pressures and vote their convictions.

If some such legislation finally is jammed through, it will be much less troublesome and disturbing if it follows the lines of the major revisions made by the Senate. But it will be even better if the whole business fails, as Senator KNOWLAND thinks is probable.

Address of United States Senator Edward Martin, of Pennsylvania, at the Annual Convention of the American Legion, Department of Pennsylvania, at Harrisburg, Pa., August 10, 1957

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. FULTON. Mr. Speaker, Senator EDWARD MARTIN on Saturday morning, August 10, 1957, delivered an address before the American Legion convention in Harrisburg, Pa., which I believe to be an important statement on the economic health of the United States. Senator MARTIN speaks of the sound policies that are necessary for the healthy, vigorous growth of our country in order that our national prosperity will continue and grow.

Both as a longtime friend as well as a Pennsylvania colleague of Senator MARTIN, it is a pleasure to insert this tribute to the ability and sincerity of our senior Senator from Pennsylvania.

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE ANNUAL CONVENTION OF THE AMERICAN LEGION, DEPARTMENT OF PENNSYLVANIA, AT HARRISBURG, PA., AUGUST 10, 1957

Your many invitations to speak at your annual conventions help the morale of an old soldier more than these humble words of mine can express.

I sincerely appreciate the honor of addressing you, because the Legion has done so much to advance patriotic Americanism and to build the material, spiritual, and cultural strength of the United States. You have fought bravely and intelligently for all things American. You have battled courageously against all things un-American.

Over the years I have talked to you on many subjects. Today, I would like to bring to your attention the financial situation of our Government and its relation to the welfare of our people. This may not arouse much enthusiasm, but basically it is one of the most important problems confronting our country.

Before taking up what some may consider a dry financial discussion, let us look back with pride at the background of the United States.

The history of America is a glorious story. It tells of toil, sacrifice, and heroism. It tells of victory produced by a people whose hearts and minds were aflame with the spirit of liberty and independence.

It tells of those courageous patriots who met in Philadelphia more than 180 years ago, and pledged their lives, their fortunes, and their sacred honor, to establish a new nation. For the first time in all the world, government recognized the divine origin of man's inalienable right to life, liberty, and the pursuit of happiness.

For the first time a government was based upon the sound principle that governments derive their just powers from the consent of the governed.

Upon that foundation, in less than 200 years, a savage wilderness has been transformed into the most powerful nation of the earth, with the highest spiritual and cultural level ever attained by any similar area in the world.

We surpass every other nation in industrial and agricultural production but regardless of our great national wealth we are confronted by grave problems.

Our most serious internal danger is the depreciation of the purchasing power of the dollar.

Yes, my fellow Americans, I want to impress upon you that inflation is the No. 1 danger to our country. If allowed to continue it can destroy our system of government. Recent world events have demonstrated beyond all doubt that inflation is a direct threat to freedom.

It has the power to crush any economy upon which it fastens its grip. The record of history proves that more great nations have been overthrown by inflation than by invading armies.

I have every respect for the economist who can discuss inflation from the technical standpoint and can support his conclusions with charts and statistics. His expert knowledge has great value but you don't have to be an expert to know that no matter how fat your pay envelope may be, the thing that really counts is how much you can buy with your dollars.

Let me give you the figures on how much the dollar has depreciated in value.

In 1939 the dollar was worth a little more than 100 cents in purchasing power. Inflationary pressure during World War II forced the value of the dollar down to 78 cents. The decline continued during the postwar years and at the beginning of 1953 the dollar represented only 52 cents in purchasing power. For a time it appeared that the value of the dollar had been stabilized at that point and for the next 3 years remained practically unchanged. However, in 1956 the downward trend was resumed and the value of the dollar sank gradually month after month, going down from 51.5 cents in June 1956 to 49.8 in April of this year.

This is an alarming situation. If the downward trend is not checked the healthy, vigorous growth of our country cannot be maintained and our prosperity will become a thing of the past.

When the dollar loses its purchasing power, it damages all with fixed incomes. The person who lives on a pension, social security, or interest on savings cannot escape the evils of inflation. There are now in the United States more than 16½ million on social security, corporations, and Government retirement, veterans pensions, veterans survivors benefits, and military retirement pay.

Values built over a lifetime, or even over generations, are reduced or wiped out by inflation. Those damaged by inflation include the more than 125 million savers in the United States, the shareholders in corporations, owners of life insurance policies and savings accounts. Men and women paying into social security make up another great list of savers whose benefits are reduced by inflation.

I turn now to some of the causes of the inflationary pressures that have been building up over the years.

First, I would point to big government as one of the primary causes. This includes excessive Government spending, deficit financing, a staggering burden of debt, printing press money and unsound fiscal policies. There has been so much expansion of Government that more than 7 million are now employed at the 3 levels, Federal, State, and local. They are not producers and the total payroll puts into circulation nearly $40 billion dollars a year.

Second, increased labor costs with a corresponding rise in the cost of production. When higher wages bring an increase in productivity there is no danger. But this has not been the case here in the United States in recent years. Inflation results when production does not keep pace with rising wages.

Third, too much use of borrowed money in the expansion of business and purchases by Government, corporations, and individuals, particularly money borrowed from banks.

An official Department of Commerce report issued on May 27, shows that the American people, at the end of last year, owed a total of more than $800 billion in gross private and public debt. This is an average of about $4,700 for every man, woman, and child in the Nation.

Net State and local government debt has increased from $13½ billion in 1945 to $42.7 billion at the end of 1956.

Net corporate debt went up from $93½ billion in 1946 to $208 billion at the end of 1956.

People have been buying out of tomorrow's pay checks. At the end of 1945 they owed less than $6 billion. In 1956 this figure had increased to $42 billion.

Fourth, experience has shown that there is no limit to human desire for goods and services, but there is a limit to the means by which these desires can be satisfied.

We must remember that even though we are the richest Nation on earth there is a limit to our resources. Therefore, when Government attempts to carry out competitive political promises, many of them made by demagoges, and undertakes to supply the wants of groups and individuals, the cost is likely to exceed available revenues. In that event, Government resorts to deficit financing. Increased debt and more inflationary pressure are the natural consequence.

How can inflation be curbed?

It can be done by drastic governmental controls over wages and prices. Americans do not want such governmental controls. We want a free economy, because the great strength of our Nation is our system of free competitive enterprise. If it collapses our entire structure will fail.

Living standards here in the United States are the highest in the world because American productivity has been advanced to the highest level in the world. Production is the golden key to prosperity. We cannot have great industrial production if we have restrictive legislation or controls enforced by administrative directives.

It can be done by voluntary restraints on the part of the people, by reducing individual spending and by building up savings accounts and other forms of savings. But that method has never been effective.

It can be done by tough credit restraints and higher interest rates to make borrowing more difficult. This is not very palatable as far as the American people are concerned but it is one of the best ways of curbing inflation.

It can be done by raising taxes so high that it would control a boom. We will not accept that plan. Taxes are too high now. Tax cuts are not inflationary, if accompanied by reductions in Government expenditures.

Many feel that the objective of full employment is inflationary. It has been suggested that wage and price increases, when more than one State is concerned, should be subject to national approval.

Politicians want to avoid brutal methods like high interest rates, curbing appropriations, and increasing taxes. Such actions are always unpopular. Too often the politician takes the easy way, without regard for the dangers that lie ahead.

The curbing of inflation is a job for all of us because in the United States, we the people are the Government.

The Federal Reserve Board by restricting the expansion of credit has done much to check inflation. This restrictive action has been accompanied by rising interest rates and many now contend this is one of the reasons for the high cost of government. However, the curbing of inflation in defense spending alone has saved us an amount greater than the increased cost of interest to the Federal Government. The stand of the Federal Reserve Board has been criticized but it has rendered a great service to the Nation.

Why has government become so expensive?

One reason is that Federal and State Governments are financing a great variety of activities that formerly were the responsibility of local government and depended upon the self-reliance and initiative of the people in their home communities.

As an example let me cite the big increase in so-called grants-in-aid from Washington to the States. In the early twenties $100 million a year in Federal funds were paid in grants to the States. This has now increased to $4 billion.

Here is another fact. One American out of five—men, women, and children—gets a check at regular intervals from Uncle Sam.

Another illustration of the increase in the cost of government is that the Federal Government proposes to spend $14 billion a year for welfare projects compared with $4 billion 10 years ago.

While we must all work for a sound and solvent America, we must not forget the dangers of Red propaganda. We have found that large quantities of Communist propaganda has been received by embassies and other so-called diplomatic representatives of the Soviet and that this material has been distributed throughout the United States.

Recently there was broadcast into millions of American homes an example of Communist propaganda more flagrant than anything ever before attempted.

It was a brazen attempt to convince American listeners that Soviet Russia has no evil designs against the free nations of the world. We were told that the Russian dictators seek only friendship and peaceful coexistence.

Yes, my fellow Americans, the Communist boss talked peace but real Americans were not fooled. The record denies their words.

Their fundamental objectives have not changed. They have not abandoned their unholy ambition to destroy all human freedom.

Those of you who heard that broadcast will recall the prediction that the grandchildren of Americans living today will live under a socialistic system.

That was a grim warning. It must not be ignored. It calls upon us to be constantly alert to the dangers of Communist influence here at home. We must fight disloyalty with every weapon at our command, and if our laws are not strong enough, they should be made stronger.

We can have a strong and prosperous America if we work for four important objectives:

1. Labor must be gainfully employed at wage scales adequate to maintain the American standard of living.

2. The farmer must have a profitable market for his product.

3. The investor in industry must have a fair return on his investment.

4. The dollar must be stabilized.

In every age in America we have looked forward. We have looked forward with a mixture of courage and doubt. Each one of us has fought his own battle. Many of us have lost. Some have won. The great majority have had both defeats and victories. But, in every generation, courage in the United States has prevailed.

Personally, I feel that America today has the same courage that caused our forefathers to move ahead. They did not have it easy. We will not have it easy. We must always fight for the stability of our currency; for the improvement of living conditions; for our up-building, morally and spiritually.

The early settlers in the New World, facing the hardship of a vast and unknown wilderness, had one thing in common—an ardent faith in God.

Let us emulate their example.

As militant, God-fearing believers in American ideals, let us fill our more than 300,000 churches, cathedrals, synagogues, and temples in the United States, 165 of them built before 1776.

Let us wage a war for complete loyalty by all living in the United States to the principles for which a million Americans died on battlefields within our borders and in foreign lands.

Let us live by the motto "In God We Trust"; and if that trust is deep enough, America will survive every attack.

"Protective Milk" Due in Stores Next Year

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 12, 1957

Mr. THYE. Mr. President, there appeared in the Washington Sunday Star of August 11 an Associated Press article referring to an address delivered by Dr. W. E. Peterson, of the University of Minnesota. The article is most informative; and Dr. Peterson is one of the outstanding dairy specialists and dairy scientists in the United States, I say without any question at all. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"PROTECTIVE MILK" DUE IN STORES NEXT YEAR

WOOSTER, OHIO, August 10.—The discoverer of "protective milk" says that cow's milk fortified to treat human beings for rheumatoid arthritis and allergies may be available in commercial quantities next year.

Addressing a Dairy Day crowd yesterday at the Ohio Agricultural Experiment Station, Dr. W. E. Peterson, noted dairy scientist at

the University of Minnesota, held out hope for treatment of cancer, rheumatic fever, the common cold and possibly other ailments with protective milk.

He has been experimenting for several years on the capability of the cow's udder, injected with disease bacteria, to produce milk charged with defensive antibodies and to transmit immunity to the consumer of the milk. His talk was a progress report on the research.

He reported:

1. Hay fever sufferers given protective milk acquire complete immunity from the effects of ragweed pollen. Similar good results have been attained on other allergies.

2. Of 26 rheumatoid arthritis victims given protective milk, 20 won relief of their symptoms over long periods.

3. Mice have been immunized against two types of cancer. Experiments on humans are under way with exciting but still unreportable prospects.

4. Milk fortified simultaneously against 21 human ailments has been produced and possibly hundreds can be mingled in the same potion.

Dr. Peterson said that human beings already are drinking protective milk and the available supply will expand as more research herds become available. He added that milk has been shipped to Mexico to combat infant diarrhea.

"By next year, several hundred people with rheumatoid arthritis will be on test," he reported.

The scientist has been his own "No. 1 guinea pig" in research on rheumatoid arthrisis, from which he suffers. He reported that he had obtained 7 periods of relief of about 6 months each and now was waiting for the ailment to recur for the eighth time.

Dr. Peterson's research centers around his discovery, reported in medical journals in 1950, that a pregnant cow has the ability to give milk that protects her calf against disease.

The disease-causing organisms are injected into the udder in quantities of billions at weekly intervals for about 3 weeks before freshening.

Investigation of Labor Racketeering —

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. GOLDWATER. Mr. President, in yesterday's Washington Star there appeared an article by Frank Kent, published in his column which bears the headline "The Great Game of Politics." The article has to do with the current investigation of labor racketeering. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREAT GAME OF POLITICS

(By Frank R. Kent)

LABOR'S "URIAH HEEPS"

WASHINGTON, August 10.—The recent shock given the country by the acquittal of Mr. James Hoffa, destined to succeed Mr. Dave Beck as head of the teamsters union, by no means has subsided. It is still felt, and will be for a long time to come, not only in the higher labor echelons and not only among the dues-paying rank and file, but among the politicians, both Democratic and Republican.

Actually, before the Hoffa business is over, there is some reason to believe there will be a real and bitter split among the top labor bosses and a disclosure of more wrongdoing among the so-called labor leaders than is now suspected. At least, that is the conviction of those best posted on the existing situation.

For example, the present heads of the AFL–CIO labor combination, Mr. George Meany, president, and Mr. Walter Reuther, vice president, have taken a very hostile attitude toward the Messrs. Beck and Hoffa. They have expressed the severest, and probably justified, condemnation of their conduct, have indicated an intention to toss them out of the AFL–CIO organization and, before the Hoffa acquittal, seemed to take the general view that they were destitute of honor and devoid of shame.

Altogether, the Meany-Reuther combination has occupied very high ground indeed, piously talked about ethics using the words "honesty and decency" as though they had, themselves, invented them. Figuratively, they have spat on the teamsters union and its corrupt leaders. This is not written in defense of these leaders, whose record is a shame and disgrace to every honest union-labor man. It is written to point out that this sickeningly pious effort of the Messrs. Meany and Reuther to proclaim the purity of their souls is more than a little ridiculous.

In this connection it is being recalled by many that Mr. Meany was a close friend of the ex-convict Joe Fay, whom he secretly visited and consulted while he—Joe Fay—was in the penitentiary. And that Mr. Reuther handles the truth carelessly. In the big auto workers' strike some years ago he publicly charged General Motors with having "falsified their books," hilariously admitting, after the strike, that he had faked the whole thing because "I thought it would put the company over the barrel." No one will deny that this was an extremely serious charge and that laughing it off is pretty low-grade stuff.

For these two men now to throw around themselves a cloak of respectability and denounce their colleagues as "unethical" and "unfit" to belong to their group is revolting to those who know the facts. It is particularly revolting to see them accepted at their own valuation by newspapers and so-called "liberal" journalists who know the truth. They are the two outstanding "Uriah Heeps" of the labor world, as old Mr. Baruch would say, "China eggs."

Despite his acquittal, Mr. Hoffa is not in the clear yet. Not only has the McClellan committee plenty of other data upon which he can be brought into court, but his new plans for the expansion of the teamsters union are so far reaching as to justify fear all over the country. It would, as Senator GOLDWATER said, give him control of the Nation.

Several things contributed to the general shock of the Hoffa acquittal. One was that the jury was composed of 8 Negroes and 4 whites. Another was that Joe Louis, former heavyweight champion, was in the court to see, as he said, "what they are doing to my friend, Jimmy Hoffa." Besides the fact that he is a hero to practically every Negro in America, Joe's expenses were paid with teamster union dues. A third thing was the extraordinary way in which the press in general "hush-hushed" the racial jury majority and Joe Louis' presence and statement.

It was printed, of course, but not widely commented upon. If there was anything more unethical than this Joe Louis incident, it cannot now be recalled. Yet, no protest along this line has emanated from that ethical pair—the Messrs. Meany and Reuther. Nor, so far as noted, has any outcry come from any bar association, judicial authority or civic organization. That extremely articulate group—the Americans for Democratic Action, which hardly ever neglects an opportunity to articulate—has been completely silent on this subject. Perhaps future developments may throw some light upon the reasons for this reticence.

Outstanding Work of Salvation Army

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. WILEY. Mr. President, a brief item appeared in the newspapers of my State a few days ago which told a most significant story. The item described a well-deserved tribute paid by the assistant director of the correction division of the Wisconsin State Department of Public Welfare. The tribute was paid to that fine group of men and women who comprise the Salvation Army of my State and of our Nation.

This particular commendation was on behalf of the Salvation Army's inspiring interest in prisoners and parolees. But other tributes might well have been given for all of the many other splendid services which have been rendered since the inception of the Salvation Army by these soldiers of the Lord.

To them "a man may be down, but he is never out," and countless lives have been saved—thanks to the Salvation Army's humanitarian fulfillment of its Christian responsibilities.

I send to the desk the text of the writeup from the August 9 issue of the Milwaukee Journal, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PAROLE WORK GIVEN PRAISE: SALVATION ARMY

EAST TROY, WIS.—The Salvation Army's inspiring interest in prisoners and parolees was praised Thursday night by the assistant director of the State public welfare department's corrections division.

"Some of the original parole officers in this country were Salvation Army people," said Quentin L. Ferm, Madison, speaking at the Salvation Army's fourth annual State conference at its lake summer camp near here. "And the years have not dimmed your humane enthusiasm."

Salvation Army representatives, he said, "never fail to make visits to all of our institutions many times each year."

He urged delegates to promote public acceptance of former convicts in Wisconsin communities.

"If an ex-convict continually runs into discrimination and nonacceptance, we, the public, have poured all of our money for correctional institutions down a rathole," he said.

A statewide information program urging legacies for the Salvation Army was described to the more than 100 lay and professional delegates.

Lt. Col. Dallas P. Leader, of Milwaukee, commander of the division which includes Wisconsin and upper Michigan, said that almost 20,000 brochures would be mailed in the next 6 months asking citizens to leave money or property gifts to the Salvation Army in their wills.

Salvation Army income in the division last year was $949,187, Leader reported. The organization in 1956 gave 191,654 meals, presented religious services for 256,193, and helped 9,400 families, he said.

Delegates were urged to "speak to sell this outfit" by Lt. Col. Fritz Nelson of the group's Chicago territorial headquarters.

Boost in Discount Rate Means "Fed" Sees No Business Slump

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. MULTER. Mr. Speaker, the following article by Leslie Gould, which appeared in the New York Journal-American of August 9, 1957, very properly highlights the erroneous approval by the Federal Reserve Board to the entire problem:

BOOST IN DISCOUNT RATE MEANS "FED" SEES NO BUSINESS SLUMP

(By Leslie Gould)

The Federal Reserve, the Government agency that is supposed to have the best feel as to the economic pulse of the Nation's business, apparently sees no immediate letdown in business, nor any lessening of inflationary pressures.

This is the main conclusion to be drawn from the four Federal Reserve bank's increase in the discount rate—the charge to commercial banks borrowing from the central banking system. The other eight including New York will follow.

The increase firmly establishes the new, higher base for all credit. The increase from 3 to 3½ percent is the biggest upward change in 15 years and the largest change in this rate up or down since 1946.

REFLECTS VIEWS ON INFLATION

The Federal's action follows the increase in interest on prime loans by New York commercial banks from 4 to 4½ percent. That also was the largest percentage increase since right after the war.

Both increases, that in prime loans and in the discount rate, were exclusively forecast in this column on July 2.

The action by the Reserve banks had to be approved by the Federal Reserve Board in Washington. So, the change reflects the Board's views as to business conditions and to inflation.

A spokesman for the Board made the significant comment that if business did turn down the rates would be changed as the situation warranted.

The implication is clear. The Reserve Board sees no real letdown in business this fall. A slight recession would be ignored, just as the Reserve has ignored the rolling readjustment of the last year or so, with some lines lagging and others going full steam ahead.

NOT A CREDIT INFLATION

The Federal Reserve probably had to take this step, for otherwise banks could have made a little more by lending money on their commercial loans by rediscounting all those at the Federal. The gap between the discount rate and prime loans would have been an unusual 1½ percent and even greater on less gilt-edged paper. The change in the discount rate holds this gap to 1 percent.

The Federal Reserve insists it is still battling inflation. The trouble is that it is combating a credit inflation, which the current inflation is not. The 1929 inflation was chiefly a credit inflation.

This inflation is a wage-price inflation. It is not the result of any feverish bidding for credit for speculation, as in 1929. Nor is it the result of any shortages, with consumers vying for scarce goods. There are no shortages.

PASS ALONG INCREASES

Wages are going up, without any offsetting increases in worker productivity. The increases are being passed along to the consumers, except in the regulated industries, such as transport and utility services.

The higher interest rates, resulting from the Federal Reserve's tight-money policy, instead of checking the inflation, are to a degree adding to the inflation. It costs more to hire money, and interest is a business expense. The only softening influence is the tax bite. Interests costs are deductible against taxes, so 52 percent of the interest charge is paid by Uncle Sam. To pass it all off that way is just kidding the public.

The Gallup Poll—Most Voters Favor Right-To-Work Law

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. GOLDWATER. Mr. President, the Gallup poll recently sampled the feelings of the American people on the subject of the right-to-work law. The results of the poll were published a few days ago in the press of the Nation. I ask unanimous consent that an article on the Gallup poll, dispatched from Princeton, N. J., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GALLUP POLL—MOST VOTERS FAVOR RIGHT-TO-WORK LAW

PRINCETON, N. J.—If it were left to the voters to decide in a referendum whether the States should have right-to-work laws or not, the odds would heavily favor the widespread adoption of the law.

A coast-to-coast survey by the American Institute of Public Opinion finds that more than 6 out of every 10 voters, or 63 percent, say they would vote for such a law, while 27 percent say they would vote against it.

This is not to say that the public is anti-union. Institute surveys over the last two decades have consistently found the public to be overwhelmingly sympathetic to labor's right to organize for collective bargaining.

But today's survey evidence indicates that many people thing unions overstep their rights when they coerce employees into joining unions.

Sentiment among union members questioned in the survey is almost the exact opposite of that of the general public. Union members say they would vote against a right-to-work law by a margin of 61 to 33 percent.

As a result of the Senate Rackets Investigation Committee's disclosures, right-to-work laws have been widely discussed in legislative circles as one of the remedies that should be incorporated in the revision of the statutes regulating labor unions.

Senator JOHN L. MCCLELLAN, chairman of the Select Committee on Improper Practices in the Labor Management Fields, has already sponsored, as a civil rights bill amendment, a national right-to-work law that would outlaw all compulsory unionism.

With legislative proposals coming up for action in several States, the institute assigned its nationwide corps of reporters to first ask the following question in today's survey:

"Have you heard of State laws called right to work, or open shop, laws?"

While 2 out of every 3 voters said they were familiar with the laws, unions have done a better job of acquainting their members with the legislation, as the following table shows:

Heard of right-to-work laws

	Percent
General public:	
Yes	66
No	34
Union members:	
Yes	82
No	18

Interviewers next asked the following question involving the job-freedom principle, as follows:

"Some States have passed right-to-work, or open-shop laws that say each worker has the right to hold his job in a company, no matter whether he joins the labor union or not. If you were asked to vote on such a law, would you vote for it—or against it?"

Here is the vote nationwide and for union members only:

Right-to-work law

	Percent
General public:	
Vote for law	63
Vote against	27
No opinion	10
Union members:	
Vote for law	33
Vote against	61
No opinion	6

An analysis of the results by geographical regions of the country shows the majority of voters in each section are in favor of the law, with the strongest sentiment in favor showing up in the East, as follows:

East: Vote for the law, 69 percent; against, 22 percent; with 9 percent expressing no opinion.

Midwest: Vote for the law, 56 percent; against, 33 percent; with 11 percent expressing no opinion.

South: Vote for the law, 64 percent; against, 23 percent; with 13 percent expressing no opinion.

West: Vote for the law, 61 percent; against, 33 percent; with 6 percent expressing no opinion.

Right-to-work bills have already been introduced or are expected to come up soon in eight States: Connecticut, Delaware, Idaho, Illinois, Kansas, Maryland, Ohio, and West Virginia.

Civil Rights Vote

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. PELLY. Mr. Speaker, under unanimous consent to include extraneous material, I wish to have an editorial which appeared in the Seattle Post-Intelligencer on Monday, August 5, printed in the RECORD. The editorial which follows speaks for itself and is in accord with my sentiments:

CIVIL RIGHTS VOTE

The angry disappointment voiced by President Eisenhower at the 51–42 Senate vote

that killed the heart of the administration's civil rights bill, was justified. It is a disappointment, as he said, shared by millions of fellow Americans.

If a mere handful more of northern Democrats, who have been among the loudest trumpeters for civil rights, had given their support the injunctive protection of the right to vote, in the form sought by the President and approved by the House, would have passed.

It was to such Senators that Senator KNOWLAND, leader of the Eisenhower forces, appealed dramatically to remember the Democratic civil rights plank in the 1956 platform. He appealed in vain.

Their support of the jury trial amendment opens them to the charge that they were less concerned with passion for principle than with politics. It is a charge that seems likely to haunt them and their party for quite a while.

While it is true that legal subtleties confused the issue, especially to lay minds like ours, we think the President is right in his position that the jury-trial amendment makes right-to-vote protection "largely ineffective" and that "many Americans will continune in effect to be disenfranchised."

Subtleties will be forgotten. The essential purpose of the administration's efforts, to protect effectively the right to vote, will remain.

For this reason it appears more than probable that the Eisenhower Republicans, in losing the battle to protect the voting rights of Negroes in the South, have won the support of Negroes in the North and West to a far greater extent than swung to them in 1956. If this is so, the party of Lincoln will have reestablished itself.

As for the Democrats, the genuine liberals among them must be viewing the prospects with dismay.

Japan Will Import British Atomic Power Reactor, Believe United States Reactors Need Further Development

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a release on Atoms for Peace, written by the Whaley-Eaton Service, considered to be one of the most reliable of all information sources on atomic energy. The release, dated August 1, 1957, entitled "Japan Nears a Decision" follows:

JAPAN NEARS A DECISION

Japan's AEC has informally decided to import a 200,000-kilowatt to 250,000-kilowatt improved Calder Hall type reactor from Britain and a small pressurized water-type reacter, capable of producing 20,000 kilowatts, from the United States.

The British reactor is to be purchased by the nine private regional power companies together with the Government's Electric Power Development Corp. It is possible, however, that an entirely new agency may have to be established by the Government for the purpose of importing reactors, our Tokyo bureau reports. This possibility stems from the growing antagonism developing between the private companies on the one hand, and the Government company on the other. The new agency would presumably take the initiative for reactor imports.

The Atomic Research Institute at Tokai-mura is purchasing the American reactor, however. One experimental reactor is already set up at Tokai-mura but its opening has been held up while special piping was procured from the United States to replace a faulty section. The opening is now expected very shortly, Washington officials have been informed.

The decision to buy the improved type of British reactor rather than the presently operating type will slow up the Japanese atomic program, since the Calder Hall type—which uses natural uranium fuel—will not be completed until 1961. The Japanese feel, however, that it will be better able to produce power at rates competitive with thermal power rates now prevailing in Japan. The Japanese contend United States reactors have not yet proven themselves, since a test power station using any of the new United States reactor types has yet to be completed.

Japan will send an atomic power generation research team from private industry to Britain this fall. Atomic power agreements with the United States and Britain are to be speeded up. A Japanese draft is to be ready for Britain shortly. Talks with the United States are to begin simultaneously with those with Britain.

Jobs After 40: Resolution of Milwaukee Eagles

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

Mr. REUSS. Mr. Speaker, I was pleased to receive from Ray Markey, the dynamic and public-spirited secretary of New Milwaukee Aerie, No. 0137, of the Fraternal Order of Eagles, a copy of a resolution adopted by the aerie at its regular meeting on August 6 endorsing Senate bill 1073 to ban discrimination in employment because of age. I believe that Mr. Markey and my other fellow-members of the Eagles deserve great credit for their interest in this matter and I commend the resolution to the attention of my colleagues in the Congress:

Whereas hundreds of thousands of Americans, over 40 years of age, despite their experience, abilities, and vigorous health, are unable to obtain jobs because of the unjustified employment policies of many plants and firms; and

Whereas this vast army of capable and ready workers constitutes a deplorable, and in many instances, tragic, waste of a great segment of America's most valuable manpower; and

Whereas many of those denied jobs solely on the basis of age are the heads of families, or have other dependents, and employment policies against hiring them lead to personal frustrations, and discontent, often with tragic consequences, and are a denial of a basic right to every American, "the pursuit of happiness"; and

Whereas it has been indisputably established through surveys that mature workers are as good, if not better than younger employees, have more developed skills, have better attendance records, and on the whole are highly worthy of their hire: Now, therefore, be it

Resolved, That New Milwaukee Aerie, No. 0137, of the Fraternal Order of Eagles, goes on record in support of passage of bill S. 1073, introduced by United States Senator JACOB JAVITS, of New York State, which would ban discrimination in employment based on age; and be it further

Resolved, That New Milwaukee Aerie carry on a broad educational campaign to obtain the support of management, labor, and the general public for job opportunities for older workers; and be it further

Resolved, That copies of this resolution be sent to our representatives in Congress and to our two United States Senators.

Our Monetary Situation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter which appeared in the New York Times on August 6 written by a well-known Washington economist, Dr. Elgin Groseclose. In this letter to the Times' attention is called to the departure from reserve theory of a 25 percent ratio.

Dr. Groseclose is an international economist and business consultant and is the author of Money: The Human Conflict and other works on money and banking. I commend it to the attention of the Congress.

The letter follows:

OUR MONETARY SITUATION—DEPARTURE FROM RESERVE THEORY OF 25 PERCENT RATIO NOTED

To the EDITOR of the NEW YORK TIMES:

Edward Collins' article, The Policy on Gold, in your July 15 issue is excellent as usual. But it misses the main point of concern for the future of the dollar. This is because the point is also ignored by the authorities whom Mr. Collins discusses.

The point is the effect not of the actual technical position of the dollar but of the speculative license it breeds, and its consequences, because the dollar is not anchored to to a tangible rock but floats on the sea of public policy subject to every wind of fear or exuberance.

Now, it is true that the $13.4 billion held here by foreign Governments and central banks is not likely to be drawn down under current conditions. This is so for the reason—Mr. Collins states—namely, the strong inward flow of invisible payments and the consequent demand here for dollars for their settlement.

Abroad, the familiar pattern of the 1920's, in which a European boom was financed by dollar credits, is being repeated. It will be recalled that the 1929 crash was foreshadowed by the collapse of the foreign bond market a year earlier, marked by the failure, in May 1928, of a Danish Government bond issue (a prime investment risk) to find acceptance in the market.

That ended the flow of capital investment abroad, and sharply halted the inflationary boom abroad. Speculative enterprises, no longer able to tap cheap money, began to fold. The effects widened, trade slowed, and when the Austrian Credit-Anstalt failed in 1931 a general European collapse followed.

A moratorium on reparation payments was followed by the standstill agreements, but

without effect. The United States credit structure was disintegrating; the creation of the huge—for the times—lending agency, the Reconstruction Finance Corporation, proved futile. The suspension of gold payments, the bank holiday and the beginnings of the welfare state followed.

PRESENT MONETARY PRACTICE

What is the situation today? At the end of 1956 the total money and quasi-money in circulation in all countries members of the International Monetary Fund, as reported by the fund, may be calculated at around $145 billion, stating the various currencies in dollars at the dominant rate of exchange. Against this amount of money the member governments held reserves equivalent to about $29 billion, or at a ratio of about 20 percent. But of the reserves only about $15 billion consisted of gold, the balance being foreign assets; that is to say, dollar deposits. Thus it may be calculated that each dollar of bank deposits in this country held by a foreign central bank supported some $5 of foreign money, which means that upon $1 of gold some $50 of bank money has been created abroad.

Actually, the statement is somewhat academic in conditions of universal nonconvertibility. But it indicates how far monetary practice has drifted from the reserve theory of 25 percent ratio.

At home, the effects are more subjective but not less noxious. Increases in the discount rate and other policy measures fail to dampen speculative enthusiasm for the reason that no one is persuaded that a depression is possible in a welfare state economy.

Everyone is convinced that if the going gets hard Uncle Sam will bail out the luckless and pour money into the economy, regardless of the effect on the reserve ratio. Indeed, we have the assurance of the Secretary of the Treasury that the Government would not hesitate to declare a moratorium if a run on the reserves developed from abroad.

And why should not the American citizen feel this way? We have been bailing out other countries for the past 10 years without requiring them to put their houses in order. Why should not the money presses start rolling if a domestic debacle develops? Surely the children of the household are to be regarded as well as those on the doorstep.

ELGIN GROSECLOSE.

WASHINGTON, *July 28, 1957.*

Are We Willing To Pay the Price of Liberty?

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. REES of Kansas. Mr. Speaker, under permission approved by the House, I am including an interesting and informative address delivered by Gov. Ruben Wagnsson, of Kalmar, Sweden, on the occasion of the annual banquet of the National Committee for the Prevention of Alcoholism on July 24, 1957. I believe Members of the House will want to read this interesting statement:

SPEECH BY GOV. RUBEN WAGNSSON, OF KALMAR, SWEDEN

In 1851, a Swedish authoress, Frederika Bremer, published her memories and impressions from several years of travel in the United States. I shall quote a passage from her interesting book: "The American is a young man, who builds his own road through the world, fully confident of his own capacity, who finds nothing impossible, has faith in everything, hopes everything, tries everything, experiences everything and emerges unhurt out of it all. Should he fail, he will rise at once, saying: 'It does not matter'. Should he fail, he will say: 'try again'. His work and aim remains this: always to work, to build up, to begin anew with new tasks, constantly developing and expanding himself or his country. * * * And he accomplishes all this not with gnashing of teeth and with sighs but joyously and in good humor. This, above all, the people of the new world have in preference to the old world: a warmer heart, a more energetic, vital, and youthful life."

Let me assure you that my impressions of America and the Americans of today do not differ very much from Miss Bremer's. I have found very little here in America of the mental plague of Europe, that paralyzing suspicion that there isn't very much to do about this world of ours, that it is going to the dogs anyhow. It is not unnatural that such a belief is widespread in a war-plagued, fear-ridden, and destitute continent and it is still less so if we consider the contrast between the hopes we held and the reality that surrounds us today. However, such a situation isn't new to us.

After the First World War some prophets of disaster kept telling us that civilization had no chances of survival. And still—there are no 20 years in the history of man, comparable to those two decades between the world wars. Not only was materials progress rapid and revolutionizing—to the laboring masses there came the message * * * that we are all heirs to the kingdom of human culture and have a right to share its splendor.

If you doubt that fact, the progress of our civilization has not been curbed, if you feel like saying that there is nothing more to be expected from the future, there is a simple test you can make. Don't ask just in general if there is progress in our world. Ask the farmer, "Oh, yes," he will tell you, "there are a lot of interesting things happening in my field. In many parts of the world the crops have doubled in 40 years. * * * And perhaps you have heard of those interesting experiments that seem to be giving us new fruits, not to speak of the improvement of old brands?" You may ask the engineer, and he is likely to answer something in this line: "There are a great number of really important new inventions registered with the patent offices every day. * * * Complicated machinery is reduced to new simplicity and efficiency. * * * Simplification goes hand in hand with increased purposefulness and power. * * * Simultaneously, we are amassing such enormous lots of knowledge that it is no longer possible for one technician to master even a small part of it. We have to specialize rather strictly, and on top of that we have had to put in a lot of teamwork. I suppose that indicates that there is a lot of progress in engineering today."

Everywhere you will find the same: A civilization teeming with new ideas, a tumult, not of destruction but of construction, to a degree never experienced or dreamed of by former generations. There may be one field where this tendency of progress is deplorably weak; the all-important field of human relations, the problems of successful and efficient government. I have been a politician during most of my life, so I modestly claim to know something about it. * * * There are many problems, for example, unemployment and the administration of large public works, that we know more about and are able to handle better than we did some decades ago. Still the problem seems to be that the atomic age is ruled by stone-age morals. * * * We shall perhaps never be able to do away with clashing interests in private and social life. It is not unreasonable, however, to maintain that new methods of investigation of social problems * * * may be found. Undoubtedly these problems are much more difficult to solve than those of technology or medicine. * * * We have explored and exploited some of the possible fields of human creative activity. Others have been left aside. But it is not axiomatic that they should be left in such a state for all the years to come. * * * The day shall come when we shall apply our richly differentiated technique of scientific thought on the intricate problems of human relations.

If we consider the fact that the speed of progress has been accelerated in a fantastic way in the past few centuries, * * * it is reasonable that we ask: Could a dying civilization renew itself to such a degree? Would it even be conscious of its own crisis, discussing it * * * fighting it as we are doing? No, these are not the death throes of western civilization. They are its birth pains. What we have seen is just a beginning. It may die from its red measles or some similar ailment of some other color. But it is certainly not dying from old age.

However optimistic I am, I cannot deny * * * the dangers surrounding us. If we are to survive, we must not give up the central and fundamental values of democracy. Paramount among them is liberty. * * * If we do not recognize the equal rights of nations, races, and classes, we shall have no liberty and no brotherhood among men.

It is, as a matter of fact, my thesis today, that the whole crisis of our civilization may boil down to the question: Are we willing to pay the price of liberty? Briefly, I may try to state that price, in the following way:

1. We need an all-out effort in western democracy to make it function with an efficiency that leaves bragging dictators and their systems far behind.

2. The whole of our democratic society must be permeated with the ideas of political and spiritual liberty. This, in its turn, is not possible if we do not create a democracy that extends beyond the voting power and the right to have a say in the wage market. It is quite as important that the cultural rights of the citizen are recognized.

3. We must build our future on the perception of our civilization as an expanding unity, capable of progress and reshaping. It is much easier to make a progressive society with increasing production and an ever-increasing treasure of thought and art fulfill the ambitions of brotherhood and equal rights than it is with a static society in which the fight for survival goes on unrelentingly.

Let me make a few comments on these three points. Point No. 1 must be understood to include the willingness of democracy to fight the perils inevitable wherever narcotics and alcohol are used. The public mind has been disturbed over the whole United States by the news of widespread drug addiction among young people.

Still there is no doubt that the damage caused by drugs is comparatively small if you consider the continuous and increasing effect of drinking upon the health and efficiency of the peoples of the Western world. It is very likely that industrial production would increase by 5 to 10 percent if we could abolish alcohol. That 5 to 10 percent would mean a lot in the social budget, and yet this is insignificant in comparison with the improvement in home life, road safety, and cultural standards to be gained by resolute action against drinking.

I would rather like to stress the point of cultural standard of living. * * * I do not say that the teetotaler is morally superior to the man who takes a drink every now and then. But I regard total abstinence as the sensible, clear cut attitude naturally adopted by everyone who believes in the

...ness and beauty of life, the inspiring ...sibilities inherent in man and the glor... ...s vistas of development and progress. ...u can never deny the fact that in every... ...r life drinking is very often the rival of ...her ambitions. To meet the problems ...today we need clear thinking and willing... ...s to accept responsibility. Drinking tends ...develop in the common man an attitude ...at means that you try to take out of life ...hat personal joy you can get. You don't ...ther about social or international prob... ...ms. You are afraid of the facts of stark ...lity and prefer to avoid them by drugging ...ur brain. The responsible way of living ...eans that you accept reality even if it re... ...is you—not to leave it alone and be left ...ne, but in the intention to reshape the ...rld according to your ideals.

* * * * *

It is important that the temperance move...ent does not content itself with walking ...ound in the well-worn clothes of our fore...thers. New methods, new approaches are ...perative, and I know that the American ...stitute of Scientific Studies for the Preven...n of Alcoholism represents such a new ...proach to a vast social, medical, and moral ...oblem.

What I have just said links up with the ...hole question of the cultural platform of ...mocracy. We have a higher standard in ...terial things today than ever be...re. * * * I am not quite so sure about ...e cultural and mental standard. Democ...cy should tell us: You have fought for ...ur political rights, you have conquered ...hort hours and high wages. The time has ...me to fight for your cultural rights as a ...tizen of democracy. Fight for your right ...read the best books, to hear the most ...autiful music ever composed, to see the ...ost wonderful works of art ever created. ...e must no longer accept the infantile su...erstition that the working classes should ...e on a lower standard of culture than ...her groups of society. * * * We are all ...titled to a chance of benefiting from the ...st of human culture.

As for point No. 3, I will say this: It is ...rrible to see the regress in liberty in the ...ternational field. * * * If it were not for ...erica, the future would be very dark in...ed. It is the strength of the United ...ates that guarantees the existence of any ...eedom at all in the world today. Some...mes we think that we see a glimmering of ...ht in the darkness, but such brutality as ...s exercised by Russia in Hungary quickly ...mpens any hopes we may have cherished.

One hundred years ago some young people ...n the State of New York founded an or...nization called "The International Order ...f Good Templars." This order brought the ...irit of the American pioneers to a back...ard, poor, far-off land, my own country, ...weden. The International Order of Good ...mplars helped to form Sweden into a ...odern democracy, and today Sweden is ...ooked upon as a progressive democracy, en...ied all over the world for its high standard ...f living and its educational level. In ...weden the Good Templars run 1,600 public ...braries. They have built more than 1,200 ...alls, open to any democratic activity. ...* Statesmen and administrators have ...ome from their ranks. Members from all ...ur political parties have been educated in ...ood Templar lodges, and there they have ...arned to cooperate for the good of society. ...* All that was the outcome of the ini...iative of a handful of young Americans a ...entury ago. Let us have more of that vi...al Americanism that makes the world a ...etter place to live in. Let us be proud of ...ur heritage of freedom. Let us state what ...e believe in, as citizens of a democratic ...ociety and citizens of the world:

We believe in free thought, in the capacity ...f reason and reasearch to bring clarity and ...oherence to our existence. We believe that knowledge and education will prove themselves to be stronger than the antiquated misconceptions and misevaluations of totalitarian theories. In our life as human beings and as citizens we prefer to stand in the service of truth and reason to giving obedience to blind instincts and traditions.

We believe in brotherhood. We give our fraternal hand to all nations and races, knowing they all have their tasks in our common fight, the fight that shall lead to world peace. * * * We believe in the miracle of creative achievements, in the holy spirit vindicating itself wherever goodness conquers indifference and progress overcomes stagnation. Each one of us is weak and brittle, but in union we stand in the service of the Lord of Hosts, bound together by the obligations of brotherhood, inspired by the ideals of humanity. It depends on you and me to give meaning to our lives. It is up to us to dispel darkness, to mitigate suffering, to build new roads through the wilderness, and create a new world.

The Issue of Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. PELLY. Mr. Speaker, the civil-rights bill, as amended at the other end of the Capitol, has come back and is languishing on the Speaker's table.

This measure as it reads now is not just a watered-down version of the bill that passed the House some time ago. Instead, stripped of its confusing legal subtleties, it no longer provides for the needed protection of the right to vote of southern Negroes. And to accomplish this negative effect, it introduces a complete reversal of our system of jurisprudence, substituting a new and dangerous doctrine of government by men for our historic constitutional concept of government by law. That is the result of interposing a jury between the judge and the enforcement of his injunction.

I will not comment as to whether support of the jury-trial amendment in the other body was politically motivated. The press and the public are competent to decide that issue more effectively than the gentleman from Washington [Mr. PELLY].

But I will say I would respect the 18 Members of the other body who voted against final passage of this bill more than I would respect any who supported the bill knowing its enactment was sabotaging its objectives.

Also, Mr. Speaker, I can understand those who are against civil rights saying the bill in its present form is acceptable and therefore it should be considered now without an attempt to obtain a stronger bill. Certainly I can understand that attitude because, in effect, this measure as now written would afford no protection at all to those it seeks to protect. As written the bill would only serve to stir up racial animosity and create disturbances.

Having succeeded in the passage through both Houses of the first civil-rights bill in more than 80 years let us not capitulate. If need be we can stay and face a filibuster. A patient effort should be made to resolve the differences between the House and Senate. Even though the Democratic leadership says this is a satisfactory bill, let us acknowledge that acceptance of the jury-trial amendment represents absolute defeat to the southern Democrats.

Not only the right of every citizen to vote is at stake, but now we must decide if, as our forefathers provided, we shall remain a Government of law or if we are to change to a system of government by men. With either issue there must be no compromise.

Beauty of the American Countryside in the Pacific Northwest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 12, 1957

Mr. NEUBERGER. Mr. President, at a time when some of us in the Senate are putting forth every effort to preserve the outdoor beauty and grandeur along our interstate highways, it is appropriate to call attention to the majesty of the American countryside. This has been done most effectively and movingly in a brief article by a warm personal friend of Mrs. Neuberger and mine, Mrs. Katherine Wonn Harris, in the August 5, 1957, issue of the Lebanon Express, of Lebanon, Oreg.

Mrs. Harris has emphasized, in her essay, the transition between the seasons of summer and autumn which always brings such poignant and idyllic beauty to the Pacific Northwest in the month of August. I ask unanimous consent that her article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUMMER PAUSES ON THRESHOLD OF FALL
(By Katherine Harris)

August is here and, by the calendar, summer still has nearly 2 months to go. But by the texture of atmosphere, of leaf and flower and root and vine, summer is on the wane. The trend to fall is obvious in sunset, in field and even in the treetops.

This is the time when green and growing things settle back for a breather and then move on to harvest ripeness. It is a pause more felt than seen for this is the time when haste and urgency of growth slows down.

Evident everywhere is the season's achievement. The grasses come to seed and droop dustily along every roadside. Wild blackberry thickets are heavy with completion. Early apples weigh the limbs and windfalls stud the brown orchard grasses.

Garden weeds discouraged by the vigorous hoe of June, are springing up to mock the gardener and test his August staying power.

The South Santiam river is languid, and its feeder creeks, so lusty in June, are now low with stony beds naked to the

sun. My lone vine maple, far from its mountain kin, is rosehued and bears for the first time this year, delicate winged seeds.

Our swallow nestlings are on the wing and safely away. This to the chagrin of the cat, Alley, who camped patiently under the bird house for days waiting for a young one to fall.

The blackbirds are flocking, further proof of the waning season. The dust of harvest drifts over the fields, and high in the air thistledown floats lazily.

So August is here, and midsummer. But across the valley westward, and east over the Cascade foothills is the glow of autumn.

Criticism of Calder Hall

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. PRICE. Mr. Speaker, the article, for which I am asking unanimous consent to insert in the RECORD, should be of interest to all Members of Congress in the light of debate in the House of Representatives last week when the Atomic Energy Commission's Authorization Act was under consideration.

Calder Hall is the British reactor in the class of the gas-cool, natural uranium reactor which the majority of the members of the Joint Congressional Committee on Atomic Energy believe the United States should be exploring.

There is no question about the British claims that Calder Hall is the only nuclear power station in the world now producing electricity on an industrial scale.

I herewith submit an item which appeared in the July 1957 issue of Atom, which is the monthly information bulletin of the United Kingdom Atomic Energy Authority.

CRITICISM OF CALDER HALL

In the House of Commons, Mr. Chetwynd asked the Prime Minister whether he is aware of the defects in the British type of reactors which have been criticized at the Tokio Atomic Energy Conference, details of which have been sent to him; and, in view of the effect of such criticism on potential customers, what action he is taking to counteract these statements.

Wing Commander Bullus asked the Prime Minister, in view of the recent criticisms of defects in the British type of reactor, what action he proposes to take to counteract the effect of such criticism on this country's overseas trade.

The Paymaster General: "I have been asked to reply. I have received reports of remarks made about the Calder Hall type of reactor at a conference in Tokyo, organized jointly by the American and Japanese Atomic Energy Forums, which are organizations of industrial firms concerned with atomic energy. The reactors at Calder Hall have gone into operation more smoothly and with far less trouble than is normally experience in starting up a conventional power plant; and the reactor system continues to show great potentialities for further development. We shall be glad to show any customers both the limitations and potentialties of Calder Hall, which is the only nuclear power station in the world producing electricity on an industrial scale.

"The best answer to criticism is to show what we have already achieved—and the critics have not."

SEVEN POWER STATIONS

At the present time Harwell is working on seven types of nuclear power stations. This is because the development period for some of the newer types is likely to be long—over 10 years—so it is important to begin early. It is also unlikely that all these types will come to maturity. It is usually impossible to decide on the relative economic merits of different alternative types without studying the technological problems for several years.

Our highest priority is given to successive improvements in the Calder Hall type of nuclear power station—which uses gas-cooled graphite-moderated reactors as a source of heat. We can envisage a succession of improved marks just as one type of aeroplane developed from a DC–3 to a DC–7B.

We are also studying the advantages of substituting liquid sodium for CO_2 gas to transfer the heat from reactor to steam generators. This would allow more heat to be extracted from each ton of uranium, so the reacter could be smaller for a given output and capital costs would be lower. To balance this, there are difficult problems of compatability of the liquid sodium which need investigation, and fuel economy will be worse. We do not yet know whether sodium cooling will show economic advantages over improved gas-cooled reactors.

A further development of the gas-cooled reactor seems possible by using fuel elements which are completely ceramic in type so that temperature might be increased to 800° C. This reactor system has many development problems and a 3 to 5 year Harwell experimental period is envisaged.

We are also working on the development of the fast breeder reactor with the objective of increasing hundredfold our utilization of uranium in the period from 1970 onward. We envisage fast reactors fueled by plutonium from our earlier gas-cooled graphite-moderated reactor. The plutonium would be fissioned and surplus neutrons would transmute U–238 in the reactor into still more plutonium. In this way we should essentially be burning the abundant U–238 rather than the scarce U–235.

We are also studying the technology of reactors using liquid fuels such as uranyl sulphate or U–233 dissolved in liquid bismuth. The long term objective of these systems is to achieve breeding or near breeding in the U–233—thorium system, thereby bringing the world's large resources of thorium into use. These reactors might also have very low fuel costs.

The development of any 1 reactor system requires the collaboration of up to 100 scientists and technologists from 5 or 6 divisions of the establishment. Nuclear physicists have to provide the nuclear data; reactor physicists and theoretical physicists by experiments and calculations determine the important parameters of the reactor—core size, lattice pitch, fuel element shape and size; the chemists study compatability of the coolant and reactor materials; the chemical engineer studies fuel element processing; the metallurgist develops fuel elements; and the engineer carries out heat transfer and fluid flow experiments and develops reliable mechanical components such as mechanisms for charge and discharge of fuel elements. This last seems to be the most difficult of all.

For all this work we are equipped with powerful tools such as accelerators and research reactors with rather elaborate laboratories for radio chemistry and metallurgy.

LAWS RELATIVE TO THE PRINTING O DOCUMENTS

Either House may order the printing of document not already provided for by la but only when the same shall be accomp nied by an estimate from the Public Print as to the probable cost thereof. Any exec tive department, bureau, board, or indepen ent office of the Government submitting r ports or documents in response to inquiri from Congress shall submit therewith estimate of the probable cost of printing t usual number. Nothing in this section r lating to estimates shall apply to reports documents not exceeding 50 pages (U. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, whe presented to either House, shall be referr immediately to the Committee on Hou Administration of the House of Represent tives or the Committee on Rules and Admi istration of the Senate, who, in making the report, shall give the probable cost of t proposed printing upon the estimate of t Public Printer, and no extra copies shall printed before such committee has report (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SAL

Additional copies of Government public tions are offered for sale to the public by t Superintendent of Documents, Governme Printing Office, Washington 25, D. C., at co thereof as determined by the Public Print plus 50 percent: *Provided*, That a discount not to exceed 25 percent may be allowed authorized bookdealers and quantity pu chasers, but such printing shall not inte fere with the prompt execution of work f the Government. The Superintendent Documents shall prescribe the terms a conditions under which he may authori the resale of Government publications b bookdealers, and he may designate any Go ernment officer his agent for the sale of Go ernment publications under such regulation as shall be agreed upon by the Superintend ent of Documents and the head of the re spective department or establishment of t Government (U. S. Code, title 44, sec. 72 Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printe to print and deliver upon the order of an Senator, Representative, or Delegate, extract from the CONGRESSIONAL RECORD, the perso ordering the same paying the cost there (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction o the Joint Committee on Printing, may prin for sale, at a price sufficient to reimburse th expenses of such printing, the current Con gressional Directory. No sale shall be mad on credit (U. S. Code, title 44, sec. 150, p 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to fur nish to subscribers the daily RECORD at $1.5 per month, payable in advance.

Remit by money order payable to Superin tendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Texans Devoting Constructive Thought to Water Problem

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. JOHNSON of Texas. Mr. President, every day brings new evidence that the people of Texas are thinking long and hard about our State's water problem and how it can best be solved.

A recent editorial in the Beaumont (Tex.) Enterprise commends the announcement that the Corps of Engineers and the Bureau of Reclamation have been asked to coordinate their efforts, down to the field level, to bring about adequate development of the water resources of Texas.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Beaumont (Tex.) Enterprise of August 5, 1957]

JOHNSON'S WATER PROGRAM

We aren't sure that Senator LYNDON JOHNSON covered enough ground when, speaking of his home State of Texas, he said "the water supply problem is the one limiting factor on the continued growth of our population and the continued expansion of our economy."

But he certainly hit upon one of the biggest headaches.

Announcing that a big-scale water development program for the State is on the way, the senior Lone Star Senator said:

"I have asked the Corps of Engineers and the Bureau of Reclamation to give me an overall water program for Texas by April 30, 1958. I am expecting the two agencies to work together, down to the field level, in advising and carrying out this program."

And what about the cost? JOHNSON expects Uncle Sam's bill to be perhaps $1.3 billion over a 25-to-30-year period.

The long-range planning angle is highly important, because no program of the type JOHNSON envisions can be practical unless it is carried out on that basis.

As everyone would have known "the purpose of this program is to keep Texas from running out of water and to prevent heavy flood losses * * *."

The same holds true for the statewide program for water use and conservation that was approved in part by the last session of the legislature, and of many other plans of a local or district nature.

Gov. Price Daniel considers it imperative that the other part of the State program be put into operation as soon as possible, and to accomplish this is one of the reasons why he seeks a special session of the legislature in October.

The same commonsense reasoning lies behind efforts of farsighted east Texans to push to completion the multipurpose McGee Bend Dam.

Senator JOHNSON made it very clear that he considers teamwork at the State and local levels as essential to the success of the program he envisions, adding:

"State officials and Texas river authorities will determine how they can best tie in their efforts with those of the Federal agencies."

Fingerprinting of Exchange Students and Others

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Roscoe Drummond, appearing in yesterday's New York Hearld Tribune, in which he emphasizes what I have tried to emphasize in a bill introduced in the Senate, and in a strong plea to the Senate and to the committees which handle such proposed legislation, that the fingerprinting requirements in our immigration laws, as they apply to the exchange of students, sports teams, ballet companies, theater companies, musicians, and a great number of others who can be absolutely invaluable in the person-to-person program between ourselves and the countries behind the Iron Curtain, should be dispensed with on a reasonable basis, and in the discretion of the Secretary of State.

There is no more powerful answer to the Russian propaganda which proceeds not from a desire for cultural exchange, but from the fact that it is found very convenient to blame on us the fact that it lags, than giving this discretion—again, I emphasize, on a reciprocal basis, and in the discretion of the Secretary of State.

The bill which I and other Senators have introduced is very simple. It consists of about five lines. I very much hope that the Senate will not fail to act upon it at this session, and strike a real blow for freedom.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW MOSCOW CLOBBERS US

(By Roscoe Drummond)

WASHINGTON.—On one of the most crucial fronts of the cold war the Soviets are clobbering us.

Where we should be winning naturally and magnificently, where all the means of winning are on our side—except that we have temporarily thrown them away—we are losing miserably and unnecessarily.

It's time to do something about it—right now and before Congress adjourns and thereby again fumbles the ball.

Something can be done about it. It's not difficult; it is quite simple.

What I am talking about is this:

The Kremlin is successfully picturing the United States around the world today as the one nation unwilling and afraid to engage in a man-for-man, reciprocal exchange of students and specialist groups between the Soviet countries and America.

And is successfully picturing itself as unafraid and eager to let many more American students and specialists into the Soviet Union—if we will reciprocate.

We are pictured as timid, scared to let citizens from Russia and the satellites see the United States, and intent upon maintaining an American "Iron Curtain" against cultural exchange.

They picture themselves as anxious and intent upon extending cultural exchange at every opportunity with America and completely ready to extend reciprocal freedom of travel.

This is a tremendous propaganda victory for the Kremlin.

There are times when the Soviets are going to win a propaganda victory because the advantage may be with their side. But in this instance the advantages belong with the free nations and should and would belong with the United States if we hadn't thus far thrown our advantage away and thrust into the hands of Moscow the very brush with which they are tarring us.

We are just beginning to feel the full effects and see the full consequences of our mistake of imbedding into the Immigration Act the requirement that visitors must give their fingerprints to the United States Government before we will grant them visas.

And how the Soviets relish it; that is, relish taking advantage of it.

Here's what we do for them:

1. We give them the most honey-laden jampot of anti-American propaganda conceivable. It is absolutely sure-fire, guaranteed to win converts and influence waverers everywhere. The United States makes itself the only nation in the world requiring fingerprinting for visas to visit this country. Since we alone impose this requirement, since fingerprinting is associated with crime-detection and is abhorrent to many people, particularly giving your fingerprints to a foreign power—Moscow has no trouble convincing much of the world that we are the ones who are against cultural exchange, that we fear having visitors from Communist nations see America and fear having American students, artists, scholars, and specialists see the Soviet Union. We lose on this one, have no doubt about it.

2. Further, we play right into the Kremlin's hands on another point. We put into their hands the device which enables the Soviets to control and restrict the travel of Russians while appearing to put the blame on America. They have no trouble persuading their people that they ought not to yield to American demands to be fingerprinted and therefore they ought not to travel to the United States or only those should travel whom the government encourages to travel.

I am by no means certain that the Soviets want to expand cultural contacts with America. It would be to our advantage if

they did. We ought to find out and we ought not to give the Kremlin an American-made excuse for restricting the right to come here to a very limited group. The Kremlin may restrict the travel of its nationals, but at least we could take the American label off the restriction.

Why no make one simple, single change in the Immigration Act this month—take out the fingerprinting requirement. The President is for this action. So is Secretary Dulles and Attorney General Brownell. J. Edgar Hoover, Director of the FBI, raises no objection. "Mr. Immigration" himself, Representative FRANCIS WALTER, Democrat, of Pennsylvania, has proposed it in the past.

Why not do something about it now—at this session of Congress?

Effect of Court Decisions on Criminal Investigations

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. JOHNSON of Texas. Mr. President, I have received the text of a resolution adopted by delegates to the 79th annual conference of the Sheriffs' Association of Texas, meeting in Houston, Tex., July 21 to 24.

I ask unanimous consent that this resolution, which deals with recent court decisions, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas there have been a series of court decisions rendered by the United States Supreme Court, Texas Court of Criminal Appeals, and other appellate jurisdictions which have worked to the detriment of the law enforcement profession in nullifying the most effective methods of criminal investigations; and

Whereas as a result of these decisions our society is being deprived of the protection of effective prosecution of persons accused of felony violations; Now, therefore, be it

Resolved, That this association voice its displeasure with these dicisions; and be it further

Resolved, That the Congress of the United States be called upon to take such action as may be necessary to rectify this undesirable trend; and be it further

Resolved, That a copy of this resolution be transmitted to Senator LYNDON B. JOHNSON, Senator RALPH W. YARBOROUGH, and to each Texas Member of Congress.

Death Penalty Question

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. NEUBERGER. Mr. President, because the entire question of the death penalty for capital crimes is a Federal as well as a State issue, I want to call to the attention of the Senate a report from the Bulletin of the Oregon Prison Association for July 1957, which describes an address on this subject by State Representative Robert B. Duncan, of Medford, Oreg.

Mr. Duncan is an able and enlightened attorney who believes that abolition of the death penalty would be a civilizing step that would not have an adverse impact on the crime rate. I call particular attention to that portion of his address in which he stresses that States without the death penalty actually have lower homicide rates than those in which the death penalty is still exacted.

Both Mrs. Neuberger and I are members of the Oregon Prison Association, which is one of the most useful and socially beneficial organizations in our State. It is fortunate in having an outstanding and capable secretary and director in Mrs. Claire Argow, a trained and experienced social worker.

I ask unanimous consent that the excerpt from the bulletin of the Oregon Prison Association reporting Representative Duncan's address be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEATH PENALTY REEXAMINED

"The modern trend throughout the world is to eliminate the death penalty and to substitute rehabilitation."

This was the statement of Robert B. Duncan, State representative from Medford, in his address on May 22 to the 54th annual meeting of the Oregon Prison Association in Portland.

The speaker was one of the sponsors of the constitutional amendment calling for abolition of the death penalty which will be submitted to the voters in November 1958.

Mr. Duncan, himself an attorney, quoted Clarence Darrow, famed criminal lawyer, who maintained that capital punishment was reserved for the poor and friendless. The speaker also pointed out that the death penalty has not succeeded in reducing capital crimes and he emphasized that the States without the death penalty have lower homicide rates than those which still demand the supreme punishment.

PROPOSED AMENDMENT DISCUSSED

In discussing the proposed constitutional amendment, Mr. Duncan stated that capital punishment would still be mandatory as punishment for treason and would be a possible punishment for first degree murder when committed by one already serving a life sentence.

He added that a second law, which would become operative only if the constitutional amendment is approved, provided that those convicted of first degree murder would be required to serve 15 years before becoming eligible for parole. He also emphasized the fact that eligibility did not mean automatic release but that the unanimous approval of the parole board would be required before such a person was returned to the community.

"If the resolution is defeated," Representative Duncan concluded, "it will be defeated by lethargy of persons who favor it but fail to campaign for it."

NEW OFFICIALS NAMED

Stuart B. Mockford, Oregon City, was chosen president of the Oregon Prison Association and 4 vice presidents, 1 from each congressional district, were elected. These included Paul B. Bender, Beaverton; Judge D. R. Cook, Pendleton; George E. Wann, Portland, and Charles P. Champlin, Medford. J. D. Annand of Tigard became secretary-treasurer and Judge Ray D. Shoemaker of Portland continued as legal adviser.

Added to the board of directors were Winston L. Bradshaw, Oregon City; Rolla J. Crick, Portland; Sheriff Edward W. Elder, Eugene; Francis E. Harrington, Portland; William Hilliard, Portland; Willard A. Mears, Portland; Rev. J. Edward Oslund, Portland; Russell A. Peyton, Beaverton; Francis M. Reagan, Portland, and Dr. Edward A. Taylor, McMinnville.

Main Street of the Future

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. JOHNSON of Texas. Mr. President, one of the interesting developments of the times is a general rediscovery of the many virtues, social and economic, to be found in the small towns of America. Managers of industry are finding that small towns offer many advantages as sites for manufacturing plants. Men and women in increasing numbers are learning that small towns are wonderful places in which to live.

A weekly newspaper in a Texas town, the Beeville Bee-Picayune, recently published a thoughtful editorial on this subject; and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Beeville (Tex.) Bee-Picayune of August 8, 1957]

MAIN STREET—1969

The theme of the 1957 National Citizens Planning Conference, held in Little Rock, Ark., in recent days, was "Main Street—1969." The year 1969 referred to the scheduled completion of the 41,000-mile Interstate Highway System. The purpose of the conference was to enunciate and broadcast to all America a clear concept of the forces that are already at work creating the main streets of the future.

Perhaps the most dramatic explanation of what is happening is that of Elmer F. Twyman, vice president of Yale & Towne, who told the conference that America is being rediscovered.

"In the adventure of rediscovery," he said, "we are finding that there is land in all parts of our great country where industry can be established and where it can flourish; we are finding that everywhere there are men and women with skill and aptitude for even the most complex industrial tasks. Our system of communication and transportation has narrowed the expanse of time and space. Nothing is distant any, and all Americans are neighbors."

Mr. Twyman noted that "the continuing dispersal of industry, away from large, concentrated centers" strengthens our defense and security in this atomic age, but even more important is its influence on economic growth. This decentralization, he said, is equalizing prosperity for all."

The dispersal program of his own company has resulted thus far in three new plants in

small towns in Virginia and Tennessee, with others under construction in Arkansas, California, and North Carolina, so he should know whereof he speaks. "We found the strength of people," he said. "* * * Small-town Americans are generous, hospitable, and neighborly * * * good people to be among and good people to work with. * * * We found stability among people in small towns, the stability that comes from nearness to the earth. * * * They are purposeful and direct and proud of their capacities."

But what are the other advantages that industrialists look for in seeking new plant sites? Mr. Twyman lists them as: good transportation, good communications, nearness to raw materials and services, and a strong welcome and spirit of cooperation from officials and civic leaders."

Our people measure up. But how do we stand on other factors? Maybe we ought to check up, before 1969.

Dictatorship by Hoffa

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 13, 1957

Mr. CARLSON. Mr. President, the editor of the Salina Journal, Mr. Whitley Austin, has written an editorial, Dictatorship by Hoffa, which appeared in the August 6 issue of the Salina Journal, that I believe expresses the viewpoint of a great majority of the American people and I am sure expresses the views of the people of Kansas.

I recognize the great need in our American economy for a strong labor organization and further understand that it has been necessary to promote the growth of unions in order to curb the unfair practices of management in years gone by.

The time has now arrived when the unions themselves must assume the responsibility for the actions of their leaders and must be responsible for their conduct toward the American people.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DICTATORSHIP BY HOFFA

Why is Jimmy Hoffa of the teamsters a worry to businessmen and union men alike?

Today you can't move supplies or merchandise without trucks. You may ship by rail or you may ship by air or by water, but somewhere down the line you also are going to have to use trucks.

So a teamsters union controlling most of the truck drivers can tie up almost any business, any industry or any construction job.

This gives the teamster bosses the whip hand. They have power not only over business but also over other craftsmen and groups of workers.

If another union doesn't play ball with the teamsters, either in questions of jurisdiction over who does what work or in union policy and politics, the teamsters by picket and strike can in effect lock the other union out.

Other craftsmen may cross the teamster picket line but if the supplies for the job don't arrive, the other craftsmen have no work.

Not content with this monopoly of power, Jimmy Hoffa is reportedly dickering with the longshoremen's unions—the men who load and unload ships.

Hoffa also has more grandiose ideas about creating a superunion covering all forms of transportation, including railways and airlines.

Jimmy Hoffa is on his way to wield more real power than the President of the United States.

This has been permitted to come about for one basic reason. Congress has given unions an exemption from the antitrust laws that prevent other groups from monopolizing economic power and strangling competition.

This privilege is now proving a Frankenstein to the unions themselves. It has become a threat to the welfare of the United States.

Removal of his special privilege to dictatorship should be the first business of this Congress.

Opposition Shown to Proposed Regulations Restricting Trade in Firearms and Ammunition

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 13, 1957

Mr. JOHNSON of Texas. Mr. President, a number of Texans have made known to me their opposition to a proposal to amend and revise regulations relating to interstate traffic in firearms and ammunition.

The reasons for their opposition are summed up in a recent article by J. Cullen Browning, editor of the Orange, Tex., Leader. I ask unanimous consent that the text of Mr. Browning's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Orange (Tex.) Leader of August 6, 1957]

ACROSS THE EDITOR'S DESK

(By J. Cullen Browning)

Willett Kuhn, who has spent many hours teaching my youngsters and others how to handle firearms safely and how to put a bullet where it is supposed to go, has called attention to a highly objectionable proposal now under consideration in Washington.

Kuhn is a longtime member of the National Rifle Association and has that organization's rating of master shooter. That's as high as you can go in target shooting.

NRA and its members are fighting a proposal to amend and reissue regulations relating to interstate traffic in firearms and ammunition.

The battle is over the question of just how heavy a hand bureaucracy is going to lay on the traditional right of the American people to own and use firearms.

Some of the opponents view the proposed regulations as part of the plot by subversives to take over control of the country.

That may be a bit farfetched but there is certainly something amiss when it is proposed that the American people be required to wade through Government red tape every time they buy a box of .22 ammunition or shotgun shells.

And that is exactly what will happen if the proposed new regulations are adopted.

Here is the background for this battle of the bullets:

The Alcohol and Tobacco Tax Division of the Internal Revenue Service drafts and enforces regulations for interstate traffic in firearms.

Just how this particular agency was assigned this job is one of Washington's many little mysteries. But it was, and now somebody in the division, for a reason that is not quite clear, has decided that the present set of regulations is inadequate.

A much more elaborate set of rules has been drafted and may be adopted unless the American people speak out against them in a loud, clear voice.

Among the proposed new regulations is one requiring that all purchasers of firearms and ammunition of any kind in over-the-counter sales acknowledge receipt of the ammunition in their own handwriting in a record prescribed by the Federal Government.

At intervals, Internal Revenue Service officers would come poking around in the dealer's records and examining his "premises and stock," to guarantee compliance.

In short, you and the dealer both would become suspect every time you bought ammunition for target practice or hunting.

A public hearing on the proposed new regulations must be held before they can be adopted and it has been set for August 27.

NRA, in literature circulated in opposition to the proposed rules, notes two things about this hearing:

1. Whether by design or not, it probably will come after Congress has adjourned and most of the Senators and Representatives won't be around to attend the hearing in person.

2. The bureaucrats have made it very difficult for John Q. Citizen to voice his opinion at the hearing. Written statements must be in duplicate and material relating to each of the several sections in the proposed regulations must be separated and each must bear the number of the section to which it relates.

The best route for the average citizen interested in warding off this threatening new encroachment by bureaucracy on individual rights is to write a letter to his Congressman and Senator urging them to file protests.

And the NRA offers these reasons for protests:

"This is a vital question to every individual who believes in the right of American citizens to possess personal firearms for lawful purposes, free from arbitrary and unnecessary governmental control.

"The issue here is of far greater importance than the merit or lack of merit of any of the proposed regulations.

"The issue is whether under the guise of executive department regulation our rights in the private ownership of firearms can be strangled little by little without legislative action of any kind."

Which is precisely the case. This is not a question of passing a law. It is a question of issuing bureaucratic rules within the framework of general law already passed by Congress with the assumption that the statute would be wisely administered.

Qualification of Ambassadors

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD to the editor of the New York Times written by Mr. Hans J. Morgenthau.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO QUALIFY AS AMBASSADOR—ISSUE TAKEN WITH SECRETARY DULLES ON PREREQUISITES FOR POST

(The writer of the following letter, a consultant to the State Department, 1949–51, is director of the Center for the Study of American Foreign Policy at the University of Chicago.)

To the EDITOR OF THE NEW YORK TIMES:

I have been both elated and depressed by Mr. Dulles' definition of an Ambassador's qualifications made at his press conference of August 6.

I am elated because if anybody who has "integrity of character * * * a sharp and quick intelligence" and is "genuinely devoted to the public service" is qualified to be an Ambassador of the United States, there must be tens of millions of American citizens who so qualify. Napoleon said that every one of his soldiers carried a marshal's baton in his knapsack. If one takes Mr. Dulles seriously, one can now say that almost every American keeps an Ambassador's cutaway and spats in his closet.

KNOWLEDGE FOR POST

I am also depressed because for a quarter of a century I have tried to impress upon my students how exacting the qualifications of an ambassador are. I have told them how much knowledge he must have of history, of current events, of foreign countries, of men; how profound a judgment he must have of men and situations, and how he must be able to cope with, and transform, situations on behalf of the policies of his government.

I have quoted the statesmen and diplomatists of the past, who stood in awe of what an ambassador must be, know, and do—men like Richelieu, Callières, Mably, John Quincy Adams, Cambon, Jusserand, Harold Nicolson, and many others.

I have been particularly fond of quoting the reference of Mr. Dulles' own grandfather, John W. Foster, to "the baneful influence of political favoritism" on diplomatic appointments and his approving quotation from a Senate committee report of 1868 to the effect that "no man can pass from other pursuits directly into the higher grades of diplomatic and consular service and comprehend clearly the nature and scope of his duties." (John W. Foster, "The Practice of Diplomacy" pp. 10–11.) If I take Mr. Dulles seriously, the only thing I need to tell my students now is: "Boys, be of good character, intelligent, and devoted to public duty. Class dismissed."

HARM TO MORALE SEEN

It is obvious that Mr. Dulles cannot be taken seriously. In order to defend an indefensible appointment Mr. Dulles has laid down a principle which is absurdly at variance with what Mr. Dulles and all men versed in diplomacy know. Yet by doing so, Mr. Dulles has done great harm to the morale of the Foreign Service and to the public understanding of foreign policy. For he has given authoritative support to those still lingering popular prejudices which have proved to be such a formidable handicap to the rational conduct of American foreign policy, his own included.

Citizens who have integrity of character, are intelligent and devoted to public duty may well wonder whether such a fleeting forensic triumph, if such it is, is not too highly paid for by the lastfng damage done to the interests of the United States.

HANS J. MORGENTHAU.

CHICAGO, *August 7, 1957.*

Drought Damage in Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. YARBOROUGH. Mr. President, at the hearing yesterday before the Subcommittee on Agriculture of the Senate Committee on Appropriations, on a supplemental appropriation for rehabilitation of soil damaged by disaster, the chairman of the Committee on Appropriations, the Senator from Arizona [Mr. HAYDEN] pointed out that tree rings in the Southwest showed that the recent drought in the Southwest was the worst in the last 600 years.

I ask unanimous consent that my remarks before the subcommittee on soil damage in Texas caused by drought and floods be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR RALPH YARBOROUGH BEFORE APPROPRIATIONS COMMITTEE SUBCOMMITTEE ON AUGUST 12, 1957

Chairman HAYDEN and members of the committee, Texas, in the last few years, has undergone two such opposite disasters as to be unique in memory.

The Texas farmer's plight might be compared to the man dying of thirst on a desert: The man, who has somehow managed to keep up his courage, has crawled across the hot sands and he finally sights a body of water. At the moment of his jubilation, a gigantic flood wave sweeps him down the channel to destruction.

The first disaster suffered by the Texas farmer was the worst drought in Texas history. This was a slow torture to the farmer. For 7 years, he would search the skies in hope of some cloud, even a small one. He watched his water tanks dry up and he knew he had no water for his cattle. He was forced to sell at any price. He watched his grass dry up. He planted his crops over and over. Each time the crops merely withered in the parched, cracked land or failed to come up at all.

In a report prepared for President Eisenhower during his inspection of the drought areas last January, Dr. Tyrus R. Timm, head of the department of agricultural economics and sociology at Texas A. and M. College, said this was the worst drought in Texas history in terms of financial losses, necessary human adjustments, and deterioration of physical resources.

The United States Department of Agriculture classified 94 percent of the Texas counties (244 of the 254) as disaster counties. Large areas of the State did not have a single year of normal rainfall from 1950 to 1957. Many farmers on the high and rolling plains and Edwards Plateau prepared their land and planted seed 3 consecutive years without harvesting a crop. Many ranchmen in the same areas fed supplemental rations to their breeding herds almost the year round since 1951.

The carrying capacity of most of the rangeland was seriously depleted.

All 20 major rainfall-reporting stations in Texas during this period showed 20 to 77 percent below normal rainfall.

A study conducted on the Edwards Plateau of the files of 45 members of the Texas Production Credit Association showed that between the fall of 1950 and the spring of 1954 ranchmen lost 38 percent of their net worth.

Literally thousands of Texas farms and ranch people were forced to the wall. In Mills County, for example, 1,000 of the 6,000 farm people left agriculture. From 1951 to 1952, the movement from farms of 80,000 persons annually was considered normal. During 1953–54 Texans left their farms at an annual rate of 160,000.

By 1955 wind erosion and the heartbreak of economic collapse that goes with it, was only one of the consequences of the drought. When the crops failed for the second and third consecutive years, all protective stubble disappeared. Nothing was left to hold the loose, dry soil in place of these cultivated fields. The fields were ready to blow and did blow away.

The cattleman, the sheep raiser, the cotton and wheat farmer—in short, every person connected with agriculture—lost tremendous amounts of money.

And since agriculture is the backbone of the Texas economy, every person in Texas suffered.

Perhaps no one can estimate with any accuracy the untold amount of damage done by the drought. Responsible officials have said it was in the billions.

In late spring and early summer rain began to fall in Texas. At first the rain was greeted with prayers of thanks.

Unfortunately, the farmer's problem had just started.

Whereas the drought was slow torture, the floods which inundated great portions of Texas were sudden disaster.

In a period of 70 days, the total flood damage to crops, seeds, and labor was estimated by John C. White, Texas agricultural commissioner, as $34,536,728. Permanent land and property damages from spring floods were approximately $50 million.

We think it is interesting to note the fact that officials say the flood damage in Texas would have been $106.3 million greater had it not been for a number of flood-control projects recently completed. The total cost of these projects was $121 million. In other words, these projects almost paid for themselves in this 1 year.

One of the tragic results of the floods is this fact: despite the fantastic amount of water that fell, the rainfall was of the wrong kind for breaking the drought.

On July 30 of this year, Mr. Timm reports that economic drought scars are not erased by these floods. Furthermore, the lack of rain and near-100 degree temperatures have accelerated the drought problem during the last 2 weeks. The situation could become very serious if rains fail to fall rather generally during August.

However, since the law under which this hearing is being held authorizes appropriations only for permanent damage to land, and does not cover crop loss or cattle loss or loss of buildings, I will now limit my statement to land damage.

Texas has had two separate areas of agricultural land qualifying for assistance under the supplemental appropriations act. One area qualifies under the wind erosion provisions and the other qualifies under the flood provision. It should be pointed out that

the wind erosion damage was centered in the areas of the Edwards Plateau and the Rolling Plains of west Texas while the flood damage was sustained in north, central, and south Texas. For this reason there is no overlap in the acreage affected by the two types of disasters.

The Texas Department of Agriculture informs me that there are 1,971,849 acres of Texas land meeting the requirements of the act because of recent disastrous floods. At an anticipated assistance level of $6 an acre this program would require appropriations of $11,831,094.

In addition, the 7-year drought created a wind erosion conservation problem on 3 million acres of crop land and 300,000 acres of pastureland. This would require $19,800,000 in appropriations for this wind erosion damage. This figure includes only the land damaged by erosion. It does not include the many millions of additional acres which have been severely damaged by the drought but which have not started to blow as yet. The State of Texas has 141 million acres of agricultural land and a great percentage of this acreage has sustained drought damage.

The total appropriations urgently needed to cover the types of damages clearly covered by the law to save the erosion and flooded land areas of Texas amounts to $31,631,094.

Arab-Israel Peace Needed To Halt Reds, Says Knight Newspaper Editor

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 13, 1957

Mr. JAVITS. Mr. President, at the San Francisco convention last month of the American Society of Newspaper Editors, Basil L. Walters, executive editor of Knight Newspapers, Inc., recently returned from an extensive tour of the Middle East, told his colleagues of the Nation's press that "Russia is the only nation profiting from the Middle East unrest." He observed that many of the seeds of world peace as well as the seeds of world war III are germinating in the Middle East and concluded that a just Arab-Israel peace must be brought about to halt the Communists.

Mr. Walters is an experienced journalist. To get his story he interviewed both President Nasser and Prime Minister Ben-Gurion, traveled both in Israel and in the Arab States, visited the cities as well as the countryside. His observations and his conclusions are worthy of considered attention. It is not necessary to agree with every one of his statements to be informed and alerted by them. I ask unanimous consent to have pertinent excerpts from his address before the ASNE printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WORLD REPORT BY ASNE TRAVELERS

(By Basil L. Walters)

It's easy to get to and around the Middle East. The distance is less from Europe than that from Chicago to San Francisco.

Once there, travel by foot and by auto is easy, comfortable, and cheap. Hotels in the Arab world, as well as in Israel, are as comfortable as those in San Francisco and the night life is equal to that in Paris.

The people are much the same as in America. There are rich and there are poor. The only difference is that the poor are poorer and more numerous.

But there is a growing social consciousness throughout the whole area.

The thing we have to keep in mind in judging the area is that it is less than a decade out from under British and French domination and that the spirit of 1776 is still the hottest thing in the region.

The people, Arabs and Israelis alike, are most hospitable.

The only precaution to observe is to keep in mind that there are a few unresolved differences between Israel and her neighbors.

I made it a point to raise the issue of Arab restrictions on travel or service by Americans of Jewish faith and reported that this policy was regarded by many as poor public relations.

The Arabs argue that their side of the Israel-Arab argument is not well known in America. I pointed out that their restrictions might well be a factor. I made a particular point that the presence of an Israel visa in any American's passport barring even a reporter from Arab countries was shortsighted and did not contribute to objective coverage of the area.

The director of tourism in Jordan indicated he is hopeful that before too long there will be a further easing of the restrictions. I hope so because one of the preliminaries to peace in the area is an improvement in communications and the understanding that comes through people talking to people.

I had hoped to get permission for American correspondents to travel freely between Israel and the Arab countries. This aspiration has to be delayed, and so I have compromised by establishing a bureau on Cyprus with one correspondent assigned to Israel and another to the Arab countries, but with frequent rendezvous, since they are husband and wife, so they can exchange notes and therefore bring the whole jigsaw puzzle together into better informed and more understandable dispatches.

I am convinced that many of the seeds of world peace as well as the seeds of world war III are germinating in the Middle East. Only an enlightened world opinion will root out the war weeds.

Key to peace is a quick lessening of the Israel-Arab tension. And the first step in doing this is to find a solution to the Arab refugee problem. * * *

This problem is not insolvable—but it won't solve itself.

Golda Meir, the able foreign minister of Israel, suggested that if, in the United Nations Assembly this fall, the finger of world opinion is pointed at both Israel and the Arabs and they are told firmly, "Settle your differences," direct negotiations would result.

She recalled that last fall for 5 months the United Nations pointed its finger at Israel and said, "Get out of Sinai—get out of Gaza." If equal force were placed behind a demand to settle the refugee problem, I think there would be action. The politicians out there need some face-saving assistance.

For 9 long years, somewhere between 800,000 and a million Arab refugees have been encamped in squalid camps on Israel's borders, largely ignored by the press of the world.

Because these refugees are fertile fields for Communist activities, they are now a peril to the Arab countries as well as to Israel. At long last there is a desire on all sides to get them back into productive and happy lives.

The United Nations resolution ordering that their property in Israel be restored to them or that they be compensated has not been implemented. Nasser told me that settlement of the refugee problem must be the first step to other settlements.

Ben Gurion told me Israel is ready to compensate and assist in resettling the Arab refugees in Arab lands where there is land and water. I am inclined to agree with him that the clock cannot be turned backwards to permit great numbers of them to be returned to their old homes. Actually, I think they would find conditions so changed that they would not want to return.

I found in the Arab world a rather general recognition that Israel is here to stay and not one responsible leader spoke of pushing the Israelis into the sea. Once the whole Arab world accepts the fact—and it is a fact—that Israel is here to stay, we've made a long stride toward peace.

There is plenty of land and plenty of water in the Middle East to provide a high standard of living for all those who live there, if these natural resources are properly utilized.

What the whole Middle East needs is peace. The Arabs and the Israelis are cousins. Until a decade ago they lived together as friends for thousands of years. It's time for the civilized world to tell them to cut out the nonsense, and their family bickering and complete the job now in progress throughout the Arab world as well as in Israel of making the desert bloom again.

The whole free world has tremendous stakes in this.

Unless the Arabs and the Israelis cut out their family feuding quickly, I fear that within 5 years the whole Middle East will come under the domination of Russia.

Russia is the only nation that is profiting from the Middle East unrest, and our lack of savvy.

The whole tradition of the Moslem world is against communism.

But the policy of the West is surely and progressively shoving the Arab countries one by one into the arms of Russia.

Russie is playing a most skillful game. Instead of shoving itself onto the leaders of the Arab world, it poses as a friend ready to assist when asked.

Every Russian diplomat in the Arab world speaks Arabic. He is taught Arabic and the traditions of the Arabic world in the University of Moscow before assignment to the area.

* * * * *

While the Arab leaders honestly believe they can accept this friendship without getting involved in communism, some already are caught up to the knuckles of the hand. Unless our policy shifts quickly, the whole arm will soon be enmeshed in the Russian mangle.

The Russian goal, of course, is to deprive Western Europe of the Middle East oil. Once Europe is deprived of this oil, it will fall as a ripe plum to Russia which will have control of the oil it needs. Atomic power will not develop quickly enough to replace the need for oil.

Greatest deterrent to Russia's program in the Middle East are the industrialists of West Germany, Italy, and Holland. Unconcerned with politics, free enterprisers are selling, not giving away, industrial machinery and know-how to Arabs. Encouraged by their government, which has set up special banking arrangements, the German industrialists take payment in stock in the new companies.

Best liked Americans in the area are our oil people. They understand the traditions of the people and are regarded as friends.

I think the greatest contribution to peace would be for dozens of American editors to visit the area with completely open minds and with friendship for all in their hearts.

American newspapers are botching one of the most important stories of our generation simply because we're ignoring it or scratching around the edges instead of getting in there and finding out the facts. We can't cover this story as it should be told merely by balancing the propaganda.

News used to be, "Look what happened to the girl next door."

Tomorrow it may be, "Look what happened to the boy next door who is fighting in the Middle East."

If you have time, en route to the Middle East, stop off at some of the American cemeteries in Europe. They're there because of failure of statesmen—and perhaps of editors—to do their duties well.

Fish Can Prepare Seedbed, England Rice Farmer Finds

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Fish Can Prepare Seedbed, England Rice Farmer Finds."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FISH CAN PREPARE SEEDBED, ENGLAND RICE FARMER FINDS

There is little chance that Arkansas rice farmers will make a practice of storing their disks and harrows and depending on a school of carp fish to take care of their seedbed preparation, but the system has worked in an emergency.

"I didn't necessarily want to do it that way," said J. L. Huffer, of England, "but in each of the past 2 years I found it impossible to prepare a seedbed for my rice. I simply hired a plane and sowed in the water and it worked."

Huffer farms a section (640 acres) of buckshot land near England. He explained that fish, particularly carp and buffalo, had a habit of rooting into the lakebed like hogs in a pasture. This stirs the soil and acts as a substitute for plowing.

Plowing and disking in the seedbed opens the soil and also destroys competing vegetation. In the tight buckshot land there is a certain amount of gamble in the process, Huffer explained. If the land is dry enough to plow, the farmer must depend on a subsequent rain to germinate the seed. If no rain comes, the land dries out to the extent that the rice will not come up to a stand, and the farmer misses a crop.

Huffer said Alfred Hilderbrand of Stuttgart and several other farmers he knew had depended on fish to prepare their rice ground for sowing.

In each of the last 2 years, spring rains flooded Huffer's riceland before planting time and he could not do his usual plowing and disking. He said the crop last year was excellent, despite the lack of spring work, and his ricefields look good this year.

LODGING CAUSES LOSS

Huffer said he harvested almost 100 bushels to the acre from some of the land he planted last year. He estimated that he lost perhaps 50 bushels to the acre from "lodging." This is the condition when the rice plants fall before harvest time and the combine cannot pick up the grain.

Lodging is one danger that accompanies water seeding. Huffer explained that when rice was planted in the water the root system was extremely shallow and the plant was not strong enough to support a full crop.

"The amount of loss does not seem so important when a man harvests around 100 bushels to the acre," Huffer said.

Fish also contribute other services to farmers who use the fish-rice rotation system. Rooting carp and the natural waves of the lake can do a fair job of minor land leveling. The fish ram their noses into the lakebed in search of food and the waves sweep the loose mud from the tiny knolls into the low parts of the field. In irrigation farming, the small rises in the field must be leveled out in order to make full use of the water.

FERTILITY RESTORED

Fish farming restores the fertility of a field and fits well into the rice rotation. Huffer estimated that a field would be "as good as new ground" after 3 years under water, if the lake were stocked fully with fish.

"After 5 years," he said, "the field would be too fertile for rice and would have to be planted to some other crop for at least 1 year."

He explained that the rice would grow so rank and so tall that a large part of the crop would be lost, if it were planted in over-fertile land.

RESERVE PLAN VALUABLE

Huffer said the conservation reserve part of the soil bank was particularly valuable to the rice farmer. One advantage is that the farmer is allowed to harvest fish from a field that is in the conservation reserve. Another is that the rice acreage has been reduced sharply and many rice farmers find themselves with surplus land. By putting this land into the conservation reserve for a period of 5 years the farmer is able to harvest two crops of fish and restore fully the fertility of the field.

In addition to this, the fish and the water will level the land and destroy weeds and pest grasses.

"We have not learned all the best possible ways to farm," Huffer said. "I am sure that, on certain types of land, seeding in the water will become increasingly important in the future. I am also sure we will learn more and better ways to use fish in our rotation program."

Postal Pay Increases

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. HUMPHREY. Mr. President, the Senate will very shortly consider the postal-pay bill, and there is no more important legislation remaining for action in the present session.

In Minneapolis over the weekend public prayers were held for the success of this legislation. Among the articles which have appeared in the Minnesota newspapers on this matter is one entitled "Pastor Lauds Prayers for Wage Increase," from the August 5 edition of the Minneapolis Morning Tribune.

I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PASTOR LAUDS PRAYERS FOR WAGE INCREASES

A Methodist minister Sunday praised Minneapolis postmen's public prayers for a pay increase as one way to make religion relevant.

The Rev. John B. Oman told his Wesley Church congregation, "It's a sad thing when we compartmentalize life, putting politics in one drawer, religion in another. We have a different key for each drawer and make sure one key won't unlock any others.

"When we go to church we use a special theological jargon that so often has no relation to the life we lead. But the praying postmen made religion relevant."

More than 1,000 city postal workers gathered at 5:45 a. m., Thursday, in Pioneer Square opposite the post office, joining other postal employees around the Nation in a minute of prayer for success in their fight for a salary increase.

The Senate civil-rights fight is delaying action on a bill passed by the House to boost postal wages. If the bill is passed by the Senate, President Eisenhower is expected to veto it.

Urging his listeners to "put legs on your prayers" by combining them with hard work, Dr. Oman likened postmen's prayers to those of farmers asking for rain and sunshine for an abundant harvest.

He cited Federal subsidies, saying the Department of Agriculture is underwritten to the extent of 50 percent, while the postal system is subsidized only about 12 percent.

Deploring the "anonymity of our mailmen" and their "take-home pay in Minneapolis of less than $70 a week," Dr. Oman said, "If I had not received a substantial pay increment in the last 6 years, I'd feel like praying for one myself."

Dr. Oman and Rabbi Lewis N. Ginsburg led Minneapolis postmen in prayer at the Thursday service.

Address by Hon. Hubert H. Humphrey, of Minnesota, to the National Board of Directors of CARE

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. WILEY. Mr. President, on July 25 I spoke on the Senate floor regarding a splendid address which had been delivered by our colleague, the senior Senator from Minnesota [Mr. HUMPHREY], on the occasion of the annual meeting of the board of directors of CARE—Cooperative for American Remittances to Everywhere.

I felt that this address was of the type which should be given the widest possible circulation.

It came from the heart of our friend, the Senator from Minnesota; and it went straight to the hearts of his audience.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF THE HONORABLE HUBERT H. HUMPHREY, UNITED STATES SENATOR FROM MINNESOTA, BEFORE THE ANNUAL LUNCHEON MEETING OF THE NATIONAL BOARD OF DIRECTORS OF CARE (COOPERATIVE FOR AMERICAN REMITTANCES TO EVERYWHERE), JULY 24, 1957, HOTEL STATLER, WASHINGTON, D. C.

Ladies and gentlemen, I shall take the opportunity in a moment or two to comment on some of the information that you communicated to this audience. But in the meantime, I would like to pay my respects to my

two distinguished senior colleagues who are here—Senator GREEN, who has given us such dedicated leadership in the field of foreign policy; and Senator WILEY, who likewise has given us the same devoted leadership in the field of international relations.

I want to say if I meet many more Republicans like Senator WILEY and Mr. Williams, I may have some of my partisan enthusiasm slightly diluted momentarily. [Laughter.]

I couldn't help but note, when the Secretary was commenting upon my expressions, at least alleged expressions, relating to foreign policy, and about my being a vigorous opponent of going it alone, that he then stated he found this to be strangely similar to good, old-fashioned Republican doctrine. Well, it may have such a strange similarity, but it's this modern Republican doctrine, you see, that has me worried. [Laughter.]

Now, having made my comments on political matters in jest and in good spirit, let me be more serious with you.

We are under a little duress of time today. There is a debate going on in the Senate, and I should like to participate in it before the day is through. Therefore, I shall try to eliminate extraneous material and get right down to cases.

UNIVERSAL PRINCIPLES IN OUR FOREIGN POLICY

I am here to address a group of men and women who, to my mind, have performed a great and important patriotic service, not only for the United States of America, but for the cause of human decency and freedom all over the world. I always like to identify the overall objectives of American foreign policy beyond the confines of the territorial limits of the United States. After all, there are some universal principles which should motivate and guide us. Our foreign policy demonstrates its strength when it has a relationship to those universal principles of democratic faith; it demonstrates its weakness when it deviates from those principles of democratic faith.

Now, what is the motivating principle behind a democracy? It is service to the individual. And I say that every person who is elected to office, or holds office by appointment, in a free country under democratic institutions, should remind himself every hour of the day that his primary responsibility, duty, and purpose is to serve and not to be served. This is the Christian ethic, too. "He who would be first, let him be last." "I come to minister, not to be ministered unto."

There is much that can be said from the perspective of all religions concerning service.

THE FEATURE THAT DISTINGUISHES AMERICA—VOLUNTARY ACTION

I believe that our foreign policy has real importance and genuine constructive effect when we search for, find, and use the key to what we call the American way of life.

What is it that really typifies our country? Not wealth; other countries have been rich, even though we surely have great wealth compared with other nations today. Not power; other countries have had power and have used it, and sometimes used it to their destruction. It is not size, because we are not the biggest country even today.

So what is it that has exemplified and characterized what one calls an American? We Americans are not a unique breed of the human species. It is impossible to define an American from the point of view of anthropology or physiology. We are a conglomerate. So, what is it that identifies us?

It is a sense of generosity, of compassion, of kindliness, of tolerance, of understanding, exemplified not only in our public institutions but in our voluntary organizations.

No country on the face of the earth has the number of voluntary organizations that we have in the United States—voluntary organizations that are so generously supported and that have such a wide scale of activities.

In France, for example—the France which cherishes her individualism, the France of liberté, égalité and fraternité—one finds a dearth of voluntarism in terms of community activity. The French people rely on the state; they rely on the government for their social welfare programs; they rely on official institutions, without voluntary help or cooperation.

THE MEANING OF SOVIET TOTALITARIANISM

We are engaged today, fellow Americans, in a struggle with a totalitarian force. It is unfortunate that the American people are not being educated as to what is meant by totalitarianism. All too often they assume it is a political party in control of a country; they assume it is just another political force at work. It is not; it is more than that. It is a political force, a military force, an economic force, a social force, a human force—put in one package, mobilized, directed and energized for the purpose of the leadership of a state.

Now, our Government is only part of America. Therefore, when the Government of the United States joins the issue with the Soviet Union, a totalitarian state, we have, so to speak, 1 arm strapped behind our back and 1 leg cut off. The Government of the United States alone cannot successfully compete with a totalitarian power. But the Government of the United States plus the voluntary organizations, plus every social and political institution that we have in America, cannot only compete but can win.

I say most respectfully to my friends who are in public service, the task of American Government today in the field of foreign policy is this: How do me, on the basis of individual participation and voluntary action, mobilize, energize, and utilize the great forces of freedom which are available in the American community? If we cannot find a way to mobilize those forces, we may well lose our struggle. By its nature, a democracy is a limited instrumentality of social organization. Therefore, when a free government is compelled to compete against against the combined forces of a totalitarian state, where the literature, the music, the playgrounds, the household, the factory, the books—where everything is a part of a total state policy—a democratic government is in a weak competitive position.

CARE REPRESENTS TOTAL HUMAN MOBILIZATION

You can understand, therefore, that CARE, representative of 26 great voluntary organizations, is a fundamental adjunct to, and part of, the total mobilization of human resources so urgently needed in this country for the fulfillment of objectives of American foreign policy and the strengthening of the spirit of democracy.

This is why I am here today. I have been a teacher in school; I always mention that because I may need a job again. [Laughter.] From observation it is clear that many of our educators and leaders have done a poor job of teaching democracy, and a worse job explaining to the American people what is involved in totalitarianism. They have some idea that it is socialism; then they argue as to whether that is good or bad. They have some idea that it is atheism. Well, it is that, plus a kind of distorted socialism, plus all kinds of other things that represent power and brutality and organization and strict discipline. Until we American understand what we are really up against, we are going to be constantly fighting an uphill battle, utilizing fewer of our resources than we should for the objectives that we seek to attain.

VOLUNTARY AGENCIES MUST TEAM WITH GOVERNMENT

This situation leads me to say this: We can achieve more good in terms of human welfare, in terms of human betterment, in terms of emancipation of people from their fears, from disease, illiteracy, ignorance, frustration—by voluntary groups working in the field of social welfare and voluntary groups working with other peoples in other lands, than we can through government.

Now, both are needed, don't misunderstand me. This isn't either/or, this is "and." It includes both. It means a role to be served by government and a companion, supplemental, coordinate role to be served by the voluntary agency. But at all times the voluntary agency should be truly so. It must not be dominated by government. We must keep that liberalization, that emancpation from the rigidity of official governmental policy, which comes with voluntary organization. This means that we must have trust.

If State Department officials were here today, I would say, "Don't be suspicious of our voluntary agencies; if they don't do everything that you believe ought to be done in the field of American policy, it's possible that you are wrong, not they." The odds are that the voluntary groups may be right. What is more, one of the great attributes of a democracy is the right of people to make mistakes and admit them. The trouble with Government is it hesitates or dislikes to admit mistakes, thus decreasing the democratic appeal of our actions and decisions.

One of the privileges of a great free people is the right to start something, then decide to shift gears, to go some place else, and admit it.

FATE OF WORLD AT STAKE

So, my friends, there is a great role for organizations such as CARE to play. You are not engaged in something now that is just doing good; you are engaged, as you and I know, in a life-and-death struggle.

This is a one-game world series. I don't know how many innings it is going to go, but you do not have 4 chances out of 7 in this one. This isn't the New York Yankees versus the Milwaukee Braves—nor is this the Chicago White Sox versus the Brooklyn Dodgers. This is a one-game world series against forces of evil, of imperialism, of totalitarianism—and we either win or lose. How long it goes on only we can tell, by what we do each day. This is where CARE is important.

OPENING OUR HEARTS TO OTHERS' NEEDS

What does CARE, then, represent?

It represents self-help. This is good.

What else does it represent?

It represents compassion and charity by living application. There is something noble in being charitable. I have always said that between the platforms of Santa Claus and Scrooge, I will stick with jolly Santa. Any time anyone wants to run on that platform, they can count me in. I have no desire to be the richest man in the cemetery. I desire to use the good things that the good Lord gave me. I have never made a fetish to see how many dollars can be saved; I prefer to find out how many can be well invested, and for what purpose. Many people have saved and saved only to destroy themselves and their families; countries have done exactly the same thing.

I grew up at a time when this country closed its doors to immigrants, when it closed its mind to new ideas, closed its heart to the crying suffering of other people. Finally we ended up closing our factories, our businesses, and our banks, and almost destroying the whole temple of American democracy. I remember because that was the impressionable period of my life. From 1920 to 1933 I listened attentively to those who were then the spokesmen of American ideals, and their sense of idealism was only to save, to amass money, to guard it, to protect it—don't let anybody touch it, don't let anybody use it, and don't be too good to anybody. [Laughter.] In the process, they were among the first to suffer and the first to be destroyed.

I remember when bankers were jumping out of hotel windows faster than pheasants were depleted in our South Dakota corn-

fields. [Laughter.] I am not saying this to be unkind; I am saying it because it is true. I am the happiest man in the world to have since lived in a time when the Government of the United States has been criticized for being overgenerous, rather than for being a tightwad.

I am happy to have lived in a time when the American people have been asked again and again through the Community Chest, through the CARE program, through the Crusade for Freedom, through all the many programs sponsored by generous-minded citizens, to contribute and contribute and contribute. And interestingly enough, my good friends, look and see what has happened. The record reveals that as contributions to voluntary agencies grow larger, the economic index indicates the prosperity of the country is that much better. Study it sometime, and see if I am not right.

You will find that when people show a spirit of generosity, of openness, of kindliness, for some peculiar reason the country itself is in a better economic, political, and social state of health.

That is why I feel the way I do about politics, and that is why I feel the way I do about these great programs.

PRAISE OF "CARE" FROM FOREIGN OFFICIALS

Now, what is CARE doing as I witnessed it? I saw CARE in operation, and I want to be specific now. In Italy, for example, I was told that our surplus food, much of it administered through CARE, had done more than anything else to defeat the forces of communism. I was told this by our present Ambassador there, by our economic minister there, and by the former Ambassador to Italy, Mrs. Luce. I have been told by three prominent officials that our food program did more to defeat communism in Italy than the Government of the United States had been able to accomplish through any of its other agencies of aid. I happen to think the forces of religion helped immeasurably too, but if you put those two together, that is what did it. Not our military assistance, not one bit. We need that, just as sometimes we may need to remove our appendix. It isn't something planned nor longed for; yet it sometimes is necessary. But constructive aid is preferable.

I was told in Greece, for example, that without our food program and particularly without our CARE program, Greece would be fighting for her life, despite all the military assistance we poured in, despite the hundreds of millions of dollars in grants we gave to Greece. I was told by the Prime Minister, the Foreign Minister, and the present American Ambassador to Greece, that our food program was the difference between success and failure in Greece.

FOOD SURPLUS—A GREAT ASSET

I have gone home to Minnesota to tell a few of our farm people about this, because too often they have been criticized for producing food. I want to say to my friends of the metropolitan press, farmers have been abused daily because they produce an abundance of food. Any country or government that doesn't know what to do with food is intellectually sterile and hopelessly lost.

Can you imagine what Bulganin and Khrushchev would be doing if they had the surpluses of food and fiber that we have? Can you imagine what those "Gold Dust Twins of Disaster and Despair" would be doing? They would be tying to the Soviet one country after another economically. Yet we go around crying about our food surplus as if it was the worst thing that ever happened to a free country.

Finally, in the last year and a half to 2 years, it has begun to penetrate the American mind—and I am not complaining only about public officials, I am talking about the whole American mind—it has become increasingly evident to Americans that possibly food may have something to do with acceptance of America abroad. Possibly food might be the vehicle through which we can bring about agreement on other policies.

Fellow Americans, if it were not for the American food provided India, that country would be fast on her way to a Communist society at this hour. American food is doing more to keep India a part of the free world than all the arms of the United States. Without food, India today would be hopelessly lost to the free world. I thank God for the CARE program and the work that it is doing. Thank God for the village help program. Thank God for the Ford Foundation program. Thanks for all of these wonderful things that are being done.

Let us bear in mind also that had it not been for the wheat provided Pakistan, that Government could never have lasted. It is about time Americans were told these things. It isn't tanks or planes that keep Pakistan alive; not at all. In a crucial hour when Pakistan was in dire trouble politically, it was food that saved the day.

CARE'S AID NEEDED IN EGYPT

Our influence in Egypt for a period of time was made possible through CARE. CARE made it possible for Egyptian children to go to school, and the number of schoolchildren in Egypt today is directly related, my friends, to the number of CARE feedings that take place in schools in Egypt. Now, I am not one of those people who have been deluded by Colonel Nasser. I was suspect of him in the beginning, and I have less faith in him now. Nassers will come and go, but the 30 million Egyptians—and there will be 35 million in another 10 years—will be there just like the Nile River.

The question before you, fellow Americans, is what do you want these millions of Egyptians to think about the United States?

These Egyptian people are a force in the world. One of the most powerful forces in the world, as Chester Bowles said not long ago, is people. People, not H-bombs, because, fellow Americans, we don't dare to use and H-bomb and we know it. We know that the official policy of our Government is not to use these terrible weapons of destruction unless we are forced against the wall as a last effort for survival.

In the meantime, what happens when the forces of political attrition nibble away one country after another? What do we do? Did you ever figure that out?

Let me say there is no political policy we can design today which will appeal to Egypt because of the attitude of her leaders. But there is a social policy that can be designed which will appeal to the people back in the villages. There they will know that the food which comes into the mouths of their children is food from America. A message of goodwill is brought every hour of the day. That cannot be destroyed in Egypt any more than it could be destroyed in Poland, where people at the Posnan Fair said, "Thank God for America." That is our reservoir of goodwill. I submit, the Poles didn't say, "Thank God for America" because we were going to put a stockpile of atom weapons in the North Atlantic Treaty Organization. I may think this is necessary, but I don't go around talking about it.

It is mighty nice to have some of the comforts of living, and people remember us best for the little things we do. It is like politics. Very seldom at home does a constituent get after me because of a vote I made in a major decision; he becomes distressed because his letters were not answered, or he was perhaps ignored at the county fair, or he just was not noticed on some occasion or another. That is what destroys his faith. These seem little things, but they really are not little; they have everything to do with ones' attitude toward people.

I have known many an intellectual who is brilliant in terms of liberal idealism and yet doesn't like people and demonstrates it occasionally. When one doesn't like people and has no faith in them, then our actions usually reveal it, because it can't be covered up. It will come out sometime, and that's the day when a fellow gets into trouble; that's the beginning of difficulties which may well be destructive.

Now we Americans like people and we like them all over the world. We have a vehicle in CARE to demonstrate this neighborly feeling, not by word but by precept. I hope that our Government will reinstitute a feeding program; I say here as I have said before, we should continue to feed the people of Egypt as we do those in other parts of the world.

I hope our Government will recognize what was said before today, about the sale of our surplus commodities under title I. Such sales are still needed, but donations under title III also have a unique role to play, and maybe a better role than title I sales.

I have heard people say, "What are we going to do with all this foreign currency received from food sales?" If you worry about the foreign currency being piled up, don't. It works; I used some of it on a recent trip myself. It bought things; I ate well with it; had no trouble at all. I know some Americans are lazy, and won't look around to see how they can use foreign currency. I say that respectfully. If any of us is really worrying about having too much foreign currency, why don't we divert more food into these great country-feeding programs? We not only deliver the food but receive in return a kindly attitude. We deliver a package with the spirit of America in it; the warm smile, the helpful hand. Maybe a little piece of literature can be added; but, most important of all, it shows we are interested, that we care.

You know, many people are lonesome. Most people want somebody to care for them. This is why a program such as CARE is so symbolic. It not only provides the material thing that is needed; it provides personal interest with it.

MY EXPERIENCE WITH A GREEK FAMILY

I saw this in Greece. There is a picture over on that table showing me taking a package to a family in Greece. I didn't know them; nobody else knew them. It wasn't a preselected family; the name was pulled right out of the file. There was no "fix."

We went down to a neighborhood in the suburbs of Athens. I was told that this was one of the heavy Communist districts. It so happened that a lady in Minneapolis had sent the money for that package, and I was asked to deliver it—a CARE package for a family, four children, husband and wife, and, I believe, the grandmother.

When I came into that house with the CARE representative, I will never forget the look on the faces of that family. First of all, there was the gentleman who had lost a leg in the civil war. He told me his total wage income was 60 cents a day. Their two little rooms were clean, and in them lived some clean-hearted people. I have been in houses—I won't call them homes—that were physically immaculate, but the people involved were slovenly of spirit. Here I found two little rooms clean, reasonably livable, and filled with warmth and human spirit.

When I presented this little package of food to the head of that household, he wept, not in shame but in gratitude. It was tough to take. I asked, "Who is this little lady behind me?" He said, "That's grandma." She came up and I talked with her. I told her about the fine Greek people in Minneapolis, St. Paul, and Duluth. I visited with her so I could gain my composure, really. All she could do was smile; she was so grateful.

This man told me if it wasn't for the American food package they received about

once every 7 or 8 weeks, he didn't know how they would be able to live.

LET'S NOT WASTE FOOD

When I think of what I have read in American newspapers about waste of food, I say every American ought to be ashamed that such waste occurs. Any American who is willing to permit even as much as one bushel of our wheat to be wasted is committing a sin. Whenever I hear an official of Government talk about how much it costs to store this grain I say, "Why don't you give it away, then it won't cost so much." It doesn't cost too much to store it right inside the stomachs of hungry people.

It often costs more when we don't act. If we are interested only in saving money, shall we take our children out of school? Of course, it will be costly because they are going to remain ignorant. If we are interested only in saving money, shall we refrain from seeing the doctor? We may not live long, but we will save money.

I repeat, there is not a single thing that will not cost money. The amount that we spend on the total food program is insignificant compared to the total foreign policy and defense expenditures of our Government. It's significant, I think, how much we are given free in service from CARE, for example, and other voluntary organizations, and what an impact this makes upon people. This is the best spent money that we will ever spend.

Have you ever figured out how long we would have gotten along in Yugoslavia without food? Our military assistance for Yugoslavia may cause trouble. I am not sure; I have to rely on the President's judgment. I didn't vote in the Senate to give Tito arms because I think he's a great fellow; I don't. But I have been told by our Government that this is the way we operate our foreign policy, so I reconciled my doubts.

But I talked to a man from Yugoslavia last week. He came here to visit his brother who lives at Harrisburg, Pa. His brother had been in Yugoslavia several years ago. I went with his brother to the Yugoslavian Ambassador; I heard what his brother said to the Ambassador about Yugoslavia—the number of people that were in jail: I asked the man from Yugoslavia, "What is it that Americans have done, that you people in Yugoslavia know the most about and like the most?" I just asked him that without any briefing, he didn't know what I was after at all. And do you know what he said? "CARE. CARE. That's the greatest thing," he said, "that's America."

POWDERED MILK HELPS MORE THAN NEWS OF URANIUM

I found out in Greece, for example, that what they called CARE was America. Little fellows, the little ones that you see in the pictures over there, called CARE America. Was I ever proud when I found our American butter and dried milk in Greece. We have taken a lot of razzing from some people about producing too much milk. Well, I found that a pound of powdered milk will do us more good in some countries than a pound of uranium. People are afraid of uranium, and the fear of people can destroy the world. They love a glass of powdered milk, milk we and our children won't drink anyway because we want whole milk. But other people are eager for a pound of powdered milk. In Spain, where the National Catholic Welfare was administering the food relief program, I watched them mixing this powdered milk in little washing machines.

When I saw these children lined up and their mothers with liter jars, and when I heard what they had to say, I had two feelings: First, I was proud to be an American; second, I was ashamed that we Americans had sold millions of pounds of that powdered milk to feed our hogs. I ask any person in this room: Do you think you have a right to feed pigs wholesome, nutritious, powdered milk when you are unwilling to give it to hungry children in other countries? It might be well to ask the agencies of Government whether we are going to have very much powdered milk for feeding these countries in the days to come.

We have dairy farmers in my State who are having to sell their dairy herds that they worked 25 years to build. There is no market for their goods. Can you imagine that? We are closing down part of America's agricultural plant at the very time that we warn that we are in a life and death struggle; at the very time we insist we have to have more missiles, more this, and more that. I have a suspicion that that man Khrushchev wasn't kidding when he appeared on TV not long ago, when he said that it will be only a short time before the Soviet Union will produce more products, both dairy products and cereal grains. And then he said, "Watch out"; they know what to do with it.

I saw what happened in Cairo, when we refused to sell wheat to the Egyptians. I saw the Soviet wheat they obtained instead, and I learned that in Port Said little Russian flags went up on refugees' tents. I believe our food ought to be used to help people.

In Israel the Prime Minister told me of the desperate need for food. What are we going to do to feed these people? Fortunately the Government of the United States gave them half of their requisition, but only half. There was a statement made here that a national policy is needed so CARE can plan its program further in advance. You cannot afford to set up missions and utilize your energies unless there is something with which to work. Public Law 480 ought to be extended, not 1 year, but a minimum of 3 years. I have asked every reasonable American with whom I have discussed this, "Do you think the surplus agricultural problem will be over in 1 year?" To a man they agreed it will not. Then I ask our Government why it wants only a 1-year extension of our surplus disposal legislation? How is it the administration can ask for 3 years for a loan fund to loan our money, yet shy away from planning more than a year ahead on use of food? How can our Government insist that food is not a vital part of our foreign policy?

Of course it is—and I hope that you will get behind the proposal for an extension of our present programs to more than 1 year; a part of that year is already gone.

May I add one other thing. I believe the gentlemen of the Congress should insist that our Government handle ocean freight negotiations so that CARE and other voluntary organizations should not be forced to argue like diplomats with the government of a recipient country on the details of the payment of ocean freight. We have experienced people in every one of our Embassies. They have the time to negotiate these matters that relate to ocean freight costs so our voluntary workers will not be involved in such activity.

I want to commend you for your plan to have two American CARE officials in each country. I believe that number is about right. The more of the native population that you can use, with some good American guidance, the better off we will be. This will prevent Formosa incidents.

Where our people have been ministering to health needs, to food and nutritional needs, to educational needs, where we confine ourselves to such services, we are not confronted with rioters who tear down our flag or mobs who tear up our files, beat up our representatives and attempt to banish us from their country.

FOREIGN COMMENDATIONS OF PUBLIC LAW 480

From my brief examination I can say that wherever CARE has gone or wherever our other great voluntary agencies have been at work, I have found a reservoir of good will that is far beyond and above the mistakes we make in policy. I have had heads of government say to me, "You Americans can clear up an abyssmal and abominable situation; if you will just help us with food we will forgive you almost anything."

I found many Prime Ministers and their ministers of commerce and agriculture who knew all about our Public Law 480, the so-called surplus disposal law, officially called the Agricultural Trade Development Act. I found that these public officials of other countries knew more about our Public Law 480 than people living right here in the United States. They knew more about it than people in our Embassies. I went into office after office in Italy, Spain, Greece, Israel, and Lebanon. The officials I talked to had all the hearings and legislative debates laid out before them, and knew more about Public Law 480 than most Members of the Congressional Committees on Agriculture who considered and approved the bill. When I compared the knowledge and information of these officials with the knowledge of our Embassy officers it was apparent that these boys are graduates and ours are just in kindergarten. They knew; to them it was the difference between life and death.

In Spain, for example, I had the minister of commerce tell me that never again as long as there was a Spain would his people ever be on such a low diet as they were before American food came. No government, dictatorial or otherwise could stand long under such conditions.

FOOD AS VITAL AS ARMS TO NATO

I heard the top military commander of our southern NATO forces, Admiral Briscoe, tell me that our food program is as vital to the success of NATO in southern Europe as are military supplies. He told me how little food supplies we had available in southern Europe, and that it might be nothing short of a military debacle if there were any hostilities. Yet we have food stored all over the United States. While Napoleon didn't know about rocket warfare and things of that kind, he did know enough about armies to say an army traveled on its stomach. He apparently didn't know about NATO. Recently, I had the opportunity to present these comments to the President.

THE LARGER SIGNIFICANCE OF CARE

Well, I could go on and on. This is my crusade. I want you to know that. I am more interested in this subject right now than almost anything that has ever touched my life. I believe that in this food program, going beyond what you do in CARE alone, there is an opportunity for the redesigning of a foreign policy with great potentialities. In the sale of our food we provide economic means for other countries. We momentarily ease the tension and the suffering. We develop new markets and habits. We carry with it a message of American generosity, kindliness, and democracy, particularly when you tie in donations through voluntary agencies. We build new contacts. We touch the lives of many people and we reach the man in the street, so-called little people whose minds are still open, those whose spirits have yet to be fully roused.

So it is on that basis that I commend you. I appeal to the advertising council for help. While no one has asked me to do this I appeal to them to put this program at the top of the list. I know there are many important programs; there always are. There is nothing more important, however, than a realization of the great human suffering in the world and a program to alleviate human wants and needs. Toynbee called this "a revolution of rising expectations." He said people today just expect more, and no longer can the oldtimers of the Victorian Age say they are not going to get more because they are. People refuse to die quietly, my friends; they just won't cooperate. They just refuse to lie down and play dead, just

because someone says "Don't make any noise. We haven't time to help you."

LET US ACT WITH BOLDNESS

People all over the world today are demanding a place in the sun, are asking for recognition, and, unhappily, some of these people believe the only way they can gain status is through the totalitarian method. Regrettably in a free country governments are timid. Most of the time, unless under duress and emergency, they lack courage. Where is there no timidity? In the people. Most Members of Congress are more timid than the people. There are some of us that aren't timid; I guess I qualify on occasion. But timidity is a characteristic of free government; courage and zeal to meet any emergency is a characteristic of a voluntary agency. We must have that or I am afraid we might lose that one game world series I spoke about.

Congratulations to you all; to CARE, its officers, its contributors, its host of friends.

Thank you very much. It was a privilege to be here.

(Standing ovation.)

The Billboard Nuisance

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Post August 13, 1957, relating to the Pestilent Growth of Billboards, on Federal highways. This editorial discusses a very important problem and I hope we will soon take steps to prohibit the use of billboards on the highways.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEMO TO THE SENATE

It has been 82 long days since a Senate subcommittee reported out a bill which would discourage the pestilent growth of billboards on the new 41,000-mile Federal Interstate Highway System. The bill, at best, was a watered-down compromise. It now lies buried in the parent Senate Public Works Committee. The leadership of the Senate seems painfully indifferent; opponents of billboards are frankly dismayed; the billboard lobby is quietly gloating. Not coincidentally, the billboard industry is the only major group which favors plastering the new roadway with signboards.

Senator CHAVEZ, chairman of the committee, pledged on the Senate floor last Friday that he would call a meeting of the full committee "as soon as I possibly can." No meeting has been scheduled. Further stalling will invite the conclusion that the Senate—and its leadership—cares more about the welfare of the billboard industry than the millions of motorists who will use Federal highways. The House has been even more sluggish; it has not begun hearings on billboard controls. Does the 85th Congress wish as its monument a scrofulous ribbon—41,000 miles long—on which voters will be continually reminded of an outrageous giveaway to a single vested interest?

The Right of Trial by Jury

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Jury of His Peers," published in the Standard-Times of New Bedford, Mass., on August 9, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A JURY OF HIS PEERS

In the name of "preserving civil rights," one of the most fundamental rights guaranteed by the Federal and State Constitutions, and dating back to the English Magna Carta, is being threatened today in Congress.

Self-appointed zealots and politicos, with a weather eye on future elections, are attempting to take away the right of trial by jury in criminal cases in the new so-called civil rights bill.

Fortunately, the Senate amended the civil rights bill last Friday, inserting a jury trial provision for criminal cases, by a vote of 51 to 42. Wednesday the Senate passed the bill as amended by a majority of 72 to 18. But the bill now must go to conference with the House of Representatives, where the so-called civil rights bill has been approved without the jury trial provision.

The Senate's action reaffirmed a basic American tradition older than the Government itself—the right of the accused in a criminal proceeding to place his case before a panel of fellow citizens.

No part of the young United States Government more impressed visitors than the emphasis on this right. De Tocqueville wrote 125 years ago that the jury system in America "imbues all classes with a respect for the thing judged."

What could be more illogical than to assert that reaffirming such a principle would obstruct justice or weaken the Federal judicial system, as President Eisenhower, Vice President Nixon, Senate Republican leader Knowland, and others are asserting?

In reality, opposition to the jury amendment has been based mostly on a cynical assumption that southern juries would not render just verdicts in civil-rights cases. Thus, to make sure of the right verdict, proponents would abolish trial by jury in such cases.

Juries are not always predictable, to be sure, in the South—or in the North. Very recently a surprising verdict of acquittal was rendered in the trial of labor leader Hoffa, after distracting tactics had been used in the courtroom.

In its proposed civil-rights bill, the administration seeks to use the contempt powers of the Federal courts as an instrument of coercion and punishment in an entirely new field of Federal activity.

In this field conceivably there could be thousands of criminal cases. In none of these would the accused have the right to have his guilt or innocence determined by a jury of his peers.

It is to the credit of Senator KENNEDY and many others that they have, while supporting civil rights, refused to go along with attacks on the essentials of fair trials and orderly governmental processes.

Nothing could be more farfetched than the accusation of a State AFL official that KENNEDY had opened himself to suspicion by voting for the jury-trial amendment.

No more courageous action has been taken by the United States Senate in a decade than insisting on the insertion of a jury-trial amendment in civil-rights legislation. The Senate should stand firm in conference in oppositions to the ill-advised House bill.

Criticism of the Supreme Court

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

CRITICISM OF THE SUPREME COURT

(By David Lawrence)

WASHINGTON.—Criticism from laymen and lawyers concerning recent decisions of the Supreme Court of the United States has lately been attracting much attention, but how do some of the judges throughout the country feel about the highest Court?

There are not many opportunities for judges to discuss these matters publicly. But something that occurred the other day at the conference of the chief justices of the highest courts of each of the 48 States throws a light on this question. A substantial number of the State chief justices favored a resolution condemning in the severest terms some of the recent decisions of the Supreme Court of the United States.

Here is the full text of the resolution offered by Chief Justice Norman F. Arterburn of the Supreme Court of Indiana:

"Be it resolved that it is our opinion that the United States Supreme Court has transgressed sound legal principles, and in particular, usurped fact finding functions in weighing the evidence in the recent cases of *Konigsberg* v. *State Bar of California* and *Schware* v. *Board of Bar Examiners of the State of New Mexico*.

"Moreover, the United States Supreme Court has encroached upon the jurisdiction of the State courts in holding, among other things, that applicants seeking admission to the bars of the States of California and New Mexico, in examinations as to their character and fitness to practice law in those respective States, may refuse to answer questions or enlighten the examining board about their past connections and associations, in particular with Communists and communistic organizations.

"We declare the past acts and associations of applicants do reflect directly upon their character and fitness and are matters relevant for consideration. Whether or not one who went through a long economic depression should have had the strength of character, moral fiber and stamina to withstand the emotional appeals of Communists—as most good citizens did—or whether as a weakling he succumbs to such propaganda is relevant in the analysis and determination of the character of such individuals. The United States Supreme Court is wrong in holding that such acts are of no value in such determination.

"Decisions which are not founded on sound legal principles or commonsense

tend to undermine confidence in the judicial system and respect for the courts.

"We further state that one who is unwilling to give freely all relevant information regarding his history and past associations casts doubts upon his moral character and fitness to practice law in any State of this Union; and such refusal is a relevant factor to be weighed and considered by a fact-finding body on character and fitness. We further declare that although the United States Supreme Court has the authority to fix its own standards of character and fitness to practice in the Federal courts, we do not recognize nor concede that it may do so for the courts of the several States of this Union."

While almost a majority favored the immediate adoption of the resolution, there were a number of justices who were in sympathy with it but felt that the subject should await a further report. Accordingly, a motion was made to appoint a committee to report back to the conference next year, and the resolution which was finally adopted declared that the chief justices were very much concerned with what the Supreme Court of the United States had ruled.

As for the decision in the Konigsberg case to which reference was made, this was decided by the Supreme Court of the United States by a 6 to 3 vote. Justices Frankfurter, Clark and Harlan dissented. In fact, Justice Harlan, in his lengthy dissent, wound up with this observation: "For me, today's decision represents an unacceptable intrusion into a matter of State concern."

Many Americans of the present day do not realize that criticism of the Supreme Court has been frequently expressed in past history and that perhaps the most severe castigation the high court ever got came from the pen of Thomas Jefferson. In a letter to a friend in 1820, he wrote:

"Having found, from experience, that impeachment is an impracticable thing, a mere scarecrow, they consider themselves secure for life; they skulk from responsibility to public opinion. * * * An opinion is huddled up in conclave, perhaps by a majority of one, delivered as if unanimous, and with the silent acquiescence of lazy or timid associates, by a crafty chief judge, who sophisticates the law to his mind, by the turn of his own reasoning."

The Presidential Stakes Now in Plain View

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Presidential Stakes Now in Plain View," written by Arthur Krock, and published in this morning's New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESIDENTIAL STAKES NOW IN PLAIN VIEW

(By Arthur Krock)

MIDDLETOWN, R. I., August 12.—The dispatches from Washington, to one who has composed many, when read at this distance from their origin, leave an oddly mixed sensation of remoteness and familiarity. They are like chimes borne on light airs to a traveler in the next valley who knows from childhood their every melody and tone.

On this rocky hilltop overlooking Sachuest Beach, and a horizon that is the Atlantic Ocean, the news from Washington about the progress of the equal-rights bill now plainly carries the brand of 1960 politics that was obscured at times by the high quality of the Senate debate. The accent is on factional conflict and a contest for advantage among ambitious politicians instead of on the impending revolution in legislation and American political philosophy.

The personal and party standards of the contestants are as visible as moths in the lamplight.

BATTLE REVEALS FACTORS

All these factors, particularly the great central one of the next Presidency, have been visible in the battle from time to time, as each phase projected by the major issues ended on the Senate floor and the next began. They were reported and anticipated with flawless accuracy in the dispatches by William S. White to this newspaper at every step in the conflict since the Republican Party's national political management made its epochal decision in the early spring. This decision was to shift the administration's position from a recommendation to Congress for a bipartisan commission study of the problem of racial discrimination in the South to a demand for a broad legislative grant of Federal force to dispel this discrimination immediately.
